Up to this time, she had felt or assumed, a degree of pity for poor Lady Jane, as a child who had but obeyed her father, but on the other hand it is made to appear that even from the first she cherished in her heart a deadly hatred for her sister. But she dared not even consign her to the tower.

> "I love her not, but all the people love her,
> And would not have her even to the Tower."

That single dash of bravery, and the passing touch of pity for Lady Jane, are perhaps the only hints of nobleness that the poet has thrown into his portraiture of Mary. Even her intellect is not made to command our admiration powerfully, although the poet might have done this in exhibiting her swaying to her will the men who formed her Council. Sometimes we are almost surprissed into admiration, as for example when she meets Gardiner's pretence that he was opposing the Spanish marriage only because he feared the people, who he said would murder *him*, with the quiet, contemptuous sarcasm,

> "And that were hard upon you, my Lord Chancellor."

Of her two great passions, her fondness for Philip is the predominating one, and rightly so, because by means of her union with him she hoped to gratify her other absorbing desire, to take fiery vengeance upon the new religion for her mother's wrongs and her own, and make England, in alliance with Spain, a mightly Catholic power. Her love for Philip is a deeply interesting psychological study. It is not that sweet natural self devotion, properly called affection, which has no wish but the good of its object, nor the ebullience of the blood called passion. It was a love altogether fantastical as regards its immediate object, whom she had never seen—a kind of love, phenomenal, indeed, but not entirely unknown in the range of human experience. Its existence is usually confined to youthful and romantic natures, Mary was no longer young nor, properly speaking, romantic but, in her, ambition took the place of girlish romance. And in contemplating the lofty future of her imagination, she was woman enough to place a hero in it and that hero was Philip. He seemed to possess all the requisite, qualifications. He was Spanish as she herself was, half by blood and entirely in her sympathies. He was Catholic and the heir to the greatest sovereignty on earth. In imagination she clothed him with personal beauty and high mental endowments and she tried hard, in spite of rumour, to invest him with moral purity. To one whose life was built on phantasy, love in such conditions, even for an unseen object, was easily awakened, and soon grew to the height of passion, and by its unwearied persistence ultimately claims to merit the name of affection. From being the hero of her air-palace, Philip became the idol that she was ready to worship when the baseless fabric of her vision was shivered and not a wrack left behind.

What seems to us the fault of the poet's representation of this love of Mary's is its sweet girlish prettiness. When she first appears on the stage she is kissing his miniature and showing it to every body who approaches her. The inconsistency strikes us even more strongly at the close when Philip is leaving her for the last time. The lyric sweetness of the following lines seems inappropriate in Mary's mouth :

> Go! must you go, indeed—again—so soon?
> Why, Nature's licensed vagabond, the swallow,
> That might live always in the sun's warm heart
> Stays longer here in our poor north than you :—
> Knows where he nested—ever comes again.

And the following :

> You are the mightiest monarch upon earth,
> I but a little Queen ; and so indeed,
> Need you the more ; and wherefore could you not
> Helm the huge vessel of your state, my liege,
> Here, by the side of her who loves you most?

We may here quote the song sung by Mary near the close of her life, when Philip had left her for the last time. Calais had been lost, and and the unhappy woman, with blasted life, and broken heart, was looking wildly around her on a "sea of troubles," and forward into utter darkness. We give it as an example of Tennyson's excellence as a lyric poet, and of his weakness as a dramatist. In the mouth of a woman who, in spite of youth, sweetness, and innocence, had been cruelly forsaken, this exquisite lyric would be most appropriate, but it seems scarcely suitable for the character or the circumstances of Mary.

> "Hopless doom of woman happy in betrothing!
> Beauty passes like a breath and love is lost in loathing :
> Low, my lute ; speak low, my lute, but say the world is nothing
> Low, lute, low!
> Love will hover round the flowers when they first awaken ;
> Love will fly the fallen leaf, and not be overtaken ;
> Low, my lute! Oh low, my lute! we fade and are forsaken—
> Low dear lute, low!

The poet, in his representation of Mary, has brought out very skilfully one trait of the feminine character. There is a touch of nature, which all must recognise, in Mary's resolute determina-

tion to believe, in spite of all evidence, in Philip's moral purity—a determination, however, which does not in the least restrain her eager desire to hear the rumours which she has resolved to reject. It is evident all the time that the rumours have made a deep impression on her. Her restless interrogating of every one from the foreign ambassadors to her own ladies-in-waiting, as if in hopes of receiving an answer favourable to Philip, and her bursts of anger and vehement contradiction when the answer is unfavourable, show that she was forcing herself to believe according to her wish and in spite of secret, supressed conviction. And so, at the latter end, when Philip has gone for the last time, and the dark night of hopeless disappointment has descended on her soul, the long-smothered conviction bursts out like a torrent from a broken dam :—

ALICE.—Madam, who goes? King Philip?
MARY.—No, Philip comes and goes, but never goes.
Women, when I am dead,
Open my heart, and there you will find written
Two names, Philip and Calais; open his,—
So that he have one,—
You will find Philip only, policy, policy,—
Ay, worse than that—not one hour true to me!
Foul maggots crawling in a festered vice!
Adulterous to the very heart of Hell.
Hast thou a knife?
ALICE.— Ay, Madam, but o' God's mercy—
MARY.—Fool, think'st thou I would peril mine own soul
By slaughter of the body? I could not, girl,
Not this way—callous with a constant strife,
Unwoundable. Thy knife!
ALICE.— Take heed, take heed!
The blade is keen as death.
MARY.— This Philip shall not
Stare in upon me in my haggardness;
Old, miserable, diseased,
Incapable of children. Come thou down.
[*Cuts out the picture and throws it down.*
Lie there. (*Wails.*) O God, I have killed my Philip.
ALICE.— No.
Madam, you have but cut the canvas out,
We can replace it.
MARY.— All is well then; rest—
I will to rest; he said, I must have rest.
[*Cries of* ELIZABETH *in the street.*
A cry! What's that? Elizabeth? revolt?
A new Northumberland, another Wyatt?
I'll fight it on the threshold of the grave.
LADY CLARENCE.—Madam, your royal sister comes to see you.
MARY.—I will not see her.
Who knows if Boleyn's daughter be my sister?
I will see none except the priest. Your arm,
[*To Lady Clarence.*
O Saint of Aragon, with that sweet worn smile
Among thy patient wrinkles—Help me hence.

This is the last of Mary. Her fierce, fanatic struggle against Providence ends thus sadly, and, in spite of the condemnation our judgment pronounces both on her acts and on the spirit in which she acted, and in spite of the fact that her absorbing passion for Philip, which might have been so treated as to win some sympathy is calculated rather to excite contempt and ridicule, we cannot choose but pity the haggard miserable blighted queen.

We had some comments to make on other characters and scenes in this drama, but must reserve them, at least for the present.

CONVENT LIFE IN ITALY.*

THE tendency which a few years ago was developing itself in England, to think with favour of the cloistered life, as one which offers a refuge from the cares and worries and pitfalls of life in the world, has died out; otherwise the Memoirs of the Princess Henrietta Caracciolo, translated from the Italian, and just published by Mr. Bentley, would render a real service. As it is, the fears as to the mischief wrought by systematic seclusion from the active world and as to the wretchedness arising from the encouragement of the taking of irrevocable vows,—fears which are naturally begot in the healthy air of personal freedom, without which the breath of life for English men and English women would be vitiated, are found in these Memoirs to be thoroughly justified. The whole conventual system on the continent of Europe seems to be based upon the notion that for women who, through lack of dowry, or want of personal attractiveness, pass the threshold of life without being married, there is no abiding place in which they will be so protected from the troubles and dangers of life as the convent. If the convent were not a place where personal freedom had to be crushed out in the name of "holy obedience," if the days within its walls had not to be passed in a weary round of devotion, in preparation for confession, in torturing the enfeebled conscience as to how to vary the self-accusing story to be whispered in the ear of the confessor; in attendance upon services whose beautiful music of itself must often sadden the mind with its suggestions of earthly happiness which can no longer be hoped for; if the whole aim of the religious training were not to keep the mind in a state of unhealthy consciousness that almost the only foe to spiritual growth resides in the promptings of the flesh; if the convent instead of being a place of repression of many fine impulses, and for the development of morbid anxieties, were an institution for providing mental culture, the great every-day solace for lonely ones; if it trained those within its walls to do useful work; if it encouraged them to aim at excellence in art; if it weaned them from the habit of unduly analysing the mysteries of the inner life, which needs for its own growth to be sometimes let alone; if it recognised the discipline of study as a purifier of the mind more potent than penance, more edifying than enforced meditation;—if such were its leading features, it would be difficult to imagine a more desirable retreat for unmarried ladies than a convent college. But such an ideal of a convent has never entered into the thoughts of those who have modelled the convent life of the past. The memoirs now translated of the Neapolitan Princess, who, because she received no suitable offer of marriage during her father's lifetime, was, when his death brought diminished income to the household, compelled by her mother to enter the Benedictine convent of San Genaro at Naples, reveal the wretchedness and dreariness of Italian convent life. They reveal the petty jealousies with which the nuns are tormented, the ruined minds of those who cannot recover from the hopeless depression which has overcome them, the unhealthy interest taken in the prolonged interviews with the confessors, the small trifles with which the mind, debarred from anything like ennobling culture, fretfully concerns itself, and the disaster gradually brought upon the physical frame by the repression of all natural longings (enabling one to account for the pallid faces which render a procession of nuns so dismal to look at). They reveal too the utter unreality of the religious life, which for the most part is but the writhing of restless morbid imaginations. The devoteeism of a nun, whose mind has offered to it no other nutriment than is contained in books of devotion of a sickly, sensuous type, and in lives of the saints written by those who look upon unlovely asceticism of body as a necessary indication of saintliness of soul, is but a modified hysteria, the result of a chronic disposition of body and mind artificially produced by surrounding influences.

The story of weary days spent within convent walls, and of the various attempts prolonged through several years to obtain permission from the ecclesiastical authorities to re-enter the outer world, as told by Princess Henrietta Caracciolo, furnishes a thorough justification of the action of the Italian Government in issuing a decree for the suppression of convents, and for enabling those dwelling in almost inaccessible cells to be restored to the freedom of secular life. The Princess dates her own restoration to liberty from the 7th of September 1860, on which day Garibaldi entered Naples, on which day too she took the black veil from her head and placed it upon the altar of the Cathedral of San Gennaro, and so restored it to the Church which twenty "weary years before" had given it to her. By so doing she considered that she had broken the last link which bound her to the monastic state. Soon after, the day came on which she wore a veil of another kind and in bridal attire was receiving the blessing of a Church which protests against vows of perpetual renunciation of the duties and joys of life, having sought in vain for the sanction of the Church of Rome from whose oppressive guardianship she had freed herself. Her life since, in her home at Castellamare, has evidently been a brighter one than would have been possible for her within convent walls.

* Memoirs of Princess Henrietta Caracciolo, ex-Benedictine Nun.—London R. Bentley.

CLIMATE AND TIME.*

THE science of Geology, which in its youth had such an intense struggle for existence, having once been granted the right to pursue its way in peace, appeared for a long time to content itself with laying the appropriate colours on the maps of newly surveyed districts, and compiling lists of fossils with unpronounceable names. But the spirit of bold speculation which animated its founders, seems to survive still at least in one branch of the Geological Survey. It is a curious fact however that the most famous of our speculative and controversial geologists such as Hutton, Playfair, Miller, and Lyell, have been Scotchmen, while their English brethren Buckland, Smith, Delabeche, and Sedgwick have for the most part contented themselves with describing the rocks and with collecting fossils. The only noticeable exception to the rule was Murchison who, though a Scotchman, and we suppose naturally fond of controversy, followed the science after the English fashion The same characteristics distinguish the two races to the present

* Climate and Time, by James Croll, London, Daldy, Ibister & Co.: 1875.

day. The somewhat dull proceedings of the Geological Society are rarely enlivened except by a passage of arms between the Duke of Argyll and Professor Ramsay, each with his own pet theory of the formation of lakes; and for worthy successors of the men who established the science, we must look to the ranks of the Scotch survey. Two remarkable books by members of that survey, have recently been published in a complete form, though detached chapters of them have for several years appeared in various magazines. One of these entitled "The Great Ice Age" by James Geikie, attempts to fix geologically the antiquity of the human race in Western Europe, and the other—"Climate and Time" by James Croll, proposes definite time in years for the age of the earth, and for the geological period of the advent of the human race as given by Mr. Geikie.

Everybody is supposed to know that in the geological age immediately preceding the present, the whole northern hemisphere was much colder than now, and that the British Isles and Northern Europe were covered by glaciers, much as Greenland is at present, while the waters round them were inhabited by animals whose descendants now live within the Arctic circle. But it has only recently been proved that this cold age was interrupted by several warm, "interglacial" periods, during which animals from the south lived in Britain. The proof of this has been successfully worked out by Mr. Geikie, who believes that the earliest human remains with which we are acquainted belong to one of those periods: that in fact as the ice retreated, it was followed up the valleys, by our flint-chipping and cannibal ancestors accompanied by the plants and animals of warmer climates. The existence of the glacial epoch was long admitted before any satisfactory reason could be assigned for it. Some geologists supposed the heat of the sun to be variable: others attributed it to the deflection of the Gulf stream (a subsidiary cause admitted by Mr. Croll), while Lyell made the mistake of assigning it to the different distribution of sea and land, though the distribution he proposed would have had effects the very opposite of those he infers.

In the irregularity called the precession of the equinoxes, combined with the varying eccentricity, of the Earth's path the author of "Climate and Time" finds the true reason why the earth has been sometimes very hot and sometimes very cold. It is obvious that when the earth is nearest the sun in winter and the eccentricity is great, we shall have mild seasons, in the north, in fact perpetual spring; while in the other hemisphere the climate will be extreme. But the hot summer in this hemisphere of extremes, would be too short to melt all the snow which had fallen during the long cold winter, while the country would be so enshrouded in fog and mist that the sun's rays could never reach it, and at the surface of the ground there would be snow all the year round. The ocean currents too, which the author believes to depend upon the trade winds, would be deflected and render the difference in climate in the two hemispheres still greater. The Gulf stream is affirmed to contain one-fifth of all the heat in the North Atlantic, and in the Northern Ice age all this went to the southern hemisphere. Owing to precession taking place much more quickly than changes of eccentricity, the conditions of the two hemispheres would be several times reversed while the high eccentricity lasted, and thus the intervening warm periods, during which vegatation was very abundant and the coal beds were formed, are accounted for. Upwards of 140 pages of the book are taken up with the discussion of oceanic circulation, though we think much less would have sufficed; but on this subject the author has had a controversy with Dr. Carpenter, who maintains that this circulation of the waters is due to difference of temperature, while Mr. Croll says the currents are due to the winds and considers the theory essential to the truth of his speculations on climate. When the case is stated in figures as a mechanical problem, the author certainly seems to have the best of it.

The change of eccentricity in the earth's orbit being due to the disturbing action of the planets, its amount and the time required to accomplish it become an astronomical problem. Its value has been calculated in this way for intervals of 50,000 years from 3,000,000 years before to 1,000,000 after 1800 A.D. The results show that we are now at a period of very low eccentricity; that 250,000 years ago it was much greater—about this period we must place the glacial that the first appearance of Scotchmen,—that 850,000 years ago, and again 2,500,000 years ago, it was very nearly as great as possible, and here must be fixed the very warm periods of the miocene and eocene ages respectively—and that in 800,000 years more, we may expect another glacial period which will enable us to dispense with punkahs and thermantidotes on the plains of India.

The author following the calculations of Sir W. Thompson on the secular loss of heat from the earth by radiation, comes to the conclusion that it is only about 100,000,000 years since our little globe was first detached from the fiery mass of the sun. To geologists who follow the teaching of Lyell as to the slow formation of the strata, and remember their vast thickness, this time will seem too short, and also to the Darwinist who certainly thinks it more than a hundred millions of years since his ancestors wore the form of microscopic *monads*. But the author considers Sir W. Thompson infallible as far as mathematics go, and unhesitatingly adopting his figures, he attempts to show that the stratified rocks are not nearly so thick as supposed and that probably the continent of Atlantis never existed. On the contrary he holds that the great ridges and furrows of the earth are now nearly the same as they have always been, and that if we could dive to the bottom of the deep ocean, and scrape away a few feet of mud we should come upon the original "crust of the earth."

Here we have a book of little more than 500 pages, which boldly casts aside the traditions not only of Jews and Greeks, but of respectable old English Geologists; which teaches us that we have reached our present comparatively high stage of development in less than a hundred million years; and that Scotchmen have existed for about a quarter of a million! With regard to all such speculations however, it is well to bear in mind Professor Huxley's remark that Mathematics are a very excellent mill which never gets out of order, but that the quality of the flour it produces depends upon that of the wheat with which it is supplied. The data upon which the calculation is founded are not very certain, and the results cannot be more certain than the data.

FUTURE PUNISHMENT.

WE publish elsewhere some further letters we have received on this important subject. These letters exhaust we think the arguments that are commonly brought forward in defence of the doctrine of eternal torments as the doom pronounced by Christianity on the finally impenitent. We think it right in publishing them to say that we had no intention of opening our columns to a formal discussion of the truth or otherwise of this horrible doctrine, but simply by an earnest and unmistakable expression of our own conviction of its impiety, to lead such of our readers as are taking the dogma upon trust, as ninety nine so called "believers" therein out of every hundred are doing, to examine for themselves the grounds upon which it rests.—The letters we now publish are exceptionably able; and yet it is at the same time clear that not one of the writers knows anything of the literature that the last few years have given birth to on the subject. It is of course impossible for us to fill the columns of this journal with the discussion, but it seemed to us only proper and necessary that the *Friend of India*, with its somewhat peculiar traditions and character, should speak out plainly on a subject that has so vital a bearing upon the credibility or otherwise of Christianty as a religious system. For if Christianty really teaches what the Church teaches on this subject, we say advisedly, and with at least some sense of the responsibility of such a statement, that it is not from God. If it be a doctrine of Christianity, that the Almighty destines untold millions of the human race to the horrible doom which the Infallible Church has provided for them, no honest man will tell the people of India that Christianity is glad tidings. The great difficulty is to be honest with ourselves in these controversies. We refuse to look steadily at the real character of the doctrines we profess to be believing; and we persuade ourselves that we are honoring God, by pleading falsely for Him with ourselves.

We again ask our readers—who can justify for an instant the procreation of children, if this doctrine be true? Were we dealing sincerely with ourselves, we should see the dilemma in a moment. We think we believe the doctrine; while our conduct shews plainly that we do not. The man is an atrocious criminal, who begets a child, if he really believes this doctrine to be true. But we do *not* believe it, and so have no scruple in marriage. If we believed this doctrine, nothing but a positive Divine command to us to beget children would justify our doing so; while that command is laid on no one. Every one we suppose will allow that the doctrine ought not to be believed unless it is revealed with lightning clearness in the Bible, while nothing but the most persistent and systematic torturing of its statements concerning the *destruction*, the *death* of the wicked, gives it any foothold at all therein.

As we have already said however, our purpose was not to discuss the doctrine in the *Friend of India*. We have thought it right to publish the letters that will be found below, and would here

dismiss the matter; but that we should disappoint many of our readers, were we not to indicate the substance of the answer that has been given to these pleadings; and in doing so we select the writings of Mr. Constable, late Prebendary of Cork. The doctrine which corrupted Christianity almost at its birth, was the Greek doctrine of the natural, or necessary immortality of the soul: and it is amazing that men can read the Bible without perceiving how explicit are its statements to the contrary. The earliest of the fathers, Justin Martyr, saw this and admitted it; while science is daily confirming to us what revelation plainly teaches. Science shows how little room there is for believing in what we call the "immortal soul" of man; and when we take up the Bible, and read it without the glosses put upon the text by theologians, we find to our astonishment that it uniformly and consistently affirms what science teaches, namely that man both soul and body is mortal; and that immortality instead of being man's by nature, is a gift bought for him by the Incarnation of the Divine Saviour, whose Resurrection is the proof and the pledge of a future life for all who are united to him. There is a resurrection of both just and unjust: of the one to eternal life as the *gift* of God, of the other to the *second* and eternal death, from which there is no resurrection. Such is the uniform and consistent teaching of the Bible, the teaching that was foolishness to the Greeks, who held the immortality of the soul and ridiculed the idea of a resurrection altogether. The Church preferred the Greek philosophy to the Apostle's teaching, and in place of the great marvel of a resurrection from the dead with issues of Eternal Life and Eternal death depending upon the work of the Saviour, filled men's minds with notions of an immortal principle in man that could not die any more than God could die. The distinctive doctrine of the Resurrection was subordinated to the Immortality of the soul, and when the soul was thus made immortal, a home had to be found for it, when Hell and Purgatory followed in natural order, with all the impieties and blasphemies with which they have filled the world. The hope of the Christian is the Resurrection: not the natural immortality of his soul: For it is not immortal. We know well how difficult to most minds such a change of conviction must be. But it has to take place in the Church, as thonghtful minds are beginning to discern. We owe every hope of Eternal Life to Christ, and not to any fancied principle in ourselves as the Greeks taught. And so Christ is emphatically the second Adam; the author of the second life, and Saviour from the second death in man. *This* was the doctrine at which the Athenians mocked when Paul preached on Mars Hill, and which the Church in its apostacy abandoned. But we shall let Mr. Constable speak on the subject:

"Future Punishment for the sins of the present life is universally allowed to be taught in Scripture; but with respect to its *nature and duration*, very opposite opinions have been and are maintained as being each of them the doctrine of God's Word. We speak only of punishment inflicted subsequent to the Resurrection and the Day of Judgment. There are three main opinions relative to this punishment. One of these makes it to be of a purgative nature, to be temporary in its duration, and to have as its end the restoration of all to God's favour and eternal happiness. This was the theory of Origen. The second opinion makes punishment to be eternal in its duration, and to consist in an eternal life of misery and evil. This was the theory of Augustine. According to the third opinion, punishment is eternal; but it consists in *eternal death—i.e.*, the loss of eternal life, or existence. This death is attended and preceded by such various degrees of pain as God in His justice and wisdom thinks fit to inflict. The third of these is the opinion here maintained. Its establishment sets the others aside. Its eternal duration overthrows that of Origen; its character involving a state of death, overthrows alike that of Origen and Augustine. We rest the proof of it on the express, oft-repeated, harmonious testimony of Scripture.

"With respect to the eternity of future punishment, we shall be brief. To us, as to the great majority of Chistians, it has always appeared that, as clearly as Scripture teaches that there will be punishment, with the same clearness it teaches that punishment to be eternal. In the first place, its duration is described in the very same terms as the life of the redeemed: "These," saith Christ, speaking of the reprobate, "shall go away into everlasting punishment, but the righteous into life eternal." *Here the same Greek word is used for the duration of these opposite states.* If we suppose the life of the righteous to be everlasting, we must allow the punishment be everlasting also. Again: our Lord has repeatedly declared that there are persons who, at no time and under no change of dispensation, shall have forgiveness: "Whosoever speaketh against the Holy Ghost, it shall not be forgiven him, neither in this world, neither in the world to come." This is wholly inconsistent with the idea that such persons should, after any period of punishment, enter into the peace of God. What Christ has here said of one class of sinners, He has elsewhere said in equally strong language of *all* who reject Him: "He that believeth not the Son shall not see life; but the wrath of God abideth on him." If, after a certain purgation, such men passed from a state of punishment into one of bliss, these words of Christ would not be true; for such men would see life: on such men the wrath of God would not abide. Again: there are persons of whom our Lord affirms that it would have been better for them "if they had not been born." Such an affirmation is incompatible with the idea that they should, after any conceivable punishment was over, enter upon a life of bliss. The moment of release would make amends for all past suffering; and throughout eternity they would praise God that they had been born. For these and other reasons, we are persuaded that the punishment will be of eternal duration. *The judgment once passed, God holds out no hope beyond.* Man now makes his choice of one or other of two conditions, each of which will be alike eternal. In this respect, we fully agree with the theory of Augustine.

"But in what will the eternal state of the lost consist? This is now our question. We hold that it will not consist in an eternal life spent in pain of body or remorse of mind, but that *utter death and destruction* is the state which will abide for ever. The length of time which the process of dissolution may take, and the degrees of bodily or mental pain which may precede and produce it, are questions which we must leave to that providence of God which will rule in hell as in heaven. Scope is here provided for that great variety of punishment which the reprobate will suffer hereafter, *from that which in its justice is terrible, to that which with equal justice is scarcely felt at all.*

"It will be well here to say a few words on the reason which has from a very ancient period led the majority of Christians to hold the theory of an eternal life of misery, as it will be requisite to show that this reason is without foundation, before we proceed to the establishment of our own view. It will be seen that this same reason led another class of minds with a like irresistible force to the other great error here controverted—*viz.*, Universal Restoration. Before the preaching of the Gospel, the highest order of heathen philosophy had framed a theory of the immortality of the soul. While the great mass of mankind had absolutely no hope of any future life (Eph. ii. 12, 1. Thess. iv. 13,) and while far the greater number of philosophers taught that death was for all, an eternal sleep, there were some few "high spirits of old" that strained their eyes to see beyond the clouds of time, the dawning of immortality. Unable, as we are able, to connect it with God as its source, and with His promise as their assurance, they framed the idea of an immortality self-existing in the soul itself. Socrates and his great pupil, Plato, were the chief advocates of this idea. They did not indeed teach it consistently, nor do they themselves appear to have relied with any firmness on its reality, but it was at least a bright idea which kindled their imagination and afforded a heme for their logical powers. According to them, the soul was possessed of an inherent immortality. It had no beginning, and could have no end. What was true of one soul was true of all souls, good or bad. They must live somewhere, be it in misery or bliss. This idea, sublime for a heathen, passed early into the theology of the Christian Church. We find it pervading the reasoning of many of the Fathers. Heedless of Paul's warning voice (Col. ii, 8.) against philosophy, they became the feeble imitators of Plato. They taught that the Life of the wicked must be as eternal as the life of those redeemed and brought to Christ.

"A moment's reflection will show us that a dogma of this kind could not remain idle; but *must* influence in one direction or another the whole question of future punishment, and indeed mould the entire doctrine of the Church upon the subject. According as men connected it with one truth of Scripture or with another, it would give rise to two opposite schools of thought. Connect the immortality of the soul with the Scriptural doctrine of the eternity of punishment, and you inevitably create the dogma of eternal life in misery—*i.e., of Augustine's hell.* Connect it with another great truth of Scripture, the final extinction of evil and restitution of all things, and you as inevitably create *Origen's Universal Restoration.* For each of these opposing theories, there is exactly the same amount of proof—*viz.*, Plato's dogma and a dogma of the Bible; and if Plato's dogma could be proved to be a Scriptural doctrine, then by every law of logic, Scripture would be found supporting *two contradictory theories.*

"Accordingly, this philosophical idea of Plato is found influencing the interpretation of Scripture *from the second century down to our own day.* The Fathers as a general rule, considered the question of future punishment under the impression that every soul of man was immortal. It is true, indeed, that they did not attach to the soul the idea of an *essential immortality and an existence from*

eternity as Plato did. They generally acknowledged it as the creation of God, having a beginning in time, and would doubtless allow that He who had given it existence, could take that existence away. But in supposing that God gave to the soul *an inalienable existence—i.e.*, an immortality not affected by any conduct upon man's part, of which no creature could deprive it, and of which God would not deprive it, they in effect laid down a dogma which had the very same influence upon their views of future punishment as if they had adopted the dogma of Plato to its fullest extent. An immortality that *never would* be taken from the soul, and an immortality that *never could* be taken from it, would have precisely the same bearing upon the future of man. In either case man must live on for ever, whether in misery or in happiness.

"Now, the immortality of the soul, whether as held by Plato or by the Fathers, was a fancy of the human mind. As to any *essential* immortality which belongs to it of its own proper nature, there is perhaps not a Christian writer or thinker who dares maintain it. It is, as Pliny justly called it, a figment; and even Socrates, with all his noble longings, evidently feared that his favourite notion was no sounder than the figment which the Epicurean Pliny contemptuously called it. Scripture denies it. An essential immortality, it does not allow to be the attribute of any creature, however exalted. To one Being only—to God— does it allow to have "life in Himself." Of one Being only—God—does it allow such an immortality to be an attribute (John v, 26. 1 Tim. vi, 16). Here, as in everything else, Scripture is the book of the highest reason. That which has had a beginning, may have an end. On that, on which God has bestowed life, He may and can inflict death. The highest intelligence, as much as the lowest, must depend on Him for the continuance of their life. Let him withdraw His sustaining power, and the mighty archangel becomes a thing of naught, as completely as the insect which dances in the sunbeam for an hour, and then passes away for ever.

"The idea that God has bestowed upon man, or upon any part of human nature, an inalienable immortality, finds just as little sanction in the Scriptures. The expression "immortality of the soul," so common in theology, is not once found in the Bible from beginning to end. In vain do men, bent on sustaining a human figment, ransack Scripture for some expressson which may be tortured into giving it apparent countenance. The phrase "living soul," applied to man at his creation (Gen. ii, 7), has been by many Christian writers, ignorant of Hebrew, supposed to imply such an immortality. *The very same phrase, however, in the original language of Scripture* had been applied *to the lower creation before it was applied to man* (Gen. i, 20, 21). The threefold description of man, as having body, soul, and spirit, has been by others supposed significant of his inalienable immortality. Whatever be meant by this distinction, it cannot in any measure support the inference based upon it, as the lower creatures are allowed in Scripture to be possessed not mearly of body and soul but of spirit likewise (Gen. vii, 15, 22. Psa. civ, 29. Eccles. iii, 19—21.) "But an inalienable immortality is expressly declared by Scripture *not* to have been bestowed upon man at his creation. We do not deny that man was made in God's image, and that a very important part of this resemblance consisted in man's not being subject to death as the lower creatures were. Immortality *was* given to man at his creation. This priceless gift was one of the gifts which a bountiful Creator bestowed upon a favoured creature. But it was alienable. It might be parted with; it might be thrown away; it might be lost. So, He the law-giver, said when in giving immortality He also added the warning, "In the day thou eatest thou shalt die." What is more, this immortality was alienated; this priceless gift was thrown away and lost. Man sinned and lost his immortality. Man, made in the image of God, lost the image. "Dust thou art, and unto dust shalt thou return" (Gen. iii, 19). Sinful man is not by nature immortal, but mortal. He has lowered himself to the, level of the beasts that perish. If immortality is to be his again, it must be as a gift restored and not inherited. It must become his by virtue of some new provision of grace which reinstates him in the place he lost. *This was the Gospel of Christ.* It was to give back the eternal life which man had forfeited, that He came into the world; but subsequent examination will show that he does not bestow this priceless gift on all, but on some only of the fallen race (John v, 24, 40)."—(*To be continued.*)

LONDON LETTER.

LONDON, 1ST OCTOBER 1875.

THE *Times* has ceased for some time to comfort its readers by the daily announcement of the suppression of the insurrection in Herzegovina. The telegrams still continue bewilderingly contradictory. Both sides claim incessant victories. The action of the Great Powers—at least of Germany, Austria, and Russia—is paralysed by their mutual suspicions and secret ambitions. The obvious and easy solution of the difficulty is to insist upon the autonomy of Herzegovina, as has already been done with Roumania and Servia. But then this solution is manifestly opposed to the ambitious designs of Austria and Russia. In the breaking up of the Turkish Empire, inevitable sooner or later, both these Governments hope to be able to seize some, if not all, the broken fragments. But this peaceful dismemberment interferes grievously with such plans. Supposing Herzegovina were rendered autonomous, the affinities of race would certainly cause the three provinces of Servia, Herzegovina, and Montenegro to form either a Federation or a single State. And the precedent once set, as the Ottoman Empire fell to pieces, the various populations would peacefully gravitate, according to race and geographical condition, either to Greece, Roumania, or Servia, shutting out Russia from Constantinople and Austria from the mouths of the Danube. This alone is sufficient to prevent either of these governments from showing any very great alacrity in carrying into effect the theory of autonomy. On the other hand, any violent pressure upon Turkey is altogether prohibited by the suspicions of Germany which would certainly enter a very emphatic veto against any solution of the present complication which resulted in the aggrandisement of either of her great rivals in the East. Strenuous efforts are in consequence being made simply to smother, the present configration, on the chance that when it bursts forth anew, the Powers principally interested may be better situated to turn the troubles of Turkey to their own advantage. Hitherto this amiable design has been frustrated by the weakness of the Turks and the determination of the insurgents. A Consular Commission, composed of the Consuls of the three Powers already mentioned, joined with those of Italy, France, and England, has been charged to inquire into the grievances of the insurgents, and to discover, if possible, some way of patching up a temporary truce. The inhabitants of Herzegovina, who have fled to Dalmatia to escape the oppressions of the Turks, have addressed a *Memorandum* to this Commission, setting forth the ills they endure under Mohammadan rule. Of course the philo-Turkish party set down these statements as exaggerations. But philo-Turks know little of Mohammadan history, which happens to be a subject to which I have devoted many years of systematic study; and the statements made in this *Memorandum* are too exactly in accord with all Mohammadan precedents to allow me to doubt of their truth. It must, too, be remembered that in abandoning their homes and their country, the petitioners have given convincing proof that they are suffering under no imaginary ills.

Here then are some of the most important passages of this statement:—"The unfortunate cultivator who rents a piece of land from the *Agha* (Mussulman proprietor) is obliged, in the first place, to purchase the manure and the seed; he has then to cultivate the land, giving to the proprietor whatever he asks, but never less than half of the produce. When the *Agha* visits the farm, he comes always with a large *suite.* These visits occur three or four times a year; and the farmer is compelled on every occasion to feed man and beast free of cost during the time of the visit. Should he object to do this, he is beaten until he consents." "The second grievance consists in the existence of farmers of the tithe,—a mode of collecting the taxes which has disappeared from the rest of Europe. The farmers, in concert with the Government officials, exact from the Christian population contributions ten times in excess of what is sanctioned by the law. Besides the tithe, the *rayas* have to pay the military tax, the capitation tax, and the land tax. The numbering of the cattle is done in an unjust way by the Turkish officials, who let off their co-religionists scot-free, but arbitrarily double and triple the number of cattle in the possession of the Christians. The latter have no redress, except an appeal to the *Wali* and his agents."

The manner in which these functionaries administer justice is then set forth:—

"If a Christian lodges a complaint against a Turk, and cannot produce on his side the testimony of two Turkish witnesses, he not only loses his case, but is cast into prison. A Christian, who should dare to bear witness against a Turk, would not have more than three days to live." The *rayas* then go on to complain that neither the religion nor the honor of their daughters and wives are safe from the violence of the Turkish officials. They complain also of the heavy abuses in the conveyance of military stores. For their transport, men and horses are "requisitioned" in the Christian villages by the Bashi-bazouks, who live on them at free quarters. and compel those who are "requisitioned" to work for fifteen or twenty days without any remuneration. If a Christian, from illness or any other cause, fails in obedience to these mandates, he is beaten often so severely that he dies. The Mohammadans are entirely exempt from this *corvee.* "What justice," adds the *Memorandum,* "can be expected from a Court composed of ferocious Turks, and two Christians who are compelled to countersign even a sentence of death against an innocent person." The *Memorandum* is a long one, and adduces a number of examples of crimes of various kinds committed with perfect impunity upon Christians by Turkish officials, to show the evil and insecurity of their condition. These representations have been confirmed by the action of the insurgent leaders. In reply to an invitation to attend a conference composed of the Consuls of the Great Powers and the Turkish authorities, they have stated the conditions under which they would consent to be present. First, an armistice from the Porte, allowing the chiefs of the different bands to meet at some point beyond the Austrian boundary or in Montenegro, to explain their demands before the Consular Commission. These are (1) the admission of Christian testimony before the Courts of Law; (2) the choice of the village police to be entrusted to the villagers; (3) the collection of the taxes at certain fixed and immutable rates; (4) that the Great Powers will give them a special guarantee that these reforms

shall not remain a mere dead letter. Could anything be more moderate, more reasonable, than these propositions? Nevertheless the telegraph of this morning informs the world that "the three Imperial powers have no intention of renewing the "Consular negotiations with the insurgents, as the conditions "of the latter are considered impossible. The Consuls at Mostar "have been instructed to draw up and send to the Porte a memo- "rial embodying the result of their investigations, with practical "proposals for a thorough reform of the administration in Bosnia "and Herzegovina." The reckon which the negotiations have split is of course the special guarantee. The Great Powers know that Constantinople will promise to any extent, but will perform nothing ; and a special guarantee would convert them into a species of armed police keeping the Ottoman Empire under strict surveillance the consequences of which are beyond the power of prognostication. So they content themselves with suggesting schemes of reform. This is like whistling for a wind, and will have about as much influence on the future of Bosnia and Herzegovina. In the meantime, as I have already said, the insurrection spreads ; the insurgents are better armed than they were, and becoming much bolder, and what the issue will be, it is impossible to say. It is in the power of Germany, Austria, and Russia to shape events as they please, and he must be a man of sanguine temperament who supposes that any good to humanity is likely to proceed from the action of these essentially barbarous and retrogressive Empires.

The extreme Republicans of Paris met a few days ago, at a banquet to commemorate the anniversary of the proclamation of the Republic in September 1792. The great speech of the evening was that of M. Louis Blanc, in eulogy of that memorable event. I think some extracts from this really noble oration may interest your readers. To most Englishmen, the French revolution is simply a synonym for the "Reign of Terror," and this is the reason why French radicals are so deeply suspected. Most Englishmen know little of their own history, and none whatever of French. The following extracts will show why, despite its lamentable excesses, the French Revolution is a reminiscence of glory to so many Frenchmen, and ought to be, I think, to every lover of liberty :

"Gentlemen, and dear fellow citizens,—It is now eighty-three years, almost to-day, since the Republic was proclaimed in France on the 21st September 1792. It was at the extreme moment of a crisis, such as no people had ever seen the like. The King of Prussia marched on Paris at the head of 90,000 soldiers, led by a great Captain. To cover the plains of Champagne, which must be defended at all costs, under penalty of seeing the enemy master of the Capital, Dumouriez had only twenty-three thousand young and disorganised soldiers. Longwy had been taken. 'The garrison of Verdun had capitulated.' Lille was blockaded. At Thionville, it is true, the inhabitants had placed a wooden horse upon the ramparts bearing this inscription—'The Prussians will take Thionville when that horse eats forage,' but in spite of the characteristic sally, the place did not seem to be in a position to hold out. Dumouriez, when showing to one of his officers on the map the forest of Argonne, had said : 'There is the Thermopylæ of France.' The Thermopylæ of France. So near was she to death. Subsequently a successful combat foreshadowed what the volunteers of 1792 would be on the field of a battle, but more was needed than the cannonade of Valmy to save the Revolution and France. For the peril came from every side ; England joined the coalition ; Vendee rose in rebellion. And then the Republic was proclaimed not merely as the one form of Government worthy of a people arrived at manhood, and fit for a nation of free men ; but as the only means to preserve France from destruction and the Revolution from vanishing into the darkness of history. . The convention was an Assembly militant. Of that there can be no question. But how little do they know its history who figure it simply as an arena given up to the fury of parties, or absorbed in the struggle with Europe. Of all the Assemblies which have appeared on this world's scene, the most laborious, gentlemen, the most creative, the one that has effected most for science, for art, for industry, for commerce, is the Convention. That which she sowed, truly bewilders the mind. She had twenty two permanent committees that laboured night and day. She issued 11,210 decrees. She willed that primary schools should be established from one end of the Republic to the other ; that each departmeat should possess a central school ; that a normal school at Prais should teach the art of teaching, astronomy, geometry, mechanics, oriental languages, rural economy, antiquities. Her intellectual activity extended in every direction. Codification of the law, telegraphic communication, the decimal system, a uniform system of weights and measures, foundation of the Bureau of longitudes, reform of the Calendar, opening of the Museum of the Louvre, creation of the Conservatoire des Arts et Metiers, creation of the Conservatoire de Music, of the *Ecole ploytechinque*, of the Institute—such is the vast and opulent heritage that she bequeathed to us."

"And with what noble, with what generous ideas did she enrich the universal patrimony ! At other times and in other countries have been proclaimed the principles which belong to individual right, liberty of conscience, liberty of speech and of the press, inviolability of the home, equality before the law ; but it was in France and during the Republic, that for the first time social rights and the spiritual unity of the human race became an integral part of a national Constitution . . . . . Let us, gentlemen bow with respect before the Republic of our fathers, and not for a moment allow *the remembrance of the evil which darkened it, nor hatred of the crimes which sullied it*, to hinder us from admiring that in it which was heroic and fruitful. Let us reply to its enemies, when they speak of the Terror, that far from being the result of the ideas of the Revolution, and the instrument of their success, it had for effect to darken their significance, and obscure their sovereign glory ; that we deplore it from the bottom of our hearts, and would gladly give all the blood in our veins that it had never occurred ; but that the Terror was not, as they assert, the delirium of certain individuals reduced to a system ; that, prepared by many ages of oppression, provoked by furious attacks, stimulated by perils without precedent, it emerged so to speak, from the very entrails of the situation, and is dead never to revive : dead with the circumstances which engendered it : circumstances frightfully exceptional, like nothing which preceded them, or anything that will come after : that acts without number attest that this Revolution, which the rage of its enemies rendered so terrible, was at heart pitifully humane,—witness the organisation of Institutes for the blind, for the deaf and dumb, the indemnity granted to victims convicted on false testimony, the adoption of orphans by the country, the protection extended by the State to deserted children, to the aged, the indigent, and the banished. Yes; they did well ; and the calumniators of the French Revolution will not succeed in effacing all these things from the memory of men. For us, gentlemen, who, thanks be to God, have to continue her work only in the calm region of intelligence, let us bless her that she has so greatly enlarged, to the advantage of her calumniators themselves, the horizon of the human mind, and let us exhibit our gratitude in serving, with an indomitable heart, justice and liberty." *Sensation prolongée. Applaudissements. Cris unanimes de Vive' la Republique.*

If, as a contrast to this impassioned oratory, we want to know what that eminently respectable and contemptible thing called British Conservatism is capable of, we have it in that characteristic circular which has just been issued by the Admiralty to officers in command of our ships of war. This precious document enjoins upon these gentlemen to give up to their masters all fugitive slaves who happen to be received on board of English ships. Of course this atrocious circular will have to be rescinded or the Ministry which issued it will be thrust from their seats with a precipitation that will astonish them. According to this remarkable paper, the protection of fugitive slaves is prejudicial to British interests. "All the slaves engaged in the Persian Gulf fisheries "might escape on board of British men-of-war, and the knowledge "that they would be protected if they did, is calculated to cause "England to be regarded with distrust and dislike by the owners "of these slaves." As I said before, this circular will most probably be cancelled in a very few days, so indignant and angry a feeling has been provoked by its issue ; but the fact of its publication is full of instruction, as showing the utterly inhuman character of Toryism all the world over. Its sympathies are strictly limited to the governing classes, even when those classes are "slave-owners." And this is why in England the Tories were all on the side of the South during the American war. To me, I confess the French Radical, as represented by M. Louis Blanc, appears a person infinitely more worthy of reverence and esteem than the knot of British nobles and gentlemen, who do not shrink from the baseness and cruelty of enjoining English naval captains to become slave-catchers in addition to their other duties.

This is an age of monuments, and I see the Americans have invited the French to join with them in the erection of a colossal statue of Liberty in the harbour of New York in commemoration of American independence wrought out by the joint efforts of French and Americans. "In the centre," so says the invitation, "of the harbour of New York, opposite to Long Island, "where was shed the first blood in the cause of independence, "would rise a colossal statue . . . . on the threshold of "that vast continent, full of a new life, whither voyage all the "natives of the world, it would rise up from the bosom of the "sea, representing 'liberty enlightening the world.' At night an im- "mense aureole, encircling her brow, would illumine from afar the "vast sea." This you will see is the regular American buncombe. And American liberty has doubtless enlightened the world on important matters. It has thrown a flood of light on the nature and capacities of "cuteness" in the making of money; it has shown that the most pompous assertion of the rights and equality of man does not necessarily save a nation from the monstrous iniquity of trafficking in human flesh, and it has set up a beacon to all the world, showing what a Republican Government ought *not* to be. These services are not small ; and if, on the strength of them, America desires to represent herself as "liberty enlightening the world." I see no particular objection. Braggadocio is at present the order of the day. In Europe there is not a single nation or Government that is not engaged in some great and self-sacrificing work—the surrender of fugitive slaves, the civilising of Central Asia, the preservation of moral order, the persecution of Roman Catholics, and so forth. It would be hard under such circumstances if Ameria were not allowed to erect a statue in honor of 'cuteness.'

LETTERS TO THE EDITOR.

FUTURE PUNISHMENT.

I.

To the Editor of the Friend of India.

SIR,—I belong to no Church (in the sense used by you) and I fear in the estimation of Romanists and High Churchmen, &c., am further from the Kingdom of God than the Heathen ; but finding you deny that the doctrine of eternal punishment is taught in the Bible, but "imported into Christianity from the old Greek philosophy" will you allow a humble enquirer to ask what interpretation you put on the following passages of Scripture.

Psalm XCII, 7. "When the wicked spring as the grass and when all the workers of iniquity do flourish, it is that they shall be *destroyed for ever*."

2 Thes II, 9. "The wicked shall be punished with *everlasting destruction* from the presence of the Lord."

Also Matt XVIII, 8. XXV, 46. Mark III, 29. Heb VI, 2. Jude 7*v*. From the context in Matt. it would appear that "hell fire" and "everlasting fire," are synonymous, perhaps you will kindly give us the benefit of your researches on this point.

There are many other passages bearing on the question; but these may suffice for the present.

The wish being father to the thought, probably your doctrine will find a wide welcome, and I venture to suppose that a few more such articles as appeared in the *Friend of India* on the 18th September last, would soon have the effect of giving it quite another class of supporters.

2 TIM III. 16-17.

NOTE—So we are to understand that the natural and proper meaning of the words "everlasting destruction" and "destoyed for ever" is a life that is never destroyed at all. What more impious perversion can there be of Scripture, than the attachment of figurative meanings to such plain and awful statements. The *death or* destruction of the soul, is not appalling enough; and so the words are taken figuratively to mean, the eternal *life* of the soul in malignity, despair, and torments. God forbid! There is downright wickedness in such perversions of the Word of God; let the statement offend whom it may.—ED., *F. of I.*

II.

To the Editor of the Friend of India.

SIR,—I read your two articles on the Tree of Life and Eternal Punishment with an interest only equal to the strong feeling which one must have on such momentous subjects.

Your first article connected our immortality with our union with Christ,—"because I live, ye shall live also;" and I think you implied that there was *no* immortality for such as were not so united with the living Head, that such in fact cease to exist at death. If I have misinterpreted you, it is not my intention to do so.

Now this is certainly not what the Scriptures teach. They speak everywhere of a resurrection both of the just and the unjust; of a day of judgment, where each will be rewarded according to his works; and of some being beaten with many and some with few stripes. If then we are Christians, taking the Bible for our rule, we are shut up to the acceptance of the doctrine of future punishment of at least some duration.

The next question is the tremendous one, will the punishment of some at least be eternal! I do not myself want to teach what the Bible does not teach. You say the Bible no where teaches the doctrine of eternal punishment, that it is an impiety, and blasphemy. I read through your article hoping to see some explanation of those passages which seem to teach the doctrine. I expected that as least you would tell us the meaning of Matthew XXV. 46. But you carefully avoid quotations and explanations, contenting yourselves with saying that the modern meaning attached to certain words is not the meaning of those words in the *mouth* of the *Apostles*.—If that is the case *it* seems strange to me that Irenæus, a disciple of Polycarp, who was a disciple of John, could write the following "For the Lord will say to some, depart, ye cursed into everlasting (*perpetuam*) fire! these will be always damned", *(Semper damnati.)*

Surely the Gospel is "glad tidings" for the very reasons that it proclaims deliverance from eternal punishment. Its words are "God so loved . . . . . *should not perish*, but have everlasting life."

It is a Gospel of glad tidings, "because the Hindoos, at least those I have come in contact with for more than twenty years, believe in the *material* torments of hell; and we can point them to a Saviour who died to save them from Hell.

I am surprised to notice your writing that the modern pulpit carefully avoids the subject. It would be more correct to say that a few avoid it. *Dr. Arnold of Rugby took an independent course and yet he both believed and preached the doctrine.

R. R. MEADOW.

III.

To the Editor of the Friend of India.

SIR,—Will you allow me a word or two in reference to the subject of Eternal Punishment which I am glad to see is not considered too theological for the pages of the *Friend*. I am one of them who are still foolish enough to believe that doctrine; and as I feel no shame in avowing such a belief, even in this enlightened nineteenth century, I trust you will allow me to state, in as few words as possible, why I cannot accept the conclusion to which you have came.

The question is one of vast importance—so much so, that I cannot but marvel at the indifference of those who think it best and safest to say nothing about it; and if there an are missionaries or chaplains in India who have not yet determined the attitude they are to maintain in reference to this question, the sooner they set about it the better. It is a pitiable spectacle to see men, invested with authority to preach the Gospel to every creature, maintain a studied silence as to what will be the consequences of refusing to hear the Gospel message. These consequences, whatever they may be, are an essential part of the message itself; and unless they are fully and faithfully exhibited, the message is but half told.

This question, as you very justly observe, *ought to be* settled by an appeal to the Bible alone. The opinions of men that have descended to us from a hoary antiquity, as well as the brilliant speculations of modern thinkers are altogether out of place here. What have we to do with the Fathers, or the school men, or modern divines? Let us appeal to the Word of God and let the doctrine of Eternal Punishment stand or fall before that tribunal. As we are agreed on that point, you will see that it was quite unnecessary for you to call such witnesses as Tertullian, Cyprian, Jonathan Edwards and others, whose testimony filled so large a space in your recent article. If the question is to be settled by an appeal to the Bible, it matters little what this or that man says on the one side or on the other.

Before bringing the matter to the test of Scripture, however, it may be well to see that we have a clear conception of what the question really is. In discussions on this subject there are two questions often mixed up together and discussed together as if they were one, whereas, in reality, they are quite distinct. One relates simply to the fact of Eternal Punishment, the other, to the way in which that punishment is to be inflicted. It is with the former of these, and with that only that we have now to deal. The way in which punishment is to be inflicted is very much a matter of speculation. One thinks it will be in this way, another in that way. The extracts you have given from the works of the authors above mentioned deal mainly with the latter question, which is altogether secondary, and about which there are endless diversities of opinion. How far it is wise in us, in the present state of our knowledge to indulge our speculative propensities on this aspect of the subject, I do not pretend to determine. What I am concerned with is to make it clear that the question of the eternity of punishment has nothing to do with the way in which that punishment is to be inflicted. A believer can leave that matter in God's hand, never doubting that He who pronounces the awful sentence of condemnation will carry it into effect in such a way and by such methods as will leave His glory untarnished in the presence of angels and men.

Putting aside, therefore, all that is merely circumstantial or incidental, such as the relation of the redeemed to the lost, and all the complications arising out of earthly relationships that seem to us now to render a final adjustment a task of almost insuperable difficulty, let us attend to the real point at issue, which is simply this, is punishment to be eternal, or is it to be of limited duration? I hold that it is clear from Scripture that punishment will be eternal; and the first passage to which I call attention is Psalm IX. 17. "The wicked shall be turned into hell and all the nations that forget God." There is nothing about eternity here it is true, but let us mark well the point to which this verse carries us in our investigation. Whether the dwelling of the wicked is to be for ever in hell or not, one thing is certain that to that place they go; and those who maintain that they do not remain there for ever ought to lose no time in searching the Sacred Record for another passage equally clear and explicit asserting that they come out again. The verse I have quoted is by no means the only one in the Bible containing that awful announcement. I have selected it as typical of a whole host of passages which will at once suggest themselves to every reader of the Bible. Let us weigh well their significance. The wicked are turned into hell, and there the Bible leaves them.

To save time, and *restrict the argument to the narrowest possible limits*, I shall quote only one other passage —Matthew XXV, 46. "These shall go away into everlasting punishment: but the righteous into life eternal." Here we have the idea of eternity implicitly attached to punishment. I am quite willing to allow that the word everlasting is sometimes used in the Bible in a limited sense, and, so far as the mere word is concerned, may be so here; but I contend that the word cannot be shown to have a limited meaning in this place, and that the connection in which it stands furnishes a moral certainty that it has here its strict and proper signification of endless duration. There is no term in the Greek language capable of expressing more emphatically the idea of endless duration than the one used in this passage; and had it been the intention of the sacred writer to express that idea here, he could have done so by no other term that would have made his meaning clearer. I hold, therefore, that as we have no means of knowing a writer's intention apart from the words he uses, it can never be shown that the word everlasting *may not have*, in this place an absolute and not a relative signification. But the connection in which this word stands removes all doubt as to its true meaning. The expression "everlasting punishment" stands side by side with the expression "eternal life." The same word is used in both expressions in the Greek. Now it is conceded on all parts that in the second expression the word has its strict and proper meaning, and we have yet to be told why it should not have the same meaning in the first.

There are two things then said to be eternal in this passage. What are they? Life, for the righteous; punishment, for the wicked. We do not need to trouble ourselves here with the speculations of old Greek philosophy about the necessary immortality of the soul. There is only one being in the universe that exists by necessity, and that is God. All others exist only as He is pleased to allow them and while He is pleased to allow them. The immortality of man depends entirely on the Divine Will and we *must consult the* Bible to find out what *that will is*. That it is not God's purpose to annihilate any class of men, is I think abundantly evident from the general tenor of Scripture. But not to travel beyond the passage before us, it is here said that the wicked shall go away into everlasting *punishment*. Can the word punishment possibly mean annihilation? I think not. Annihilation is no punishment. It simply brings a man back to the state in which he was before he was created, and is therefore no punishment at all, unless it can be shown that it would have been a punishment to him not to have been created. *It is* great punishment to a man who has been raised to great honour and dignity to be ignominiously thrust back to the obscurity from which he rose; but the punishment consists in the man's being alive to feel it. It would be no punishment if it were not felt. The eternal punishment that awaits the wicked is possible only on the assumption that they continue to live.

One word more and I am done. Christianity is not indebted to any system of philosophy for the doctrine of eternal punishment. It would be strange indeed were we shut up to the belief

* Interpretation of Scripture, Ser. XVI.

that a mere figment of Greek philosophy utterly opposed to the spirit of the Gospel, as you suppose it to be, has held in bondage the whole Christian Church during almost the whole period of its existence. You suppose indeed that there have always been "a thoughtful few" who have nobly striven to emancipate their brethren from this fearful bondage; but if their achievements in the future are to be measured by their success in the past I fear the Church must continue in bondage to the end. The doctrine of eternal punishment is one of the distinctive doctrines of Christianity. It is so clearly one of the doctrines of the Bible, that if it be given up it will be impossible to retain any other of the distinguishing truths of our common faith. Slowly, but surely one after another, they will pass away, till Christianity, once "a light to lighten the Gentiles" is swallowed up and lost in the darkness of heathenism.

D. W.

IV.

To the Editor of the Friend of India.

SIR,—Your article on "Eternal Punishment" in a recent issue of the *Friend*, is virtually a challenge to those missionaries and chaplains whom you describe as avoiding this subject in a "cowardly" manner Though I am not a "missionary" in the ordinary acceptation of the term, and certainly not a chaplain, yet I regard myself as included in your somewhat sweeping description of what you call "the pulpit." and I therefore wish to trouble you with a few words on the subject.

You say that you "would if possible, compel our missionaries, and chaplains to make up their minds clearly whether the doctrine of eternal misery belongs to Christianity or not." I say nothing of the wild intolerance of such a feeling, but I would ask you, has it never occured to you that many preachers have a strong dislike to the vehement dogmatism of parties on the opposite sides of this question?. It would be easy to meet every one of your arguments by a counter argument of at least equal force but what then? After men have been ranged on opposite sides, and are prepared to contend for their views with all the vehemence and declamation you use in your article, are we compelled to say that truth must be on either side? I do not think so. The gross materialism of the eternal punishment believed in by the authors you quote, I have no more belief in than you. You give way to the temptation yielded to by most polemical writers—that is, you oppose the *extreme* views of the party you attempt to write down; you go back for examples of the belief in eternal punishment to the times of Turtullian and Cyprian, or to those of Jeremy Taylor and Edwards, and when you have exhibited them in all their naked repulsiveness, "you turn round and say!" "How horrible, can you believe that"? Now I ask, is that fair? Do you find preachers of the present day giving such minute descriptions of hell as these old writers gave; and when you have refuted to your own satisfaction their views, is it fair to leave the impression on the minds of your readers that you have also refuted the views of all those who do not declare themselves on *your* side of the question?

1. There are two factors in this question, with only one of which you deal, and that very imperfectly.—I mean *guilt* and *punishment*. You discuss the latter only. But these two are correlated in the closest possible manner. You can only determine whether punishment is too severe or not, when you have determined the measure of guiltiness of the criminal or sinner. In the case in question, that of the moral guiltiness of a human soul, no human being is capable of deciding as to its extent, degree, or desert. God only is the judge. Therefore, it is beyond the right or power of any fallible creature to say what is or is not an adequate or over severe doom.

There is a vast difference between the moral feelings of a judge bound to uphold the integrity of the Law and of the criminal who breaks it. The former thinks of the guiltiness of the criminal, the latter is naturally disposed to think of the severity of his punishment. The latter, from being personally interested, is not a fit judge of whether his doom is too great or not. This is your condition and mine. We cannot, if one would, be proper judges as to our guilt and its desert. We see more of the side of the question which affects us—punishment—than of the question that affects the Righteous Ruler, the guilt that makes punishment necessary. To any mind, the boldness (to use no stronger word) of those who glibly and in the most confident manner take on themselves to be judges of what is or is not too severe a judgment on guilty men is the most unseemly part of the spirit displayed in discussions on this question.

2. The argument you use in denouncing the doctrine of eternal punishment is too much *ad hominem*. It is an appeal to the feelings, and more to the animal than to the moral feelings of our nature. You draw a picture of the sufferings of the lost—filled in with quotations from ancient and mediæval writers and having "piled up the agony," you say "Is it not dreadful. Can you believe it?" This is not fair. Suppose your sense of guiltiness (I mean of men generally) were as keen, which it confessedly is not, as your sense of the awfulness of human suffering, I have no doubt that your horror at the thought of mens' sins would be quite as great as that which you have regarding their consequences or punishment. I believe that if some pure spirit could survey the state of mankind as it now is, there would be an equal horror at the spectacle of evil and of the misery which it brings here and hereafter. But we are not in that position. The misery which is the effect of sin touches us on the most sensitive side of our nature; the guilt which is the cause of misery affects us only on the most hardened side.

3. You overlook the fact that the most dreadful thing to contemplate is, not the duration of misery, but the existence of it at all in the world of a perfect God. Were we in a state of spiritual purity, the idea of sin and its consequent misery entering the universe of God, would be so dreadful that the mere duration of either would be a secondary consideration, and, moreover, so awful would the bare idea of the existence of sin appear to a pure nature that no escape from its doom would seem possible. Further, the sin and misery that already *exist*, are sufficient to fill the soul with all the feelings of horror of which it is capable. Your fair correspondent, whose only refuge from the maddening thought of eternal doom is in turning her thoughts from it, would find sufficient to make her mad if she could only realise the actual punishment of sin, the misery of it, that is taking place all around her. But the horror at the misery of men does not alter the fact of it. So far as mere reasoning goes, it is quite as incomprehensible and awful a doctrine that the millions of men and women, and innocent children, should suffer as they do under the government of a loving God as that any suffering should be eternal. I do not mean to say that the eternity of suffering does not make the idea more awful. It does. But I want to show that mere feelings of horror at the thought of eternal doom cannot be taken as evidence that such doom will not be passed, since the same feelings may exist with regard to evil and misery the fact of which cannot be denied. To human reason, the two things, present misery and eternal misery, are both inconsistent *in kind* with the character of a loving God—and this is the awful mystery; they only differ in *degree*. How dare you or I speculate as if the government of God were not to be of the same *kind* in the future that it is in the present? It is easy and harmless enough to imagine some grand Utopia of the future in this world, but when men in their speculations regarding the future life carry their Utopianism there, and virtually arraign the Almighty at the bar of human reason, saying He *cannot* do this or that because of its repugnance to present feelings, I am disposed to apply to them some of the epithets so freely scattered up and down your article.

4. My own position in regard to this doctrine of the future state of the wicked is, I believe, that of many of the preachers whom you accuse of cowardice. I hold it is a subject on which there is not sufficient revealed in Scripture to authorise men to hold dogmatic opinions one way or the other. One peculiarity and excellence of Scripture is its silence as to the *modes* of future existence, either of the holy or unholy. If we wish to see how theories and doctrines are formed regarding the future world, we have to look for them in the ages of a corrupt Christianity; in which the high spiritual teachings of Christ and His Apostles became degraded by the grossest materialism. But the Scripture says but little regarding the particular forms or modes of the future life. Its grand aim is to present the great fact that holiness will bring bliss and evil will bring misery, here and hereafter. All the illustrations which are found on this point in Scripture are intended to set this twofold truth prominently before the mind. As to the duration of the future state, my own position is, this,—that both by the light of reason and Scripture, *I can see no end to the happiness of the righteous, and I can see no end to the misery of the wicked.* In this sense, I hold the doctrine of eternal bliss and eternal misery. No intimation comes to me in Scripture that evil will cease to be punished hereafter as it is now, or that salvation from evil will be possible beyond this life; and I am warranted in believing and teaching men that they have no right to make a hope when the Scripture gives none. In this I do not think I am attempting to be "wise above that which is written." My view is not so positive, I admit, as that which you condemn, and that which is found in most Christian creeds, but as I am a congregationalist, I am bound by no creed but the Bible, and can speak regardless of what is called the "orthodox" doctrine on the subjects.

And it is this partly negative view which, in my opinion, alone is worthy of this solemn subject. It leaves the subject shrouded in that awful mystery in which I believe God meant to keep it on this side the grave. It shuts out all hope of salvation beyond this life, and all hope of the cessation of the misery of the wicked. Any speculation as to the possibility of restoration hereafter is mere groundless speculation, and nothing more. If there shall be such a restoration, no one can prove it or has a right to assert it. A mere possibility of it is not a sufficient ground of belief or of human action, all the less so, since in this case it is a possibility grounded chiefly on a *wish*.

I cannot take up more of your space in referring to the particular views you have adopted on the subject. You seem to advocate the "annihilation" theory of Mr. Dale and others, since you say that "the soul is not in its nature immortal, but eternal life is purchased for mankind by the Saviour, for those who are united to Him by a living faith. "This has always appeared to me a hideous view of the nature of man. Bad as he is, I think one of the excellencies of Scripture is that it never loses sight of the grandeur of man even in his ruin," as Pascal beautifully says. It used to be the reproach thrown upon the old Calvinists that they exhibited the "non-elect" (*i. e.*, the unbelieving) as so many inert pieces of nature, having no more to do with the kingdom of heaven than the stones of the mountain; but this "destruction" view makes the being who was created in the image of his Maker a mere beast, for he, no more than the dog has the "necessary immortality"—*that* comes only by "faith." Now, I have been accustomed to think that the love of existence is greater than of any particular mode of it, and our higher instincts placed within us by God, would lead us to choose even the immortality of the wicked rather than the death of a soulless beast. But I am not going to object to it on the ground of its repulsiveness, as in that case I should be only using your own line of argument. Your doctrine is in my opinion, doubly condemned, inasmuch as it has no Scripture Authority, and denies what the Scriptures assume, and what sound philosophy teaches, the immortality of man as man, apart from considerations of his destiny.

The raising of this question is not well timed. It is not a vital question, so far as I am aware, and it only provokes men to indulge in the manufacture of fine spun theories that can only please their makers but be of little profit to men generally. The destiny of men is one of those solemn subjects that both tempt men to speculate, and is at the same time the least suited for speculation. The all-knowing God has kept the future in His own hands, and on this side eternity our ignorance must ever be infinitely greater than our knowledge of it can be. But

"Fools rush in
Where angels dare not tread,"

and on both sides of this question the most groundless positions have been taken, and assertions been made. One of the "Fathers," Justyn Martyr, who lived 140 A.D., in his zeal for the doctrine of eternal punishment said. "If it be not so (that the unrighteous shall be punished with everlasting fire) then there is no God;" and others of the same view have spoken as strongly. I condemn this dogmatism on the one side as much as I would the dogmatism of your article on the other. If both parties only remembered how vast is their ignorance on the whole subject, there would be less of positive statement either way. If we want to have positive beliefs in which to find rest and hope, we shall find them in connection with those truths that deal with present duty in its bearing on future being. Life "in Christ" can alone bring future good, whatever that good may be; and a Christless life must necessarily bring awful ill, whatever that ill may be. The "ill," be it Eternal Misery, temporary misery, or annihilation, is sufficiently awful to warn a reasonable soul against it. On this common ground you and I can stand, but no other is safe.

J. ROSS.

THE WEEK.

THERE is no political news of any importance this week from any part of the world, and Indian newspapers are nearly unreadable at present, containing nothing but the Prince of Wales *ad nauseam*. The only interesting news about H.R.H. is a description of a wonderful evening dress which Poole the tailor has devised for him and his suite; a cream colored peajacket and knickerbockers, with a narrow braiding of gold round the jacket front. It is difficult to believe that so sensible a man as the Prince has consented, even at Poole's instance, to array himself at evening like a king in a pantomime. One of the papers states that the Calcutta Volunteers are to furnish a guard at Government House during the Prince's stay, and if so they had better be put through a course of training, as the duty will be a very important one, and will require thorough efficiency on the part of the men entrusted with it. The Flying Squadron arrived in Bombay on Friday week, and will form the finest part of the sight. There is every prospect of the Calcutta rowing club getting up a regatta for New Year's Day, crews being expected from Madras and Poona, while the Squadron is sure to have some rowing men in it. At Chandernagore there is, or used to be, a crew dressed like admirals:—this should be seen after. The Cricket Club season is to be inaugurated this afternoon by the customary ceremony of a tiffin. No proposal has yet been mooted for holidays in Calcutta during the Prince of Wales's stay, but the Bombay plan of taking a whole week is really too absurd. Three days at Christmas, and one or two at New Year's day, say the Saturday and Monday, would surely answer every purpose.

A MEETING of the Justices is advertized for the 17th, to elect a Vice-Chairman, but no fresh name has been published as a candidate. There are rumours afloat that the election will not come off at all, and that Government intends to subvert the municipality altogether, and wipe it off the face of the earth, appointing a Commission to manage the town affairs. We give the humour *quantum valeat*, but regard it as incredible.

IT is reported from home that the authorities have it in contemplation to abandon using the Staff Corps as an entrance to the Indian Army, and to send out men direct from home, thus making the Indian Army again a separate service.

FROM Madras we hear that the tallest of the cinchona trees at Nediwuttum near Ootacamund, planted thirteen years ago, now measures 33½ feet high and has a girth near the ground of 28½ inches. The Government plantations on the Neilgheries now contain 2,659,423 plants, of which nearly one-half are "red," and upwards of a million "original loxa" bark. The Quinologist's factory has been closed, but 28,659lbs. of bark were shipped in the half year to the home market, where bark is worth from 1*s.* 8*d.* to 9*s.* per lb.

IT is rumoured at Simla, that Sir Alfred Horsford is to be the new Commander-in-chief, and among other important changes to take place, it is said Lord Northbrook will resign the Viceroyalty early next year, and that Sir P. Wodehouse will retire from Bombay about the same time. That veteran theorist, Miss Carpenter, has arrived in India, and is bestirring herself to introduce more European ideas into the country. Her good intentions are undoubted, but to introduce a Factory Act, and a Labour Act may be to disturb long existing habits which work well, and to put ideas into the mind of the people unsuited for their condition, and tending to destroy their comfort and happiness.

IT is proposed, we are glad to learn, to erect a Hall in Calcutta, with a view to promote social intercourse among the European and Native races. The Hall will be used for the following purposss:—

1. Social Reunions.
2. Lectures and debate on literary and social subjects.
3. Newspaper and Magazine reading.
4. Public meetings for the promotion of objects of general interest and utility.

As soon as sufficient funds are secured, a Committee will be appointed, composed of representatives of all classes of the community. Native Chiefs and European and Native gentlemen, interested in the above object, are invited to extend their aid towards the erection of the proposed Hall. The project is very favorably regarded, we believe, by both the local and Imperial Government.

THE rumour that the Bishop of Madras would shortly resign has been officially contradicted by His Lordship's Chaplain.

MONEY MARKET.

FRIDAY 29TH OCTOBER.

THE year 1875 is bidding fair to be rather a remarkable year as regards the course of the money market, and calculations based on usual experience are so far being falsifed. After the holidays a marked demand for accommodation almost uniformly sets in; and last week's Bank Statement was a surprise to most people. The statement showed such a great falling off in the Bank's business, that a fall in rates would have been a natural consequence, but none having taken place, it is to be presumed the management sees further before it, than the outside public do. Certainly the present appearance of the market is very easy. The Bank's statement does indeed exhibit an increase of about 19 lakhs in the business demand for cash, but that is nothing to affect the position of money, especially as nearly all the Council Bills are at present being directed here, and the Government Balances have been so far reduced, that cash will most probably be paid in to provide for a great part of them. To be sure, there is little or no silver coming to this port from abroad, and as Burmah took very little last year, there is the greater probibility that it will require supplies now. Ceylon too has been taking coin from this market and is likely to want more, but the long depressed Piece Good's trade is now becoming active, and the Government cash balances are so much reduced, that the position of money is very different to what it was three or four months ago, and so far as can now be seen, there will be ample cash found here, without importation, to meet any demand that appears probable.

To produce dear money this cold weather, there is scarcely any thing apparent now, but as Exchange has taken up a decidedly strong position in Calcutta, and even more so in Bombay, although it is the slack season there, it will not be out of place to suggest that it is not improbable there may be supplies of silver sent to the East before long. The supply of new silver in Europe is apparently checked, but the stores in Germany and Holland, though drawn upon largely heretofore, must be far from exhausted, and any market rise in exchange would very likely tempt shipments from those sources. No doubt a large quantity will be wanted for small coinage, but the introduction of a gold standard will displace a good deal more than has yet been sent away,—and on that ground alone a much higher range of exchange than now exists, is improbable for the present season at least. Rates of exchange have not been so strong as last week, but there will be a much larger amount of mercantile bills making presently, and the prospects are that rates will be steady, if not higher. There have indeed been forward sales of such paper on about present basis, but the extent is not sufficient to modify what appears to be the natural course of rates. For to-day's mail the Banks have sold at 1-10-¼ for six month's sight, at 1-10-1-16 to 1-10 for three months, and at 1-9-¾ to 1-9-11-16 for demand; and Telegraphic Transfer has been given at 1-9-¾ to 1-9-11-16, all being rather firmer, although no higher, at the close. Export business being dull, Private Paper has been scarce. Credits have commanded the fine rate of 1-10-5-16, although so many private buyers now deal in Telegraphic remittance, and the Banks have all along been buyers of discountable paper at 1-10-7-16, and of payment documents at 1-10-½, with some disposi-

tion to accept less towards the end. Yesterday and to-day being holidays, business for the Mail was practically finished on Wednesday, when the following were the closing rates :—

Bank Bills	1-10¼	6 months sight.
Credit Bills	1-10 5-16	
Document Bills	1-10 7-16 to ½	

Import business may be called good now, and a very fair off-take is going on, with every prospect of continuing, but exports which ought to be active, are not nearly so lively as usual at this season. Jute is decidedly dull, in spite of slightly better accounts from home, but the Mills here are working steadily, and there is no accumulation of supplies. Tea has been doing well at home, and although next week's sales will be large, there is every prospect of good prices being obtained. There is nothing reported in new Indigo crop up to this time.

The market for Government paper has been much better this week, and rates are looking up, at all events for the staple four per cent stock. These have been in demand, and a considerable amount has found buyers at rising prices ; 101-13, 101-14, 101-15 and finally 102 having been paid. The other loans are not so currently saleable, but four and a halfs of 1872, which become fours in 1879, have advanced from 102-10 to 102-14. and are now quoted 103, at which they are still the cheapest stock in the market. The five and a half per cent. stock is exceptionally dull ; and lower transactions have taken place at 107-13 and 107-14. Wednesday's closing prices looked firm, and were :—

4 per cents.	102
4½ per cents.	103
5½ per cents.	107⅞

The share market is flat, with few exceptions. Tea is still much neglected, but Spinning Mills are looking up. Bank of Bengal Stock has further declined, as was to be expected, and still lower prices seem probable. Nationals too are lower, perhaps in sympathy, for by reason they ought to be higher, and in London there has been a general rise in the shares of the Exchange Banks that are dealt in on the Stock Exchange. Coal shares are again attracting attention. An idea is abroad that shares generally will be in more favor shortly, but up to the present time the market may be described as in a more inanimate state than it has been for years. The total business of the week has been very small, and the undernoted are the principal transactions that have taken place ;

Bank of Bengal, 1310, 5, 1300, 1295.
National Bank, 109, 8, 8, 108½.
Bengal Coal, 1375, 1375.
Equitable Coal, 230, 30, 35.
Beerbhoom Coal, 100.
Budge Budge, Jute Mills, 1 premium, 1 preminm.
Barnagore Jute Mills, 98, 7, 8.
Howrah, Jute Mills, 74, 5, 5.
Seebpore Jute Mills, 74.
Fort Gloster Jute Mills, 86, 6.
Singell Tea, 102, 1, 100.
Dehing Tea, 50.
India General Steam, 380, 85, 80, 380.
Strand Bank Press, 20.

INDIAN INTELLIGENCE.

BENGAL.

THE Durbhungah State Railway will re-open for traffic on the 1st November.

MR. THORNEYCROFT'S statue of the late Lord Mayo has arrived, and will shortly be placed upon its pedestal.

WE regret to hear of the death of Maharajah Ramkissen Singh, of Tikaree, one of the most distinguished members of the native aristocracy of Behar.

THE Bengal Government lately applied to the Government of India for a loan of 30 lakhs of rupees, for the construction of the proposed light railway from Patna to Gya. The application was, it is said, refused.

THE surveying party for the Naga Hills will start in a week or two under Captain Butler. There are some strips of country still unexplored between the Assam frontiers and the Burmese watershed which will engage the attention of the surveyors, who, we hope, will this time be undisturbed by a misunderstanding with the hill tribes.

NORTHERN INDIA.

MR. H. M. CHASE, District and Sessions Judge, has been transferred from Meerut to Agra as a temporary measure, on being relieved by Mr. Dashwood.

THE Lieutenant-Governor, North-Western Provinces, will leave Nynee Tal on the 4th November, reaching Moradabad on the 5th, Agra on the 6th, and Allahabad on the 8th.

FROM May to September, inclusive, 132 deaths of cholera occurred at Delhi. There were 231 seizures, 129 of whom were treated in the cholera hospital, of which number 56 died and 13 recovered.

THE Government of India has, at last, passed final orders on the case of Mr. T. C. Kavanagh, v. c., Deputy Commissioner in Oudh. Mr. Kavanagh is not to rejoin his appointment, but will be permitted to retire on the highest pension that an Uncovenanted servant can draw, *viz.*, £600 a year.

JUDGMENT was delivered on the 22nd instant by the Deputy Commissioner of Simla in Colonel Colyear's will case. The essential feature of the judgment is that the attestation of the document which purported to constitute Major Goad executor to a will previously executed has been declared invalid. A *pro tempore* receiver has been appointed to take charge of the estate.

A VERY foolish and absurd rumour is afloat amongst the natives of Seetapore, to the effect that a certain goddess, somewhere in Oudh, has demanded four hundred human sacrifices, and that her votaries have consequently sent agents to all parts of the province to entice or steal away young children for the purpose. The little boys and girls, particularly the former, are not allowed therefore by their parents to leave home for any purpose whatever. The attendance in the primary town schools is fast falling off for this reason. The credulity of the people is certainly in just proportion to their ignorance and superstition.

THE Oudh and Rohilkund Railway company will be seriously affected by a judgment just given in the court of the Assistant Commissioner of Barrabanki, Oudh, on the suits of certain villagers whose homesteads were destroyed by sparks from the Company's engines. The court held that the plaintiff's property was destroyed by the negligent conduct of the Railway Company or its servants, and decreed damages in the fourteen suits filed. Unless, therefore, the Company succeeds in procuring a reversal of the judgment on appeal, it will be obliged either to remove all the villages within a certain distance from the line along its entire length, or to give the villagers due compensation,—an arrangement which would cost the Company several lakhs. The case of the plaintiffs was admittedly taken up by the local Government, the villagers being virtually paupers. But we notice it thus prominently for another reason. It was urged by the plaintiffs' counsel, Mr. Sykes, that not only had the Oudh and Rohilkund Railway Company "no express statutable power to run locomotives," but that it was not even "under any statutory duty to run them." These pleas, novel and startling as they appeared at first, and to no one more than to the Company itself, were established to the satisfaction of the court, and held to be good. It is of course for the Company to strengthen its position by obtaining the requisite "statutory power" for future need. Meanwhile it lives and learns, and pays its little bill.

BOMBAY.

THE members of the Poona Ryot's Commission intend leaving Poona shortly for Matheran, where they will make their final observations before submitting their report.

H. H. THE GAEKWAR'S gold and silver guns have arrived at Bombay in charge of a native officer and a few men. They are neatly made, and are estimated to be worth ten lakhs of rupees.

THE Hon'ble Mr. Justice Nanabhai Haridas has been appointed to act as a Judge of the High Court during the absence on leave for three months of the Hon'ble Mr. Justice Pinhey. Mr. Justice Melvill, for whom Mr. Justice Nanabhai acted, is expected to return to Bombay about the 20th proximo.

THE Government House festivities during H. R. H. the Prince of Wales's visit to Poona will consist of a State dinner on Saturday night to the select few ; and a reception on Monday evening of Poona society. Government has for the first time thought it necessary to publish the names of those who are entitled to a private entrance to Government House.

IT has been resolved, we hear, to form, among the employés of the B. B. & C. I. Railway, a Volunteer Corps similar to that got up by the G. I. P. R. and E. I. R. Companies : and meetings for this purpose will shortly be held. The encouragement and assistance given by Government towards these movements are very satisfactory : and it is to be hoped that the efficiency of the Volunteers, in their organization and discipline, will repay the expense and trouble now being incurred. It has been stated that the Government allowance per head of Rs. 20 will be inadequate to meet the cost of the uniform, &c. ; but, as the men have been assured that they will be put to no expense whatever, they may rest certain that "satisfactory arrangements" will be made in every respect. We trust, with Mr. LeMesurier, that the gallant Volunteers will be able to supply a guard of honour when the Prince of Wales leaves India. We are glad to learn that there are, among the employés of the G. I. P. Railway Company, a number of musicians, and that there will be little or no difficulty in getting up a respectable band.

MR. C. GRONDONA, Agent of the Rubattino Steam Navigation Company, and Consul for Italy, met with a serious accident on Saturday morning, while having his usual early ride. He left his hotel, the Hope Hall at Mazagon, accompanied by a groom, and proceeded in the direction of Mahaluxmee. When near the Mahaluxmee bridge, his horse became excited, apparently from another horseman coming rapidly up from behind. Rearing and plunging desperately, the brute finally flung his rider with great violence, Signor Grondona pitching upon his head. Mr. Baumbach, of Messrs. Remington and Co., was happily then passing, and alighting, went immediately to his assistance. The Signor was unconscious, and with the aid of the grooms they conveyed the unfortunate gentleman to the very best place they could possibly have selected, namely, the Sir Jamsetjee Jejeebhoy Hospital, where surgical skill was at once applied. It was about half-past seven when Dr. Anderson, the House Surgeon, first saw him, and found on examination that besides a severe shock to the system and sundry bruises, there was concussion of the brain, but no fracture of the skull. Being of a robust and thoroughly sound

constitution, no ultimate danger is anticipated, an opinion, we believe, endorsed by all the doctors of the hospital.

WE are glad to learn that the Shevaroy coffee estates are looking remarkably well, and though coffee is commanding as much as Rs. 10 per maund, yet people do not appear eager to part with it Labour is cheap, compared with other hill stations, or even with the plains, and supplies are by no means dear, especially when it is considered that most of them are brought from Salem, fourteen miles distant. Skilled labourers, carpenters, &c., command high pay, as they have to be brought from the plains, and generally speaking they do not care to live any length of time upon the hills. The absence of limestone is a serious drawback, and building is, in consequence, an expensive business, as the lime has to be carried up from the plains by coolies or by bullocks. Clay, sufficiently good for burning bricks, is obtainable, but tiles for roofing must be brought from the plains, and cost, delivered at Yercand, about Rs. 5-8 per thousand. Timber for building is procurable in the forests, but some people prefer the palmyra timber of the plains, which is extremely expensive. House-rent is not high, considering that the houses are all furnished, and that for three or four months, or during the cold season on the plains, they are tenantless. The hillmen are a study in themselves, and the Sanitary Commissioner might find it rather a difficult matter to demonstrate how these people preserve their health, living as they do with their cows and buffaloes.

MADRAS.

MR. JAMES CARR and Mr. Joseph Owen Wright are the two Solicitors who have been called upon to show cause why their names should not be struck off the rolls of the Madras High Court.

THE South-east Wynaad Annexation Petition is not likely to be so soon disposed of as was at first anticipated. The question will probably be referred to the chief officials of the two districts most concerned, for report, after which it will be again brought before the Governor in Council.

THE number of Chinchona plants propagated at the Ooty plantations during the past half-year was 4,830, *viz.*, 7,190 plants of C. Augustifolia (var. Lanceolata) and 1,640 of C. Pitayensis. The number of plants permanently planted in the plantations remains the same as shown in the previous half-yearly report, *viz.*, 1,190,458. 54,700 Chinchona plants have been issued to the planters in Wynaad, and 23ounces. of Chinchona seed supplied to the public gratuitously. 709lbs. of green tea-leaf has been supplied to Major Jennings. 28, 659lbs. of Cinchona dry bark has been shipped to England for sale in the London market.

THE reduction of the Neilgherry Commissioner's salary from Rs 2,000 to Rs. 1,200, about which so much has been said and written, has after all taken place, but Mr. Cockerell, with characteristic independence, is determined, according to a correspondent, to withstand this encroachment upon his just dues, and has ordered the full amount of salary he has been accustomed to draw to be placed to his credit. This is as it should be. It would be an act of the grossest injustice on the part of Government, and one which no covenanted officer would tamely submit to, to reduce the salary of a man while in office, when he is fully entitled to that salary. The reduction should not affect Mr. Cockerell, it may, his successor. There will now be a little discussion again on the subject when the matter is referred to Government by the Accountant-General.

FROM a report by Dr. Blanc on the last outbreak of cholera in the Yerrowda goal, there seems little doubt that cholera poison was communicated to the Yerrowda prisoners through water; and the acting Sanitary Commissioner has taken the opportunity of this report to point out the great danger of the practice which so extensively prevails in India of drinking water fron rivers polluted by the washing of dirty clothes. It seems that four days previously to the outbreak at Yerrowda goal the corpses of two persons, who had died of cholera, had been burnt, and their clothes washed some twenty yards above the spot from which water had been drunk by some prisoners employed in watering a new road; so that, as Dr. Blanc remarks, "it is quite possible, even if not absolutely certain, that they may have drunk water actually containing the poison of cholera in its most dangerous state." This fact is most instructive, and shows the lamentable consequence that may ensue from a disregard of the rules of common sense in matters relating to health. Whatever opinions may exist as to the adoption of "cremation" as a means of disposing of dead bodies, there can hardly be a question as to its being desirable to burn the clothes, if not the corpses, of persons dying of infectious illness.

BURMAH.

THE reports from some parts of the Bassein district continue to be very unfavourable in regard to the crops; and though it is not expected that there will be any serious scarcity, there is little doubt that distress will be experienced in several quarters. Indeed, it would be hardly possible for such a loss as some 40 or 50,000 acres of culturable land to occur without creating distress.

ASIA.

A LATE issue of the Siam paper states that Government are arranging to send an army to the north in November next, to quell the disturbances now existing among some classes of the people. A battery of the new Gatling guns will be ordered to accompany the force, and the necessary arrangements are being made to supply the troops with accoutrements.

THE United States Consul at Tientsin, in an official report to the Department of State at Washington lately printed, laments over the lost cotton trade of America with China. "Our trade," he says, "with China in manufactured cotton goods was once considerable and promising; but in a time of national misfortune that trade passed away to others, who secured and still enjoy its benefits by the practice of downright systematic frauds. That countless tons of clay and other adulterations used by English manufacturers should be sold to the Chinese as cotton, with the aid of counterfeited trade-marks, is evidence of the shifts made by those manufacturers to retain control of a trade that does not naturally belong to them. Notwithstanding the difference in the price of labour in both countries, it seems anomalous that England should buy cotton of the United States, transport it across the Atlantic, and when manufactured send that same cotton in the shape of fabrics by a long and circuitous route to the consumers in China, when the same market is so much nearer and easier of access to the United States, where the cotton originates. American manufacturers could certainly purchase cotton in the United States on the same terms offered by English manufacturers; and it would seem that the higher price for labour paid by the American manufacturers should be partly, if not wholly, compensated by cheaper transportation direct to China across the Pacific, while English goods would have to bear the additional cost of transportation across the Atlantic and a superfluous half of the distance from England round the Eastern hemisphere to China. If American goods could avail of cheaper transportation even now, it must be remembered that they could not at present compete in China with grossly adulterated and hence cheaper English goods bearing the same trade-mark."

THE *Stamboul*, a French paper published in Constantinople, gives some particulars respecting the Chinese Navy which possess some interest at the present time. The ships composing the flotilla cruising on the southern coasts of China, the *Stamboul* says, belonged not so long ago to the Viceroy of Canton, who had purchased them from England, but lately the Imperial Government decided that they should hoist the Imperial flag. These vessels number sixteen; they measure, on an average, 300 tons each, which makes for the sixteen a mean total of 4,800 tons; they mount eighty-two guns in all, and have the outward appearance of English gunboats. Their artillery is relatively powerful. The *Tien Fo*, of 150 tons, carries six guns, among which are two little Krupps. The *Jan-Lan*, of 221 tons, also carries six guns, of which one is a 70-pounder Armstrong. On those of the ships which are commanded by Frenchmen the crews are armed with Chassepots, and on those commanded by Englishmen the Snider is the weapon in use. All the vessels have also a certain number of French revolvers on board. They are each accompanied by a war junk armed with ten or twelve cannons, and another junk as coal tender. The commanders, officers, engineers, and two or three instructors in gunnery, are Europeans; the remainder of the crews are Chinese. All the words of command are given in English, but the instructions are drawn up either in French or English, according to the nationality of the commander. The Chinese sailors work their guns very well, and some among them are good gunners. The sailors receive on an average twelve piastres per month in the shape of wages, and out of this sum they have to clothe and board themselves. The minor repairs which these vessels require are effected in Canton, in the arsenal built about two years ago, and which, it is said, will have to be closed, as it does not by any means pay.

MILITARY.

THE 19th Punjab Native Infantry will march on the 1st of November for Mooltan *via* Shahpore and Jhung.

PROFESSIONAL opinion, as expressed on the occasion of the recent field-days, was unfavourable to the efficiency of the Jutog Mountain Battery for actual service, in respect of the guns, the calibre of which is considered insufficient.

MR. JOSEPH HENKINS, late riding-master to the 4th Dragoon Guards, who was superseded for absenting himself from the headquarters of his regiment in Ireland without leave, is at present holding a command in the Carlist forces under General Dorregaray, to whom his former experience of irregular warfare gained under Garibaldi will be acceptable.

THE *Bombay Gazette* says: "We hear that a young officer, who has lately been astonishing the folks of Bombay by the magnificence of his equipages, has suddenly disappeared from the enchanted circle he drew around him. It is said that he has been passing himself off as the possessor of a rank which he was by no means entitled to hold, and that the financiers of his regiment have some very unpleasant matters to settle with him. In the meantime he has left a large number of confiding people lamenting his sudden disappearance.

The following changes have been made in the Madras Brigade Commands:—Brigadier-General, A. K. Gore, from recent promotion to British Burmah Division; Brigadier-General W. G. Owen, from Southern District, to Ceded Districts; Brigadier General W. T. Williams, from recent promotion, to Southern District; Brigade-Major Captain (Brevet-Major) J. M. Kerr, to Fort Saint George and Centre District; Major-General R. Hamilton, C. B., Staff Corps, is permitted to reside and draw pay within the limits of the Madras Presidency. Lieutenant Colonel T. Dyer, Staff Corps, to act as Brigade-Major Fort Saint George and Centre District, until relieved by Major Kerr, or until further orders.

IN the Commander-in-Chief's General Orders of the 14th instant we find the distribution list of the force to be assembled at the forthcoming Camp of Exercise at Delhi. The force will at first be divided into six divisions of separate arms, *viz.*, four of Infantry, one of Cavalry, and one of Artillery, for preliminary exercise—then into four divisions each having a due proportion of the three arms, for field manœuveres—and finally into two *corps d'armee*. All Staff Officers should be at the camp by the 1st of December, except the Umpire and Engineer Staff, whose arrival may be delayed until the 1st of January. Major-General Sir James Brind, K C.B., Royal Artillery, and C. T. Chamberlian, C.S.I., Staff Corps, head the list of Umpires.

EVERYONE will remember how, during the seige of Paris, written messages were reduced by means of photography to such a small com-

pass as to be capable of being inserted in a quill which was afterwards attached to a pigeon's tail. The same principle has been applied to military maps, which are reduced to one-tenth their size, in sections on glass or pellicule. When placed in a black chamber, about as large as a stereoscope, they are amplified by a microscope. A lucifer match, or the end of a cigar, affords sufficient light to consult them, and a series of concentric circles marks the distances. An officer can thus carry the ordnance maps of all France in his pocket book. It is clear that the process might be applied to other purposes besides military ones. A traveller in the snowy range of the Himalayas would often find the advantage of having a map that could be stowed away in a pocket book.

GENERAL.

SIR JOHN STRACHEY is expected at Bombay in time to meet the Prince of Wales.

THE Emperor of Brazil is about to set out on a visit to Europe and the United States.

A STRASBURG paper states that the sword given up by Napoleon III. to King William was handed over by Prince Bismarck in March 1871 to General Castelnau, who went to Berlin for that purpose under an assumed name.

Mr. ROBERT LOWE, Mr. Grant Duff, Mr. Alexander Russel, Editor of the *Scotsman*, and Dr. W. B. Carpenter, the well-known writer on physiology and other subjects, are all said to be candidates for the Rectorship of Aberdeen University in succession to Professor Huxley, whose term of office is about to expire.

IT is said that at the Arenenberg Council it was decided that the Prince Imperial would undertake the exclusive direction of the Bonapartist policy, and be wholly guided by M. Rouher. The members of the party in the Assembly will demand a plebiscite and the revision of the existing Constitution.

A SEMI-OFFICIAL note has been sent to the Paris papers, pointing out that certain articles recently published, advocating the annexation of Belgium to France, merely express the fantastic ideas of private individuals. That they should have been noticed by Belgian Journals has caused, it is remarked, profound astonishment in France.

THE Medical Congress at Brussels was brought to a close on September 25th. The leading English members of the Congress state that from a medical, as well as from every other point of view, the organisation of the Congress was excellent, that highly important questions were properly discussed, and that the reception of the members of the Congress left absolutely nothing to desire.

IT is stated in official quarters, says the *Civil and Military Gazette*, "that an officer of the Financial Department may be deputed to the Staff of the Prince of Wales during the Royal tour. The interchange of presents alone will involve the payment of several lakhs, and as the Imperial Parliament, as is its usual custom, will demand an account, this financial control is considered necessary.

THE case of Mr. Robins, who, with his wife and children, was arrested and very roughly treated by the police in Paris, has, it appears, been settled; but (according to the correspondent of the *Times*) not very satisfactorily. The Prefect of Police, on receiving a letter from the Foreign Office, summoned the commissary before whom Mr. Robins was brought, and admonished him to be "less brusque with strangers in future."

IT has been decided by the Liberal members of the French Assembly to return to Paris at the beginning of October, in order to prepare for the work of the session, which commences on November 4th. According to the *Opinione Nationale*, the determination of the Cabinet to adopt the system of voting by arrondissement has produced a strong sensation among the Left Centre members, and a rupture between the party and M. Dufaure is decided upon.

THE Greeks in London are about to establish a club, on the model of the Cobden Club, in honour of the memory of Byron. It is to bear his name, and its object will be to "commemorate the genius of Lord Byron and his generous and heroic exertions for the liberation and regeneration of Greece, and to cultivate the growth and fruition of patriotism in Greeks and philhellenism in Englishmen, and of mutual amity between the two nations."

ALMOST the only news regarding the insurrection in Turkey is contained in the Belgrade papers, and must be received with caution. One statement is that the Turkish commanders have ordered all the maize fields for four leagues round, between Nisch and the frontiers of Servia, to be fired, in order to facilitate the march of an army into the latter country. The papers further assert that the Turks are making preparations to attack the Servian towns of Alexinatz, Saitschar, and Negatin.

THE Marquis of Bute is trying a curious experiment near Cardiff: he has had planted some 3,000 vines on a sunny slope on his estate, and means to try if wine can be made in Wales. He has already had some wine made from grapes trained against walls, and has even contrived to drink some of it. One hopes that Lord Bute's wine may not resemble the *vin de Suresnes*, of which it is said that it takes three men to drink it—one having to hold the victim while the others pour the wine down his throat.

THE Americans are wise in their generation. Though the idea of repudiation seems to haunt them they are continually agitating for "specie payment" "honest payment of the public debt in coin;" "sacred preservation of the public faith;" "repudiation denounced in every form and guise." It is something to know that the democrats of New York, headed by the Governor, are "squarely on a hard money platform;" but why this agitation? Does national honesty require a platform in the United States? It certainly does in Spain.

MR. SPENCER, an engineer connected with the East Indian Railway, has invented a system of obviating the inconvenience arising from the expansion and contraction of the long wire ropes used to get distance signals. The wire is cut midway between the signal and the station, and a heavy weight, hanging in a well to the two ends, which pass over friction pulleys, takes up the stack as the line expands, or yields to its contraction. Of course a pull from the station is thus converted into a relaxation of the wire at the signal post, and *vice versa*.

THE Turks are waking up. Mr. Scudamore has already undertaken the reform of their post-offices; and now an Engineer from Constantinople has arrived in London charged with the duty of negotiating with one of the numerous asphalte companies for the paving of the entire Turkish capital with asphalte. The asphalte mania has also spread to Alexandria and other smaller cities in the East, who are about to cover their streets with the tarry composition which in wet weather converts the thoroughfares into skating-rinks.

THE Pope received the address of the Florence Catholic Congress on September 29th. He commended the censure passed by the Congress on Liberal Catholicism, and eulogised the newly formed O'Connell League for liberty of teaching by the Church. The enemies of the Church, he said, accused it of ambition and wanted to enslave it, but it remained mother and mistress. The Italian Catholics should exert themselves, and even if their efforts were futile, God would reward them. They should combat error while showing themselves charitable to those who were misled.

A BEYROUT correspondent writes on the 7th ultimo: "The American Palestine exploring party left for the east of the Jordan on Thursday, September 1st. It consists of Colonel Lane, Chief Engineer and Commander of the party; Dr. Selah Merrill, Archæologist; Mr. Rudolph Meyer, Assistant Engineer; and Mr. J. Harvey Treat, General Assistant. They will make a preliminary reconnaissance of 45 days in the Hauran, Bashan, and Moab, and then begin their cartographical work. The maps to be constructed by the American expedition east of the Jordan, and by the English Expedition west of the Jordan, will be of immense value and the Porte might well afford to assist in bearing the expense."

THE Carlists are daily yielding, and their long struggle is now considered played out. It is to be feared that civil feuds of another kind will now begin, and no one is found to look hopefully at the prospects of the young King. All the while the Carlists were in the field political differences were buried by Madrid partisans with common assent. They are now being quickly unearthed, and the King may yet wish that the Carlists had kept in the field. Persistent measures to keep Cuba are taken. It is a singular position for a great Power owing its three hundred millions, and in the eyes of Europe a defaulter, fighting its battles with money which belongs to other people, and on which it fails to pay interest. Spain is a dishonest borrower. It is to be feared that even in Europe it can hardly be said to stand alone.

AN ocean homing bird of great docility, intelligence, and spirit, has been found in Iceland, which flies at a meteor-like speed of 150 miles an hour, and is able to find its home, over sea and land, from any part of the habitable world. A pair of these birds, a few days ago, brought despatches from Paris to a lonely spot, congenial to their nature, in a wild and rocky part of Kent, within ten miles of London, in an hour and a half. Press carrier pigeons took the despatches on to the city—the whole distance from Paris to London, by actual parcel mode of conveyance, being done within an hour and a half! If the experiments at present being made in training and educating them continue successful, it is hoped by next summer to establish a daily miniature ocean mail between America and Europe, the whole distance to be traversed between sunrise in one hemisphere and sunset in the other.

A LETTER from Zanzibar narrates a daring adventure in pursuit of slavers. On August 9th, the launch of Her Majesty's ship *London* was crusing off Bemba Island, when a slave dhow was observed becalmed seven miles distant. Robert Trigger, Captain of the launch, thereupon determined to board her, and started off in a small boat with two blue jackets and an interpreter. After pulling two hours the slaver was caught. The three men sprang up her bows with cutlasses between their teeth, knocked down with their fist the Captain and those who came to his aid, and before the crew had recovered from their surprise, had lashed the Captain and two others hand and foot and put them overboard into their boat; the rest of the crew were intimidated. A breeze springing up, Trigger made sail and took the dhow, which was densely packed with slaves, alongside the *London's* launch. The dhow was taken to Zanzibar, and condemned, the British Consul commending Trigger and his comrades to the consideration of the Admiralty. Captain Sullivan, of the *London*, however, gave the men a severe rebuke. He has since been superseded by the Admiralty.

WHEN the *Vanguard* went down, many persons muttered that of course nobody would be found to blame. The members of the court-martial have, however, been found much above making things pleasant. After taking infinite pains to get at the causes of the accident, they give a verdict which shows that the Vice-Admiral, the officers of the *Iron Duke*, and the officers of the *Vanguard*, are to blame. Those of the *Vanguard* are, however, alone able to answer for themselves in this inquiry, and all the officers and ship's company are acquitted of blame save five. Upon these five the censures of the court fall heavily. Captain Dawkins *is*—the order sounds strange considering where the *Vanguard* lies—dismissed his ship, and he is also severely reprimanded for neglect of duty before and after the accident. Commander Tandy and Navigating Lieutenant Thomas are also severely reprimanded for want of seamanlike alertness before and after the accident, and for similar shortcomings the Chief-Engineer and carpenter are reprimanded, but not severely. That the whole squadron was moving too fast, and that the *Iron Duke* increased its speed in the fog and shifted its course, are matters yet to be dealt with. The loss of the *Vanguard* has at least

given occasion for proof that the navy is not eaten up with *esprit de corps.*

A COLOURED woman, named Sarah Jones, at Beach Island, New York, has given birth to twins. One of the children is a perfectly developed female, large for her age, and with every appearance of health. The other, who is a male, is but imperfectly developed, has only the rudiments of limbs, and does not eat, depending for sustenance upon its sister. These two beings are joined together by a wide band in the centre of which one of the lungs of these strange creatures seems to be located. Touch the male, and the female will shrink; pinch it, and she will cry. Reverse the operation, and still it is the female who manifests sensibility. The head of the male is small and misshapen, the ears presenting more the appearance of those of an animal than of a human being. The pulsations of the heart and the act of respiration can be plainly perceived in the ligament joining the bodies. This ligament, if such it can be called, is joined to the girl at the end of the breast bone, and to the male lower down. It is broad and thick, covered with skin like the rest of the body. Whether there are two distinctive sets of vital organs, or whether both are dependent upon one, has not yet been determined. The latter opinion seems to prevail, however. It is apparent, at any rate, that the male receives nourishment through its companion.

THE New York correspondent of the Simla paper says: With regard to inventions to save labour, I saw exhibited a writing machine, called here a type writer, which some day, with all the copying and *chit writing* one has to go through in India, may be found very useful there. Writing of all sorts can be done twice as fast with a great deal less labour than writing in the ordinary way, and it is by no means a complicated machine; the price of it is about 100 dollars, and I believe it is having a great sale. It is about a foot and a half high and 6 inches broad, and very portable. The letters are formed or rather printed on paper by touching knobs upon the alphabet, and numerals are printed. It works very rapidly, and no type setting is required, as each letter comes into its place on the ivory key or knob being touched. I saw the machine in operation, and numerous letters from clergymen and authors written on type writers of their own, saying that they had found by experience that it was infinitely easier both to write and think at the same time, using this machine, than with the ordinary method of holding the pen. It only takes a few days to acquire the use of the machine, and one can practice upon a slip of paper about a foot long and 3 inches broad, which is an exact copy of the finger board of the machine. The direction of the shop is Densmore, Yost and Co., 707, Broadway, New York, and I can assure any one applying that the firm will be happy to send out to India their printed descriptions of the machine.

LITERARY.

MR. CHARLES DARWIN is said to be writing a work on "Climbing Plants." Granting the transmission of hereditary qualities, a Darwin ought, at any rate, to know all about "climbing trees."

THE Guzerat Vernacular Society are making good progress with their new dictionary of the Guzerati language. Nearly 25,000 words have already been collected.

A NEW work by Messrs Pierce, the well-known chess problem composers, and containing a collection of 600 masterpieces of chess strategy by English authors, will shortly be published.

DR. HUNTER'S "Life of Lord Mayo" will be issued by Messrs. Smith, Elder and Co. this winter. Dr. Hunter will also edit, with a memoir of the writer and notes, the "Essays on the external policy of India" of the late Mr. J. W. S. Wyllie, some time Acting Foreign Secretary to the Government of India, while Professor Nichol is to edit "the prose works of Sydney Dobell."

AN important discovery has just been made at the Abbey of Grotta Ferratta near Frascati. It consists of the copy of a manuscript of Strabo, more ancient than all the others known of that Greek geographer, and which fills up many hiatuses in the text which the Hellenists had hitherto used. Some Sicilian monks, driven from their country, and who, at the invitation of Otho III., took refuge in that monastery in 1002, took with them a number of valuable manuscripts in Greek, which they used, but kept carefully from the knowledge of others. Thus the treasures there long lay buried until the learned Cardinal Angelo Mai came to make research. His investigations were continued by Father Giuseppe Cozza, and in the course of his operations he had the good fortune to find a palimpsest, under the writing of which (a text of the Old Testament of the eleventh century) appeared other characters which had been effaced, but which, by the aid of chemical reagents, can easily be re-established. The original of that ancient writing is the work of Strabo, in three columns, in uncial letters, and continuous.

ECCLESIASTICAL.

THE Rev. R. S. Copleston, Bishop-designate of Colombo, will be consecrated immediately after Christmas.

THE *Madras Mail* contradicts the rumour that Dr. Gell contemplates resigning the Bishopric of Madras in the Spring. His Lordship has no idea of resigning so long as the state of his health admits of his continuing in office.

WE learn that there is a strong probability that a Presbyterian Chaplain will be appointed to Lucknow at an early day, and it is rumoured in the station that a Presbyterian Church is to be built in the Cantonments.

AN interesting ceremony took place at Dehree-on-Sone on the 20th ultimo. Dr. G. C. Roy, M. D., F. R. C. S., who was officiating for the permanent incumbent of Superintendent of the Jail and Civil Surgeon, was publicly received into the Christian Church. The Rev. W. Wilkinson officiated.

LATEST TELEGRAPHIC NEWS.

London, 22nd October.

HEAVY rainfall and further disastrous floods in England.

London, 22nd October.

THE Foreign Office has received a telegram dated 18th, from Mr. Wade from Shanghai, stating that the guarantees obtained from China comprise a Chinese Mission to England with a letter of apology for the Yunan outrage and a safe passage to and across the Burmah frontier for the Mission of Enquiry to be sent to Yunan. Further the Commissioner of Customs has been instructed to report fully respecting the taxation on foreign trade, and the Chinese Government engage that when the enquiry is concluded a competent Chinese Officer shall confer with British officials on the regulation of frontier trade between Burmah and China. A Decree was issued on the 10th instant, calling the attention of the Provincial Government to the passport clause in the treaties alluding to Mr. Margary's murder; and to the consequent appointment of the Commission. Mr. Wade returns to Pekin in about a week after having despatched Messrs. Grosvenor and Baber to Yunan.

London, 22nd october.

COLONEL HENRY YULE has been appointed Member of Council for India.

London, 23rd October.

THE Prince of Wales has arrived at Port Said.

The rainy and tempestuous weather continues in England. The rivers Trent and Ouse are overflowing and causing serious damage and loss of life.

The following appointments appear in last night's *Gazette*:—R. De Sails to be Colonel 8th Hussars, J. O. Gibsone to be Colonel 7th Lancers, Henry Renny to be Colonel 85th Foot, and J. T. Preston to be Lieutenant-Colonel of 45th Foot.

Brevet appointments.—A. A. Spencer and David Downing to be Generals, E. L. Russell, W. D. F. Patton, and P. E. Herbert to be Lieutenant-Generals; C. H. Morriss, C. W. Thompson, and Robert Warden to be Major-Generals, and B. H. Heathcote, J. T. Usher, and E. D. Smith to be Lieutenant-Colonels.

London, 25th October.

THE floods in England are partially subsiding. The Prince of Wales arrived at Cairo yesterday, and had a splendid reception.

London, 26th October.

YESTERDAY being the anniversary of the battle of Balaclava, the surviving non-commissioned Cavalry officers and men who were present at the charge met together at a banquet at the Alexandra Palace.

The Troopship *Jumma* has sailed for Bombay from Portsmouth.

London 26th October.

IN race for Cambridgeshire—

Sutton	1
Lord Gowan	2
Grey Palmer	3

A fresh insurrection has broken out in Khokand.

Admiralty has received a telegram from Suez stating that the engines of the *Serapis* now works satisfactorily.

Steamer *Pekin*, carrying passengers, mails and cargo of the disabled Steamer *Deccan, has passed the Suez Canal.*

Berlin, 21st October.

THE Bavarian Liberal Ministry have resigned owing to the address voted by the narrow Ultramontane majority of the Chamber. The King has refused to accept the resignation, and has likewise addressed the Ultramontane.

Milan, 23rd October.

THE Emperor of Germany has left Milan.

Cairo, 26th October.

THE Prince of Wales arrived here on Saturday evening, and was received at the railway station by the Khedive. On Sunday he visited the Khedive and gave reception to the English residents and afterwards dined at the Palace on Monday. His Royal Highness conferred the Order of the Star of India on the hereditary Prince, in presence of the Khedive. His Royal Highness started to-day for Suez and was accompanied by the Khedive as far as the railway station.

Shanghai, 26th October.

MESSRS GROSVENOR AND Baber started yesterday on their mission to Yunan, and will be followed on the 30th instant by Mr. Davenport, who joins them at Hankow. All three will proceed through Yunan into Burmah, after investigation of the outrage on Mr. Margary.

Suez 27th October.

THE Prince of Wales embarked last night for Aden.

St. Petersburgh, 27th October.

THE Khokandese have dethroned Nasreddin. The second Russian exploring expedition, which started in the middle of September, have reached the vicinity of the mouth of the Attreck.

ADVERTISEMENTS.

BANK OF BENGAL,

Calcutta, 26th October 1875.

NOTICE is hereby given that the Bank of Bengal, General Treasury and Public Debt Office will be closed on Monday the 8th November 1875, on account of the Hindoo Festival "Juggodhattree Poojah," in conformity with Government Notification, No. 3464 of 29th October 1867.

By order of the Directors,

(Sd.) R. HARDIE,

Secretary & Treasurer.

The Celebrated Futtehgarh Tents.

ANY order for Tents required for next cold season, Durbar, Mess Native Princes, and Kutcherry will be furnished on application. For particulars, and detailed very reasonable Price List, apply to

MESSRS. BULDEO PERSHAD & Co.,

General Merchants and Tent Manufacturers,—Futtehgarh.

SIXTEENTH REPORT BY THE DIRECTORS OF THE

NATIONAL BANK OF INDIA, LIMITED.

THE Directors have pleasure in submitting the Accounts for the half-year ended 30th June last, duly audited.

The net profit for the half-year amounts to £23,045. 18*s.* 3*d.*, and after adding £2,375 10*s.* 10*d.*, brought forward from last account, there is a balance at credit of Profit and Loss Account of £25,421 9*s.* 1*d.*

With that sum the Directors have dealt as follows :—They apply

In payment of an *ad-interim* dividend, at the rate of five per cent. per annum, free of income tax	£11,631	5 0
And carry to next account	13,790	4 1
	£25,421	9 1

The Dividend is payable on and after 23rd instant.

In the exercise of the discretion vested on them by clause 32a of the Bank's Articles of Association, the Board of Directors have resolved not to call the Shareholders together at this time, as there is no business of any importance to bring forward.

The result of the Bank's operations for the half-year under review has satisfactorily fulfilled the anticipations of the Board, who are glad also to be able to add that no bad debts have been incurred.

The Branch at Shanghai was opened for business on 1st May last, and gives promise of realising the expectations formed regarding it. There and at all other points a steady and satisfactory business is being done.

National Bank of India Limited,
London, 22nd September 1875.

By order of the Board,
R. O. SAWERS,
Chief Manager.

E. W. WINGROVE, } *Directors.*
R. P. HARRISON,

We have compared the above Balance Sheet with the Books and Vouchers kept in London; and the Certified Returns from the Branches, and find the same in accordance therewith.

C. N. COOKE,
FRANCIS COOPER (Cooper Brothers & Co.) } *Auditors.*
LONDON, 21*st September* 1875.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S
ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt*, by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S
ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Honduras Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood*, and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children. CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

DISTRICT DOG-CARTS.
(ON A NEW PRINCIPLE.)

MESSRS. NOWRAJEE & CO., COACH BUILDERS, &c., LUCKNOW, beg to intimate that they undertake to construct the above Carts, with all the latest improvements, for the trifling sum of Rupees

ONE HUNDRED ONLY
For Cash.

N. & Co. have supplied these Carts to all parts of India, *viz.*, the *N.-W. P.*, *Punjab*, *Central Provinces*, *Bengal*, *Oudh*, and recently *Burmah*. Most of the Planters in *Tirhoot* and *Lower Bengal* provided themselves with these Conveyances during the Famine operations, and found them very useful; while the Officers in the Customs and Survey Departments use no other now while out on duty.

Being light and movable, they are easily forwarded to any part of the Country at a trifling cost, and can easily be drawn by Ponies or Galloways.

Harness and Lamps to suit, at Rs. 30 and 20 extra.

N. B.—Orders from Out-stations must be accompanied with a remittance.

Home Park, Broughty Ferry, Scotland.

Establishment for the Board and Education of Young Ladies.

CONDUCTED BY MISS HISLOP, DAUGHTER OF THE REV. A. HISLOP, AUTHOR OF "THE TWO BABYLONS," &C.

BROUGHTY FERRY is healthily and pleasantly situated at the mouth of the Tay, and is much frequented by those in pursuit of health.

It is the aim of the Principal to combine the highest possible gradual development and culture of the intellect, with the Christian training and watchfulness of a home. A large staff of Masters and English and Foreign Governesses. Reference is kindly permitted to

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India,* and will be a complete record of what is being attempted for the improvement of the Agriculture of the country ; of its planting enterprise ; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"
Calcutta.

&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office, No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

PRINCE OF WALES'S ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

Rs. 50 to Rs. 400 each.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

St. Xavier's College,
No. 10 *and* 11 *Park Street.*

My Dear Mr. Fleury,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13th May 1875. E. LAFONT,
Rector.

OPINION OF BRADFORD LESLIE, ESQ., C. E.,

Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. Fleury & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.

Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary

P. W. FLEURY, Esq.

Dear Sir,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,

Great Eastern Hotel, NIAUDE,
Calcutta, 17th January 1874. *Secretary.*

Calcutta, 28th December 1869.

Messrs. P. W. FLEURY & Co.

Dear Sirs,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,

F. & C. OSLER.

P. W. FLEURY & Co.,

No. 44, FREE SCHOOL STREET,

CALCUTTA.

THE "Indian" is a Life Office only, and its Funds are therefore free from the Risks attaching to Fire and Marine business.

INDIAN LIFE ASSURANCE COMPANY, LIMITED.

COMBINING LIFE ASSURANCE AND PENSIONS.

Funds *entirely* in GOVERNMENT SECURITIES AND REMAIN IN INDIA. Policy-holders can appoint an Auditor.

Established 1869

ON NEW, SOUND AND POPULAR PRINCIPLES.

(Preliminary expenses including Establishment of 44 Agencies Rs. 2,066 only instead of Rs. 50,000 and upwards!)

REGISTERED UNDER ACT X. OF 1866.

Capital Rs. 500,000 Fully Subscribed.

Paid-up Rs. 100,000 only (to leave a large surplus to Policy-holders) as advised by the Actuary, J. Hill Williams, Esq., Vice-President, Institute of Actuaries, London.

HEAD OFFICE: MEERUT.

BRANCH OFFICE: BOMBAY.

Advantages of Assuring with this Company.

(1) ECONOMICAL MANAGEMENT. (2)* ENTIRE DIRECTION IN INDIA (3) NO AMALGAMATION. (4) FUNDS in Government Securities only. (5) REDUCTION OF PREMIUMS. (6) POLICY-HOLDERS entitled to appoint an Auditor. (7) REDUCTION TO ENGLISH RATES from date of leaving any port in India, Ceylon or China. The first Company which granted this complete concession. (8) NO RESTRICTION ON TRAVEL. (9) INDIAN RATES of Premium charged while in India. English Rates on leaving for Europe. Assurers who do not contemplate spending a *life time* in India or other tropical climates, will find that the rates of this Company compare *favourably* with *enhanced English Rates*. They have the advantage of *consistency*, as it is *proved beyond doubt* (by the various Civil and Military Funds) that English Life is of less value in India than in Europe. (10) ASSURANCES EFFECTED on lives of EUROPEANS, EURASIANS, PARSEES, AND HINDOOS. (11) CLAIMS PAID three months after satisfactory proof of death. (12) POLICIES for the whole term of life. Short terms of years certain, or payable during life time. ENDOWMENT ASSURANCES combine the advantages of Personal and Family Provisions. They are made payable to the assured themselves on attaining a specified age, or to the representatives at death should that happen sooner. A PROMISSORY NOTE GRANTED for every PREMIUM PAID. (13) HALF CREDIT SYSTEM. (14) NON-FORFEITABLE POLICIES BY LIMITED NUMBER OF PAYMENTS. Should payment of premium not be continued, a paid-up Policy in the form of a Negotiable Promissory Note payable to bearer is given for every Premium paid, which Promissory Note cannot lapse, and is payable on the death of the assured or may be converted into cash during his lifetime to the extent of *30 or 40* per cent. of the premium after 1st or 2nd years paid, without forfeiting the balance of the sum assured. Thus, the assured receives full value for his money for although he can only withdraw 30 or 40 per cent. of the amount of his premiums paid, he receives value for the remainder by being assured. In this way he has full control of his money, the Premiums paid becoming to him equal to a current banking account withdrawable at will. (15) LIBERAL SURRENDER VALUES. (16) SUMS PAID under Promissory Notes exempt from all charges. (17) PREMIUMS are payable monthly, quarterly, half-yearly, yearly, in five, ten, fifteen or twenty payments, or on the half credit system. (18) LAPSED POLICIES may be revived at any time on production of approved Medical Certificates and payment of arrears of Premium, with interest. (19) LOANS ON POLICIES. (20) EXCHANGE OF POLICIES by the substitution of Lives. (21) PENSION BRANCH. *The Rates are more favourable than those of any similar Fund in India.*

THE TWO GRAND INDUCEMENTS TO POLICY-HOLDERS MUST ALWAYS BE

Unquestionable Security; and as large Profits as the System of Life Assurance admits.

Forms of Proposal, Tables of Rates, and any further information may be obtained on application to the Company's Agents, or to

D. LANCASTER, *F. I. A.*,
Secretary.

* Head Office, Meerut, 1875.

* Extract from Mr. P. M. Tait's Paper on "Anglo-Indian Vital Statistics," read before the East India Association, London, on 28th January, 1874:

"One formidable objection to English proprietary Companies doing business in India is, that the local Directors and representatives of these Companies in India are simply Agents without any substantial power, and removeable at pleasure by the chief authorities in this country."—(England) *Insurance Record, February*, 1874.

GROVE PARK SCHOOL, WREXHAM.

PRINCIPAL.—J. PRYCE JONES, L. C. PREC.

ATTENTION is respectfully invited to the following facts:—1. The locality of the School is remarkably healthy. 2. The premises are extensive, and fitted up with due regard to the comfort of the Pupils. 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Book-keeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

TERMS which are moderate and inclusive with lists of successful pupils on application.

THE LONDON ASSURANCE CORPORATION

FOR FIRE, LIFE, AND MARINE ASSURANCES,
INCORPORATED BY ROYAL CHARTER, A.D. 1720.

HEAD OFFICE.
No. 7, ROYAL EXCHANGE, LONDON, E.C.

GOVERNOR,
JAMES BLYTH, ESQ.
SUB-GOVERNOR, DEPUTY-GOVERNOR,
EDWIN GOWER, ESQ. DAVID POWELL, ESQ.
JOHN P. LAURENCE, ESQ., Secretary.
JOHN ANTHONY RUCKER, ESQ., Underwriter.
ARTHUR H. BAILEY, ESQ., Actuary.
THOS. B. BATEMAN, ESQ., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates.

Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.

Medical Fees and Stamps are paid by the Corporation.

SOUNDY AND Co., BOMBAY.

NOTICE.

THE CENTRAL ASIAN TRADING COMPANY,

BESIDES having in view the development of British commerce with the countries beyond our frontier in India, are desirous of establishing in the Punjab a warehouse upon the same principle as exists in London or any other large commercial city in Great Britain. Goods of every kind will be kept stocked in their warehouse at Peshawur for the purpose of enabling the English merchants of the Punjab (or any other part of India,) to select goods wholesale on the same principle as they now receive from England. The Company's produce coming direct from the Manufacturer must naturally offer advantages superior to what merchants so far inland are at present in the habit of receiving in dealing with Agents in England. The most favourable terms will be granted by the Company to merchants with whom they have business connections. The Company trust, by confining their business to wholesale transactions, that the European merchants of the Punjab (or any part of India) will appreciate their endeavours to open up a system of trade intercourse, which must eventually prove of immense benefit to the Company themselves, the retail merchants and the public generally.

The Company may not have the exact description of produce in stock, required by all the European firms with whom they hope to do business; they are however prepared to bring from England, without any delay, such goods as may be wanted provided the firm requiring the same will please to inform them of their probable yearly demands.

The Central Asian Trading Company offer the same inducement to the native traders of the Punjab, *i. e.* to supply them with every thing they require in their daily business transactions. Every attention will be paid by the Company to the suggestions of native merchants in their dealings with the Company, so as gradually to introduce a system of trade intercourse which must prove profitable to all. The Company are prepared to receive barter in exchange for the produce of their warehouses, provided such produce is saleable either in the markets of India or Great Britain.

Mr. Thomas Russell, Manager of the Central Asian Trading Company, will feel happy at all times, to grant information to any one desirous of doing business with the Company; all letters should be addressed to Mr. T. Russell, Manager, Central Asian Trading Company, at Peshawur from 1st November to 30th March, and from 1st April to 31st October at Murree.

PROSPECTUS.

CENTRAL ASIAN TRADING COMPANY "LIMITED,"

CAPITAL £1,20,000,

WITH POWER TO INCREASE:

IN 12,000 SHARES OF £10, OR RS. 100 EACH.

Managing Director, Pro. Tem.

C. E. HERBERT, Esq.

Manager.

T. RUSSELL, Esq.

As soon as a sufficient number of shares have been taken up a full Board of Directors will be elected :—

Bankers in the Punjab.

THE PUNJAB BANK LIMITED.

Bankers in London.

THE DELHI AND LONDON BANK LIMITED.

Bankers in Calcutta.

THE DELHI AND LONDON BANK LIMITED.

Bankers in Bombay.

THE NATIONAL BANK OF INDIA LIMITED.

Agent in England.

GEORGE HOLME, Esq., PRESIDENT, DERBY CHAMBER OF COMMERCE.

Agents in Bombay.

Messrs. FORBES and Co.

Agents in Calcutta.

Messrs. FITZE and Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only* or by barter.

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager, C. A. T. Company.

Murree, September 1875.

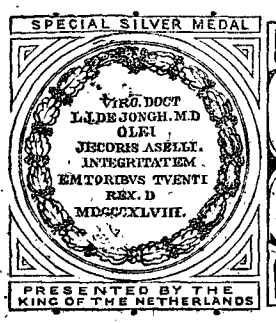
To

The Manager_____Bank Limited

Sir

I enclose Rs._____being on account of my first call of Rs. 10 per share on _____shares in the Central Asian Trading Company Limited, and I undertake to accept that number of shares, or any small number, that may be allotted to me.

I remain,
Yours faithfully,



DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHEBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT O. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND *INTEREST.*
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.

WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.

POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fall of Two Lives.

POLICIES FOR SHORT TERMS of from 1 to 10 years.

ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
~~The Medical Fee in all Cases Paid by the Society:~~
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

John Ralph Engledue, Esq.

Secretary,—Andrew Francis, Esq.

The financial position of the Institution on 31st December 1874, was as follows:—

Proprietary Capital	.. ..	£1,000,000	0 0
Annual Life Income	Premia ..	76,424	0 0
	Interest ..	25,594	0 0
Realized and Invested Funds	..	598,970	0 0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia; for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

EDITORIAL NOTES.

THE Viceroy and party passed through Allahabad on Monday, and arrived in Bombay on Tuesday afternoon. Wednesday and Thursday were to be fully occupied with receptions.

On Tuesday morning the Prince of Wales arrived at Aden, and is reported to be in excellent form. His reception was characterized by great enthusiasm, and the decorations are said to have been astonishing. He will be in Bombay in two days. The Western Capital is already ablaze with excitement, and is full of native chiefs with their picturesque retinues, which seen from due distance will doubtless form a striking if somewhat grotesque spectacle for the Prince. The city has of course received a vast crowd of strangely mingled visitors, and we hear that due precautions have very wisely been taken to prevent the outbreak of an epidemic. As our royal visitor will be in India before our next issue we send him by anticipation a hearty welcome. Whatever opinions may have existed, expressed and unexpressed, regarding the visit, its attendant circumstances, and *probable results*, now that the Prince may almost be said to be among us, all will agree in hoping that the satisfaction of the visitor himself may be complete, and that the results to India, may be as great and good as the most sanguine have anticipated.

***

WE should have noticed in our last issue the meetings held at Bankipore on the 20th and 21st ultimo, for considering arrangements to be made for the reception of the Prince of Wales. At the former meeting the sums subscribed were princely, and amounted on the spot to Rs. 1,40,666. We hear with unalloyed satisfaction that the bulk of the large sum subscribed, is not to blaze to heaven in the form of rockets and illuminations. Fortunately for Behar, the Prince will be at Bankipore for a few hours only, and these by day, during which he will be entertained by the Lieutenant-Governor of Bengal, and the reception expenses will be limited to a comparatively small sum. There will thus be no prodigious waste to be deplored, as at so many places throughout India. It is therefore proposed to commemorate the visit by some permanent institution of a useful character; and the proposal to found an Art and Industrial College is a most commendable one. We congratulate the wealthy inhabitants of Behar on their good sense as well as their princely munificence. What act of public beneficence is to commemorate the royal visit in Calcutta? We heard of a proposal in connection with the Free School. Has anything come of that?

***

SIR RICHARD TEMPLE did well to visit Sikkim. To the rôle of administrator, he has added that of the pioneer of trade and civilisation, and he could hardly have expended his superfluous energy more usefully. Where Sir Richard has gone, others are sure to follow. The inhabitants and their northern neighbours will by and by become familiar with the sight of English visitors, and before very long we hope, the way will be opened up for an important trade. We certainly look for more important results from the tour than Sir Richard's amateur sketches, though we have no doubt these will be interesting and creditable enough. To the mere tourist considerable attractions are offered. On the third day of the tour, the Lieutenant-Governor reached Toomlong, the capital, with its palace and three monasteries, and a population of about two-hundred. One of the best views of Sikkim is said to be from the summit of Phieung-grong, at an elevation of about 13,000 feet. On the sixth day, Chomnaga was reached, and here he was hospitably received by the young rajah, a boy of about 16 years of age, small in stature, not very princely in appearance, but modest, observant, and anxious to please. The guests fared in Chinese style on soup composed of maccaroni mince, and eaten with chop-sticks, and bread baked in long devices, with butter. The rajah's mother and her husband Changzed, who is nominally at the head of the durbar and practically the ruler of the State, assisted in entertaining the exalted visitor. The matters of business said to have been discussed, were, forest conservancy in Sikkim, the relations of the State with its neighbours Nepal, Bhootan, and Thibet, the roads in the country, the trade route through one corner of it, bridges &c. Presents were exchanged, and His Honor, after ascending the Chola pass, which is said to afford a view of striking grandeur, began to retrace his steps towards Darjeeling.

***

THE latest telegrams about Herzegovina are not of a tranquilizing kind, and the quelling of the insurrection, or the satisfaction of the insurgents, seems as far off as ever. The *Official Gazette* of St. Petersburg is said to have expressed a want of confidence in Turkish promises of reform, and to have declared that the Powers must take steps to put an end to the sad condition of the Christians in Turkey. We can hardly feel surprised at such an announcement, and, especially, when along with it comes the intelligence that the Turks have massacred some families of insurgents who surrendered themselves, and that Turkish subjects have *violated the Servian territory and committed depredations.* Still such interference, as the *Official Gazette* suggests, must, if exerted, be fruitful of momentous results,—results which Britain is not in a position to contemplate without some misgiving. Assuredly our statesmen will have need of courage and sagacity in dealing with this difficult problem. It will not be easy to make duty and expediency of one accord, if it comes to be a question of what power shall sit supreme at Constantinople. The *Times*, which is always the organ of expediency, deprecates, as we should have expected, the interference of foreign powers, and we suppose Lord Derby will be of the same mind as the *Times*. It would need a more daring statesman to grapple with this business.

***

WE are sorry to learn that our anticipations are too likely to be realised, with regard to the effect of the early stoppage of the rains in Tirhoot. If we could take inspiration from the *Official Gazette* and hope against hope that rains sufficient to be of any real service, may yet fall, we should be glad to do so. But there is no such hope, and considerable distress must now be looked upon as certain. Rice in Durbungha is already at fifteen seers the rupee, and as assistance is hardly expected from Government for such a small local calamity, some provident planters are already storing rice in their factories, and preparing to face the prospect. We cannot believe that, in this season of rejoicing, when money is flowing like water, and blazing out in fireworks, this one district will be allowed to suffer from want of the necessaries of life. *It is not a little remarkable that the country which* was starving from famine so recently, should now be able to entertain the Prince of Wales at such a cost to the people of the soil, and the idea of the people of Tirhoot being allowed in such circumstances to suffer the pangs of hunger, is not to be entertained. Government must not be above so small a matter, and we cannot doubt that whatever necessity may arise, will be abundantly supplied.

***

THOUGH the Chinese difficulty cannot at the present stage be said to be settled, the negotiations have reached a degree of completeness, at which matters must rest for some time to come. The mission from Pekin to Yunnan is now on its way, and we sincerely

trust—though our hope is by no means well assured—that Messrs. Grosvenor and Baber may be successful. We formerly expressed a doubt as to the wisdom of insisting on conditions which the Chinese Government might be unable to fulfil, and grave suspicions have been expressed in other quarters, of the ability of the Government at Pekin to enforce its commands at Yunnan. But we do not think it probable that the gentlemen of the mission run any serious risk, with regard to their safety. The most that we dread is their failure to achieve any practical result, and that the Chinese may simply have a fresh opportunity of laughing at us in their sleeve. *If* the mission prove successful and the punishment for Margary's murder be inflicted by the Chinese Government, it will be far more satisfactory than if a British force had been sent through Burmah, but we fear that the chances in favour of such an issue, are not of a very hopeful kind.

***

WHEN we took exception some time ago, to the remarks by a contemporary on the recent appointment to the Directorship of Public Instruction in the Hyderabad Assigned Districts, we did so merely on the ground that the only objection urged, was that the person appointed was a native of India. It appears, however, from a consideration of the strong claims that have been ignored, and of the former position of the fortunate official who has been appointed without claims, that the Government has taken a step, which only peculiarly exceptional circumstances (and we hear of none) and extraordinary qualifications on the part of the gentleman in question, could justify. The power of choosing the fittest men for offices of high responsibility, is often, in rulers of genius, like an unerring instinct, and sometimes finds its best instruments in the most unlikely places, but we have yet to discover that the present Viceroy and his advisers possess this power in a remarkable degree. It will require something more than ordinary success to justify the present appointment. It is a defiance of official indignation, and, what is of more consequence, of public criticism, and we shall watch for the result, which will enable us to ascribe it to heaven sent genius.

***

IN the "Press Message" controversy with the Editor of the *Madras Mail*, the Government of India in the N.-W. P. appears to have missed the point at issue. The question arose on the receipt of a telegram by the Editor of the *Madras Mail* subscribed "Press Message," containing matter of a purely private nature, which under the existing telegraph rules he was bound to publish in its entirety, or, as an alternative, to pay the difference of cost between "Ordinary" and "Press rates." The object of the address to the Government of India, was to point out the inconsistency of a rule which insisted upon the publication of a telegram, no matter how libellous or actionable, or in default, the payment of a fine. Thus the practical effect of the rule is to punish an Editor for not *doing wrong*. Surely there is some means of removing such an anomaly.

***

IT has long been evident, that Turkey was steadily sinking into hopeless financial embarrassment; while the fact, that, for years past, she has systematically paid her dividends with new loans ought to have proved a warning to those having a pecuniary interest in Turkish Bonds. The end has now come with its train of consequences. Upon the holders of the nine per cent Treasury Bonds the blow will fall with the greatest severity.

The default has been the cause of a good deal of indignation, in consequence of what appears to have been an opportunity, designedly afforded, for a large amount of stock jobbing on the part of those who were seemingly in the secret; a sequel which satisfactorily explains the fact, that for some days previous to the publication of the official announcement, prices from Constantinople had been very weak, and large sales on account of Turkish paper had been ordered.

The official notification runs as follows:—

"It is well known that the Budget shows a deficit exceeding "£5,000,000. In order to be able to pay regularly the coupons "of the various loans, the Government had hitherto been in the "habit of obtaining fresh loans, thus paying one debt by contract-"ing another. The result of this expedient was an increase of "the deficit and a dimunition in the confidence of holders of "Turkish securities, which is proved by the constant depreciation "which Ottoman stock daily undergoes. In consequence of this, "the Government, in order to completely balance the budget, has "definitively decided to carry out from to-day the following "measures. All the receipts from the customs, as well as those "derived from the sale of tobacco and salt, the tribute paid by "Egypt, and, if necessary, a portion of the sheep tax, will be paid "into treasuries specially established for the purpose, without, how-"ever, thereby prejudicing the rights resulting from the concession "made to the Imperial Ottoman Bank. It has been likewise decided "that during five years the interest on Turkish securities is to be "paid half in cash and half in bonds payable in five years bearing "an annual interest of 5 per cent. After five years the coupons will "be again paid integrally and regularly as hitherto."

The first loan, obtained by the Turkish Government in 1854, was for 3 millions, and from that time to the present, she has increased her debt to £180,000,000. Of this sum, the six per cent issues have special hypothecations, and the revenues for each are, in most cases, handed over to the Imperial Ottoman Bank. The loans of 1854 and 1871, secured by Egyptian tribute and remitted direct to the Bank of England, cannot be applied to other purposes. The issues of 1869 and 1870, amounting together in the aggregate to £50,000,000, less the bonds redeemed to the present time, have also special hypothecations. So that, in short, the only portion of the public debt on which the Sultan is free to make any experiments, which his caprice may suggest, is the 5 per cent, or general debt; of which he himself is by far the largest holder. The total amount of this actually in the market is £61,000,000. The scheme by which it is hoped to restore the financial equilibrium, will under the most favorable circumstances add £50,000,000 within five years to the nominal debt of Turkey.

***

THE dispute between the Orthodox and Liberal Protestants of France is as fierce as ever. M. Vignie of Nimes, and President of the Consistory, asserts that the position of the Liberal Churches is deplorable. Owing to the prolongation of the dispute caused by the matter having been referred to the Council of State, months must elapse before the Council gives its decision. In the *interim*, the Churches are closed, public worship not celebrated, religious instruction suspended, sacraments are not administered, and families stricken down by grief, are deprived of pastoral consolation. One journal goes so far as to say that since the revocation of the Edict of Nantes, no such condition of things has been witnessed, as that now to be deplored. The Minister of Public Worship offers to recognize pastors "provisionally," but neither Liberal nor Orthodox Protestants will accept the offer; alleging, that if the Church exists, nothing provisional can be recognised. The contending parties are right in rejecting all makeshifts. What is required is a decision frank, clear, and resolute, on the part of the Government.

***

FULL permission has at last been granted to the Bible Society to print and circulate the Scriptures throughout the whole of the Russian Empire, and the Society has also obtained from the authorities at Constantinople that which was some time ago taken from them, the right to print the Scriptures in Turkish in the city of Constantinople. These successes will in some measure compensate for the difficulties thrown in the way of the circulation of the Bible in France, by the ascendancy of Ultramontane influence in the government of Macmahon. The various Bible Societies of the world have been the means of translating the Scriptures into 175 distinct languages, and 250 different dialects, and have given to a vast number of these nations, an alphabet for the first time in their history. Lord Shaftesbury lately asserted at Glasgow that the two societies connected with Great Britain alone, had circulated over the surface of the globe so many copies of the Scriptures that, if they assigned but one copy to five readers, they had issued more than would furnish every human being on the face of the earth and almost every one in his own language, with a copy of the Word of God. "There might be small insigni-"ficant languages which they had not reached yet, but they trusted by the blessing of God, to reach them, and that they would not leave a single corner of the world to which the Bible had not penetrated, or a single dialect of importance into which it had not been translated; and these great operations it was that constituted the secret of our strength and the glory of our kingdom."

***

BIGOTRY on the Burial question is, in England, slowly giving way to a pressure from outside that cannot much longer be resisted. The conference of Clergy and City, held in the Sheldonian Theatre, Oxford, last month, came to a resolution on the subject, which perhaps goes as far in the matter as staunch Churchmen can be expected to go, though we hardly expect that it will satisfy the opposite party. The resolution fully admits the right of every Englishman to interment without reference to his religious opinions, but it insists with equal firmness on the Church's right to

have her churchyards ensured against the intrusion of any service other than her own. Consequently while any one may be buried in the churchyard without any religious service, the resolusion proposes that those who desire services not according to the forms of the Church of England, should be interred in cometeries provided for that purpose by the local authorities. These new cemeteries would of course be unconsecrated, and any sort of service Christian or Pagan, would be permitted. Further than this, we say, there is no probability that Churchmen will voluntarily go, and nothing but an act of the legislature will convert the churchyards into national property. Compromise of a kind to satisfy both parties is scarcely to be anticipated, and the question must come up for a trial of strength in Parliament.

***

INTERESTING missionary meetings were held in the early part of last month, in connection with the Baptist Union of Great Britain and Ireland. The service of the 5th October was is connection with the departure of several new missionaries for their appointed destinations. Among these were Dr. William Carey, and Mr. H. I. Tucker for India. We trust the former has inherited the mantle as well as the noble name of the Christian conqueror of India. He will doubtless receive a warm welcome where that name is so deeply and so deservedly revered. At another meeting on the same day, interesting addresses were delivered by the Rev. H. R. Pigott, Ceylon, Rev. Dr. Buckley, and Rev. J. Williams Orissa.

***

THE Italian Catholic Congress which opened at Florence on the 27th September under the presidency of Monsignor Cecconi appears to have been a conspicuous failure. The *Journal de Florence*, an Ultramontane print, laments that out of 30,000 heads of families in Florence, less than 150 gave in their adhesion to the Congress. Italian Catholics labour under difficulties which do not hamper the 200,000,000 of their Communion scattered over the world. The great Ultramontane grievance is the dethronement and captivity of the Holy Father, while none of the members of the Association ventured to allow themselves any direct allusion to a question involving the very existence of their country.

However sad the condition of things in Italy at the present moment; however low the standard of morals, it would be difficult to assert that there was ever either more piety or more holiness of life in former times, even in the Provinces which were under the immediate control of priestly Government, or in the Two Sicilies where the government was administered on the most rigid principles of the Syllabus.

One of the most general and most melancholy failings of the Italian people, says the Florence correspondent of the *Times*, is their propensity to blasphemy, and, he might have added, to the most obscene language. The evil is universal, and is an outrage upon civilization as wel as religion. The most atrocious oaths and revolting obscenities are household words with men, women, and children of the lower, and sometimes even of the higher, classes throughout Italy, the offence becoming more frequent and more pronounced at every step from the Northern to the Southern part of the Peninsula. It has become in great measure a habit, and persons break out, even when least excited, into expressions of which they either do not know, or do not consider the meaning. But one might defy the Archbishop of Florence, to say whether blasphemy is a more prevalent vice now than in the good old times, or whether, indeed on the contrary, there is not some little improvement of late among the educated classes, and more especially the so-called "unbelievers." It is in Rome and Naples especially, where people have been longer under the full influence of the priests, that the name of the Saviour and of the Virgin Mary, the especial object of popular adoration, are most frequently made the occasion of almost incredible invective.

The same writer says, that those who are interested in the religious life of Italy express a firm opinion that a revival of faith therein whether pure or otherwise, is hopeless till a separation of religious from political interests has been thoroughly effected. "So long as on the other side of the Alps, people pray for the "Pope-King," and Italy is threatened with the danger of an Ultramontane crusade, the hostility of the soundest and noblest part of the population to the Church—which makes the Pope's dominion over the Roman State, and the supremacy of the ecclesiastical over the civil power in every Catholic country, dogmas of Papal Infallibility will continue to be as consistent, as violent, and as indiscriminate as it now is. Were good sense and moderation to guide the choice of the next Conclave, and a new Pope to sit in the Vatican, willing to accept accomplished facts, making his peace with the nation and compelling the Church to "give unto Cæsar the things that are Cæsar's," there might be some hope of a revival of true religion in the country. It is the Church that has made the nation infidel. Well-meaning Italians themselves feel that religion in their country has been made so exclusively a matter of the senses, of threatrical shows, of outward practices, of corrupt indulgences, and of absurd miracles, as to revolt rather than edify even the most grovelling minds.

***

THE establishment of hill-colonies of poor Europeans and Eurasians is a project that has been long talked of, and we trust may soon enter the region of practical experiment. We are glad to hear of a conference between the Lieutenant-Governor and the Chaplain of Darjeeling on the subject of a proposed colony at Buxa, and we hope that we may soon hear of some tangible result. The question is not merely one of beneficence, but has become almost of necessity, and may without exaggeration be said to be of imperial interest and importance. There is an accumulation of helpless destitution, degradation, and low morality in our Indian, cities which is not only a disgrace to our Christianity, but is a blot if not a serious danger in the Empire. And there has been proposed no remedy so full of promise, so suggestive of solid results as the of hill-colonisation. There may be a small class too depraved or too useless to be transformed into vigorous and thriving agriculturists and artisans by the most favourable influences, but we cannot doubt that the majority of the lapsed population of Whites and Eurasians might be redeemed from misery, and made a source of prosperity instead of a burden and disgrace to the State. There is a superabundance of excellent sites in the Himalayas, the Neilgherries, and the Western Ghauts. These might in process of time be dotted over with colonies, centres of industrial life and energy, and admirable refuges for such as are unfortunate in the plains. Let an experiment be honestly made, and the success of one will be the begining of many. If Sir Richard Temple's name should be associated with the foundation of the first hill colony, he will deserve honourable mention not only in our provincial, but in our imperial history.

***

WE hear through the *Cochin Argus*, of an extraordinary case of what appears to be ecclesiastical swindling carried on in a superbly insolent style, by the Chaldean Bishop Mellus among the Christians of Trichoor. He came to the place sometime ago, with letters from the Patriarch of Babylon appointing him Metropolitan of Malabar. On the 7th of Feb. last, he addressed a letter to the Syro-Chaldeans of Malabar, in which he published a brief professing to be signed by Pope Pius IX, and which conferred certain powers upon the Chaldean Patriarch. Having thus imposed upon the ignorant Christians of the district, he and a priest named Philip Azais seem to have used their assumed authority chiefly for the purpose of collecting sums of money. It would appear that some of the more intelligent of the flock came to suspect that they were being fleeced by those who were not shepherds but wolves, and a Mr. Chereyeth Authapay wrote a letter to the Right Reverend Dr. Meurin, Bishop of Bombay to have their doubts removed. Dr. Meurin has not minced matters in his reply, and has roundly charged Bishop Mellus with schismatical intrusion, forgery, and misappropriation of funds, including in these charges the priest Philip Azais. He declares that the Patriarch of Babylon has no authority in Malabar, and that the Pope's brief professing to confer such authority, is an impudent forgery. He gives some particulars as to the antecedents of Bishop Mellus, and charges him with having conducted a begging expedition to France in behalf of his poor countrymen and with enriching his own family with the proceeds. Here is a sample of Dr. Meurin's strong language which he would hardly have dared to use had he not felt that he was justified by the facts. "The Brief published by Bishop Mellus is therefore a barefaced forgery. If it is a true and authentic document, written by the Pope, Bishop Mellus will not remain silent at my charging him publicly with *mean forgery*, but will contradict my statements or prosecute me for libel. But he dares not do that, for he is conscious of his guilt. He will remain silent, like Philip Azais, that unworthy priest and companion of his, whom I charged publicly with the same crime of forgery. He remained sillent, for he knows that I possess still the fabricated seal, with which he sealed his forged documents for collecting money in India; he remembers that he gave up to me those false letters of recommendation together with his false seal on my threatening him, that otherwise I would make him over to the Police. Is it not heartrending to see a bishop and a priest, both

forgers, ravaging the Church of Christ, and dragging numbers of souls with themselves into eternal damnation?"

***

THE Marwarries, or money-lenders, are the exciting cause of some novel propositions. A correspondent of considerable experience in the machinations of these oriental counterparts of the money-lending harpies who lately provoked the ire of the London *World*, writes to the *Times of India* proposing "to abolish altogether the recovery in civil courts of debts due for money lent or goods delivered" as the only means of checking their dishonest practices. This remedy, our contemporary considers, would be even worse than the disease, as the Marwarries though great, are not unmitigated, evils, and it suggests as a more appropriate measure, that the courts which take cognizance of their claims, should be empowered to exercise equitable jurisdiction, to decree, in short, not all that is in the bond, but all that the money-lender could fairly demand. We do not see how this proposal, if carried out, could be of any practical benefit. A bond or promissory note not unfrequently represents from three to five times the value of the money actually passed in the transaction, and it is always in the power of the lender to provide against any probable abatement of the sum exhibited in the document. To improve the Marwarrie off the face of the earth is we fear impracticable.

***

THE commission of enquiry on the agrarian outrages against the village money-lenders in the Deccan, have, it appears, completed the first part of their investigation into the causes of the indebtedness of the agricultural classes and the working of the Civil courts, and it is reported that they are now engaged in ascertaining to what extent, if at all, the land revenue assessment and the collection thereof are connected with the outrages. The question is of the utmost importance to the Agricultural classes, and it is earnestly hoped that the enquiry itself, or any measures it may possibly result in, may prove a relief to those concerned. Among the moral proposals for ameliorating the condition of the ryots, is one, put forth by an official of standing, to establish an encumbered estates court to relieve *all* encumbered estates by paying a certain percentage, in full acquittal of all claims. When it is considered that such estates may be numbered by perhaps hundreds of thousands, the *practicability* and economy of the measure are obvious. Our contemporary the *Bombay Gazette* would have a really good bankruptcy law. It sums up its suggestions thus:—1. Reform all Law Courts by mak- "ing them cheaper, speedier, and diminishing appeals; (2) Per- "mit no bond to be drawn up, mortgaging or selling land, except "by a licensed notary of known good character; (3) Force all who "can afford to educate their children to do so in towns where there "are schools; (4) Insist on equitable interpretation of contracts, "and sell no land in execution of a decree except with the sanction "of the head executive officer of the district." (5) As light a "land-tax as the state can afford to levy, with a liberal treatment "of the ryot in years when crops fail."

Suggestions 1 and 2 appear reasonable. Compulsory education in towns scarcely bears on the question, for it will at least affect but a very small percentage of the agricultural population, and that in a questionable degree. (4) The equitable interpretation of a contract would be a partial remedy at first, and soon cease to be one at all, owing to the manipulation of future contracts to suit the requirements of equity in name only. How the chief executive officer of a district can object to the sale of land in the execution of a decree, without stultifying the law, is more than we are able to perceive. (5) A light assessment has been the invariable policy of the British Government, while the partial or entire remission of the revenue in a season of scarcity or famine, has long been the rule. Since much of the ryot's distress arises from having to borrow money from the money-lenders to pay the land revenue, the simplest means of relieving him of that necessity would seem to be to receive its equivalent in kind.

THE GOVERNMENT AND MORAL EDUCATION.

ALTHOUGH a great part of the blame which is thrown upon the Government in India for neglect of moral training in its efforts to raise the intellectual level of its native subjects, is undeserved, being based on assumptions which are utterly erroneous, it is impossible to deny that it is, in some measure, the fault of Government that such a charge has been made, and that it has been possible to make it with some degree of plausibility. Whatever may be the desire of those who superintend our Education system, it is unquestionable that they have fallen into the very serious mistake of presenting to the native mind Western education not mainly as a means of mental culture, but chiefly as the sure and only road to worldly advancement. It was easy to make this mistake; to correct it must be exceedingly difficult. It would have been long before natives of India would have become enamoured of Western Education for its own sake or for the sake of the culture which is its proper effect. But they speedily discovered that if they availed themselves of the education which Government offered them, it bore a kind of print that they were well-qualified to appreciate, situations in Government offices and houses of business with comfortable salaries, and increased facilities for mercantile and professional success. They grasped at these prospects with avidity, and have never to this day been able to see that education, even a so-called intellectual education, ought to lead to higher results than these. That there are natives who are honorable exceptions, and look upon mental culture and moral elevation as of far higher value than pecuniary gain or professional success, we are eager to admit. Our statement, nevertheless, applies to the mass of those who take advantage of the education that Government, and other institutions provide. And we are sorry to be obliged to refer to some recent minutes by Sir Richard Temple as being calculated to foster this false conception of education in the native mind.

The students in our colleges have thus been encouraged to look upon the curriculum as a process by which they may, if their fate be favourable, be transformed into thriving government officials, successful lawyers or clever men of business. Its worth in their eyes is its prospective money value, and nothing has been done to help them to a just view of the real nature of education. And though, judging from the high character of the professors in our colleges, we cannot doubt that much moral instruction has been given, and excellent examples set before the students, and, though we hold strongly to the belief that a true intellectual training cannot but be a moral training, yet it is not wonderful that students with sordid views of the nature and utility of education, should be blind to all that does not seem to point in the one direction in which their eyes are turned. But not students only, but even those friends of morality whose voice is now heard in loud complaint against the demoralising tendency of our system of education, seem unable to comprehend the truth, that there can be no clear line of demarcation between intellectual and moral training. They, too, have been smitten by the delusion that the training given in our Colleges is intended merely as a course of preparation for a career of worldly success, and as a consequence believe that morality can only be taught as a distinct subject. This is a radical mistake. Not only can the moral sense be trained and developed by a course of literature and science, but these cannot be truly taught, at least they cannot be truly learned, without the moral sense being cultivated. True intellectual culture and true moral culture are inseparable.

The truth we have stated, however profound it may be, is so far from being original, that to some it may appear a trivial common-place. But many a truth is common-place by repetition, yet far from being commonly apprehended, and this is one which it seems necessary to declare persistently. And it is so all the more, because some of our readers may meet it with the practical objection, that we have before our eyes in India a vast system of intellectual education, which has been in operation for a considerable number of years without having produced any improvement in morals. Nay it is even declared that alongside of the intellectual advance there has been going on a deterioration of morals. In reply to this objection we repeat what we have elsewhere stated, that it has not yet been made clear that there has been a declension of morals. Is it not rather that the immoral conduct of our university graduates and students is more noted than similar conduct in others who have not had their advantages? And is it not also that immorality in these men manifests itself in new and strange ways and is offensive, as much by reason of its novelty as by reason of its folly or wickedness? But, though we have not seen sufficient reason to admit that there has been deterioration, we cannot deny the lack of evidence of any improvement. It must be confessed that education does not appear to have done much for morality in India. We have

already indicated how far we think that Government or the system may be held responsible for this. An utterly false ideal has been held up before the native mind. And it is incumbent on Government and the Officials of the Education Department to be instant in season and out of season to sweep away the false ideal and put a loftier one in its place. It might well be an instruction to all Principals and Professors of colleges to make it one of their grand aims to impress upon the minds of their students, with all the moral earnestness at their command, what is the true end and object of the higher education. To learn that, is itself no mean part of education, and till that begins to be apprehended, no cramming of the memory, nor any amount of mental gymnastics, will lead to high mental culture or loftier morality. But no more would courses of morality lectures. Ethics might be taught as easily as logic or grammar, and with precisely the same effect on the moral nature of the student.

We are for from asserting that morality cannot be taught. But it can be taught only under certain conditions. Moral principles may be enlightened and developed, nay, as we have said, must be so, by a thorough education in science, literature, and philosophy, even though the education be what is called secular. But a secular system can only educate the moral principles; it cannot implant the germs of them in the mind. And if students come to our Colleges destitute of the seeds of true morality in their minds, as we greatly fear a large number of them do, it is vain to hope that a College course, though under the wisest management, can produce a crop from an unsown field. We are driven to the conclusion that the fault that has been laid to the charge of our education system is really due to the minds of the students. And believing so, we have no confidence that any such measure as the establishment of chairs of morality would have any beneficial effect.

Moral principles are either inherited, imbibed at home and in early youth, or awakened by the appeals of religion to the heart and conscience in after life. Government in India is irretrievably committed to a system of secular education and cannot enforce moral teaching by the sanctions of religion. It could not even attempt to do so without either being false to the Christian religion which it professes, or violating its promise not to interfere with the religions and social prejudices of its native subjects. And therefore we do not believe that Government can do much more than it is now doing for the moral reformation of the students of its colleges. That reformation must begin somewhere else. It must begin in the homes of the people, and be carried on in the elementary and upper schools, and then but not till then, may we anticipate good moral results from the the higher education of our Colleges. Let those virtuous and intelligent natives who complain of the effect of education on the habits of their countrymen, bestir themselves, but not for the purpose of getting Government to establish morality classes. The axe must be laid more nearly to the root of the tree. They will confer on their country a far greater moral benefit by joining heartily among themselves to discountenance and uproot the degrading superstitions and practices so common among the mass of the people, and by helping native society to fling off the fetters that hold it in ignorant servitude. Morality must be taught to the mass of the nation, or it will continue to be taught in vain to the enlightened few. If you cannot cleanse the fountain, you labour in vain to purify the stream. There is much work to be done by native social reformers, and we see with hope that a spirit of reformation is stirring at the present day. But it will be found to be a grave mistake to look to Government, or to a College training for much assistance, for a true reformation must come from within. And we would give one practical advice to our native friends: Leave off in the meantime complaining about the moral failure of the higher education, and strive with all your might to forward the great cause of elementary education among the masses. Your hope lies there, and not in the direction of the Colleges.

We must not conclude without stating our unfaltering conviction that it is only Christianity that can, if anything can, truly elevate the moral character of the people. And by Christianity we do not mean a dry and barren system of Christian ethics, not Christian morality divorced from Christ, but the Scripture Gospel in its integrity. From using the true lever of morality, our Governments are debarred, and can only teach and enforce morality by enlightened laws and pure administration of justice. A different machinery, using the power which alone can regenerate the moral nature, must reach the hearts and purify the homes and lives of the masses of the people. But the great subject of missionary enterprise is one on which we cannot now enter.

THE STAFF CORPS AND STAFF CORPS PENSIONS.

IT is stated that the Royal Commission appointed to consider promotion and retirement for the Army, is in favor of a certain age for the latter: that is to say, it recommends an involuntary retirement after so many years service. Now, a scheme of this kind depends for its success on the manner in which it is carried out, and on the liberality of the Government. If involuntary retirement can be rendered voluntary, so to speak, by the inducements offered to go, the plan will work well; if, on the other hand, a man is simply consigned to Jericho when the State has no further need of his services, the dissatisfaction in the Army will be great, and one more Military grievance will be added to the long list that is now swamping the service in a sort of Slough of Despond. Some time ago, we drew attention to the sorrows of Indian Officers in the matter of pension, and pointed out the absurdity of attempting to reconcile the healthy current of promotion wanted, with the miserable pensions of a past century. In fact, the Indian Army requires the consideration of a Royal Commission in this thing quite as much, if not more than the other, for the Public Money is now almost thrown away upon special retirements, when a revision of the pension rules is the real remedy for stagnation of promotion and senility. It is ungracious, we know, to say that private interests have any thing to do with this waste; nevertheless, there is a strong suspicion that they are not altogether forgotten in the matter. It has better suited many of the Colonels of the Staff Corps, who retired under special conditions, to receive sums of ready money than annuities, but concessions of this kind do not benefit the Service generally one whit, but only the favored officers whose circumstances they happen to suit. To meet the wants of *all* the officers, such revision of the pension rules is requsite as will enable officers to retire from the service before they are completely worn out, and incompetent as commanders.

A great error in the construction of the Indian Staff Corps, was the mistake of not providing it with a liberal scale of pension. The consequence of this error has been, that the very fair rate of speed in the promotion rules of the Corps, is neutralised by the block among the senior officers when the question comes to retirement. The prospect of a mere pittance for pension, baulks the old officers at the last moment, and they hold on to India with a desperate tenacity rather than risk that state of semi-starvation in Europe, which belongs to the pension scale of 1798. The pensions of the Indian Staff Corps are, with very little difference, those of the officers of the old Indian Army, and yet the Staff Corps was devised for certain services altogether different from those appertaining to the the regimental officers of the old Native Army. Staff Corps officers fill many important and lucrative civil and political appointments, but their pensions are those of the regimental officer, and there is something strikingly inconsistent in a salary of say fifteen hundred rupees a month, and a pension of one hundred and ninety pounds a year,—the latter the reward of twenty years actual service in the country. It was another mistake we think, to render Staff Corps pensions dependent upon years of service, and not upon rank. The effect of this has been to give Majors and Lieutenant-Colonels very often only the pension belonging to the grade of Captain. For example, no officer is entitled to retire on any pension whatever until he has completed twenty years Indian Service, but as it generally, we might almost say invariably, happens that before the twenty years are accomplished the officer has

been several times to Europe on furlough or sick leave, or both, all this leave must be deducted from the twenty years of servitude necessary to qualify for the first, or captain's pension. Thus, an officer may be, as we have said, a Major or Lieutenant-Colonel before he is entitled to retire at all, and then only on a pension belonging to a junior, and worse paid, rank than his own. There is also a manifest inconsistency between twenty years' Staff Corps service promoting an officer to a Major's rank, and the same twenty years' service only giving him a Captain's pension. It appears to us that the Staff Corps Officer should receive the pension properly appertaining to his rank, whatever his years of service might be, and if this concession were granted, it would doubtless expedite those retirements that are wanted in a great measure. For, as the thing works now, the Staff Corps Officer is constantly striving to make up the years he has spent in Europe, and is clinging to the Service to gain the pension of his grade, and not that of the grade next below it.

It is difficult to say at what age an Indian officer ought to leave the service, for some men are young men at a period of life when others are old. It is pretty clearly shewn, however, by our military acquaintances any where, that after a certain age the officer's interest in the service becomes very slack, and his nerve and judgment shaken. This decay arrives sooner with some men than others, but whenever apparent, the time has certainly arrived when it is good for the Officers and the Native Army to part. A Native Regiment is not to be entrusted to the charge of officers past their work, or without an interest in it. The events of 1857 should have taught us that lesson. However, it is useless to deny that, at this moment, there are many officers in the Indian Army who are simply making a convenience of the service to obtain the highest rates of pension they can get, and of whose efficiency as regimental officers on active service, the less that is said the better. And it is impossible to blame these officers, for the Government directly encourages them to hold on to the service to the last, as their only chance of obtaining a support in retirement for themselves and families. This class would have disencumbered the Army of their presence years ago had the pension rules been more liberal than they are now, but the Government encourages them to linger on, getting nearer and nearer to Colonels' allowances, off which the Government has to buy them at a considerable expenditure of present cash. Economy in pensions, in fact, runs away with capitalised annuities in cash, and the Indian Army becomes blocked with the grade we least want of all,—Colonels. In considering this most important question of retirement, it is very necessary to take a broad view of the situation, and a liberal one too. Curious ideas prevail at home, if not out here, on the subject. The staff Corps Colonels' pension of one pound a day, seems liberal enough to those who do not carefully consider the position; but in point of fact we might just as well offer two and sixpence a day to the Colonel as twenty shillings, for the one would meet his necessities quite as ill as the other. As the rule, the senior officers of the Indian Army are married, and men with families. As the rule also, they have saved nothing from their incomes. Journey to Europe, education of children, with the ordinary professional expenses incumbent upon them, have run away with rupees whenever gathered into little stores, and it is not unfrequently the case that the Indian Colonel is as poor a man the day he quits the service as the day he entered it. The absurd idea, common at home, that every Indian Colonel has saved money out of his Indian income, is due to the traditions of a golden past: it would be nearer the truth to say that a good many officers, ripe for pension, were in debt, and worse off than as ensigns. Now what is three hundred and sixty-five pounds a year, to a colonel with a family to provide for or to educate? Heavy deductions would be made from this income as subscriptions to the Military Funds, and it is plain enough we think, that no man could keep up his social status, as even a retired Colonel of the Army on the remainder. It cannot be done. The pensions of another century no longer meet the requirements of the day, and until the scale is very considerably increased the Indian Government will have to lament a block in promotion, and a superabundance of Colonels. But this is not only a question of money and expense. The tone of the Indian Service is evidently lowered by the discontent induced, for one thing, and by the senility prevalent, for another. It is contrary to all military precedent to have, as we now have, an army scandalously deficient in the grades of captain and subaltern. A Regiment without its due proportion of young officers to old ones has no *verve*, no animation, no youth. It is wanting in some of the very best military qualities, as a consequence, and we cannot but think that the restoration of the Indian Army is much dependent for anything good, upon the youth and the spirit of the officers we may give it. We have been so long accustomed to regard the Indian Army as one of convenience for the disposal of men out of employment, that the superior rank and mature age of most of its officers have become familiar to us, but it is not in this way that armies should be officered with a view to effectiveness. It we want efficiency in the Indian Service we must have youth as well as experience in regiments.

THE LAW IN AND FOR INDIA.

THIS was the title of an article in the Westminister Review so long ago as January 1862, and it opens with the confession that no fact in the history of the Government of British India, stands more completely and incontrovertibly established than its total failure in one of the most important departments of Government, the administration of justice. Writing now, after the lapse of 13 years, a period in which great reforms have been effected, which has seen the Penal Code and the Civil and Criminal Procedure Codes given to British India, we are tempted to ask the question, whether the march of improvement in the administration of justice has kept pace with the march of improvement in almost every other branch of our administration. In answering the question, we are compelled to say that legislation has far outstripped the progress of the country, and that our laws, instead of being a mirror in which the actual condition of the people is reflected, reflect a civilization far in advance of that of British India. In the article to which we allude, reference is chiefly made to justice as administered in the Mofussil, and in our present remarks, we purpose to confine our attention to the Mofussil courts, as they form the chief means by which British justice is brought to the doors of the people in this country, and the conditions of residents in the capital consisting of a large mercantile community are such as justify an advanced system of legislation. We purpose therefore to discuss briefly the questions as to how far we have succeeded in bringing Criminal and Civil Justice near to the people, and where we have failed. And we shall start by saying that whereas there is but one opinion as to the excellency of our codes of *Law*, we cannot help thinking that our great failure has been in our Codes of Procedure and in the rules laid down for the administration of these laws. And we consider that this failure is due to the fact of a non-recognition, on the part of those who have laid down these rules of Procedure, of the fact that they were legislating for a country emerging from semi-barbarism into civilization, and not for a country that had attained a very high rank of civilization. We have sacrificed almost every other consideration to exactness and theory, and a study of the true condition of the people, so essential to successful legislation, seems not to have formed part of the education of those who have framed the laws we are discussing. The New Criminal Procedure Code is certainly a step in the right direction and shows that this fact is beginning to be recognised, and we take the indignation which it excited amongst those classes whose interest it is to encourage litigation as one of the finest tests of its excellence. To take first of all our criminal administration. We believe that serious and grave offences are examined into and disposed of more quietly and satisfactorily in India than in any other country in the world, considering that our officers have to work with a police hopelessly ignorant and corrupt in their lower grades and necessarily so from the class from which they are recruited, we have but little fault to find in this branch of our criminal administration. Mistakes, and grave mistakes, have

occurred and do occur, but in what country do they not? We believe however that justice in serious cases is administered by our mofussil judges and magistrates, take them one with another, as fully and fairly as could be expected, and despite the outcry that is raised now and then when any class of persons feel themselves aggrieved by some one decision, against mofussil justice—an outcry as unreasoning as it is unfair and spasmodic—we think sound common sense and honesty are brought to bear on most of the cases that are brought before our mofussil officers. Where we think that our criminal administration is faulty is in not checking that absurd and petty litigation which is the bane of India, more especially Mofussil India. Any one who has lived for any time in the mofussil must know that what a shille lagh is to an Irishman an eight anna stamped paper is to a Bengalee, and the daily records of any magistrate's *cutcherry* show a mass of litigation undertaken for the pure purpose of gratifying petty personal spite and malice, which would astonish any one who did not know it to be a fact from experience. It is true that on the trial of a case a magistrate may award compensation to the accused, but in may instances it has to be considered whether in so awarding this compensation he is not simply paying the man who was too late in bringing his suit, or who has so to speak forced his neighbours hand. It is generally a case of *arcades ambo*, and a magistrate may often pause and consider before he awards compensation, except of course in any glaring cases, whether he is not rewarding one scoundrel at the expense of another. We consider that this section of the law has failed in ordering the fine (for fine it must be considered) imposed on the complainant to be given of necessity to the accused. By this over facility which we have given to petty litigation, we have turned our courts into an engine of warfare between rivals, and have made them take the place of the *lathis* to those who are too cowardly to employ that weapon. Then, on the other hand, the Criminal Court is often used to avoid the delay and expense of the Civil courts in questions involving pure matters of right. A *marpit* is tacked on to the complaint, and it is not an unknown thing for litigants to agree to abide by the decree of the criminal court on the petty *marpit*, and allow it to govern the main question at issue. This course has the merit of being cheaper than going to the civil courts, and, moreover, furnishes the excitement of leaving the result to hard swearing, which is preeminently gratifying to the mind of a native. Surely it is pitiable to see such a magnificent engine as our Courts of Law used for such bare and petty ends. Then, again, it is revolting to common sense to see the farce enacted of administering an oath to a native, an oath for which he has no regard, and which binds him about as much as a sense of truth and honour binds a khansamah to give his master an honest account of his daily transactions at the bazaar. We have often thought how natives must wonder, if not laugh, at the case which prompts the Sirkar to try, by a formula to them perfectly unmeaning, to bind them to speak the truth when they have come prepared to lie.

Our criminal laws, admirably adapted as they are to a civilization like that of England, are, in their formalities and the extreme facility they give to petty litigation, far in advance of the present state of India, and we should like to see, in the first place, unnecessary forms abolished, and in the second place, petty litigation checked by making it much more expensive than it is now and giving more license to magistrates to punish summarily false complainants in petty cases, by a fine which should not necessarily go to the defendant. We should be glad also to see a few rules laid down for the prompt and effective prevention of false swearing in cases of the like nature by a small fine—and not leave it necessary to have recourse to the tedious and often unsuccessful course of a regular prosecution for perjury. With regard to serious cases, the consequences of perjury are too grave to be adequately punishable by a small fine, and in such cases a regular prosecution and severe punishment would be desirable and necessary. What we have got to disconnect our minds from, is the idea that *perjury*, as we understand the crime, is known to the native mind, and it ought to be made punishable according to the offence in respect of which it is committed. This has been recognised with regard to serious offences in Sec. 194,5 &c. of the Penal Code, but it has not been extended in the direction of trivial cases, and this we should like to see done. In such cases, a small fine inflicted there and then, would have a very deterrent effect on the false-witness-giving classes of the country, and we think it would be judicious and right in small cases to give the magistrate discretion there and then to punish glaring instances of false swearing. So much for our Criminal administration although much more perhaps might be said on the subject.

Our Civil Legislation in small cases, more especially in cases relating to petty disputes about rent and land, is a crying scandal. This has so recently been pointed out in these columns and is so universally recognised that it calls for but little remark now. All those who have dealings with our mofussil moonsiff courts know it too well. The procedure is long, vexatious, and expensive, and when a few days would decide a suit were a few summary rules drawn up and were rent suits made triable by the executive officers, weeks and months are consumed in the tedious and unsatisfactory procedure of a moonsiff Court, to say nothing of the future proceeding in the appellate courts. The Moonsiff is an officer who never moves out of his *cutcherry* to try a case, who is obliged to trust to the evidence brought before him, and who, with we believe a strong desire to do justice, fails entirely from want of local knowledge and the power of deciding cases *in situ*. The frequency with which cases which in any other country would be brought in the Civil Court, are in India brought in the Criminal Courts for the avowed purpose of saving expense and time, shews sufficiently that the people have no love for Civil Justice as administered in London. We have, in our Civil Procedure Codes, given an elaborate procedure to a people utterly unsuited to use it, and who often prefer to forego their rights to going to the expense and trouble of a suit liable to be prolonged *ad infinitum*. Our remarks may savour of retrogression. We think retrogression preferable, if by it we plant our footsteps more firmly in the path of justice. We are at present shooting far a-head of the people for whom we legislate, and, in consolidating our legislation with regard to serious suits both civil and criminal, we have despised the day of small things, and have left our laws, as far as petty litigation goes, too facile in criminal cases and too elaborate in civil cases for the people whom we govern; and we would earnestly commend to our legislators a reconsideration of the laws regarding small causes both in the Civil and Criminal side.

"THE FINAL GOAL OF ILL."

FROM Stuart Mill on Nature and from Professor Clifford on Immortality we are fain to return once more to In Memoriam and listen to the gentle words of hope and trustfulness that indicate the attitude of Tennyson's mind towards the great Problem of human life, which another of our poets, fitting to expressive words the thought that fills many minds at the present day, has called "the mystery of the cruelty of things." On such a subject as this, it may be asked, is it a rational proceeding to appeal from the scientific philosopher to the philosophic poet? Shall we not be safer under the guidance of the severe logician who sacrifices his emotions, and so-called intuitions, on the altar of truth, than if we listen to the persuasive words of the poet who sacrifices truth on the altar of his emotions? Hardly in any sense do we now believe that the poet is divinely inspired, and though we enjoy his mystery and music, and our souls glow with enthusiasm as we gaze on the gorgeous air-palaces that he builds by his art, we do not in this age of experimental science accept him as an interpreter of the secrets of nature and a revealer of the will and wisdom of the Deity. To many minds in our day, if not to most, the poet speaks, not with more authority but with less, from the very fact that he is a poet. We scarcely look for severe adherence to truth, even in his delineations of nature, or if we demand fidelity with regard to minutiæ, we apply a lax standard of criticism to his generalisations; and when we find him arriving at beauty and completeness, by the disregard of unpleasant and unlovely facts, we merely attribute his conduct to "the pardonable one-sidedness of the poet." There is unfortunately, too much justice in this reception of the teaching of our modern poets. Some of them have been false to their high

vocation, and have sung "without a conscience or an aim." The flush of beauty in their writings is too often not the glow of health, but the hectic flush of disease; their garlands of loveliness are

"But as ivy leaves around the ruined turret wreath,
All green and wildly fresh without, but worn and gray-beneath."

Granting, then, that we are not to look upon the poet as a teacher of absolute truth, which he no longer claims to be, and that many poets are not even what they ought to be, faithful expressers of healthy human emotions, we are yet prepared to claim for Tennyson a high place among the teachers of the age. While we admire the grace and sweetness of his language and the almost feminine beauty and delicacy of his fancies, it has always appeared to us that his greatest claim to reverence lies in his morality. By morality we here intend to signify, not the absurd conventional thing of nineteenth century growth which is more correctly called squeamishness, but his scrupulous fidelity to the laws and facts of nature, the truthfulness with which he seeks to express human emotions, and the lofty purpose that breathes in every part of his writings. No poet was ever more loyal to law and conscience than Tennyson, and no poet has less of the "pardonable one-sidedness" attributed to the bard.

Let any one read the two remarkable productions we have mentioned above, and compare them with the sections of In Memoriam which treat of evil and good in nature, and man's hopes and fears in connection therewith, and say whether the poet or the philosopher is the more exposed to the charge of one-sidedness. Tennyson admits the existence of evil, at least of apparent evil, in the ways of nature, as fully as ever Mill could desire, and feels, perhaps more keenly than he, "the mystery of the cruelty of things;" while at the same time he gives a place in his view of nature which is just, and not more than just, to facts of human consciousness which Mill ignores and which Clifford laughs to scorn. Mill expatiates on what we know, and makes no allowance for what we do not know; he passes judgment on a whole which he confessedly knows but in part; without knowing the purpose that guides the operation of nature, or the final result to which these may tend, he condemns the righteousness of many of these operations. The great weakness of Mill and of other of our great philosophers is that they draw strong conclusions from the unknown, as if the known were the all; whereas the little we know must certainly take its character from its relation to the vast, the infinite unknown. It has given satisfaction to some that Mill has in theory admitted so much in favour of theism and the hope of immortality. He does not consider belief in a Deity, or rather in a possibly existing Deity, repulsive to a scientific mind, and he is not unwilling to concede that a hope in immortality may have some basis as a hope merely, and as such, may be a comfortable and useful possession. But granting that a God may exist, he argues that the facts of nature prove that *this* God cannot be at once all powerful and purely beneficent. Now it appears to us that Mill has drawn an unworthy conclusion from the high premiss assumed. Granting that there is a Deity, a one God,—and Mill is clearly of opinion that there is a far stronger probability in favour of monotheism than of polytheism—we should say the wise conclusion is the old Hebrew one that his ways cannot be as our ways nor his thoughts as our thoughts, or that we at any rate, whose view of his administration of the government of the universe is limited to so narrow a portion of space and of time, are no fit judges of his character. It has been said that the God of most orthodox religious people is simply a magnified "non-natural man," and Mill has demonstrated with great clearness that the severest logic is liable to the same weakness as popular imagination, and that when it grants the possible existence of a Deity infers attributes similar to those of man, and has no higher standard of judgment to apply to his government than we should apply to the government of a great human potentate. Now it is true that we have no higher standard to apply, but the fact that we must begin with an assumption, and not a certainty of his existence, necessitates another assumption, viz., that we cannot know enough of his nature and government to justify a charge against him of either weakness or want of benevolence, because the few glimpses we get of his ways and works will not satisfy the standard by which we judge one another. Mill has painted in the blackest colours the reckless cruelty of Nature, and in his essay on Theism we find that his hypothetical God is blamed for all this cruelty on the supposition that he can be judged by human minds according to a human standard, and on the other supposition, involved in the former, that every operation of Nature can be judged by those immediate effects which are patent to our observation. No allowance is made for hidden purposes or far-reaching effects; it is assumed that a phenomenon can be judged, and classified as good or evil, by a comparison with those that immediately precede and follow it, although there must be an eternal sequence of phenomena mostly unknown to us, on which its character depends. If however we compare the earth as we find it now, with the globe that geologists suppose it must have been, long before it was capable of receiving animal life, must we not conclude that the progress has been in a direction which justifies us in assuming that, if we suppose everything to have taken place under the direction of a Deity, the purposes of that Deity have aimed at producing harmony and beauty, and a state of things in which sentient beings might, by a wise use of their advantages, live happily and act nobly. We know that there is much apparent imperfection, and we do not know, indeed, how it could be otherwise, for we cannot imagine life without progress and development, and we should be satisfied if only we can see that the progress points to things higher and better than now exist. Our knowledge is limited to phenomena; all phenomena are changes; and experience seems to show that the changes are in the direction of improvement.

But the charge against Nature, and so against the hypothetical Deity, is, not that things are imperfect and so admit of development towards something higher and better, but that the changes that mark this development often cause pain and suffering to sentient beings. In fact it seems that there is no getting over the radical defect in Mill's philosophy that the test of good is, Does it produce happiness to sentient beings? And the test of evil, Does it cause pain or suffering to sentient beings? Mill, we think, magnifies greatly the importance of mere pain. Had the Deity been benevolent, he would have made use of anæsthetics, and so effected all the changes that he needed to produce among his sentient creatures, without causing them suffering! The question that must here be asked is, if pain is in itself evil, whatever the final effect of it may be. Mill's philosophy really answers that it is. The Deity ought, if he is not of limited power, to have found a painless way of producing the effect desired. We cannot help thinking that the assumption here is impious, and, if that assumption is not made, our knowledge is too limited to justify us in charging nature, or even an omnipotent God, with want of benevolence, since we are not in a position to say that the final result of pain may not be sufficient to justify its employment in the development of sentient creatures.

Let us now try to understand the mood of mind displayed by Tennyson on contemplating the apparent cruelty of nature. And we observe first, that he admits fully, and makes no attempts to explain away, the fact that nature often appears to us not only cruel but recklessly so. Man fain would trust that God is love, and "love Creation's final law," but "nature, red in tooth and claw, with ravage," shrieks an apparently everlasting no. Nor is her cruelty directed against individuals only; race after race is relentlessly destroyed:—

From scarped cliff and quarried stone.
She cries 'a thousand types are gone;
I care for nothing, all shall go.'

All creatures on earth from the moth that is "shrivelled on a fruitless fire," to man, her last work, endowed with splendid purpose, which leads him to undertake labours, endure sufferings, to love, pray, and battle for the good and true—all are doomed to suffer and to die, while it is almost equally difficult to see what good end is served by their ever having lived, and why, since they have been called into existence, they should be fated to suffering both in life and in death.

So far Tennyson may be said to be at one with Mill. He is no optimist who thinks that all that is, is exactly as it ought to be; nor does he with "the pardonable one-sidedness of the poet" see beauty and beneficence in all the ways and works of nature. But he differs from Mill in the possession of a virtue which nowhere appears in the writings of the latter—we mean humility. He feels the littleness, the ignorance and foolishness of man, and dares not judge his Maker. On the other hand it does not appear that Mill can even suppose a Deity towards whom he could assume an attitude of humble trustful docility. He assumes a God and says to him. "If you are omnipotent you are at least inferior to me in point of benevolence, and I shall do all I can to ameliorate the sad condition in which you have cruelly placed your creatures; but if you are beneficent you must be very weak, and I shall be happy to give you all the assistance in my power to thwart the evil powers to which you are opposed." To assume a Deity and treat him so cavalierly on one's own assumption is painfully ludicrous. We prefer to feel like the author of In Memoriam that man is but as it were

"An infant crying for the light,
And with no language but a cry."

This is the highest human teaching, nay it is the noblest Divine lesson that man has learned, that the wisest is but a child in knowledge and the highest intellect must assume the altitude of a child as its most fitting attitude towards the Deity. It is only presumption that can say that, while we do not know enough to be certain that there is a God at all, we do know enough to be certain that if there is a God he must be possessed of certain attributes or destitute of certain others. Tennyson no more professes to prove the existence of a God than Mill does ; he sees as clearly as Mill that there are things in nature that on the hypothesis of an Almighty and all-good Creator we, with our limited knowledge and faculties cannot explain ; he does not conceal the anxiety and doubt that this conviction causes him ; but he humbly trusts where he cannot know, and hopes that somewhere and somehow we shall get the mystery explained, and shall see unmistakeable love and goodness even where we now see what seems cruelty and caprice. We take the two lines,

> " O yet we trust that somehow good,
> Shall be the final goal of ill."

as perhaps the simplest and completest statement possible of the only rational mood of a humble earnest human soul looking abroad upon the phenomena of nature and the life of man. The stanzas which follow are a beautiful amplification of the statement, but really add nothing to it. We might take it word by word, as some preachers take a text, and base upon each a train of thought and feeling. The interjection strikes the key-note of appropriate feeling, the " yet" concedes all that can be urged by the sceptical philosopher against hope and trust in God—all that presses with a " heavy and a weary weight" upon the heart of a contemplative believer. There is probably a meaning in the use of the plural pronoun, for the transitions from " I" to " we" in " In Memoriam" are often of great significance. The poet derives some comfort, though Mill would hold it unworthy of a thinker, from the reflection that he is not singular in trusting in the dark, and he longs to carry others along with him in his struggling faith in the ultimate triumph of good. " Somehow" is a confession of ignorance and incapacity to solve the painful problem of the relation of evil to good. So much being confessed, the fitting word to express the most rational state of mind with regard to the problem is " trust."

> " O yet we trust that somehow good,
> Shall be the final goal of ill."

Hoping to return to the subject again we shall leave the reader with a stanza from Browning, expressing in his own vigorous style a similar trust.

> It's wiser being good than bad ;
> It's safer being meek than fierce ;
> It's fitter being sane than mad.
> My own hope is a sun will pierce
> The thickest cloud earth ever stretch'd ;
> That, after Last, returns the First,
> Though a wide compass round be fetch'd ;
> That what began best, can't end worst,
> Nor what God blest once prove accurst.

THE ILIAD AND ODYSSEY OF INDIA.*

[*By Edwin Arnold.*]

THERE exist two great, two colossal, two unparalleled epic poems in the sacred language of India which were not known to Europe, even by name, till Sir William Jones announced their existence ; and which, since his time, have been made public only by fragments, by specimens bearing to those vast treasures of Sanskrit literature such small proportion as cabinet samples of ore have to the riches of a silver mine. Yet these most remarkable poems contain all the history of ancient India, so far as it can be recovered, together with such inexhaustible details of its political, social, and religious life, that the antique Hindoo world really stands epitomized in them. The Old Testament is not more interwoven with the Jewish race, nor the New Testament with the civilization of Christendom, nor the Koran with the records and destinies of Islam, than these two Sanskrit poems with that unchanging and teeming population which Her Majesty rules as Empress of Hindostan. The stories, songs, and ballads, the histories and genealogies, the nursery tales and religious discourses, the art, the learning, the philosophy, the creeds, the moralities, the modes of thought, the very phrases, sayings, turns of expression, and daily ideas of the Hindoo people are taken from these poems. Their children and their wives are named out of them ; so are their cities, temples, streets, and cattle. They have constituted the library, the newspaper, and the Bible, generation after generation, to all the succeeding and countless millions of Indian people ; and it replaces patriotism with that race and stands in stead of nationality to possess these two precious and inexhaustible books, and to drink from them as from mighty and overflowing rivers. The value ascribed in Hindostan to these two little-known epics has transcended all literary standards established here. They are personified, worshipped, and cited from as something divine. To read or even listen to them is thought by the devout Hindoo sufficiently meritorious to bring prosperity to his household here and happiness in the next world ; they are held also to give wealth to the poor, health to the sick, wisdom to the ignorant ; and the recitation of certain parvas and shlokes in them can fill the household of the barren, it is believed, with children. A concluding passage of the great poem says :

" The reading of this Mahá-Bhárata destroys all sin and produces virtue, so much so, that the pronunciation of a single shloka is sufficient to wipe away much guilt. This Mahá-Bhárata contains the history of the gods of the Rishis in heaven and those on earth, of the Gandharvas and the Rákshasas. It also contains the life and actions of the one god, holy, immutable, and true, who is Krishna, who is the creator and the ruler of this universe, who is seeking the welfare of the creation by the means of his incomparable and indestructible power ; whose actions are celebrated be all sages ; who has bound human beings in a chain, of which one end is life and the other death ; on whom the Rishis meditate, and a knowledge of whom imparts unalloyed happiness to their hearts, and for whose gratification and favour all the daily devotions are performed by all worshippers. If a man reads the Máha-Bhárata and has faith in its doctrines, he is free from all sin, and ascends to heaven after his death."

Yet these national poems—the Mahá-Bhárata and the Ramayana, the literary palladia of India—remain unknown to Europe, and have never been translated by command of the English Government, as beyond question they should have been. Nothing, in truth, can quite excuse the indifference shown in this default : it is an instance of the want of sympathy in the otherwise grand and admirable administration of British India ; but it is a serious instance, for the task was of necessity one unlikely to be performed —if not impossible of performance—except by the encouragement and with the resources of a powerful Government. The treasures of a foreign literature may safely be left to private learning when they appear of manageable dimensions ; but these poems, as we have said, are enormous, overwhelming, colossal. They go beyond the grasp of any single mind, it would be thought, however gifted, to exhaust. The Mahá-Bhárat contains some two hundred thousand verses ; the Ramayana, about fifty thousand. They are poetical encyclopædias in fact, and the British Government might surely have explored and surveyed them like a territory of its Raj, ordaining their careful translation by some judiciously chosen committee of scholars, Sanskritists, and poets, as a work of actual administrative duty. This would have formed a monument well worthy of the English name, and the world of science and literature would have been justly grateful ; while nothing could have better developed the knowledge of India in England, or reflected greater light upon that mutual origin which is the best hope of future times. All this has not been performed officially ; but two men of generous self-devotion and boundless industry have set themselves to the forgotten duty, and their labours have found in the enterprise and liberality of the honourable publishing firm of Messrs. Trübner and Co. the means of seeing light. In justice to this house, which has done so much for the cause of Oriental scholarship, and in order to draw the attention of the Government and the public to the new literary riches that now lie unlocked, we intend in this and a following paper to touch in outline upon the two poems which quite deserve the name we have given them of " The Iliad and Odyssey of India."

The Ramayana of Valmiki, answering most to the Odyssey, has just been completed by the single-handed toil of Mr. Ralph Griffith, Principal of the Benares College. The last volume of this amazing piece of faithful labour has just reached our hand, and when it is remembered that the whole of that enormous epic has been thus at last translated by a single English scholar—amid the constant duties, too, of a most responsible official position, and under the trying rays of the Indian sun—we must pause here to offer to Mr. Griffith the tribute of a sincere admiration. Apart from the poetical and scholastic merits of the prodigious work—which we shall hereafter consider—we thank him in the name of the British people for taking away the old reproach from our rule in India by transferring—canto by canto, to the number of no less than one hun-

* *The History of India from the Earliest Ages.* By J. Talboys Wheeler. Vol. I. *The Vedic Period and the Maha-Bharata.* (London : Trübner & Co., 57 and 59 Ludgate Hill.)
The Ramayan of Valmiki. Translated into English Verse by Ralph T. H. Griffith, M. A., Principal of the Benares College. In Five Volumes. (London : Trübner & Co., 57 and 59, Ludgate Hill.").

dred and thirty—this second great epic poem of the Hindoos into the language of the Rulers of Hindostan. Such a triumph is at once a masterpiece of intellectual perseverance and an honour to Anglo-Indian scholarship ; while, we repeat, that to have undertaken the production of so veritable an *Opus magnum* reflects much credit upon the publishers who have shared in the task.

We shall return to this marvellous poem, now at last given to the English people, and shall show how, by its study, they may better understand their Indian fellow-subjects. As for the Mahá-Bhárata, even more vast than the Ramayana, it would seem, as has been said, hopeless to expect that any single mind could address itself to the translation of that almost endless epic. A bare transcript into curt and literal prose would occupy about fifteen ordinary octavo volumes, without a note or comment. But, wonderful to relate, this, too, has been achieved, or nearly so, by a scholar unknown, yet well deserving fame and public gratitude. When Mr. Talboys Wheeler was recently compiling the first volume of his excellent "History of India," a digest of the Mahá-Bhárata and Ramayana formed a necessary introduction to the work. While patiently toiling through the summaries and existing extracts of the enormous poem, Mr. Wheeler sent to the Calcutta Library for a translation indexed there as "The Bhagavat-Gita," a mere episode in the epic. The librarian forwarded back a huge MS., much embrowned by age, worm-eaten and faded, indifferently written, and forming about nine thick volumes folio. To the joy of the historian, this turned out to be not merely the interlude whose title was affixed, but the bulk of the Mahá-Bhárata itself, in English, good, true, and terse : and from that MS., thus casually unearthed, Mr. Talboys Wheeler was able to enrich his first volume with the admirable digest of the Mahá-Bhárata, from which we shall mainly quote. No one knows whose patient and untiring brain and pen produced and bequeathed this splendid secret treasure. There is some reason to believe it was the work of Professor H.H. Wilson, whose command of Sanskrit lore was equalled by his wonderful powers of application and enthusiasm for such toil. But this is conjecture only, and we grieve that we cannot pronounce with certainty the name which so well deserves to be coupled with that of Mr. Ralph Griffith as redeeming the British Raj from the discredit of conquering India, and yet leaving unconquered the two noblest and largest regions of her literature. Thanks to this nameless scholar, whose gentle soul, it may be trusted, reaps unimagined reward elsewhere, "full of the stately repose and the lordly delight of the dead," we possess now a very full conspectus in Mr. Wheeler's History of the Mahá-Bhárata, and in the fair copy which has been made from the old yellow MS. an accurate and almost complete translation. What was wanting in this vast labour, the Baboo Chunder Ghose—an accomplished Sanskritist—translated orally to Mr. Wheeler from the Aryan text : and thus the digest and extracts were fully made which we shall now briefly notice.

The "great war of Bhárat" has its first scenes in Hastinapur, an ancient and vanished city, formerly situated about sixty miles north-east of the modern Delhi. The Ganges has washed away even the ruins of this, the metropolis of King Bhárat's dominions. The poem opens with a "sacrifice of snakes," but this is a prelude connected merely by a curious legend with the real beginning. That beginning is reached when the five sons of "King Pandu the pale" and the five sons of "King Dhritarashtra the blind," both of them descendants of Bhárat, are being brought up together in the palace. The first were called Pandavas, the last Kauravas, and their lifelong feud is the main subject of the epic. Yudhishthira, Bhima, Arjuna, Nakula, and Shahadeva are the Pandava Princes. Duryodhana is chief of the Kauravas. They are instructed by one master, Drona, a Brahmin, in the arts of war and peace, and learn to manage and brand cattle, hunt wild animals, and tame horses. There is a striking picture in the early portion of an Aryan tournament, wherein the young cousins display their skill, "highly arrayed, amid vast crowds," and Arjuna especially distinguishes himself. Clad in golden mail, he shows amazing feats with sword and bow. He shoots twenty-one arrows into the hollow of a buffalo horn while his chariot whirls along ; he throws the "chakra" or sharp quoit, without once missing his victim ; and after winning the prizes, kneels respectfully at the feet of his instructor to receive his crown. The cousins, after this, march out to fight with a neighbouring king, and the Pandavas, who are always the favoured family in the poem, win most of the credit, so that Yudhishthira is elected from among them *Yuvaraj*, or heir apparent. This incenses Duryodhana, who, by appealing to his father, Dhritarashtra, procures a division of the kingdom, the Pandavas being sent to Vacanavat, now Allahabad. All this part of the story refers obviously to the advances gradually made by the Aryan conquerors of India into the jungles peopled by aborigines. Forced to quit their new city, the Pandavas hear of the marvellous beauty of Draupadi, whose *Swayamvara*, or "choice of a suitor," is about to be celebrated at Kampilya. This again furnishes a strange and glittering picture of the old times ; vast masses of holiday people, with rajahs, elephants, troops, jugglers, dancing women, and showmen, are gathered in a gay encampment round the pavilion of the King Draupada, whose lovely daughter is to take for her husband (on the well-understood condition that she approves of him) the fortunate archer who can strike the eye of a golden fish, whirling round upon the top of a tall pole, with an arrow shot from an enormously strong bow. The Princess, adorned with radiant gems, holds a garland of flowers in her hand for the victorious suitor, but none of the Rajahs can bend the bow. Arjuna, disguised as a Brahmin, performs the feat with ease, and his youth and grace win the heart of Draupadi more completely than his skill. The Princess henceforth follows the fortunes of the brothers, and, by a strange ancient custom, lives with them in common. The Pandavas, now allied to the King Draupada and become strong, are so much dreaded by the Kauravas that they are invited back again, for safety's sake, to Hastinapura, and settle near it in the city of Indraprastha, now Delhi. The reign of Yudhishthira and his brothers is very prosperous there ; "every subject was pious ; there were no liars, thieves, or cheats ; no droughts, floods, or locusts ; no conflagrations nor invaders, nor parrots to eat up the grain."

The Pandava King, having subdued all enemies, now performs the *Rajasuya*, or ceremony of supremacy, and here again occur wonderfully interesting pictures. Duryodhana comes thither, and his jealousy is inflamed by the magnificence of the rite. Among other curious incidents is one which seems to show that glass was already known. A pavilion is paved with "black crystal," which the Kaurava Prince mistakes for water, and "draws up his garments lest he should be wetted." But now approaches a turning point in the epic. Furious at the wealth and fortune of his cousins, Duryodhana invites them to Hastinapura to join in a great gambling festival. The passion for play was as strong apparently with these antique Hindoos as that for fighting or for love ; "No true Kashatriya must ever decline a challenge to combat or to dice." The brothers go to the entertainment which is to ruin their prosperity, for Sakuni, the most skilful and lucky gambler, has loaded the "coupun," so as to win every throw. Says the poet.

"Then Yudhishthira and Sakuni sat down to play, and whatever Yudhishthira laid as stakes, Duryodhana laid something of equal value ; but Yudhishthira lost every game. He first lost a very beautiful pearl ; next a thousand bags each containing a thousand pieces of gold ; next a piece of gold so pure that it was as soft as wax ; next a chariot set with jewels, and hung all round with golden bells ; next a thousand war elephants with golden howdahs set with diamonds ; next a lakh of slaves all dressed in good garments ; next a lakh of beautiful slave girls, adorned from head to foot with golden ornaments ; next all the remainder of his goods ; next all his cattle ; and then the whole of his Raj, excepting only the lands which had been granted to the Brahmins."

After this tremendous run of ill-luck, he madly stakes Draupadi the beautiful, and loses her. The princess is dragged away by the hair, and Duryodhana mockingly bids her come and sit upon his knee, for which Bhima the Pandava swears that he will some day break his thigh-bone, a vow which is duly kept. But the blind old King rebukes this fierce elation of the winner, restores Draupadi, and declares that they must throw another main to decide who shall leave Hastinapura. The cheating Sakuni cogs the dice again, and the Pandavas must now go away into the forest, and let no man know them by name for thirteen years. They depart, Draupadi unbinding her long black hair, and vowing never to fasten it again till the hands of Bhima, the strong man among the Pandavas, are red with the punishment of the Kauravas. "Then he shall tie my tresses up again, when his fingers are dripping with Duhsasana's blood."—(*To be continued.*)

THE GUIBORD BURIAL CASE.

(FROM AN OCCASIONAL CORRESPONDENT.)

TORONTO, SEPT. 20.

WHAT is known in Canada as "the Guibord Case" possesses a far wider interest than arises merely from its connexion with the recent Montreal riots. It furnishes a striking case in point for those who apprehend danger from the pretensions of the Church of Rome to define, "with a divine certainty," its own sphere in the domain of faith and of morals, and to be supreme within that sphere. A brief outline of the origin and history of the case will not be without interest at the present time, both in

regard to its bearing on the Ultramontane question and on the recent French-Canadian *emeute* at Montreal.

Joseph Guibord's offence in the eyes of his spiritual superiors was that he refused to withdraw from membership in the "Institut Canadian." It was this same Institute that, as universal legatee of Guibord's widow, continued the appeal to the Privy Council which resulted in the decree the execution of which was opposed by the Montreal mob. Some idea of the nature of this organization and its relation to the Roman Catholic Church is, therefore, necessary to a proper explication of the case. In 1844, a number of French-Canadian young men organized themselves into a literary society to which was given the name of "Institut Canadian." A long roll of French-Canadians who have distinguished themselves in public life or in professional careers can be shown as having been connected with the Institut at one period or other of its existence. In 1854, addresses of congratulation were presented by the Society to no less than fourteen of its members on the occasion of their election to Parliament. The Institut rapidly gained in influence and usefulness, and in course of time the towns and larger villages of the Province founded each its Institut after the model of the original one in Montreal. Though it is asserted that the Roman Catholic clergy were all along jealous of the Institut Canadian, this does not appear until, in 1855, an alteration of the constitution was made with a view to admitting to membership those of other nationalities besides the French. This alteration the clergy strenuously opposed; and when they failed to prevent its being carried out, they took to the formation of rival institutions which would be under their immediate control, and to which they gave the designation of "Institus Nationaux." By their influence they succeeded in either suppressing altogether or altering the character and securing the control of all the Instituts Canadians outside of Montreal. After this the Institut passed through various vicissitudes which it is unnecessary to detail, but the ecclesiastical authorities ever after assumed towards it a more or less hostile attitude.

A leading feature of the Institut Canadian of Montreal is its library. At present the library has some 9,000 volumes, and it, together with the reading-room, which contains leading newspapers and periodicals in French and English, is open gratuitously to the public, who largely avail themselves of the boon. The library was formed by donations, and for nearly a dozen years after the foundation of the Institut no question was raised in regard to the character of the books. Just prior to 1858, however, the clerical newspapers began a crusade against the Institut on the ground that its library contained immoral books. In 1858, at a meeting of the members of the Institut, a resolution proposing the appointment of a committee to make out a list of the books in the library which, in their opinion, ought to be thrown out was submitted; but an amendment, to the effect that the library contained no improper books was carried by a considerable majority. Shortly afterwards (30th of April, 1858) the Roman Catholic Bishop of Montreal issued a Pastoral, in which he referred to the action of the Institut in this matter, pointing out that the majority had fallen into two grave errors—first, in declaring that they were the proper judges of the morality of their books, an office which belonged to their spiritual guides; and, second, in declaring that the library contained only moral books. In this Pastoral he stated that the Council of Trent pronounced excommunication against those who read or kept bad books; and that if the members of the Institut persisted in the bad path they had entered upon they would subject themselves to the severest punishment. The issue thus raised between the Institut and the Bishop remained *in statu quo* for nearly seven years, when (in 1865) several members, including Joseph Guibord, made an appeal to Rome. Nothing was heard of the matter for four years, and, as a last effort to restore harmony between the Church and the Institut, some time before the departure of Bishop Bourget for Rome to attend the Vatican Council a deputation was sent to him by the Institut, with a catalogue of the books contained in the library, and requesting his Lordship to point out any book which he considered objectionable. The catalogue remained in his hands for over six months, and on the eve of his departure for Rome the deputation went back for an answer. The catalogue was handed back to them without a single book being indicated as objectionable. When asked what he thought of the library, the Bishop said he did not indicate any book as it could bring about no practical result. "What result do you desire and what do you suggest for the guidance of those who heard from you that our library contained bad books;?" the deputation asked. "Let them consult their confessors," was his Lordship's reply. It is worthy of mention, in this connexion, that a French-Canadian newspaper, *Nouveau Monde*, had denounced the library of the Institut as containing improper books, and had an action for libel successfully brought against it by the Institut. When in Rome, in 1869, Bishop Bourget sent a pastoral letter to his diocese, in which he stated that the Pope had rejected the appeal and had condemned the Institut. The pastoral quoted the *Decretum* in which two things were specially forbidden—first, to belong to the Institut so long as it taught pernicious doctrines; and, second, to publish, retain, keep, or read the *Annuaire* of the Institut Canadian for 1868. It is somewhat singular that an appeal made in 1864 should have been decided against the Institut because, in 1868, the *Annuaire* contained something which was adjudged contrary to the rules of the Church. The matter objected to was the reproduction of a speech by M. Dessaules, and another by Mr. Horace Greeley, on liberty of conscience. In the pastoral above mentioned the Bishop added that any person who persisted in remaining a member of the Institut, or in reading the *Annuaire*, would be deprived of the sacrament—"*même à l'article de la mort.*" Alarmed at this ecclesiastical thunderbolt, the Institut met (September 23, 1869) and passed the following resolution:—

"1. That the Institut Canadian, which was founded for purely literary and scientific objects teaches no doctrine of any kind, and certainly excludes all teaching of pernicious doctrine.

"2. That the Catholic members of the Institut, having learned the condemnation of the *Annuaire* of 1868, declare that they submit purely and simply to the decree."

This act of submission the Bishop characterized as hypocritical. The letter in which he so characterized it was written in Rome, and addressed to the Administrator of the Diocese at Montreal, who claims that he received it on the 17th of November, 1869—the day before Guibord died. Six months before this date, Guibord was taken dangerously ill, and was attended by a priest, who administered Unction to him, but, as he declined to resign his membership of the Institut Canadian, would not administer the Holy Communion. On the 18th of November, 1869, Guibord died of a sudden attack of paralysis, and M. Rousselot, Curé of the parish, acting under the instructions of the Administrator of the Diocese, who was guided by that letter of the Bishop's which reached him a day or two before, refused to bury the remains in that part of the Côte des Neiges Cemetery, where Roman Catholics who receive ecclesiastical sepulture are ordinarily buried. It has to be noted that the Administrator based his instructions to refuse ecclesiastical burial to Guibord's remains upon the document which he does not claim to have received before the 17th of November, 1869. As Guibord died before that document could have been known, his friends claim that the pastoral of the 30th of April, 1858, is the only *dictum* applicable to his case. Upon the refusal to the Curé to allow the remains to be buried in the customary part of the cemetery, even without religious rites, the widow of Guibord appealed to the law. It should be mentioned that the Côte des Neiges cemetery, when the suit was first iustituted, was unconsecrated, the consecration having only been performed after the appeal to the Privy Council. Proceedings were instituted in the Superior Court of the Province, which resulted in favour of Guibord's widow. From this decision the Fabrique of Notre Dame appealed to the Court of Review, which reversed the decision of the Superior Court on the purely technical grounds that the action should have been brought against the Curé personally, and that the writ was informal. The widow then appealed to the Court of Queen's Bench. At the opening of the Term the widow's counsel challenged the four Roman Catholic Judges (the Court being constituted of these and one other—a Protestant), on the ground that they belonged to the Church of Rome, which had, by the Syllabus of 1864, promulgated the dogmas that the ecclesiastical authority was exercised independently of the Civil Government; that the State, even when governed by a Protestant sovereign, possessed no authority (even indirectly) over matters of religion; and that, in case of conflict between the State and an ecclesiastical authority, the latter should prevail. On the last day of the Term the five Judges declared the challenge inadmissible, as it amounted to an accusation against four of the Judges of treason and perjury. An appeal to Her Majesty's Privy Council was then moved for and obtained. Judgement was given in the case by the Privy Council *on the 21st of November, 1874*, and it was ordered that a peremptory writ of *mandamus* be issued directed to "Les Curé et Marguilliers de l'Œuvre et Fabrique de Notre Dame de Montreal," commanding them, on tender of the usual fees, "to prepare, or permit to be prepared, a grave in that part of the cemetery in which the remains of Roman Catholics who have received ecclesiastical burial are usually interred," &c.

The judgement of the Privy Council reviews the *status* of the Roman Catholic Church in Lower Canada before the law, as secured to it by the Act of Cession under the Treaty of Utrecht. It also reviews the laws of the Church itself, and grants that, if a sentence of excommunication were passed against a Roman Catholic in Canada, it would be the duty of the Civil Courts to respect and give effect to it; but it holds that no sentence of excommunication was ever passed against Guibord which would, either according to the Quebec ritual or any law binding upon Roman Catholics in Canada, justify the denial of ecclesiastical sepulture to his remains. The plea set up that Guibord was a "public sinner," and had, therefore, forfeited his right to ecclesiastical burial was held to be not proven. M. Joseph Doutre, the only member of the Canadian Bar who took part in the argument before the Privy Council, has recently (September 13) written a letter to the Toronto *Globe* in reply to one which was published a few days before in the same paper by the Roman Catholic Archbishop of Toronto. In that letter, M. Doutre discusses the question of Guibord's excommunication as follows:—

"The Catholic Church in Lower Canada partakes of the character of an Established Church. The laity constitutes in each parish a corporate body as regards the properties of churches, cemeteries, and parsonages. These properties belong to the parishioners and not to the bishop or the curé. The curés have the right to recover, before the Courts, the tithes from the parishioners. The Church, composed of the curé and laity, has a right to collect through processes of law any amount of taxation for the building of churches, parsonages, and the purchase of burial grounds, and the repairs and maintenance of the whole. These things do not exist in Ontario. There everything is voluntary, and I am not prepared to express an opinion on the respective rights and duties of the clergy and laity. But the condition of things in Quebec has constituted clear and well defined rights and duties for the two bodies. Decisions from the highest Court in Quebec, a Court uniformly composed of a majority of Catholic Judges, have laid down as a rule formally approved of by the Church (until the recent changes in the constitution of the Catholic Church), that the old ecclesiastical law of France was still the ecclesiastical law of Lower Canada. The 'Mannel des Curés,' by Mgr. De Stantels, Curate of Varrennes, one of the honorary attendants of the Pope and honorary Canon of the Montreal Bishopric, published in 1864, contains as a preface a circular letter of the present Bishop of Montreal, commending the book to the clergy of his diocese. At page 17 it says, 'No one can doubt that the common ecclesiastical law which obtained in France before the cession of Canada to England is the ecclesiastical law of Canada.' Viewing the case of the refractory Fenian (hypo-

thetical case instanced by Archbishop Lynch) in the light of these laws, I would not question the right of a priest to refuse communion to him at his last moments; but I would unhesitatingly deny him the right to refuse ecclesiastical sepulture to his remains. From time immemorial, Catholic France, both at home and in the Colonies, has maintained that the sepulture of the dead, even in the times when ecclesiastical courts were in full operation, was exclusively cognizable by civil courts. *Excommunication major* only could justify the refusal of ecclesiastical burial by separating, in a measure, from the Church the object of that excommunication. I need not tell an Archbishop how such excommunication should be pronounced to be valid; but for his readers and mine I must say that the law never acknowledged excommunication unless it were publicly denounced and personal, after monition. No secret or collective excommunication has ever been admitted as valid. In fact, no system of public laws could co-exist with a collective or secret exclusion from an Established Church. The French ecclesiastical and public law, as left to us at the time of the Treaty of Cession, goes further. It claims for the civil courts the right to examine whether excommunication, when pronounced, is conformable, in its causes, with the canon or not. When the case was argued here numberless decisions of the French Courts were cited, declaring null and void excommunications pronounced with all the external formalities of the law, in order to reach the consequences of excommunication. And let me remark, that not one single case could be cited contradicting the doctrine above mentioned, both as regards the absolute necessity of a public and personal excommunication, and as to the right of inquiring into the causes of excommunication.

"Bringing these principles to bear on the Guibord case, I must tell Archbishop Lynch, (1) the members of the Institut Canadian were never excommunicated, even collectively; (2) Guibord was never excommunicated, either collectively with others or personally. . . . The only excommunication which was ever pronounced in Canada, according to the rules of ecclesiastical law, was that of a newly married couple, who had gone to a Protestant minister to be married. This was some six or eight years ago at Rimouski. Guibord not being excommunicated, any reasoning founded on that error falls to the gound."

The more recent circumstances connected with this interesting case will be fresh in the minds of every one, and the foregoing outline of its earlier history will help to a better comprehension of events which are now happening or have but recently happened.

FRENCH NOTES ON SCIENCE.

THE formation of hail has been largely occupying the attention of the Academy of Sciences. Volta explained the production of hailstones whose weight could attain 10 to 12 lbs., from the kernel of the stones being caught between two clouds charged with contrary electricity. The stones would pass from one cloud to the other condensing on their surface, and thus adding to their bulk, the ambient watery vapour. Daguin explained the theory of hail clouds, by the meeting of two winds; one coming from the north and the other from the south; the clouds thus produced are strongly electrified, and the cold necessary for the congelation of the watery particles, would be due to the expansion of these clouds, the consequence of the electrical repulsion between these very particles of water. The stones would be invested with a whirlwind motion owing to the difference in temperature between the two winds. The problem thus far has not been deemed solved. However, M. Faye has just presented an explanation, which is rather a step towards a solution, than a solution itself. He considers a hail storm to be merely a penetration into the lower strata of the air, of a state of things existing in the superior regions. This phenomenon, is characterized by the extreme rapidity with which the storm breaks out horizontally, in the midst of the most calm atmosphere. All aeronauts have testified to the presence of clouds full of needles of ice, in the elevated regions of the air, and that electricity, as proved by Guy Lussac, increases in quantity the higher we ascend in the atmosphere. When a storm, therefore, breaks out in the upper regions of the air, and descends to the soil, the currents of air drag down with them, the floating icicles, and the lower strata of clouds becoming charged at the same time with electricity, shocks ensue, and these impart a gyratory motion to the storm. The singular rustling noise of the wind is due to the striking of the hail stones against each other. It is during the descent of this whirlwind, that the humidity becomes condensed, forming hailstones.

***

M. VERNIER has just completed a "tour of the Alps," residing at various elevations, from six to nine thousand feet above the level of the sea. He has visited the health stations of Saint Maurice and Smaden, where invalids enjoy pure air and sun-baths, as the means of developing their "animal power." At Pontresine, water boils at 200, instead of 212 degrees as in the plain; at noon, the air is three times less humid than during the morning and evening, and the difference in the temperature, in some cases, is so great, that the side of your clothes turned towards the sun, becomes too hot to touch, while the part in the shade, produces the sensation of intense cold, Like heat, light is more intense at great elevations, because the atmosphere absorbs less of it, as well as of humidity. This intense light produces a kind of intoxication, despite colored spectacles or a protecting veil; the sensation is not akin to "mountain sickness," but consists of an annihilation of all brain work, a general feeling of forgetfulness, and an impression of absolute peace. The new comers to a "station" situated some 6,500 feet above the level of the sea, experience at first, an increase of appetite, a respiration deeper and slower, the contractions of the heart become stronger and less quick, the blood colors the skin more effectively, and transpiration is increased. Those persons who feel in a mountain home, oppression of the chest, beatings of the heart, headaches, vertigo and sleeplessness, ought to at once descend to the plains. Scrofula rickets, anemia, stomach cough, and nervousness, are the diseases peculiarly benefited by mountain air; heart and eye maladies should avoid it. The mean rate of mortality among the mountain population is 16 per 1,000; longevity is not conspicuous, and there are more deaths between the ages of 2 and 60 years, than between 60 and 100. The glaciers continue to retire, but it is very difficult to obtain precise information respecting this phenomenon; the memory of the oldest inhabitant cannot be trusted; the peasantry generally admit that the glaciers recede, but cannot say whether such recession has succeeded or not, a period of advance. The marmot being more respected by the people, commences to live lower down on the mountains, uttering its peculiar cry, however, more vigorously, on the approach of a living being, to signalize its retreat in the holes of the rocks. The chamois continue to be numerous, and often ascend to the summits of the highest mountain to escape the hunter; they will traverse a declivity in a few minutes, that would occupy a traveller an hour to descend.

***

M. FLAMMARION continues his very interesting studies on the so-called "fixed stars," The displacement of a fixed star is not more, during a year, than the 1860th part of the apparent diameter of the sun or moon's discs as they appear to us, and even this amount of variation is not due altogether to the star's own movement, as it is enhanced by the revolution of our planet. Generally speaking, therefore, it would take a star *1860 years to accomplish* a displacement, equal to the sun's disc, so that since the time of Jesus Christ and Tiberius, the greater number of stars have hardly effected such a small journey. Some stars in this work of displacement, move seven times more rapidly than others. Arcturus for instance, effects this inherent movement three times more rapidly than other stars; its rapidity across space is equal to 5½ millions of miles per day, and yet it requires 664 years to change its position by a space equal only to the apparent diameter of the sun and moon; nay more; since one, two, aye three thousand years, that this well known star has been noted on astronomical maps, it appears not to have moved! Again, whatever be the absolute direction of a star, we never see more than the projection of its route upon the apparent sphere of the heavens. The sun, accompanied by the earth and the planetary system, instead of remaining in space in a state of repose, as was generally believed since Copernicus as far as the close of the last century, is being carried towards the constellation Hercules, and this movement of course effects a change of perspective in the position of each star. Of all the brilliant stars observed by the ancients, not one occupies at the present time the same place in the firmament; hence, the mutual distances between stars ought in the course of ages to alter, which thus supposes, that the actual figure of the constellations cannot always endure.

***

DESCARTES was the first to state, that an animal is a simple machine, working regularly like a wind-mill or a barrel organ, having neither thought nor sentiment, a piece of mechanism well-mounted, a movement operating like clock work. In a word, it would thus seem that we are automatons; perhaps it is not bad that we are so, as the contractions of the heart, the peristatic motion of the alimentary canal, deglutition, and respiration, being all automatic movements, the consequences might be fatal, were we to forget to make our heart beat, for example. But there is a great difference between the conclusion of modern science and the opinion of Descartes; the animal has been found to be an automaton, but not only an automaton. It is only since 1830 that we possess correct ideas upon the nervous system, which may be very briefly described, as consisting of the brain, with a cord in connection with it, namely, the

spinal marrow. From this central axis branch the nerves which put the muscles in motion, as well as the nerves which transmit the sensations. As we descend in the scale of creation, the brain and spinal marrow dwindle down, and disappear, as in the polypus, to a confused mass of nervous threads. External impressions are communicated by the nerves to the spinal marrow, and from thence to the brain; the latter in turn transmits its orders to the muscles. The brain is not, as it was for a long time considered to be, the unique centre and terminus of all impressions; the spinal marrow can command without even communicating with the brain—can act, as it were, on its own account. This is called reflex action, and explains the mechanical or automatic movements which ensue. If, by a wound, the spinal marrow be cut in a man, the lower part of the body becomes paralysed, and the orders from the brain stop at the part cut, nor can the impressions pass from the extremities to the brain, for if the feet be pinched or even burned, the invalid remains unconscious of the pain: no will can be exercised, because no communication exists with the brain. But if the sole of the foot be tickled, the leg will be vigorously withdrawn, because the impression has been transmitted to the spinal marrow, which reflects it to the muscles of the leg, and commands, as it were, the withdrawal of the foot from the cause of the irritation. This automatic act exactly represents the movements which take place where frogs or pigeons may be deprived of their brain, in whole or in part, and yet perform some natural acts, and where, in the case of inferior animals, such insects as the centipede for example, if the head be removed when they are crawling, the decapitated body will continue to advance all the same. Even if the body be cut up into several parts, the same phenomenon will be observed in each part, because the feet act in connection with a special nervous centre. Of course, being deprived of its visual apparatus, the headless insect cannot avoid obstacles in its path. In the case of aquatic insects, if decapitated, they will remain motionless so long as they rest on a dry surface, but plunge them in water, and they will perform their ordinary swimming movements with great energy for half an hour. Again, fish, to put their respirating organs in motion, require to have the extremity of their mouth only, in water, and in this condition can be made to live several hours. Further, when a criminal is guillotined, the movements observed in the trunk and on the visage, are but reflex actions; it is an automaton that works, not a conscious being. An animal is then an automaton, possessing a nervous centre, an *intelligence*, which directs its organism and puts the machine directly in motion. Food in being swallowed may block the aërial passages, but mechanically, a cough will expel *it*; the will, however, also produces that defensive cough. Again, walking is a voluntary movement, and yet soldiers, when fatigued, can continue to march, though quite asleep. The nervous system, especially the brain, has thus come to be recognised as the seat of life; the ancients believed blood, the "vital fluid" to be the centre of life; thus Homer's heroes "exhale their souls with the blood flowing from their wounds." Hippocrates, Plato, and Aristotle, had no correct idea of the nervous system.

***

M. DE ROSTAING has preserved raw meat during sixteen days of the late tropical weather, by means of powdered madder. He placed a portion of raw meat, rolled in an equal weight of the powder, covering the whole with a layer of the same. On examining the mass, no alteration was visible; the meat was "mummified." He does not intend his discovery to be applied to the importation of fresh meat from Australia or South America, but to preserve the respect for the dead which exists so profoundly in France, and to protect justice against the tendencies of cremation. M. Pasteur holds that all putrefaction is caused by animalcules, invisible to the naked eye, and which are transported by the air; exclude these animalcules from the air, and decomposition will be stopped. M. Gayen experiments with eggs, which in time spoil, and produce the animalcules—vibriones &c., peculiar to putrefaction; he rejects the idea of spontaneous generation, and asserts that the animalcules entered the egg while it was passing through the oviduct and before the shell was hardened.

***

M. DE BOISBANDRAU has enriched chemistry by the discovery of a new metal, and hence an addition to the list of simple bodies; he calls it *gallium* in honor of his country. It was discovered in some blende brought from Spain, and was revealed by the spectroscope; it resembles zinc very much in its properties. M. Paulet denies that injections preserve wood, it being generally believed that the metallic salts form insoluble compounds with the nitrogenous matter contained in the wood. M. Paulet found these compounds were not insoluble, and those of copper, particularly, dissolved in water containing carbonic acid.

***

THE French army is being largely supplied with preserved boiled beef, in tin-plate boxes, each box containing a quantity sufficient for 24 men during one day. The meat keeps sound for months, is being largely consumed at present during the autumn manœuvres of the troops, and is highly relished. It is prepared just like preserved vegetables, cooked in water heated by steam, then placed in tins hermetically closed, and lastly submitted to a high temperature to destroy all germs of fermentation. Australia and America ought to be able to here cut out the home contractor.

***

THE artificial colouring of flowers is largely practised for Parisian ball rooms; the fumes of sulphur are well known to turn in some seconds, roses, pansies, violets &c., absolutely white, but by mixing some drops of ammonia with sulphuric æther, (the Filhol process), a great number of violet or rose coloured flowers change to a beautiful deep green, flowers not of the same shade take a different tint; yellow flowers suffer no change, and purple leaves become instantly green. If the flowers after undergoing the change be plunged in clear water, they will retain their artificial hues for several hours; subsequently they return to their original shades.

***

TOSELLE, the inventor of the ice-making apparatus, is now able to make 11lbs. of ice in five minutes, the exact time necessary, according to M. Foye, to produce ice, that is to say hail, in the atmosphere.

***

SOME fishes have air-bladders and others none: the latter of course undergo no change in bulk from pressure whether at or below the surface of the water. M. Moreau admits that fishes with air-bladders expel the air when at the surface of the water, and absorb it when descending, but the muscular system has nothing to do with the variations of pressure.

SPIRIT OF THE NATIVE PRESS.

THE *Sádháraní* regrets to notice that Parliament so rarely discusses questions affecting the interests of India. As a rule, it matters not whether the Liberals or the Conservatives are in power, the Indian Budget is brought before the House at the very end of the Session. This indifference to Indian affairs has been shewn ever since the country came under the direct Government of the Queen. It was not so however in the days of old John Company. The administration of retired Indian Governors was often a subject of debate in Parliament; and the reproaches cast upon Lord Clive and the famous trial of Warren Hastings shew that India was more valued and more cared for then than now under the direct rule of the Crown. At that time, the country had not been fully subjected. The Mahrattas and the French in the South, and the Mahomedans in the North-west, were sufficiently powerful to hold the English in check. The Nawab of Moorshedabad had not yet been reduced to beggary. The English then loved us and felt for us; and the administration of the country was earnestly discussed in Parliament. But now that the British power is paramount, the Viceroy is virtually an irresponsible ruler. The rights of the children of the soil are ignored, while they groan under the burden of heavy taxation. They have ceased to expect that Parliament will do justice to them. Under the Queen's rule, they have lost the immense advantages which the administration of the East India Company conferred on them. The indifference of our rulers might have been excused in a body of merchants with whom trade was everything, but under the direct rule of the Queen, justice demands other treatment. Every Viceroy should be required to render to Parliament an account of his administration when he retires from his proconsulship.

THE *Som Prakásh* writes strongly on the Opium revenue. Government should give up this obnoxious income, and make up for the loss by curtailing its expenditure on the Civil and Military establishments.

THE *Sahachar* warns the public against the danger of founding the "People's Association" proposed to be established in Calcutta in opposition to the British Indian Association. The latter has gained some political influence, but it will be able to achieve no more good if weakened by division, and movements of the kind will become contemptible in the eyes of the authorities.

THE *Amrita Bazar Patrika* denounces heavily those of its countrymen who mean to give themselves up to pleasure and mirth during the Prince's brief sojourn amongst them. They should seek to lay before His Royal Highness the wants of the country; the severity of the Criminal Procedure Code; the condition of the jails, and the poverty of the nation. It will be a bad omen for the people if the opportunity be lost.

LETTERS TO THE EDITOR.

ST. PAUL'S COLLEGE.

To the Editor of the Friend of India.

SIR,—A Young Bengalee gentleman of Calcutta is desirous of leaving home for London, and to have his education there in *St. Paul's College*. Will you please furnish me with the rules and regulations of the College?

RAM CHUNDER PALIT.

NOTE.—If the writer will refer to the *Friend of India* of 3rd July he will find a very full account of the College in its columns. The annual charge is 60 *Guineas a Year*.—ED., *F. of I.*

IN MEMORIAM.

To the Editor of the Friend of India.

SIR,—As you have already published a few articles on Tennyson's "In Memoriam," I hope you will not object to insert this letter. It will interest those of your readers who delight in "literary controversy," and are curious to know how people manage to write a good deal and come off in flying colours.

Breen, in a very elaborate paper on *Plagiarism*, tells us that some of the thoughts contained in "In Memoriam" do not quite belong to Tennyson. For example, the following :

"'Tis well; 'tis something we may stand
Where he in English earth is laid;
And from his ashes may be made
The violet of his native land."

Is taken from Shakspeare's *Hamlet*, in which he says :

"Lay her i' the earth,
And from her fair and unpolluted flesh
May violets spring."

Which in its turn is taken from Persius who, in one of his satires thus proceeds :—

"Nunc non e manibus illis,
Nunc non e tumulo fortunatâque favillâ
Nascuntur violæ."

ROSIERES.

NOTE.—Shakespeare is the prince of plagiarists as well as the prince of poets and dramatists. A profound original thinker, he yet never abstained from saying a good thing because somebody had said it before him, but laid the whole world under contribution. Carlyle, among modern writers, does the same. It is only when a writer seeks by palming off the thoughts of other men as his own, to win a reputation as an original thinker, that the term plagiarist is odious. But it is far from certain that Shakespeare borrowed from Persius, though he may have done so. There is not a poet of great note whose writing are not adorned with borrowed beauties, and were we to cut out of modern writers all the thoughts that have been expressed in some form or other by Shakespeare the bulk of our literature would be marvellously reduced.—ED., *F. of I.*

THE LEX LOCI.

To the Editor of the Friend of India.

SIR,—A Hindoo who has lately been baptized at Cutwa Missionary station desires to be a preacher of the Gospel. He has no parents, but has a share of a considerable patrimony. His brothers tell him that "a Hindoo converted to Christianity cannot possess the estate of his father."

Mr. Editor, is there any law in British India, by which a baptized Hindoo cannot possess his father's estate? If there is any, then please kindly oblige us by informing us of it.

R. N. D.

NOTE.—By Act XXI of 1850 known as the "Liberty of Conscience Act," it was enacted that "so much of any law or usage now in force within the territories subject to the Government of the East India Company, as inflicts on any person forfeiture of rights or property, or may be held in any way to impair or affect any right of inheritance, by reason of his or her renouncing or having been excluded from the communion of any religion, or being deprived of caste, shall cease to be enforced as law in the Courts of the East India Company, and in the Courts established by royal charter within the said territories."

This carried out the principle introduced into Bengal by Lord William Bentinck in 1832, *viz.*, that "the Hindoo and Mahomedan law of inheritance should apply only to those who were *bonâ fide* professors of those religions at the time of the application.—ED., *F. of I.*

THE SEVENTH DAY: OR THE FIRST! WHICH?

To the Editor of the Friend of India.

SIR,—On asking a member of my station some days ago, why he had not been to Church on the previous Sabbath, I was met with the reply—"It was out of my power; just when I thought "that I had that part of the day to myself, a telegram came announcing the despatch of a *special* train with the Governor "General's *Horses* &c."

Also, I myself saw from the papers, that on that same Sabbath, (I think it was) the Viceroy left one of the up-country stations with his *suite*, and pursued his journey, as on any other day. I have heard His Excellency spoken of as being a religious, if not a pious, man; but be this as it may, most certainly THE MASTER would not have made this Sabbath day's journey, any more than he would have deemed a horse of greater importance than toiling, weary man.

The Prince of Wales is now on his way to this country. His example for good or for evil must long survive himself: let us hope that the son, and apparent successor, of that mother who could point one of Africa's kings to a precious volume, as the source of England's greatness, will not be slow to remember that fact, and to show to India's millions, that that Book contains a "fourth commandment;" but should the painful duty be necessary neither must the *Chief Pastor* of this vast Diocese forget, that a predecessor in office is said to have reminded a contemporary Viceroy that the 4th Commandment "reads *Remember that thou keep holy the Sabbath day*."

SABBATARIAN.

AMERICAN DEGREES.

To the Editor of the Friend of India.

SIR.—As there is reason to believe that certain Honorary Degrees that are passed in India, have been obtained in the manner spoken of below; and as others may be seduced to lay out money in the same way; I hope you will publish this note as a warning, the matter being important enough to deserve republication, I think, in *all* Indian Newspapers.

J. W.

From the *Lancet* of September 25th, 1875.

AMERICAN DEGREE BROKERS.

The following letter is sent to us for publication. It was written to one of the assistants of a leading firm of druggists :—

Packington College, 145, Packington Street,
London N., Sept. 2d, 1875.

"MY DEAR SIR,—I can influence you the diploma of A. M. and Ph. D., or B. Sc. or D. Sc., &c., from several Universities in the States; and if you will call here between four and eight, *or any time* by appointment, or state a time when you wish me to call on you, I can show you the documents, and give you every information; or if you send the fee (£15), I will send the document at once, with the registration certificate, &c., &c.

Yours very truly,
E. STURMAN.

"P. S.—You can arrange with me as regards money matters."

Apropos of this subject, we publish from the *Times* the letter of his Excellency the Minister of Education at Washington, in reply to Mr. A. L. Sparkes, of Shelton, Stoke-on-Trent, who had very happily forwarded to that distinguished functionary the letter of that mysterious person in Jersey who considerately caters for those who want degrees *in absentia* at the small cost of £ 20 :—

Department of the Interior, Bureau of Education,
Washington, United States, August 18th, 1875.

"SIR,—Your letter of the 1st instant, enclosing a communication from Dr.—, dated the 16th of July, and offering to procure the degrees of Ph. D. and M. A. from the university of Philadelphia for the sum of £20, was received on the 16th instant. In the absence of General Eaton, Commissioner of Education, I sent the documents in question for the examination of Hon. J. P. Wickersham, Superintendent of Public Institution of the State of Pennsylvania. The charter of the university of Philadelphia was revoked some two or three years ago on account of the notorious and shameless sale of degrees, and other rascalities. It has no actual or legal existence.

"Allow me to assure you, Sir, that no respectable institution of learning in the United States confers degrees for money. If degrees are conferred at all, they are granted with other motives than pecuniary gain. The reason why this particular fraudulent institution has been successful is because the University of Pennsylvania whose name it imitates is an institution of great corporate wealth and high intellectual character.

"I return Dr.—'s letter after taking a copy of it.

'I am, Sir, very respectfuly,
your obedient servant,
CHARLES WARREN,
Acting Commissioner.

"TO A. L. SPARKES, ESQ., B. A., SHELTON,
STOKE-ON-TRENT."

CANALS *vs.* RAILWAYS.

To the Editor of the Friend of India.

SIR,—The London *Economist* lately declared that the trade of India was not much, if at all, better than it was before the Great American struggle; if this is really the case, we shall be able to judge how far the railway system has succeeded in promoting the industry of the country generally, or if it has been worth while to go through so much to get so little, as Mr. Weller's charity boy remarked when he got to the end of the Alphabet. Unfortunately he has left us in grave doubts on the subject which it is as well to clear up, if possible, and so satisfy X. Y. Z. perhaps, who appears to consider the Millennium cannot now be *very far off* when the Government guarantee 5 per cent for railway enterprizes which yield only almost 1½ per cent. dividends, and the community are taxed to make up the deficits.

On the Madras Line, which has lately declared a dividend at the rate of 1·775 per cent, the average charge for goods traffic is two annas a ton a mile, as well as I can ascertain. In order to pay the guarantee the traffic should be charged at least six annas a ton a mile, and because *the sender* gets off this charge and the community is taxed to make it good, your correspondent argues I am wrong in estimating the average cost of railway traffic to *the community* at three annas a ton a mile for goods. He gives no data for his calculations, he ignores the deficits on account of the railways altogether, the subsidies paid to these companies to do their proper work at all during the greatest emergency, and the fact that the railways cannot secure the products of the land from ruin if the rains fail, or the community from such stupendous losses: but we are all to go to bed happy because *the sender* of produce by railways is let off as cheaply as possible at the expense of "the poor Indian whose untutored mind" we have the governing of.

A. B.

FUTURE PUNISHMENT.

I.

To the Editor of the Friend of India.

SIR,—In reply to "Inquirer" in your issue of the 16th instant I beg to observe that St. Paul in the passage he evidently refers to, says "*of the hope* and resurrection of the dead I am called in question" (Acts xxiii, 6*v*) and similarly in Acts xxvi, 7*v*. "For which *hope's sake*, King Agrippa, I am accused of the Jews," and what this hope is he declares in 1, Cor xv, 19*v*. "If in this life only we have *hope in Christ* we are of all men *most miserable*" but according to the same apostle, Christ had abolished death and brought *life* and *immortality* to light through the Gospel (2 Tim. i, 10*v*.) If then St. Paul was content to teach this as *the Gospel* entrusted to him, in what way can it be shewn that he omitted the paramount importance of eternal punishments and torments? As regards the immortality of the soul, the original sentence on man for disobedience was "for dust thou art, and unto dust shalt thou return (Gen. iii, 19*v*,) and in Ezekiel xviii, 4*v* God says "Behold all souls are mine; as the soul of the father, so also the soul of the son is mine; *the soul that sinneth it shall die*" "but" exclaims the great apostle "thanks be to God which giveth us the victory through our Lord Jesus Christ," proclaiming his *hope* of a resurrection from death, even as Christ promises in Rev. iii,21*v* "To him that overcometh will *I* grant to sit with me in my throne *even as I also overcame*, and am set down with my Father in His throne." Which way is narrow enough to walk in as Christ Himself declared, without encumbering ourselves with speculations as to what God's judgments shall be according "to men's traditions" and "vain janglings."

A.B.

II.

To the Editor of the Friend of India.

SIR,—Allow me to express my satisfaction with the renewed life and vigour which you have infused into the *Friend of India*. Every missionary must highly appreciate the unhesitating and cordial support which you uniformly give to the work of the Church in India, and every Christian man must be truly glad to find in the *Friend* an uncompromising opponent of the sacerdotalism and ritualism which are working so much mischief in our day. I regret, however, in common with many others, that you feel compelled to dissent from the general faith of the Church on the matter of the destiny of the finally impenitent. And you will, I am sure, allow me to say that many of us feel that you quite misapprehend the tone of feeling with which the doctrine of eternal punishment is regarded by those of us who hold it, and believe it to be the teaching of the Word of God. However now and then in exceptional cases, individual preachers may have expatiated with a revolting detail, utterly unwarranted by Scripture, on the sufferings of a future life, in such a manner as to suggest that they found pleasure in the picture conjured up by their imaginations, I am perfectly confident that the immense majority of those who sincerely hold the doctrine, do so with profound sorrow of soul; and that only as feeling compelled to accept the awful mystery by what seem to us some of the very plainest and most unambiguous words of the Lord Jesus Christ—the most tender and compassionate of all preachers. And insoluble though the mystery be, I cannot, for one, see that any moral difficulty attaches to the existence of sin and suffering at any point in a future eternity which might not equally be urged against the unquestioned fact of its existence to-day. Even this is to my mind a mystery, which no effort of human *reason* can possibly reconcile with the goodness, holiness, and power of God. But we nevertheless, not by reason but by faith, even in the face of this inscrutable mystery of sin and sorrow, hold fast our trust in God as our *Father*, matchless in wisdom and in holiness, in goodness and in power. And in the same way, utterly unable to explain as you would do, words of the Saviour which seem so plain as those concerning future punishment, we, nevertheless, while receiving them with deep sorrow, hold that even in all this God is most kind and loving, as well as most righteous and just; and willeth not that *any* should perish, but that all should be saved; and in this faith patiently wait for that morning when eternal day shall break and the shadow flee away.

S. H.

III.

To the Editor of the Friend of India.

SIR,—In your last issue of the *Friend* you have three letters on the subject of Eternal Punishment. The second letter maintains that the doctrine is taught in Scripture, and the third supplements that by giving the proof passages. It seems to me however that those passages have been misunderstood; that in fact they do not teach that doctrine as generally understood. The first passage Mr. Brayton gives is Matt, iii. 12. "He will burn up the chaff with unquenchable fire."

Here the fire itself is stated to be unquenchable. It is there, but the chaff may be soon burnt up and followed by more chaff to be consumed. There is nothing in the passage to show that the same pieces of chaff will be for ever burning but never consumed.

Mark ix. 43-48. So also with respect to the fire that never shall be quenched; "where their worm dieth not, and the fire is not quenched."

These expressions merely indicate the duration of the fire that consumes; not the duration of the sufferings of those who are thrown into it. For aught we know to the contrary the fire may consume them instantly and still be itself unquenchable.

The following passages may be taken together:—"And these shall

Mat. xxv. 46. go away into everlasting punishment; but the righteous into life eternal."

"But he that shall blaspheme against the Holy Ghost hath never

Mark iii. 29. forgiveness, but is in danger of eternal damnation."

Mr. Brayton argues that as the same adjective is used in both cases therefore the duration of the punishment must be equal to that of the reward.

True.—The happiness knows no change, it is permanent, has no termination—so also of the punishment, but the one preserves the life, while the other destroys it for ever. Annihilation is eternal punishment, for it is final, and gives no hope of any after—deliverance or redemption.

The next passage is Jude 7 *v*. "Even as Sodom and Gomorrah . . . . . are set forth for an example, suffering the vengeance of eternal fire."

Does the "eternal fire" here mean the fire which consumed the cities with their inhabitants, or does it mean the fire of hell? I take it to refer to the former. It is a matter of history, and thus the Apostle says that the destruction of those cities is "set forth for an example;" referring to the narrative in the book of Genesis. [I need scarcely add that those cities are not burning now, although the word "eternal" is used here.] The future punishment of man, whether eternal or non-eternal, is a matter of threatening, and cannot be said to be "set forth as an example." I question very much the justice of your correspondent's inference from the use of the present participle "suffering" in this verse. He says "here the persons spoken of are not in danger of, but are actually suffering, the "vengeance of eternal fire." I don't think that the participle here indicates any thing about *time*, but I take it to be what is called a *modal* adjunct to the verbal predicate. The sense perhaps is just the same as if the words were re-arranged thus:—"the fact that they suffered the vengeance of eternal fire is set forth for an example."

The statement that "the promise of a certain good on a certain condition implies that if the condition be wanting, the good is not only lost but the opposite evil must be endured," is also open to question. If I add A to B, I get B and A, but if I refrain from adding A, I have still B, and not B—A. I am quite unable to see how the doctrine of eternal life implies the doctrine of permanent punishment. Even though man died, generally, like the beasts of the field, having no hereafter—that death was the destruction alike of body and soul—still, there would be no incongruity in the doctrine of eternal life for some, co-existing with such a fact.

Rightly interpreted, I believe the Bible does teach the doctrine of eternal punishment, just as certainly as it teaches the doctrine of eternal life. The punishment is eternal, because it destroys "both body and soul:" it carries with it no hope, however distant, of redemption. Life and death are set forth for choice and acceptance: but the death *is* death—complete destruction, and not a continued existence in suffering that is synchronous with the eternal life of the blessed.

F. T. R.

THOUGHTS ON REVELATION.

To the Editor of the Friend of India.

SIR,—Your correspondent in the article "Thoughts on Revelation" says "Should those who witnessed past miracles have been deceived, "and none can affirm that they were not, what becomes of the "doctrines held to be confirmed by those miracles?" &c. &c., but was not this exactly the case of all the apostles and especially of St. Thomas? if any men on earth were witnesses of Christ's miracles surely the apostles were, and yet they "all forsook him and fled." In the case of St. Thomas we have recorded just what your correspondent appears to be seeking for to stengthen him in his difficulties. When Our Lord proposed to return to Judea to raise Lazarus, his disciples tried to dissuade him by reminding him that the Jews lately sought to stone him, "and goest thou thither?" When the journey was determined on, St. Thomas said to his fellow disciples "Let us go also, that we may die with him." So that at all events he was a witness of this miracle if we are to allow as much credibility to the narrative as we do to any historical narrative; yet we read that when told of the resurrection of the Lord, he declared he would not believe except on his own conditions, notwithstanding all the miracles he must have seen or witnessed. After the raising of Lazarus, the same apostle had said to Our Lord "We know not whither thou goest, and how can we know the way"? It is quite evident then from the Gospel narrative that Our Lord did not expect even His disciples would believe in Him after all His miracles, but in His infinite love and mercy He left His greatest blessing as the best to be recorded for our hope and consolation. "Thomas, because thou hast seen me, thou hast believed; *blessed "are they that have not seen and yet have believed.*". The above is from the Gospel according to St. John, but in the Acts of the Apostles by St. Luke, Ch. IV. 16*v*. we have a very similar narrative that the witnesses of miracles did not or would not believe, so that the complaint made by your correspondent is by no means new or singular; St. Peter also says in Ch. I. 8*v*. &c. of his first epistle "Whom *having not seen*, ye love; in whom, *though now ye see him not, yet believing*, ye rejoice with joy unspeakable and full of glory; *receiving the* end *of your faith*, even the salvation of your souls." And so St. Paul deals with the jailer at Phillipi, Acts. XIV. 31*v*. "Believe in the Lord Jesus Christ, and thou shalt be saved, and thy house." It is the gift of God as our Lord and His apostles taught, John IV. 10-VI. 32-33*v*. Romans VI. 23*v*. and Ephesians II. 8*v*. The mere witnessing of a miracle could not, therefore give us this faith, and it is vain to expect it, but then our merciful Lord did not leave us comfortless, but has told us that "He is the way and the truth and the life." It is therefore only by a conformity, however defective, to His example, that we can hope to be saved, and he has also declared "All that the Father *giveth* me shall come to me, *and him that cometh to me I will in no wise cast out.*" It is then only by faith that we can be secured as old Luther long ago taught. No miracles of the Church of Rome, or any human doctrines whatsoever, can do this for us, as it is in the XLIX Psalm 7—9*v*, and all the poor Christian can say to his

brother is in the words of old Bunyan, "Be of good cheer Jesus Christ maketh thee whole." As it also is in Acts iv, 11—12*v*.

A. B.

THE WEEK.

Place aux Princes! As every body is talking chiefly about the Prince and his visit, we must do as every body else is doing; the more especially as during the week several touching and interesting incidents have occurred, concerning him. One is, that just before the *Serapis* started it was discovered that there were no pints of champagne on board. Who is responsible for this gross negligence we have not heard; but it is enough to excite universal indignation. Louis XIV. once said that he had almost had to *wait*: but imagine a Prince of Wales in this civilised 19th century having to drink a quart instead of a pint of champagne now and then! If it had been the Duke of Edinburgh instead of the Prince, the matter would scarcely have been passed by so easily. With only £ 60,000 to spend, it will be hard enough as it is, to make both ends meet without any such useless and unnecessary waste. Another incident that has pained us, is the fact that when the *Serapis* left England there was no fuss made. It was allowed to steam out just as any any other ordinary steam-ship. This may have been accidental, but the thoughts it suggests to us are gloomy. We have heard and *dis* believed much lately concerning the growing republicanism amidst the English working classes, and the possibility of H. R. Highness the Prince never coming to the throne of England. We believe that the hearts of Englishmen from the highest to the lowest, beat still with loyalty and love to the English throne, We notice also that a Prince's Hand-book for Hindostan has been published. This will be doubtless only the first of a long series of Prince's something or anything:—the Prince's collar, the Prince's socks, the Prince's handkerchief, the Prince's coat, the Prince's barouche or the Princes dog-cart, the Prince's beard, the Prince's smile, the Prince's crown, the Prince's bow—we may certainly expect to be deluged thus for a long time to come. The fact that the Queen ought to come forward and give the Prince £100,000 to add to Parliament's noble grant, has also been lately discovered by the English *Examiner* which says that if Disraeli had had the courage to ask for £200,000 it would have been cheerfully agreed to by the working classes, even while for conscience sake they object to any grant at all. We trust they will remain in the same generous mood, when by and by an additional grant may be asked for, as probably it may be. This, and the statement that the *Times* intends to telegraph a daily letter from India during this celebrated visit, about exhausts all the novel and momentous thoughts of the week about the Prince.

From the accounts that come from Bombay about the decorations for the Prince's visit, we are struck with the contrast that exists in that place amongst those responsible. All seems to be hurry, and doubtfulness, and changeableness. Now this order is given only to be recalled: now that arrangement is settled only to be disarranged. In Calcutta, how different is it! No press, no difficulty, no hesitation exists. Calmly and secretly for the most part the work progresses, much as if the Municipality has enlisted some of the *Arabian Nights'* genii in it. We have no doubt whatever, however it may be in Bombay, that the result in Calcutta will be stupendous, perhaps "prodigious!" as Donimie Sampson used to say. The city of Bombay itself is at present full of native princes of all sorts and houses and carriages have been let at enormous rents We have even heard Rs. 30,000 in one instance mentioned as the rent for a house not so large as some of Calcutta's palaces. We wonder if Calcutta will receive so many visitors? If not, why should not all the Princes now in Bombay run over to Calcutta after the Prince's departure and so see all our gaities as well? Many of them, may never have such an opportunity of seeing Calcutta at its best again and we feel sure that there are many philanthropically disposed inhabitants who would gladly give up their houses for a few days, for a consideration.

One of the daily papers has said that the fever known as the *Burdwan*, has been raging in Hooghly and its neighbourhood and is even now approaching close to Calcutta. That something ought to be done to mitigate or remove this evil all agree, but there seems to be some difficulty amongst those whose duty it is to do something, to find out what is the cause of this fever. If it be taken into consideration, that from Calcutta upwards the whole country is little more than a swamp, that the drainage is defective along the whole line, that vegetation of the rankest kind is allowed to accumulate and not all about these suffering villages, that staquant pools large and small are innumerable all over the country, that the line of Railway, has throughout been allowed to accumulate miles and miles of stagnant water on each side of it, we cannot but imagine that after some years, or say in another century, as no responsible government can act with juvenile haste, in another century this scourge will have disappeared.

The news from the Madras side is of no great importance; but the dispute between Dr. Meurin the Pope's Bishop of the Malabar Coast and Bishop Mellus, the nominee and advocate of the Patriarch of Babylons has called for much remark. That Dr. Caldwell the New S. P. G. Bishop of the South of India, has arrived: that the Planters' Association in the Wynaad promises to do good work for the planters; that Mr. Atkins has repeated his statements about the condition of the Madras 'poor whites' and defies disproof; that Sir F. P. Haines declares he has not had any official information about being the new Commander-in-Chief, that an irreverent writer in the *Madras Mail* proposes that every where the Prince is expected, trophies formed of red tape, memos, and dockets be erected in vindication of our official activity, and all that some others have done or said, are, they not written in the books of the Chronicles of Indian life Presidensial or Mofussilite?

At Simla the will case of Colonel Colyear has been decided. It will be remembered that, that hale old resident of Simla died somewhat suddenly after returning from a tour in the plains. It was suspected that he was poisoned. As the codicil appointing Major Goad as executor could not be shewn to have been signed in the presence of the attesting witnesses, it was adjudged invalid. We should think that Major Goad must be on the whole relieved by the decision. The vital topic of the right place of the Bombay Admiral-in-Chief in the table of precedence has been decided to the discomfiture of the Admiral, who naturally thought he should rank next to the Commander-in-Chief of the Army, forgetting that the dance about being a Member of Council put him out in his calculation. We do trust that those at work on the New Table are conscientiously carrying out their task. A little careleseness, laxness, or thoughtlessness, we beg them to consider, may render many an indefatigable and noble member of society misserable for life.

The various amusements of Calcutta are now in full swing. With an Opera at the Corinthian, and two theatres and a promise from the Orchestral Society of a series of cold season concerts, a Calcutta man must be hard to please, if he cannot contrive to make his evenings pass pleasantly. As so many have already criticised all these performances favorably, we need not here add our unusual praise.

MONEY MARKET.

Friday 5th November.

During the past week a decided revival has taken place in the Export trade, and in Jute, Tea, and Linseed, very considerable operations have been effected. From 15,000 to 20,000 tons of freight are now under engagement for the first named article alone, and about 24,000 boxes of Tea were disposed of at the sales of Monday and Tuesday last. In import trade there is a good current demand going on, and being supplied at about current quotations, which are more remunerative to the merchant than they have been for years back; and there is every prospect of a continued large consumption of cotton goods for some months ahead.

The position of money remains easy, and the Bank of Bengal's business has sustained a further diminution to the extent of about twenty-three lakhs:—the cash balances, however, are not stronger than they were, but on the contrary have been trenched upon to the extent of nine lakhs, Government having taken out thirty-two lakhs during the week. There is no change in the official terms for money, the Bank minimum remaining at 5 per cent, but in the bazaar lower rates are current. The course of trade will probably keep rates steady now for a time.

It has transpired that Government has been fortunate enough to find a purchaser for its shares in the Bank of Bombay, in the eminent Hebrew firm of Sassoon, at the high premium of Rs. 155 per share of Rs. 500. We have not heard of any negotiations on foot for disposal of the shares in the Bank of Bengal, but the amount here is so large that it is very unlikely any single purchaser could be found. This Bombay transaction however strengthens the force of the suggestion that an invitation for tenders would be the best means of obtaining the best possible price for the shares, and that it should be done quickly, to remove

the incubus from the market before the general value of the stock has had time further to deteriorate.

The course of Sterling exchange this week has been a little peculiar, and instead of the greatly enlarged shipping operations having strengthened rates, an easier tone has from time to time made itself felt, becoming more decided towards the close of the mail. The demand for remitance, moreover, has not been excessive, and the price of Council Bills on Wednesday, 1-9¾, though lower than last time, was not lower than was generally expected here. The cheaper appearance of the London Market seems to be the only cause, among all the causes at present affecting exchange, calculated to produce flatness. The remittances for this mail, in Bank Bills, are of good amount, but still nothing extraordinary, and the greater part have been settled at 1-10¼, six months sight:—one Bank, however, gave 1-10-5/16 for a short time, and sold pretty freely:—for shorter dates, three months sight has been sold at 1-10, and demand bills at 1-9¾:—Telegraphic has been steady at 1-9-11/16, but comparatively little has been taken in this shape, doubtless also in expectation of cheaper discount at home.

The supply of credits has been limited, and their rate has been 1-10-5/16 with exceptionally a little even at a farthing. Document Bills have strangely become weaker, as they became more abundant, and after being stiff at 1-10⅛ are now scarcely stronger than 1-10-7/16, for payment, whilst discountable paper is quoted 1-10⅜ to 1-10-7/16. The closing quotations for this mail are :—

Bank Bills	1-10-3/16 to ¼	6 months sight.
Credit Bills	1-10-5/16	
Document Bills	1-10-7/16	

There has been rather a strong enquiry for Government paper, and an extensive business has taken place at hardening rates, with an upward tendency. Four per cent. paper has progressed from 102, 102-1, 102-2, 102, 102-1, 102, 102-1, 102-2, 102-1, 102-2, to 102-1, at which there were large sales yesterday. In the four and a half per cent. stock there has been an unusually large amount of dealing, but it still remains the cheapest stock in the market taking the difference of interest into account; the business in it has been 102-14, 102-15, 103, 102-15, and finally again 103.

The five and a half stock is difficult to place, but holders are firm at 108, and a little business has been done at that price. The latest quotations are :—

4 per cents.	102-1 to 102-2.
4½ per cents.	102-15 to 103.
5½ per cents.	107-14 to 108.

There is very little of a cheering nature to report as regards the share market, and business is almost at a stand still. Bank of Bengal shares are steadier since yesterday, no doubt owing to sale of the Bombay Bank shares above referred to, and there are again buyers at 1310. National Banks are decidedly firmer, and there has been some good buying at stiffening rates. Spinning Mill Stocks have been rather quieter again, although it is known that the going concerns cannot overtake all the orders they are receiving. Tea shares are as flat and neglected as ever, but appear to be well held there being no urgent sellers. The following will show the leading sales of the week in the order effected :—

Bank of Bengal, 1290, 5, 1295.
National Bank, 108, 9, 109.
Barnagore Jute Mills, 97½,98.
Seebpore Jute Mills, 74, 72.
Fort Gloster Jute Mills, 84.
Howrah Jute Mills, 74, 5, 74.
Bowhreah Jute Mills, 94,92.
Singell Tea, 100, 1, 100.
Central Cachar Tea, 134.
Dehing Tea, 50.

The English mail of 15th October has arrived in Bombay, and will consequently be delivered here on Monday morning.

INDIAN INTELLIGENCE.

BENGAL.

IT is probable that the ferry steamer from Sahibgunge to Caragola will soon not be able to land passengers at a less distance than six miles from the latter place. As it is, passengers have, owing to the river having changed its channel, to be landed some four miles below the Caragola dâk bungalow.

OWING to the rains having come to an end earlier than usual this year, tea manufacture has almost ceased on the hill gardens in the Darjeeling district. However, as nearly every estate in the district has made more than the amount of tea estimated at the beginning of the season, planters have no reason to complain of the early close of manufacture; on the contrary, they will now be enabled to get the tea which remains at the factories packed and despatched to market earlier than usual, and not be obliged, as is often the case, to hurry over their pruning.

THE Construction of the new Hastings Bridge has commenced in earnest, and the contractors are pushing on the work rapidly with a view of completing the structure by Christmas. The length of the girders is 174 feet each, and the span, clear between the masonry blocks, 163 feet. The total weight of iron in the bridge is about 300 tons. The roadways for passengers will be protected by ornamental railings, and altogether the bridge will be quite a credit to Messrs. Marillier and Edwards, who obtained the contract for, we believe, Rs. 1,40,000.

WE read in the *Behar Herald* that a special meeting was held at Bankipore on the 20th instant with a view to devising measures for giving a suitable reception to the Prince of Wales. Amongst those present were Maharajah Moheshur Buksh Singh, Maharajah Sir Joymungal Singh, K. C. S. I., Maharajah Kishen Protap Sahee, Rajah Radha Persah Sing, Rajah Prohlad Sen Singh, Rajah Hurobullub Narain Singh, Rajah Sheonundun Singh, Maharajah Coomar Hurrendro Kishore Singh, and many other distinguished native residents of Behar. Mr. C. F. Metcalfe, the Commissioner, who presided, said that as the Prince would remain in Bankipore only a few hours, during which time he would be the guest of the Lieutenant-Governor, no lavish outlay was necessary on the reception itself. He would leave it to those assembled to say whether any steps should be taken to commemorate His Royal Highnes's visit by the establishment of a public institution of a permanent character. Some of the gentlemen present then proposed the erection of a building in connection with the Patna College, and others were more in favour of a College of Art and Industry. The question was ultimately left for future decision, but a sum of Rs. 1,40,666 towards the erection of a suitable *memento* was subscribed on the spot. This must be pronounced a very handsome contribution, considering how the purses of many of the Behar landholders were drained during the late season of scarcity.

NORTHERN INDIA.

LUCKNOW is preparing to assail the Prince with a ball, a talookdar's fête, and a levee. The dates are not yet fixed.

THE trial of Captain Liot of the Royal Artillery for forgery will take place at the present Criminal Sessions at Allahabad, which commenced on Thursday.

A CASE of considerable interest and importance to travellers will shortly be tried in the Punjab Courts, arising out of the following circumstances :—

THE contractor's engine now runs to the top of the Ghaut between Ajmere and Nusseerabad, so that there is only seven miles more of rails to be laid down, and the whole of the Rajpootana Railway (at least as at present sanctioned) will be a *fait accompli*.

WE regret to hear that a young Subaltern of Artillery, belonging to a Battery stationed in the Punjab, who recently took French leave to England, has been arrested at Aden and is being brought back to India for trial.

THE Maharajah of Cashmere has evinced his approval of the Medical Mission there by presenting Dr. Maxwell with a handsome shawl and other articles of Cashmere manufacture. He also provided a *dhoolie* and bearers for the Doctor, who is proceeding home in bad health.

ACCORDING to statistics, 10·4 per cent. of the Punjab jail population has been punished within a year for breaches of prison discipline. This proportion, as the Lieutenant-Governor remarks, is rather small. Out of 3·1715 punishments, however, 2·272 were corporal, and his Honor thinks this is too much.

THE approaching Camp of Exercise at Delhi seems likely to develop more extended uses than such camps have hitherto done. We are told that novel and interesting trials are to be made in artillery and rifle practice. In furtherance of the latter, all the Native Infantry Regiments not yet so provided are to be equipped with Sniders.

MR. W. H. CAREY, of Simla, a grandson of Dr. William Carey, of Serampore, has two sons about to come to India as missionaries. Among fourteen students who lately received the Degree of Medicine in the University of Edinburgh they stood second and third in the order of merit. Dr. William Carey has been appointed to Delhi by the Baptist Missionary Society, and Dr. Ernest, who remains a few months more at home, will be soon appointed to another station.

A CORRESPONDENT writes to us from Jeypore :—"We have just had a visit from Baboo Keshub Chunder Sen, who, on the evening of the 27th delivered an interesting lecture 'on Ancient and Modern Civilisation in India.' Colonel Beynon, Political Agent, occupied the chair, and there was a large attendance of European and native gentlemen. The lecture was one of great interest; and we trust the good counsels tendered by the lecturer to his fellow-countrymen will bear fruit. Mr. Silbiger, gas contractor, who has received a contract from the Jeypore Government for the introduction of gas into the city, has commenced vigorous operations. He confidently expects to have part of the city lighted up by the time of the visit of the Prince of Wales in February. The Jeypore Chief seems to spare no expense in making his capital in all respects a model town."

The Hon'ble Rr C. Drummond, 72nd Highlanders, met with a severe accident while travelling from Campbellpore to Rawal Pindi on the 6th of September last. He took a seat in the Mail Cart at Lawrencepore and travelled in safety till within two stages of Pindi, when a pair of vicious horses were harnessed to the cart. These horses commenced kicking and backing to such a degree that Mr. Drummond and a Mr. Collis, who was also on the cart, had to jump off to save themselves from the risk of being precipitated over the *khud*. Suddenly the horses started off at full speed, and these two gentlemen ran after the cart, and catching hold of the hand-rails began to pull themselves up, placing their feet on the foot-board. Mr. Collis got up all right, but while Mr. Drummond

suspended in mid-air with the horses going at full gallop, the iron was rail of the cart broke off in his hand, and he was thrown violently into the road, breaking his leg in two places and dislocating his ankle. Mr. Drummond is, about to institute a suit against the postal authorities of the Punjab to recover damages for the severe injuries he has received. The case will raise some interesting questions as to the degree of liability attaching to Government for injuries received by a passenger in a Mail Cart through the viciousness of the horses, and the defective nature of the iron rail attached to the cart in question.

BOMBAY.

A VERNACULAR paper states that His Excellency the Viceroy has invited Sir Jamsetjee Jeejeeboy, Bart., and his two sons, to Calcutta, to be present at the Durbar which is to be held there.

CHOLERA is raging furiously throughout the Belgaum Collectorate. A correspondent says that "shoals of natives are dying daily, and the epidemic is on the increase."

MR. C. GRONDONA, the Italian Consul, who was so severely injured by being thrown from his horse, is now in a fair way of recovery and will shortly leave for Genoa.

THE lowest figure for the use of a one-horse vehicle at Bombay during the Prince of Wales' stay is Rs. 60 per day. An Australian loafer is to tool the Gaekwar of Baroda's four-in-hand for a fortnight and receive Rs. 1,000 for the job.

THE memorial of the Bombay Mill-owners, praying that the duty imposed by the recent tariff upon raw cotton, not the produce of Continental Asia or Ceylon, may be remitted, is to be forwarded for the consideration of the Secretary of State for India.

THE deputation to Bombay on behalf of the Nizam will consist of Mr. Saunders, C.B., (Resident); Sir Salar Jung, Nawab Vusherut Dowlah, Bahadoor, Minister of Justice, son-in-law of the late Nizam, Vicar-ool-Oomrah Bahadoor, and Rajah Narindra Prasad.

THE Missing Steamer *Coromandel*.—The Commander of H. M. S. *Rifleman* writes as follows to the Political Agent, Muscat:—"I beg to inform you that I have returned from Koria Mooria Islands, having searched them, also the coast of Kooria Mooria Bay, Gulf and Island of Massirah, and the adjacent coasts, but have not been able to get any information about the missing steamer *Coromandel*. The Captain of an Arab *batilla* informed me that a steamer had sunk off Ras Haffoon, but he could not say when, having received his information from the Somalis, who said the crews had been taken care of by their people."

AT the annual general meeting of the Gujerat Vernacular Society held the other day, it was resolved that an intimation be made to Mr. Dulputram Dayabhai, the well-known Gujerat poet, to the effect that in consideration of the eminently valueable services rendered by him to the Society and to Gujerathi literature, the Society are pleased to grant him for life a pension of Rs. 20 per mensem, from the time he is incapacitated from serving them and resigns his situation, with a reversion of Rs. 8 to his wives after his death to be equally divided between them, on the understanding that the share of either of them on death is to lapse to the Society, and that the Society reserve the question of commemorating his services after his death, when a larger portion of the pension will lapse to the Society, for future consideration.

BOMBAY is fast getting ready for the reception of the Prince of Wales, who is expected to land on or about the 8th instant. The decorations and entertainments will be splendid, and the town is already full of visitors of rank. About thirty native Princes and Chiefs have arrived, including the Gaekwar of Baroda, the Nawab of Jownaghur, the Maharajah of Edur, the Rajah of Kolhapore, the Rao of Kutch, the Thakore of Bhownuggur, the Maharana of Meywar, and many Chiefs and Sirdars from the Southern Mahratta country and the Deccan. As most of them are accompanied by a crowd of retainers, the temporary increase of population is considerable, and house accommodation and conveyances are at a high premium. The Rajahs and Chiefs appear to relish the change from the semi-barbarism of their own territories to the comparative civilisation of Bombay, and everybody, we are told, is in a good humour. Both the Viceroy and Sir John Strachey are expected to arrive next week in time to meet the Prince on landing,

MADRAS.

THE Rajah of Calastry has been asked by the Government to come to Madras to meet H. R. H. the Prince of Wales.

A MOVEMENT is on foot for raising a Regiment of Volunteer Cavalry, 250 strong, from amongst the planters of Southern India.

THE CENTRAL COLLEGE.—We learn that Rs. 42,000 have been sanctioned for works connected with the Bangalore Central College.

THE Secretary of State for India has sanctioned a requisition of the Madras Government for specimens of ploughs of Swedish manufacture.

MR. A. C. CAVENDISH, Inspector of Branches, has been appointed to act as Deputy Secretary and Chief Accountant of the Bank of Madras during the absence on leave of Mr. W. T. Holmes.

THE CORTELLIAR BRIDGE.—The tender of Mr. Maylor of Calicut for the construction of an Iron Bridge across the Cortelliar river has been accepted by Government.

THE Maharajah of Travancore has to pay no less a sum than Rs. 7,000 to secure a house in the Luz as a residence for himself and staff during the week of his stay in Madras when he comes down to meet H. R. Highness the Prince of Wales.

THE South Indian Railway Company are very busy trying to complete the southern extension in order that the Prince may open it. A beautiful saloon carriage is being constructed in the Railway Workshops for the Prince, the cost of which will be Rs. 25,000.

THE arrangements for fitting up six of the rooms in the Government House, Madras, for His Royal Highness the Prince of Wales, are being rapidly proceeded with. We learn that the cost of fitting up these rooms will be upwards of twenty thousand rupees.

HAVING returned from Cottayam to Madras to greet the Prince of Wales, the Bishop will remain at the capital a week, and then proceed afresh to Travancore, and leaving Trevandrum on the last day of the year, will go into Tinnevelly and spend five weeks visiting the mission fields.

COFFEE ESTATES IN SOUTHERN INDIA.—The United Planters' Association in Southern India represents 423 coffee and tea estates, with an area of 150,000 acres, upon which at least £2,533,000 have been laid out. About 43,000 labourers are said to be employed on these estates. There are about 360 European planters in the country.

PRINCE OF WALES' RECEPTION.—The Rajah of Vencatagherry, C. S. I., has very liberally subscribed three thousand rupees towards the expenses of the reception of H. R. Highness the Prince of Wales. The rajah is well known for his liberality, and in this case is, next to the Madras Government, the largest subscriber to the fund.

GRAZING LANDS.—Respecting the assessment of grazing lands in the Tinnevelly district, Mr. Puckle has arrived at the conclusion that the entire area of these private grazing grounds should be registered in the lowest taram and granted on putta, without restriction of any kind. The lands being borne in the puttas will soon cease to be distinguished as allotments for any specified purpose.

IN reply to the complaint in the Madras papers, that Mr. Robinson, their acting Governor, has been idling away his time at Ooty in an atmosphere of pure *Badminton*, a correspondent of the *Madras Times* affirms that this gentleman "is probably the hardest worker "in India; that he rises when the majority of mankind have about "half-finished their night; and toils on after most people have "quited their offices."

CAPTAIN CAMPBELL WALKER, Officiating Inspector of Forests, in a letter to the *Madras Mail*, states that he has not yet definitely accepted the offer of an appointment in New Zealand; his services have at his own request, made to the Secretary of State through the Madras Government, been placed at the disposal of the New Zealand Government. He will, it is said, on Colonel Beddome's return, take leave, and proceed to that Colony, with the intention of returning eventually to Madras.

THE Collector of Malabar some time ago represented to Government that salt could be obtained on the Western Coast. The Board of Revenue directed Dr. Rutton to proceed on a tour thither with a view to test the salt produced there. It is stated that salt is manufactured to a considerable extent in Travancore and Cochin by the Rajah's Government. The method adopted in manufacture is different from that obtaining in Madras; salt water is let into the pans or reservoirs by means of pipes instead of by the working of pecottahs, thereby doing away with a good deal of manual labour.

THE death of Mr. T. H. Going, the late Deputy Chief Engineer of the Madras Railway, has given rise to a good deal of discussion as to who will be selected by the Board of Directors in England to be his successor. It was announced that on the retirement of Mr. Beresford Anderson, the present Chief Engineer, in December next, the late Mr. Going would be appointed to fill the post. Rumour has it that Mr. Robinson, one of the Engineers of the Railway, now on furlough in Europe, will be selected by the Board to fill the vacancy after the departure of Mr. Anderson.

ACCORDING to a report published we find that in the official year 1874-75, the total number of persons vaccinated in the Coimbatore Local Fund circle was 23,499 against 22,695 in the previous year, and 29,465 in the year before. The work of the department somewhat declined owing to a reduction in the establishment, but the Board, at the suggestions of Drs. King and Shortt, will do all they can to improve the working of the department so as to increase the total number of operations. Private vaccination will be encouraged by the payment of Rs. 10 per 100 successful operations. Dr. King is of opinion that each vaccinator ought to operate on 1,000 cases during the year.

MR. JAMES W. Arbuthnot, of Messrs. Arbuthnot and Co., has reported to the Collector of the Vizagapatam district, that his firm have made an experiment in Palcondah of the cultivation of the Bengal jute plant raised from the best Dacca seed. "There appears he says, "to be a fair prospect of our gradually introducing the Bengal Jute plant into Palcondah with the same success as has attended indigo cultivation, and with the view of improving the preparation of the plant (in which the ryots are very careless, using muddy stagnant water) we propose, if practicable, to utilize the reservoirs connected with our indigo factories and used hitherto solely for supplying the factories with clearer water than can be drawn at once from the rivers or tanks."

CEYLON.

A SHORT time ago, it was resolved by some of the inhabitants of Columbo to present Sir Comarasmy, Kt., with an address and a gold plate in honor of his being knighted by Her Majesty the Queen. It was resolved at the time to give the newly-created knight a grand entertainment on his return to Columbo from England, but Sir Comarasamy declined the honor, and asked that the address should be privately presented to him. This was accordingly done. The address presented was signed by about forty thousand of the inhabitants of the island; the gold plate is said to be a splendid piece of workmanship.—

ONE of the Ceylon papers publishes the following as being an exact copy of a document which is said to be framed and glazed and adorning the chunam wall of the Assistant Agent's House in Trincomalee:—

LICENSE TO CAPTURE ELEPHANTS,

No. 1000.

License is hereby given by virtue of the Ordinance No. 13 of, 1869, to His Royal Highness, Albert Edward, Prince of Wales, and

his trappers and followers, to capture one elephant in the Division of Trincomalee, within one week, in the Eastern Province, from this date, and no longer, on the following conditions, any breach of which will involve the cancelling of license and confiscation of any elephants, caught thereon, besides all penalties prescribed by the Ordinance :—

1st.—The license is of no avail beyond the time specified, and no elephant under three cubits may be captured.

2nd.—The elephant intended to be caught may not be shot or otherwise destroyed.

3rd.—Before an elephant is captured, this license must be produced to the Vanniya of the Division, and his endorsement as to such production obtained.

4th,—Within six days of the capture of an elephant on this license, notice must be given to the Vanniya of the division, describing the height, sex, and marks on the animal, and the Vanniya will record these particulars on the license.

5th.—If the elephant captured on this license die, the license is of no further effect ; and if any person other than those authorised are engaged in the capture the elephant will be forfeited.

6th.—The elephant is to be brought to this *Cutcharee* to be registered, and certified as caught upon a license within one week *after* expiration of license.

Government Agent.

Trincomalee Cutcharee, Dec. 11, 1874.

BURMAH.

MR. B. A. Davidson, late Superintendent of Police in Rangoon who was wounded in an encounter with the Pegu dacoits, and who in consequence had to have his arm amputated, is now quite convalescent, and has been appointed to officiate as Superintendent of Police Tavoy.

STRINGENT orders have been issued for the completion of the Rangoon and Prome Railway in the ensuing year, and trains will probably be running between Rangoon and Thongzai at the 60th mile by June next. The carriages are to hold ten people, who will get in from the back as in an omnibus, instead of at the sides as is the case on English Railways. This we suppose is necessitated from the narrow guage which has been adopted.

ASIA.

SIR CHARLES SHADWELL K. C. B., late Commander-in-Chief in China, has been informed that the action taken by the commanding officers of the ships employed at Bangkok, at the time that a civil war was anticipated, owing to the dispute between the two kings, has met with approval at the Foreign Office ; and despatches to that effect have been forwarded to the present Commander-in-Chief for the information of the officers named.

THE expedition, composed of the Editor of the *Turkestan Gazette* and two other Russians, which set out in the beginning of last May to explore the Khanate of Hissar to the north of the Upper Oxus, returned to Shehr-i-setz in June last, after traversing the greater part of this very imperfectly-known region. A valuable map, comprising the survey made by two of the travellers as well as fourteen astronomical observations taken by Herr Schwartz, will shortly be published. The most interesting of the results are the identification of the " Iron Gates," which have acquired such historical interest from having been passed by Timoor at the head of his army when on his way to Hindoostan, as well as from the description given of them by the Chinese pilgrim, Hwen-Tsang, in the seventh century ; the discovery of the Surchan as an important tributary of the Oxus ; and the identification of the remarkable bridge called Pulisangin which spans the Surkhab at a place where the stream is confined between rocks only thirty yards apart at the bottom, but which at the top overhang the stream so as to make the actual length of the bridge only ten yards. Professor P. Lerch, known for his writings on Central Asian geography, has communicated an interesting paper on this expedition to No. 8 of the *Russische Revue*, in which he remarks that during his stay in Bokhara he discovered a work, the existence of which has been hitherto unknown to European geographers, being a history of Mohammad Rahim Khan of Transoxiana, and containing much valuable ethnological and geographical information on Hissar. In various points it confirms the researches of the Russian travellers. Our knowledge of the natural zone intervening between the Russian and British possessions in Asia is now rapidly increasing. Any one inspecting the last edition of Colonel Walker's excellent map of Central Asia connot fail to be struck with the great increase of information shown thereon acquired partly through the agency of the Kashgar Mission, but in an important measure through the aid of the native explorers who, by their careful training under Colonels Walker and Montgomerie as well as by their personal energy, have been enabled to penetrate into countries closed to British officers, and thoroughly and scientifically to map out large tracts in these inaccessible regions. The Hissar Expedition will help to fill up one of the few remaining as well as most conspicuous blanks in the map.

MILITARY.

DR. BEATSON, Officiating Surgeon-General, is likely to be confirmed in his appointment in succession to Sir J. C. Brown, K. C. B., whose tenure of office expires on or about the 20th instant.

THE promotion of Major-General Sir Edward Russell, K. C. S. I., will interfere in no way with his command in India. Sir Edward will complete his five year's service at the head of a Bombay Division, and will return to England early in 1876.

IN consequence of difficulties of transit caused by the interruption of communications and other reasons, the Commander-in-Chief has directed that the Soldiers' Industrial Exhibition, ordered to be held in the autumn of 1875, shall be held at Mean Meer towards the end of January 1876.

CAPTAIN FORD of the the 4-23rd exchanges with Captain Hezlet of the G-4th Royal Artillery ; Captain Ellaby of the 1-23rd with Captain Glass of the 5-21st ; Captain Keith of the A-24th with Captain Montgomery of the G-11th ; Lieutenant Gillespie, of the A-C with Lieutenant Taylor of the A-E.; and Lieutenant Lyster of the 7-23rd with Lieutenant Rogers of the 7-21st Royal Artillery.

GENERAL.

THE *Memorial Diplomatique* states that Ameer Shere Ali intends to establish an Afghan legation in Constantinople. Although his ministers are opposed to the project, the Ameer is said to have determined to carry it into execution.

A GERMAN newspaper gives some statistics shewing the progress of the cotton industry in Germany. Taking the consumption of raw material by the returns of imports and exports, and subtracting the latter from the former, we obtain the following results:— "Between the years 1836 and 1840, the consumption was 18,597,100 lbs., between 1856 and 1860, it was 96,935, 800 lbs., and between 1871 and 1875, it was 244,441,500 lbs., thus shewing that the consumption is more than thirteen times greater than it was some forty years ago.

THE North-West Africa expedition is expected to leave England for the Coast of Africa early in November. General Sir Arthur Cotton has promised to accompany the party. The object of this preliminary expedition is to make a survey of the Coast of Africa opposite the Canary Islands, in order to find a suitable position for a harbour and commercial and missionary station. Moreover, to enter into commercial arrangements with the native tribes, to inquire into their present means of commerce and the resources of the country through which it is proposed to pass, to examine as far as practicable the sand bar across the mouth of the river Belta, which it is supposed keeps back the water of the Atlantic Ocean from flowing into the dry bed of the ancient inland sea, and to obtain levels and other necessary information. Mr. Mackenzie, the Director of the expedition, expects to get the friendly support of the principal chiefs of the tribes of the North-West Coast.

AN ingenious Swedish wood-carver has hit on a way of applying the game of chess to political and religious controversy. This artist, whose name is Oestergren, and who is a native of the obscure town of Westeras, in Sweden, is making ready for the forthcoming Philadelphia Exhibition a set of chessmen intended to typify the struggle of opinion now going on in Germany. On the one side the Emperor is the king, the Empress Augusta the Queen, Prince Bismarck and the Minister of Public Instruction, Herr Falk, the bishops, the knights are uhlans, and the pawns recruits of the landwehr. Their adversaries are the Pope, of course as king, while an abbess figures as queen ; the bishops are cardinals ; monks mounted on asses represent the knights, and the pawns are monks on foot. This is not the first happy hit of the artist. Last winter in the Upsala Exhibition he exhibited a chess game, in which the pieces represented the chief actors in the Franco-Prussian war.

FEW dream that the wine vintage at France is about as valuable as her grain harvest ; but so it is. The seven million hectares of arable land she possesses at 100 hecktolitres each of grain at 20 francs gives a gross amount of two milliards of francs to the farmers ; on the other hand the 22 millions of hecktares of vineyards yielding in a fair year 70 millions of hecktolitres of wine at 70 francs gives also an amount of two milliards of francs to the wine growers. But it is further to be kept in view, that while the grain by its manufacture into bread and retail sale adds 50 per cent. to its value, the product of the vintage, taking the distillation of brandy, and the retail profits on wine from the cellars of the dealers, adds little if any less than 100 per cent., bringing its annual total to four milliards. The actual exports of wine from France have now reached the sum of 250 millions of francs per annum, but in a good wine year, it is estimated that the home consumption is twenty or twenty-five times as much as the whole export. It appears clear then, that it was the grape that paid the war indemnity, and it is to the grape France owes her present prosperity.

AMERICA is producing not merely a plentiful crop of "girl graduates," but heroines of another kind that never fail to command admiration. The New York papers contain an account of Ida Lewis, a young lady who is the Grace Darling of America. Ida is a child of the keeper of Lime Rock Light-house, Rhode Island. She first attracted public notice nine years ago by saving a soldier, who by venturing out in a light skiff on a blustering day, would certainly have been drowned had not the girl risked her own life in the surge to save the man. The year following, she saved the lives of two men in a terrible gale : the girl came to the rescue when the craft was nigh perishing, and carried both men safely ashore. Her most heroic effort was in 1869. Two young soldiers sailing from Newport to Fort Adams in a boat guided by a boy, were caught in a squall that upset the craft. The boy was drowned. The soldiers clung to the wreck, and Ida having seen the accident from the light-house, though unwell at the time, launched the life-boat, and without hat or shoes sallied forth to rescue them : and succeeded. She has now added another rose to her chaplet by the rescue of one of the three men capsized from a boat, the other two being saved by another boat which put out from the shore. Feminine heroism like this deserves to be noticed widely.

MR. WILLIAM JAMES Richmond Cotton, Alderman of Lime-street Ward, and M.P. for the City of London, who has just been chosen Lord Mayor for the ensuing year, is the eldest son of Mr. William Cotton, of Stratford-by-Bow, Middlesex, and of Caroline, his wife ; he was born in the year 1822, and was educated for the legal profession. He afterwards, however, resolved to follow com-

mercial pursuits, and he is now a partner in the firm of Messrs. Culverwell, Brooks, and Co., Russia Merchants, of St. Mary Axe. In 1866 he was chosen an Alderman without going through the usual probationary stage of a member of the Common Council; and served as one of the Sheriffs of London and Middlesex in 1868-69. In 1870 he was elected a member of the first London School Board (when he acted as preliminary Chairman) and was re-chosen in 1873. On this occasion he was returned at the head of the poll, as was also the case in the following year when he stood in the Conservative interest for the representation of the City of London. He is a member of several important City Companies, including the Turners, the Haberdashers, and the Saddlers; as also one of the Governors of Queen Anne's Bounty, and President of the City of London Rifle Corps. He was also one of the most active Administrators of the Lancashire Relief Fund, of which he acted as Chairman and Treasurer. Mr. Alderman Cotton married, in 1846, Miss Caroline Richmond Pottinger, daughter of Mr. Charles Pottinger of Sunderland, by whom he has a numerous family.

LETTERS from the British stations on the West Coast of Africa state that great efforts are being made at Accra to complete the arrangements for the removal of the seat of Government from Cape Coast Castle to that more salubrious spot, and it is expected that the change will be made at the end of the year. The step is looked forward to with great pleasure by the officials, who hope to invigorate their health with purer air and enjoy the exercise of horse riding, for beasts of burden do not live more than a few weeks at Cape Coast. Situated about two miles from the town of Africa is the old castle of Christiansborg, partly destroyed by an earthquake in 1862. This is being converted into quarters for the Governor, and other buildings are in course of erection for the officers. Between the castle and the town other buildings of a like character are in progress, one of them being a court-house with a frontage of 80 feet. The Akropong mountains, 40 miles distant from Accra, were first selected as the site for a Government sanitarium, but have now been abandoned for the mountains of Abudi, which have the advantage of being 15 miles nearer the town; and although the height (1,500 feet above sea level) is less than that of the former, they are more exposed to the sea breeze. It is expected that the hills will be connected by telegraph with the town, supplemented hereafter by a single line of rail or tramway. The sanitarium will have a frontage of 70 feet. When the seat of Government is removed from Cape Coast Castle, the troops will probably be withdrawn, as no provision has been made for them at Accra, and a small force only will be required. The conduct of the natives is good, and the strength of the garrison at Accra is only 105 men, consisting of a few men of the West India Regiment, some Hussars, Houssas, and Fantee policemen. The advantages of the new station in point of health over the other stations on the coast have long been known, and upwards of forty missionaries engaged in various parts of Africa have their residences and families at Accra.

THE Augsburg *Allgemeine Zeitung* has published several articles lately on Burmese affairs, in some of which our policy in Burmah is rather severely criticised, and a keen desire and power for stirring up strife is attributed to us. In one of the most recent numbers, after referring to the refusal of the King to allow a British force to pass through his territory, and to the report that the King had declared himself a vassal of the Emperor of China, it goes on to say that England in her dealings with Burmah is carrying out her "customary policy," and is attempting to extort from the King submission to her demands by harassing him with "internal embarrassments and external complications." In proof of this the writer states that by the last mail news was received that a conspiracy had been set on foot by Prince Mekhara for seizing the person of the King and for raising the standard of revolt, and that but for the accident of the King's having got wind of the scheme it would probably have been carried into effect. "That English intrigues were at play in this there can be little doubt," he adds—a remark which also instantly occurred to him when he heard that Siamese troops had exiled a number of Burmese settlers, and had burned down 240 of their houses; more especially as these acts were immediately preceded by a meeting of an English Commissioner from Burmah and an officer on the Staff of the English Consul-General in Siam, at Cheng-mai, where they were both most hospitably received by the Siamese authorities: while as a finishing stroke to the poor king, Mr. Wade has done his best to deprive him of support from China by presenting an urgent ultimatum on the subject of the murder of Mr. Margary to the Peking Foreign Office. According to another article, however, we learn that neither has the King been always dealing quite openly with us, and that some of the principal members of the late embassy which he accredited to England were men who should have been quite disqualified, from the meanness of their rank, from appearing in the guise of envoys. One was recently recognized at work as a subordinate overseer in the Royal dockyards, and the chief ambassador was lately sent to Calcutta as a spy on a foreign employé who had been commissioned to buy paints and so forth for the King's workshops.

LITERARY.

THE authorship of the *Unseen Universe* is now confidently ascribed to Messrs. Thomson and Tait, the former of whom fills an academic chair at Glasgow, and is president elect for the next meeting of the British Association: the latter holds a professorship at Edinburgh. Both gentlemen matriculated at Cambridge, and were collaborateurs in the production of a very able and difficult treatise on physics. There is now also little doubt, we learn, that the remarkable book *Supernatural and Revealed Religion*, which has reached its seventh edition, is the work of Philip Pusey, nephew of Dr. Pusey, who is said to have been not a little shocked by the views enunciated by his clever relative.

LATEST TELEGRAPHIC NEWS.

London, 29th October.

THE Duchess of Edinburgh was safely delivered of a Princess this morning.

The *Morning Post* states that the army retirement scheme provides that no retirement shall take place until after seven years' service, and that officers then retiring shall receive a lump sum according to a certain scale.

London, 30th October.

THE *Official Gazette* of Saint Petersburgh expresses a want of confidence in the Turkish promises of reform, and declares that the Powers must take steps to strengthen the confidence and put an end to the sad condition of the Christians in Turkey. The Turks have massacred some families of insurgents who surrendered themselves. The Turkish subjects have violated Servian territory and committed depredations.

THE STATISTICAL REPORTER,

A MONTHLY JOURNAL

Devoted to Economic, Agricutural & Statistical, Enquiries.

THE first number will issue early in November, and subsequent numbers on or about the 1st of each successive month.

Subscription, Rs. 12 per annum, payable in advance; or Rs. 2 per each number if purchased singly.

All business matters should be arranged with, and advertisement rates may be learnt from, Mr. E. M. LEWIS, Superintendent of the Bengal Secretariat Press.

JAS. T. GILMORE,

CIVIL ENGINEER AND ARCHITECTURAL SURVEYOR,

Agent for Engineering Stores & Materials,

UNDERTAKES AT A MODERATE CHARGE THE SUPERVISION OF

New Works & Repairs during progress.

HOUSE Proprietors executing renovations or improvements by giving out in petty contracts, or employing their own workmen, may obtain sound professional assistance, and provide an intelligent check against unnecessary, or exorbitant outlay, whereby *their* interests will be ensured.

PROFESSIONAL DUTIES and SCALE OF CHARGES may be ascertained on application at the Office, No. 20, BRITISH INDIAN STREET, CALCUTTA.

Preliminary Advertisement.

SINDIA STATE RAILWAY.

NOTICE TO CONTRACTORS.

TENDERS for the construction of the works on the proposed line of railway between Agra and Gwalior, including the bridge over the River Chumbul, a distance of 75 miles or thereabouts, will be invited shortly.

E. C. S. WILLIAMS, LT.-COL., R. E.,
Director of State Railways.

NOTICE.

THE CENTRAL ASIAN TRADING COMPANY,

BESIDES having in view the development of British commerce with the countries beyond our frontier in India, are desirous of establishing in the Punjab a warehouse upon the same principle as exists in London or any other large commercial city in Great Britain. Goods of every kind will be kept stocked in their warehouse at Peshawur for the purpose of enabling the English merchants of the Punjab (or any other part of India,) to select goods wholesale on the same principle as they now receive from England. The Company's produce coming direct from the Manufacturer must naturally offer advantages superior to what merchants so far inland are at present in the habit of receiving in dealing with Agents in England. The most favourable terms will be granted by the Company to merchants with whom they have business connections. The Company trust, by confining their business to wholesale transactions, that the European merchants of the Punjab (or any part of India) will appreciate their endeavours to open up a system of trade intercourse, which must eventually prove of immense benefit to the Company themselves, the retail merchants and the public generally.

The Company may not have the exact description of produce in stock, required by all the European firms with whom they hope to do business; they are however prepared to bring from England, without any delay, such goods as may be wanted provided the firm requiring the same will please to inform them of their probable yearly demands.

The Central Asian Trading Company offer the same inducement to the native traders of the Punjab, *i. e.* to supply them with every thing they require in their daily business transactions. Every attention will be paid by the Company to the suggestions of native merchants in their dealings with the Company, so as gradually to introduce a system of trade intercourse which must prove profitable to all. The Company are prepared to receive barter in exchange for the produce of their warehouses, provided such produce is saleable either in the markets of India or Great Britain.

Mr. Thomas Russell, Manager of the Central Asian Trading Company, will feel happy at all times to grant information to any one desirous of doing business with the Company; all letters should be addressed to Mr. T. Russell, Manager, Central Asian Trading Company, at Peshawur from 1st November to 30th March, and from 1st April to 31st October at Murree.

PROSPECTUS.

CENTRAL ASIAN TRADING COMPANY "LIMITED,"

CAPITAL £1,20,000,

WITH POWER TO INCREASE:

IN 12,000 SHARES OF £10, OR RS. 100 EACH.

Agents in Calcutta.

Messrs. FITZE and Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only* or by barter.

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager, C. A. T. Company.

Murree, September 1875.

To

THE MANAGER_____BANK LIMITED

SIR

I enclose Rs._____being on account of my first call of Rs. 10 per share on _____shares in the Central Asian Trading Company Limited, and I undertake to accept that number of shares, or any small number, that may be allotted to me.

I remain,
Yours faithfully,

ADMINISTRATOR-GENERAL'S OFFICE.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"
Calcutta.

MANUFACTURERS OF

Crystal Chandeliers, Candelabra-Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware, &c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office, No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

The newest and most elegant Designs. Specially intended for India, with Duplex or Single Burners.

Fancy Glassware.

Elegant Ornaments for the Drawing-Room or Boudoir.

Full Particulars in future Advertisements.

HIBBERT'S

HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS, BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London:

"April 23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A. writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus, perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yours truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R. ROBERTS of the ship Sidney A. Jenkins."—Dundee. May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Bottles, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

INSIST ON HAVING HIBBERT'S SALINE.

AGENTS FOR CALCUTTA,

BATHGATE & CO.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificient and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

DISTRICT DOG-CARTS.

(ON A NEW PRINCIPLE.)

MESSRS. NOWRAJEE & CO., COACH BUILDERS, &c., LUCKNOW, beg to intimate that they undertake to construct the above Carts, with all the latest improvements, for the trifling sum of Rupees

ONE HUNDRED ONLY

For Cash.

N. & Co. have supplied these Carts to all parts of India, *viz.*, the *N.-W. P.*, *Punjab*, *Central Provinces*, *Bengal*, *Oudh*, and recently *Burmah*. Most of the Planters in *Tirhoot* and *Lower Bengal* provided themselves with these Conveyances during the Famine operations, and found them very useful; while the Officers in the Customs and Survey Departments use no other now while out on duty.

Being light and movable, they are easily forwarded to any part of the Country at a trifling cost, and can easily be drawn by Ponies or Galloways.

Harness and Lamps to suit, at Rs. 30 and 20 extra.

N. B.—Orders from Out-stations must be accompanied with a remittance.

The Standard Life Assurance Company.

Established 1825,

WITH WHICH IS NOW UNITED

THE COLONIAL LIFE ASSURANCE COMPANY.

COLONIAL AND FOREIGN ASSURANCES.

An amalgamation having been formed between the *t andard Life Assurance Company* and the *Colonial Life Assurance Company*, the business of the united companies will henceforth be conducted under the title of

THE STANDARD LIFE ASSURANCE COMPANY.

The annual revenue of the Standard Company is now upwards of £650,000, and the accumulated funds amount to upwards £3,500,000 sterling. The new business transacted during the past year amounted to the large sum of £1,375,000 sterling, the corresponding premium amounting to £45,337 per annum.

Moderate rates charged for residence in the Colonies, India, and other places abroad.

Local Boards and *Agencies* in India and in all the British Colonies where every facility will be afforded in the transaction of business, and where premiums may be received and claims paid.

Immediate reduction of premium on return to Europe, or other temperate climate without medical certificate.

Profits divided every five years.

The new Colonial and Foreign Prospectus may be had on application at the chief offices of the Company, or to the Agents at home or abroad.

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

CALCUTTA.

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.

Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.

POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.

ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.

WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.

POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.

POLICIES FOR SHORT TERMS of from 1 to 10 years.

ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of *50 per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £37,030.

John Ralph Engledue, Esq.

Secretary,—Andrew Francis, Esq.

The financial position of the Institution on 31st December 1874, was as follows :—

Proprietary Capital		£1,000,000	0	0
Annual Life Income	Premia ..	76,424	0	0
	Interest ..	25,594	0	0
Realized and Invested Funds ..		598,970	0	0

RETIRING PROVISIONS.

Policies are issued by which these may be secured, and at the same time a surviving family be protected in the event of premature death.

ASSURANCES BY TERMINATING RATES OF PREMIUM.

Under this system, Assurances can be effected for the whole term of life, the annual premia; for which cease after a given number of years.

FREE POLICIES.

Assurances by this system can never altogether be forfeited by non-payment of Premia.

CLERGY FUND.

One-tenth of the Proprietors' Profits is periodically set aside for the purpose of aiding Clergymen and Ministers to assure their lives for the benefit of their families.

At 3, Chowringhee Road, Calcutta.

An issue of 500 Copies already guaranteed. Subscription, Rs. 25 only, in advance.

SINCE the ensuing season will inevitably be a most brilliant one, and as the appliances for producing magnificent Illustrations and splendid Letter-press in the Office of the ROYAL TOURIST will be unequalled in Asia, the Proprietors of that Journal will also publish every evening a paper entitled the

"ENTRE-ACTE."

This expensive and novel production will be devoted to illustrated descriptions of, and *critiques* upon, the Theatrical and Operatic World in the Metropolis of India during the season 1875-76. An issue of

2,000 Copies is Guaranteed.

The Subscription to the *Entre-Acte* will be only Rs. 10 for six months. Twice a week Portraits will be given in CHROMO, while the daily illustrations will be produced by means of Wood-engraving and Lithography.

All Cheques, Money-orders, and Cash remittances of every kind to be sent to MESSRS. NICHOLLS & CO., Financial Agents, 8, Old Court House Street, Calcutta.

Communications of a business nature and letters relating to the Editorial Department should be addressed to

WALTER RODWAY,
3, *Chowringhee,* CALCUTTA.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

Age next Birthday	Yearly.			Half-yearly.			Quarterly.			Age next Birthday.	Yearly.			Half-yearly.			Quarterly.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2122.] Calcutta: Saturday, November 13, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

AS an impression seem to be wide spread that Mr Rodway's *Royal Tourist* and *Entre-Acte* are in some way connected with the *Friend of India*, it is desirable perhaps to explain that such is not the case, but that they are the sole enterprise of Mr. Rodway himself. Whatever credit therefore may belong to either, belongs exclusively to Mr. Rodway; the proprietors of the *Friend of India* being in no way interested therein, Mr. Rodway resigned his appointment as Assistant Editor of the *Friend of India* in September last, and simply rents the ground premises of No. 3 Chowringhee as his publishing office.

WELCOME.

THE Prince of Wales has now begun to realize "his long-cherished dream," and is, while we write, a sojourner in the capital of Western India. All our readers will join us in bidding him a cordial welcome. Let loyalty bestir itself, and swell the royal salutes that reverberate over all India, with a many-voiced, heartfelt, salutation. Every loyal British subject, and every true friend of India, must look with intense interest on the visit of the Heir-Apparent of the Empire to its noblest dependency. And the Prince of Wales may well feel a movement of exultation within him, when the real vastness of India opens up before his eyes, and he reflects that this mighty dominion is a dependency, and but one of the great dependencies, of his native England. It is true that it was not won without a stain. It is true that we are here in the invidious position of conquerors. It is true that our rule must in many ways be galling to native feelings, and obnoxious to native discontent; yet the wisest and best informed of the children of the land will frankly admit that the British sovereignty in India has been in the main beneficent, and that at no period in the authentic history of the country has India fronted the world and futurity with such a peaceful and hopeful aspect as at the present day. The Prince may with justice and satisfaction say, as he traverses the countries united under the name of India and under the dominion of the British crown, "The Empire is peace." And when we consider how manifold and heterogeneous are the elements that we are here welding together into one vast nationality, and how splendid are the possibilities that we are striving, not unhopefully, to develope into realities, it will not seem extravagant to say that the Prince stands on the step of the most splendid throne the world has ever seen, and he may be pardoned if he feels now that he gazes on "the brightest jewel in the British Crown," that his visit to India is the proudest moment in his life, and indeed in the history of the Prince of England.

The Empire is peace. It was not necessary that the Prince should come holding out the olive branch. He has come to join the hands of British subjects of every nationality in a more cordial grasp of friendship than heretofore. We already have peace, and we look to this Royal visit to establish goodwill more completely than has yet been done. He is eminently qualified, we believe, to conciliate the kindly feelings of the leading natives of India, to overcome prejudices and jealousies, and to win "golden opinions from all sorts of people," not only for himself, but for the sovereignty which he as a matter of fact, though not officially, represents. In welcoming him to India, we are hailing, we trust, the establishment of a closer bond of unity and brotherhood, and more cordial relations of friendship, between the natives of India and their Aryan kinsmen from the West.

We welcome him: and all India welcomes him: because it is beyond a doubt that his tour will make this country better known to the English people generally, and its importance more correctly estimated by them, than any event that has hitherto occurred during the connection between the two countries. When the name of India was last a word of intense interest in every British household, it was a name of terror and ill-omen. How different will be the eagerness with which the inhabitants of Britain will now look for intelligence from this Eastern wonderland! And the facilities for communication that have made the visit possible, make possible the speedy transmission of such a flood of light upon all Indian subjects that we may confidently hope that this country will never again be so little known to the English nation, or so vaguely and inaccurately represented to the imagination of the English people, as it has hitherto been. Better knowledge of each other, and more friendly relations between the two races, may safely be calculated upon: and on these we may justly found a hope of future solid advantages both to England and India.

From the day on which the island of Bombay passed into the possession of the English crown, to the day when the Prince of Wales stepped on shore from the *Serapis*, how marvellous has been the progress of British influence in India, and though there are still sunken rocks that necessitate the wariest guidance of the ship of State, how splendid is the consummation that has been reached! It may justly be said, that such a tour as that on which the Prince of Wales has now set out, and on which we wish him in the name of our readers health, safety, and hearty enjoyment, would not have been possible if the British administration in India had not been, in spite of many failings that may be frankly admitted, beneficent in its objects, and brilliant in its results.

EDITORIAL NOTES.

WE are glad to learn that officers of the Indian Army will be allowed to retire in 1876 on the same terms as were sanctioned during the present year.

***

MR. KNIGHT'S new paper, the *Indian Agriculturist*, will start from the 1st of January next, instead of the 1st of December, as previously announced, thus commencing with the new year and avoiding a broken period. It has already, we hear, secured a large number of subscribers. The first number of the promised *Statistical Reporter* has just been issued by the Bengal Secretariat. It occupies only a small part of the field which the *Agriculturist* is intended to cover.

***

THE murder of the Hon'ble Mr. Birch, the resident at Perak on the Malacca Coast, is confirmed, and troops have been despatched from Penang to bring the perpetrators of the crime to justice. As to the motives of the murderers the advices are silent, but they appear to have been political. The Straits Government had decided on placing the administration of Perak in the hands of Commissioners of its own, assisted by a Council of the Malay Chiefs, and though this plan is said to have been agreed to by the Chiefs themselves, it is clear that a strong party in the State must have been opposed to it. *All the Rajahs*, we are now told, are suspected of complicity in the murder, and two men in particular. Passer Lal and Sultan Ismail—are collecting strong forces to fight the troops that have been sent from Penang. It is not improbable, therefore, that reinforcements will have to be despatched from Calcutta, while the gun boat *Philomel* is to leave from Bombay directly.

***

ACCORDING to the telegraphic advices of the last two days, the Northern Powers have decided on their course of action towards Turkey. Russia has been the mouth-piece of the coalition, and has "acquainted the Western Powers with the steps contemplated, "which point to the occupation of Bosnia and Herzegovina by Aus- "train troops." If these Powers could but agree upon the disposition to be made of the "sick man's" goods, they would not be long in finishing him. Bosnia is the extreme frontier province of the Turkish empire, on the North west, and has been termed the Switzerland of Eastern Europe, a Switzerland, however, the mountains of which do not reach the region of perpetual snows. Herzegovina is simply a district of the province, or eyalet, which is governed like all the other provinces of Turkey by a Pasha. The position of the province makes it the the high-way between Austria and Turkey, though there are almost no roads in the country. Being the frontier province, it is studded with fortifications, and its occupation will open the heart of the Turkish Empire to the Austrian advance. Bosnia has been a fief of the Ottoman Empire about 350 years, having been finally annexed thereto by Solyman the magnificent, when Germany was agitated to its centre by the voice of Luther; German troops sacking Rome; the Barbarossa brothers scourging the Italian seas; and the Popes playing off the Turk alternately against the French monarch and the Spanish Charles. Herzegovina is the ancient dukedom of St. Saba under the Venetians, and was for two centuries the great battle field between the, Christian and the Turk. It was not finally recognized as Turkish territory until nearly the close of the 17th century (1697), when by the treaty of Carlowitz it was confirmed to the Porte. It has thus been less than 200 years under the undisputed rule of Turkey, and it would be impossible to feel any regret at its coming once more under Christian protection, but for the political situation it involves. Physically and ethnologically, Bosnia and Herzegovina are but one province.

***

LORD NORTHBROOK has done a graceful act in calling upon the Venerable Dr. Wilson at Bombay. The fine old man came to India in 1828, and has been nearly forty years in the country. We suppose it is generally known that Andrew Wilson, the author of the *Taeping Rebellion*, and now of the *Abode of Snow*, is a son of Dr. Wilson's by his first wife, whose biography is on most missionary bookshelves in the country. The old Doctor is quite a Bombay institution, and probably no man that ever came to the country gathered to himself so thoroughly the sympathies and confidence of all classes. To the Princes of India his name is a household word, and large numbers of them are his personal friends. During the mutiny, he was the confidant and adviser of Lord Elphinstone, and it is after all men of his noble stamp who are the guarantee of the stability of our rule in India. We suppose he must have visited Calcutta at some time or other—probably when the venerable Dr. Duff was here—but whether that is so or not, he will be personally known to many in our community. He still possesses or did possess until a month or two ago, singular vigour for a man of his years, and we are most glad to see that the Viceroy has paid him this mark of respect in his decline. The late Bishop Cotton shewed a very touching deference to the fine old man, when he knelt down with him in the Scotish Mission House at Bombay, and begged him against his own wish to conduct in extempore prayer the service of the family. How strange it is that it should ever be otherwise! Few men probably of his time have ever excelled Dr. Wilson in the solemnity, range, and power of these efforts. His set sermons are not, we think, so successful, being too long and too learned for mixed audiences; but his prelections on the Old Testament Scriptures are pecularly interesting at all times. We trust he may be spared many years yet to the Missionary Churches.

***

THE Army correspondent of the *Pioneer* writes: It is now officially settled that Lieutenant-General Sir Frederick Paul Haines is to succeed Lord Napier of Magdala as Commander-in-Chief in India. More than a year ago I led you to anticipate this appointment as a moral certainty, and I do not think, looking all round, that a better selection could have been made. General Haines, although not, I believe, over 55 years of age, has great Indian experience; as Military Secretary to Lord Gough he acquired at a very early period of his career a close knowledge of the routine duties of the office, while, by the completion of his five years at Madras, he will have had good practice in the art of commanding. Having filled more than one appointment in the staff at home, he will also bring a varied experience to bear upon the discharge of his new duties, and thus will not be open to the exception sometimes taken to his predecesor, the present Commander-in-Chief, on the ground of the exclusively Indian character of his antecedents. I believe that Sir Frederick Haines's only real competitor for this the highest open prize in the Army was Sir Augustus Spencer, lately commanding the Bombay Army; but his age, nearly 70, settled the question, notwithstanding strong social influences.

***

THE Judicial Commissioner of Mysore has given dire offence to the Mysore bar. In a letter to the Commissioner of the Nagar division ordering the different Courts to discourage law agents and touts, whom he calls "those off-scourings of the bar," Mr. Prinsep writes:—"As far as my experience goes, justice is better done without the intervention of any pleader or *mokhtear*, and by personally ascertaining from the parties themselves the matter in dispute." The pleaders not unnaturally protest against this sweeping verdict, but Mr. Prinsep is largely right. We cannot however dispense with the class. We shall never have an efficient administration of justice in the country, until the Judges are assisted by a native bar of high character, and it is upon raising its character that we must concentrate our efforts. Impatiently to sweep it away because of its present venality and weakness, would be to stereotype the evils and imperfections that we are anxious to remove. We should like to see more control over the bar exercised by the Bench both in and out of the Presidency towns.

***

THE latest news from Burmah does not show that the escort question has been so completely disposed of by the late negotiations as the organs of Government here would have us believe. It has been advanced a stage, but that is all. Permission to send an escort has been obtained, but no understanding has been arrived at on that important point—its strength—and the Burmese version of the King's letter makes his consent entirely depend upon the number of men composing it. The Government of India, careful of the lives of its officers, and *with Mr. Margary's fate fresh* in its memory, might not think a regiment of infantry too large a force to send with the next expedition. The King, on the other hand, may profess to consider a detachment of 50 men or so quite strong enough to protect the party from all attacks. The matter is thus not so much settled as temporarily laid on the shelf. In all likelihood it will have to be dealt with again almost *de novo* when the time comes for the expedition to start, which of course will not be until after the Prince of Wales has left India. It is quite possible, however, that the satisfactory settlement of our difficulties with China, which now seems more probable than it did, may make the Burmese monarch easily amenable to reason and diplomacy next year, and in that case the delay is not to be particularly regretted.

THE *Courrier de Saigon* of the 20th ult., contains the text of a commercial treaty between France and the Kingdom of Annam, concluded at Saigon on the 31st August 1874, and ratified at Hué, the capital of Annam, on the 26th August last. The negotiators were, for France, Vice-Admiral Krantz, Governor and Commander-in Chief in Cochin China, and for Anaam, the *K-vi-ba*, Nguyen-Van Toung, Minister of Justice, and Nguyen-Tang-Doan, styled *thi lang*, of the Annam Home Office. The treaty is rather a lengthy one, consisting of twenty-nine articles with an explanatory rider attached, and may be said to consist mainly of minute regulations for the conduct of trade under the nominally joint supervision of Annamite and French officials, but so worded as to keep the real power substantially in the hands of the French.

***

SOME of our readers may probably remember that at a meeting of the Oriental Congress last year in London, a paper was read by Dr. Forbes Watson on the establishment, in connection with the India Museum and Library, of an Indian Institute for lectures, enquiry, and teaching. The paper treated of the importance of Indian studies, and their advancement by means of an Institute. It dwelt on the relations of England to India, how they varied and affected so many different interests, and in what manner the establishment of an Indian Institute would tend to promote the advancement of home knowledge on Indian affairs, and lead to the dissemination of that knowledge, thus not only meeting a want much felt of late years, but subserving, in many respects, the interests of both countries, while it showed that the political connection between them would alone be a good and sufficient reason for the foundation of such an Institute in London. An Institution which has for its object the promotion of Oriental studies, literary and artistic, which form so important a branch of the present intellectual movement in Europe, and which is calculated to exercise an influence on the progress of higher education amongst the natives of India and on the training of the candidates for the civil service of India, is deserving of the warmest support of the enlightened and wealthy community of both countries interested. The evidence afforded by this and kindred institutions in connection with the Oxford and Cambridge Universities, of the growing desire to promote Indian studies in England, will be hailed by every true friend of India. Professor Monier Williams was among the passengers to India by the last mail; and he comes out to promote amongst the scholars of this country the establishment of an Indian Institute at Oxford somewhat on the model of Dr. Forbes Watson's proposed Institute in London, the plans for the establishment of which are in an advanced state. Professor Williams' scheme is, we are glad to see, one of the results of the reading of Dr. Forbes Watson's paper at the meeting of the congress last year, and Cambridge too is moving in the same direction. "With an Indian Institute in "London, having at its disposal the immense resources of the "Indian Library and Museum, and acting in connection with such "an important body as the Asiatic Society, with the two great "English Universities vying with each other in advancing Indian "scholarships, and with the kindred institutions which we hope "to see established in other places, ample means would be afforded "for not only the advancement of Indian studies, but also for the "dissemination over the country of a knowledge of India and of "her affairs."

***

THE Rev. A. H. Sayce contributes an interesting article to *Nature* on the Astronomy of the Babylonians. He asserts that an ancient people, the Accadians, who had come from the mountains of Elam, about 4000 B. C. and who spoke an agglutinative language, were the sources of all the scientific culture of Chaldea, and not the Semitic Babylonians themselves. The oldest Chaldean astronomical records are the "Observations of Bel" in 70 books compiled about B. C. 1700, most of the tablets of which were found under the soil at Kouyunjik. These records were carefully kept in all the larger towns: in later times a fortnightly report was also sent to the king. To the Accadians, we owe the signs of the Zodiac the days of the week, and the division of the year into twelve months. Cycles of 12 years were in use, during which the same kind of weather was expected to recur, thus agreeing pretty closely with the recently noted time for the recurrence of sun spots. The day, they divided into 12 periods, each of which was subdivided into sixty minutes, and each minute into sixty seconds, The days of the week were named after the sun, moon, and five planets, and the 7th, 14th, 19th, 21st, and 28th of the month were called "days of rest," on which certain work was prohibited. The number of eclipses of the moon recorded is very large: hence the observations must have begun at an early date. Long before the time of Sargon of Agané, for whom the 'observations of 'Bel' were compiled, it had been noted that lunar eclipses occur after a cycle of 223 lunations. The record generally begins with the words, "according to the calculation" or it may be, "contrary to calculation the moon was eclipsed." Mr. Sayce gives a translation in full of a table of lunar longitudes, now in the British Museum. Observations are made as to the varying colour of the sun, especially at the beginning of the year, when on the 1st of Nisan the sun was "bright yellow;" in another place it is "discoloured," or rather "spotted." The Accadians only knew of five planets besides the earth. The large number of fixed stars known to them, and the observations on the phases of Venus and Mars, necessitated the employment of some kind of telescope, and Mr. Layard's discovery of a crystal magnifying lens at Nineveh indicates that such an instrument was used.

***

THE consequences of unwise interference with the Press are so disastrous, that there is a great, and very natural unwillingness on the part of Anglo-Saxon communities to meddle with its excesses, even when taking the shape of downright immorality, while there are those who are disposed to go to the opposite extreme. Comte selected a hundred volumes of science, philosophy, poetry, history, and general knowledge, which he deemed a sufficient library for the world, and proposed a general bon-fire of all the rest. Even of poetry—to which he showed the most indulgence—all but the very best was to undergo this fate. This is the intolerance of infallibility. In fact no more personified infallibility ever lived than Comte.

***

IT seems pretty certain that M. Buffet will cease to lead the French Cabinet as soon as the Assembly meets, as the penalty of his folly in snubbing M. Say by refusing his recent speech a place, according to usage, in the *Journal Official*. Say resented the slight and a Cabinet council supported him, when the speech appeared in the journal in its integrity, but with a prefatory letter to soothe M. Buffet, which in fact, however, only clinched the speech, as the latter, instead of being a simple ministerial discourse, became the programme of the Cabinet. Were the Assembly in Session this new blunder of M. Buffet would have sent him into private life; as it is, he has, we suppose, a few weeks longer of official existence. As usual, the Republic reaps the advantages of the attacks directed against it. M. Buffet labours under the common defect of all French public men, that of believing, when in power, that they are indispensable. In March last the cry was so general for his heading the Ministry that he ought perhaps to be excused. His threat of resignation produced not the slightest regret: but was received with as much indifference as a letter from the Comte de Chambord, or a cabinet council at Chiselhurst.

***

ST. MICHAEL is the patron of Rome, along with Saints Peter and Philippe de Neri. The castle of St. Angelo is called so in honor of St. Michael, because in the year 600, when the plague raged, Pope Gregory the great saw the Saint standing on the Adrian Mole putting his sword into its sheath, as a signal of the Divine wrath being appeased. The anniversary of St. Michael is also the *fete* of the Comte de Chambord; and his followers the Legitimists observe it as do the Bonapartists their 15th of August. On the 29th September, the Comte de Chambord, fifty-five years ago, was born. It was then that Victor Hugo sang the praises of that "child of miracle," and finally received from the grandfather, Charles X. a pension of francs 2,000, for his poetical loyalty.

***

A PROPOSITION has been made to put the Catholic Military Chaplains on a par as to pay with the English and Presbyterian Junior Chaplains: that is, to give them an income yearly of £600, which is equal we suppose to about £250 in England. This has been refused, but an additional grant of Rupees fifty per month has been sanctioned.

***

IN the fêtes now reigning in all the chateaux of France, a new pastime has been introduced—that of private steeple-chases, or rather hurdle-races, for ladies, a portion of the park being set aside for the purpose. The exercise, it is said, cures all nervousness, and developes presence of mind. All this, in the eyes of Baby Blakes, would be mere child's play.

***

THE inauguration of Chateaubriand's Statue passed off better than was expected. Although the honoured author must be

included, and deservedly so, among the glories of France, yet he managed to attack his friends and his opponents with talented impartiality in his *Memoires d'Outre tombe*, which will maintain his laurels the longest time fresh. He was born in the rock town of Saint-Malo in 1831. He solicited a portion of the rock overhanging the sea for his sepulchre. It was granted, and in a tomb ornamented with a massive granite cross sleeps the poet, who loved the sea and nature so well, but cared little for society or for politics, His statue is beside his tomb, and the room where he was born, now belonging to an Hotel, overlooks both. It was in its kitchen his mother was confined, on the 4th September 1768; and Chateaubriand has been dead many years. Oddly enough, he has been honoured both by Republicans and Royalists, and it is difficult to say which he detested most, though he lived and died a professed Royalist, while believing the age of monarchy was past for France. He was decided in his hates, and he hated the Second Empire cordially. After early years of suffering and wandering, having shared the misfortunes of his party during the Revolution, it was at London his misery grew less, and that he produced the *Historical Essays* in which Republicanism finds so much to admire. He was the best of *professing* Catholics, and charmed by the attractive manner in which he wrote about its dogmas and its mysteries. You find pleasure in reading his *Genius of Christianity*. He thanks the Invisible for giving him "imagination to feel, what his reason cannot comprehend" of the Divinity. Medals commemorative of the beautiful bronze statue—the latter a master piece of Millet's, were distributed, but the Breton peasantry would not accept them until assured they were "blessed." The orations were poor, and the best was cut short by the bursting of a water hose in the midst of the spectators.

***

WE are glad to announce the publication of "The Prince's guide-book, a Hand book of Hindoostan," compiled by Mr. G. R. Aberigh Mackay, of the Delhi College. The work is a complete guide to Bombay, giving a popular and authentic account of its fortunes, its buildings, institutions, views, and varied population, and furnishes a bird's eye view of the natural, historical, and political characteristics of our Indian Empire, while the brief and popular account of the physical aspect of the country and other kindred subjects, together with more particular instructions and statistics for the special behoof of travellers, will be found interesting to the Indian public generally, and Indian tourists particularly.

***

IT is one of the signs of the times that the great question of Denominational *versus* secular education is coming to the front in America as elsewhere. The Roman Catholic priests of the United States are, and have long been, intensely dissatisfied with the common-school system. They complain that it takes the education of the children of their own communion out of their hands; exposes them, at the most impressionable age, to powerful non-Catholic influences,—and has a strong tendency to make them grow up Protestants or freethinkers. They have recently put forward a demand for the establishment of separate schools for Catholic pupils, to be supported, like the others, out of the State revenues, but in which "the tone, the influence, and the incidental teaching," shall be wholly Catholic. There is not the slightest chance that such a claim will ultimately be conceded. The American people thoroughly understand the value of their educational system—perhaps the best of their institutions—and are profoundly attached to it. But party spirit in the States runs high just now. Both Republicans and Democrats are straining every nerve to secure a majority for the next Presidential election, and the latter count a good deal upon the Catholic vote. Of late years it has generally been given in their favour—organisation makes it tell heavily—for the priests are amongst the most skilful of "wire pullers," and in a close contest it is quite possible, or rather, highly probable, that Cardinal M'Closkey and his colleagues would have it in their power to turn the scale either way. The fear of offending useful allies who might easily be converted into dangerous enemies has made the Democratic leaders temporise. They have not formally surrendered the principle of secular education, nor is it, apparently, quite certain that they deliberately intend doing so; but neither have they met the Catholic claims with a flat denial. Their silence and hesitation have emboldened the priests to make an attempt in Ohio, where the Roman Catholic element is strong, and gives the Democrats a majority, to obtain such a division of the educational funds of the State as would suit their purpose. The Bill was thrown out by the State legislature, but it came so near being passed that the alarm has been taken all over the Union, and the question it has raised has suddenly become one of the most important by which political parties are defined and divided. The Republicans, with more sagacity than their opponents, have taken their stand firmly, as a party, upon the principle of non-sectarian teaching. At the Republican State Convention of New York, held at Saratoga in September, the following resolution was affirmed amidst great enthusiasm.—"The free public school is the bulwark of the American Republic. We therefore demand the unqualified maintenance of the public school system, and its support by equal taxation, We are opposed to all sectarian appropriations, and we denounce as a crime against liberty and Republican institutions any project for a sectarian division or perversion of the school fund of the State." This is explicit enough, and it has been followed up by an unusually strong and plain-spoken speech from President Grant, whose habitual reticence gives his words all the greater weight. He describes the issue as one between "patriotism and intelligence on the one side, and superstition, ambition, and ignorance on the other," and exhorts his countrymen to "labour for security of free thought, free speech, free press, pure morals, unfettered religious sentiments, equal rights, and the privileges of all men, irrespective of nationality, colour, or religion; to encourage free schools; resolve that not one dollar appropriated to them shall go to the support of any sectarian school; resolve that neither State nor nation shall support any institutions save those where every child may get common school education unmixed with any atheistic, pagan, or sectarian teaching; leave the matter of religious teaching to the family altar, and keep Church and State for ever separate." The leader of the Republican party has hitherto been one of the most cautious and common-place of men in his public utterances. His use of language of such, for him, unusual fervour, is therefore a clear indication of the importance which the educational question has now assumed in America. The States have so far been singularly free from the religious animosities which have agitated or convulsed Europe. Sectarian disputes have never, with them, been the determining cause of great political conflicts. But it is evident from the tone General Grant now finds it necessary to adopt towards the Catholics, that our Transatlantic brethren are to enjoy this fortunate immunity from theological strife no longer. A new era has commenced, and one of the great parties into which the nation is divided already makes resistance to Roman pretensions a cardinal point of its policy. Whether the Democratic leaders will accept the challenge thus thrown out to them must for the present be considered doubtful. It is still possible that the strong anti-clerical feeling of a great part of the rank and file of their party may compel them to dissolve an alliance which must in the end be ruinous. In that case, the question will be dropped for the present. But it is easy to predict its reappearance as soon as party exigencies again set politicians bidding against each other for the Irish, which practically means the Catholic, vote.

***

A GUNNY bag sewing machine, with a true overhead seam sewn exactly as if done by hand, has, the *Dundee Advertiser* says, been invented by a Dundee mechanic, after ten years' labour, and has been patented at home and in many foreign countries. The machine can work at the almost incredible speed of 1,000 stitches a minute, even with common jute thread double, and either plain or tarred, and it is attended by two young girls. In sack sewing, three stitches go to the inch, so that the marvellous speed of 333 inches, or nine yards and a quarter of cloth, can be sewn in a minute. This is much faster than convenient for the sewing of the bottom ends of the sacks, which require more time for the feeding in, but it also goes on very easily and steadily sewing the ends of five sacks a minute!

Coal and machinery costing less at home, the invention, if so successful as reported, will tell rather in favour of Dundee in the struggle for the command of the jute trade which is just about to commence between her and Calcutta. But the comparative gain, after all, will be trifling, and far from sufficient to turn the scale against the factories on the banks of the Hooghly, with their unlimited supply of cheap labour.

***

A NATIVE correspondent, Raj Chandra Sanyal, writes to the *Pioneer* and describes himself as lately bestowing alms on three Europeans, one of whom seemed to be an Englishman. The men had been cast adrift by the East Indian Railway, had not been able to obtain other employment, and are now begging from door to door amongst the natives. Raj Chandra Sanyal's letter cannot be read without humiliation, and his remonstrance is only too just. The Railway Companies are to blame for engaging men at home and then dismissing them in India, where they are

helpless. They should at least find their discharged employés a free passage to England or the Colonies. But Government is equally to blame for allowing such things to be done. The wrong is a two-fold one; it is a wrong as much against the alms-giver as against the men who have been made beggars. Its most appropriate remedy would be a law compelling an employer, if he dismisses an European servant brought by himself from England, to see him well out of the country. We hope that such a law will some day be passed and rigorously enforced. In the meanwhile, natives like Raj Chandra Sanyal deserve our thanks for their charity to our unfortunate countrymen.

THE currency agitation in the United States has seriously alarmed commercial circles on both sides of the Atlantic. The State of New York, by the Conventions of both its great parties, has pronounced against paper currency, but Pennsylvania and Ohio have declared for inflation. These declarations have given the question so much importance that the leading men amonst the Republicans have agreed to sink all minor differences, and to unite in combatting the heresies of the Democratic inflationists, whose victory at the coming elections would inevitably have the effect of greatly diminishing the value of all American securities.

CAPTAIN CAMPBELL WALKER has submitted to the Madras Government a statement of the working of the fuel plantations in that Presidency. According to the report, 438 acres have been planted at a cost of Rs. 21,493, 5, and the total area under plantation is 6,019 acres compared with 6,643 acres at date of the last report. The receipts in the half year were Rs. 4,273 against Rs. 5,890 in the first half of 1874, thus raising the receipts from the commencement of operations to above a lakh of rupees. In the Cuddapah and Bellary districts the plantations appear to have thrived, but the returns show that the area under cultivation has fallen off. The apparent decrease is attributed to the defective returns previously submitted. The revised estimate shows that the total area of land planted out in the districts is 6,019 acres. Captain Walker has directed the particular attention of officers of the department to the necessity of sending in carefully prepared statistics, as by *failing to do so they increase the difficulty of compiling* correct returns. There has been a considerable increase in the area available for planting, and the past year's operations may be regarded as favourable. Much progress has been made in the Trichinopoly and North Arcot forests, in spite of the heavy rain and floods in the latter district, where nearly a lakh of casuarina plants were washed away. Captain Walker inspected many of the plantations, and found that the nurseries were well stocked with seedlings. Besides the above, there are firewood plantations in eight districts of the presidency, with a total area of 1,01,202 acres; the expenditure on these plantations is set down at Rs. 1,12,994, thus showing that 1,14,349 trees were planted on 41,586 acres of land. There are large plots of land held under reserve, some are half and others fully stocked; 136,043 trees were planted, but many of them decayed, and the total given above shows the number of trees on the plantations on the 31st December last. It appears that the returns from the forest officers are received through the collectors. This system is not approved of. The Inspector of Forests says that were the district forest officers placed in direct communication with and held responsible to him, much of the delay and inconvenience now felt would be saved. The Board of Revenue are in correspondence with the collector for opening up firewood reserves in the Madura District.

THE interminable Eastern question seems to have advanced a stage nearer solution since our last issue. General Ignatieff, the Russian Minister at the Porte, has had an interview with the Sultan, and has pointed out that the financial dilapidation and maladministration of Turkey, as also the discontent of the population, urgently call for reform. The Sultan's reply is not yet known. We may safely assume that reforms have again been promised, but such promises have been made so often, and so badly kept, that Russia will now probably refuse to put any faith in them unless they are accompanied by a guarantee of some sort. Nor is it difficult to conjecture what that guarantee will have to be. The language lately held by Prince Gortschakoff to M. Thiers shows that Russia regards the autonomy of the Herzegovina and Montenegro as an indispensable condition of any arrangement that may be come to with Turkey, and the Sultan will now probably be told that he must consent to it. General Ignatieff's employers would hardly have allowed or instructed him to take the imitiative at Constantinople so prominently unless they had first obtained an assurance that the representatives of the other great powers, or the majority of them, would support Russian policy when matters to which the demand for reform is merely a formal prelude were discussed. We therefore expect to hear shortly that the sick man has again been called upon to submit to amputation—an operation which will do him a great deal of good, and which he ought by this time to be able to bear without flinching, as he has undergone it so often. We have noticed the latest intelligence above.

***

ONE of the most unfortunate results of the abolition of the Indian navy has been the interruption caused by that measure to the systematic survey of the coast. The interruption has been felt to be all the more unreasonable because within the last twelve years the coasting trade of India has developed with unexampled rapidity, and numerous ports are now frequented by steamers which at the time the Indian Navy surveys were going on seemed to be too insignificant to require attention. The inconvenience caused by the want of accurate charts has at last become so great that government has been compelled to create a new department for the survey of the Indian seas. Its duties will be to perfect and keep up the charts of the whole coast line, from Tenasserim on the east, to a point beyond Kurrachee on the west, and of the Andamans, the Nicobars, the Mergui Archipelago, and the Laccadives. The compilation of sailing directions, and of an annual chart of wrecks, will fall within its province, and a variety of miscellaneous work connected with light-houses, buoys, and beacons, will also be attended to. The Superintendent of the department will be Commander A. D. Taylor, late of the Indian Navy, an officer who has already been employed many years in surveying, and has made it a labour of love to ascertain all that can be known about the seas, harbours, and coasts from Suez to China. With so competent a director at the head of affairs the new surveys ought to be executed both correctly and speedily.

***

THE telegraphic announcement that the Admiralty will issue fresh instructions as to the reception of slaves on board our vessels of war, creates of course no surprise. The more attentively the late offensive orders are looked at, the more clearly are they seen to conflict with the ideas that have prevailed for a hundred years. This view is now taken by the leading journal; and the *Times* is insisting with much fervour, not only on the fact that a vessel of Her Majesty's on the High seas is a floating island where the slave at once becomes free; but that even in territorial waters, "when "a slave has once set his foot on a deck covered by the English "flag, we are bound to stand by our principles, leaving to the "foreign power the remedy of refusing to us the customary comity "of nations, on the ground that we have abused the concession." This is clearly the only doctrine the English people will approve.

The *Daily News*, with strict accuracy probably, maintains the legality of the admiralty's order, but the *Times*, more faithfully interpreting the feelings of Englishmen, says: "An English-man-of-"war is English territory, even in a foreign harbour, and we are "bound to claim on board all the liberties the English law concedes." The Admiralty instructions required fugitive slaves who had come under our flag to be given up to the local authorities, if the vessel returned to the territorial waters of the slave-holding country, on the "necessary proof" being given of the slave's identity. The truth is, the question has touched England in a very tender point, and in a season of political apathy it was sure to rouse the country. The "instructions," issued in July, even if now rescinded, will not save the Ministry from the odium of a blunder which for magnitude excels its every previous *fiasco*. The depth of the popular feeling is indicated in a way that shows clearly that on the subject of slavery the heart of England is thoroughly sound.

***

PROFESSOR JEVONS agrees with us that the price of silver has fallen in consequence of the German currency reforms, but thinks it by no means certain that it will fall further than it has already done. The professor of course assumes that no attempt will be made to demonetize silver in the Great Eastern Empires of India, and China; and in that case he is right. That any great rise will happen in the purchasing power of gold he deems to be wholly a matter of speculation. "We cannot do more than make random "guesses on the subject, and, as a mere guess, I should say that it "is not likely to rise. Gold has since 1851 been falling in value

"and an increased demand for gold is not likely to do more than "slacken, or, at the most, arrest, the progress of depreciation."

These views point to a slow recovery of silver in value as the effects of the German currency reforms wear off, and are, we think, eminently reasonable. The *Englishman* points out that though the eastern nations were to demonetise silver, they could not do without a large quantity of the metal for small coin, "and "the amount required by them for this purpose is likely to increase "so much as alone, in time, to bring about a gradual recovery of "price." Our contemporary might have added, we think, a more potential fact, namely, the enormous annual waste of silver in the East by its conversion into personal ornaments. India alone is supposed to contain 250 millions of people, and the custom of the whole is to convert their savings into silver ornaments. Four annas per head only in such a population, means six millions sterling of silver per annum. India must stand by her silver currency, until very much stronger cause is shewn for any change than we have yet seen.

***

A CORRESPONDENT writes: To destroy white ants, introduce half a tea-spoonful of arsenic into the white ants' track or into the nest if you can find it. The ants eat the poison, and then one another: so it is said! However that may be, their destruction is complete. The writer says he has tried the experiment on many occasions with success.

AN HOUR WITH "GENERAL ACTS OF THE GOVERNOR-GENERAL OF INDIA IN COUNCIL, VOL. I."

THE first volume of the revised edition of the Acts of the Governor-General in Council lies on the table before us. It contains all such Acts passed between the years 1834 and 1863, both inclusive, as are extended or can be extended to the whole of British India or to the Presidency towns. An index is also given of all the Acts passed during the above period of 30 years. Their total number was 819, and of these, 97 which remain in force wholly or in part are printed in the volume before us, and 8 are to be printed in the Appendix; 116 are Local Acts (among which we include Private and Personal Acts) which also remain partly or wholly in force in the various territorial divisions to which they relate; 17 are omitted as they relate to the Straits Settlements; and 581 have been wholly repealed. The great legislative change which may be described as dawning when this epoch of 30 years was coming to a close, was the commencement of the substitution of Codes for special Acts governing matters specifically and not generically. And we have no doubt that the conclusion of the following 30 years epoch will see codification at its zenith, and that we shall have a Code for every branch of law, the extent of which is capable of being simplified and arranged compactly by the admirable system of codification. And not only of general Acts, such as the Indian Penal and the Criminal Procedure Codes, but of Acts locally applicable, codified for each province. During the period we are discussing, the first Code is the well known Civil Procedure Code Act VIII of 1859. This Code has however been tinkered up a good deal, and besides does not embrace the procedure of all kinds of Civil Courts. Hence it has been supplemented by other Acts, and has had a good many of its provisions repealed and altered, so that a new Code has become an absolute necessity, and a bill has been introduced providing the same. Next comes the Indian Penal Code, which has stood the wear and tear of time and tinkering legislation as only such a stupendous monument of labour, care, and forethought could have done; and last the Criminal Procedure Code, Act XXV of 1861, which has long since succumbed to repeal. Of the 97 Acts in the book before us, several relate to the extension of English laws, or the amendments in English laws, to those parts of British India where cases are governed by the provisions of English Law. We also find an Act intituled "Act XX of 1847, an Act for the encouragement of learning in the Territories subject to the Government of the East India Company by defining and providing for the enforcement of the law of Copyright therein." One of the provisions of this Act is that no publisher of encyclopædias, reviews, magazines or the like, may publish an article of any of his contributors separately, during a term of 28 years, without obtaining the consent of the author or of his assigns.

Literature is so ephemeral, as a rule, in India, that we do not think any publisher would count the years with impatience as they rolled slowly and slowly on towards the third year of the sixth lustrum, and the Indian Public are not so constituted as to peruse with general and widespread avidity the productions of a bygone age. Still it may console the Indian authors of the age to know that their task-masters cannot, besides sucking their brains, eat them too. The Mutiny marks an era during this period, and a few Acts passed during those troubled times are still in force, one of which stands as a stern finger post to apprise the still uncaptured rebel or his heirs, that his crime has never been, and never will be lost sight of, even though the guilty one have passed away. We allude to Act XXV of 1857, which provides that where it can be proved that any person has committed treason or any offence punishable with forfeiture of property, as well as other penalties under certain Acts, and it can also be shown that he is dead or has escaped out of our territories, or cannot after diligent search be found his property shall be adjudged forfeited to Government. Almost side by side with these acts, and others repealed long ago, which were passed to extirpate all that was ruffianly, abandoned, and fiendish at that epoch, all that tended to anarchy and lawlessness, and to the debasement and crushing out of education and religion, of peace and of industry, we find three Acts passed which materially elevated the cause of education in India, and which reflect the highest glory on Lord Canning and his Government mainly from the lesson they teach that, while the arts and resources of war had to be skilfully used and husbanded against the most fearful odds, the arts and resources of peace were not forgotten, and were not suffered to decay. We allude to Acts II, XXII, and XXVII, of 1857, whereby Universities were incorporated at Calcutta, Bombay, and Madras. The first was passed when the first faint but ominous signs of the rebellion were overshadowing the political horizon; the last but nine days before the victorious assault on Delhi. We have no space to enter upon other important Acts of this epoch which still remain unrepealed, such as the Interest Act, the Lunacy Act, the Presidency Towns Small Cause Court Act, the Police Act, and the like, as we wish to devote a little space to the book, as a book, before us. The present volume is more useful to the student of Indian Laws in general than to the man of business or to the man whose duties compel him to administer certain laws. As, we presume, it is for the use of this latter class that this stamp of work is ordinarily published, we demur on practical grounds to this kind of publication. It involves great labour and no inconsiderable expense, and while it benefits a stray individual or two it does not lighten the labours of the mass who require legal assistance. It is too cumbersome and too long for constant or daily reference, and, as the wave of repeal steadily submerges for ever one after another of the old acts year after year, and of late years has blotted out scores of them from our Statute Book, who can safely predict that another year or two will not see the tide rise over most of the 97 Acts in the 1st. volume of this *magnum opus*, and that this book will not be cast aside, with a sigh over so much labour and expense lavished in vain? *Absit omen*, but repeal and codification are the legal watchwords of the day; and with these conditions ever present and steadily on the increase, we should prefer a cheap issue in a handy form of works containing the laws applicable to, and to be administered by, each branch of public servants, presidency by presidency, department by department, throughout India. This has been done to a certain extent, mainly by private enterprise, but a vast extent of law still remains in a state of chaotic jumble. Law usually is of such an arid nature that the private compiler shrinks from entering on its domain, but we hold it is the duty of the State to classify and arrange it under its proper heads. A task worthy of a legislative Hercules—a task of a repulsive and wearisome nature, but a task imposed by a duty owed to those who have to administer the law, and who cannot administer it properly in its present shape; and finally a task from which there should be no shrinking merely because it is distasteful.

CHILD-MARRIAGE.

IT is probable that many of the readers of the *Friend of India* see the "Journal of the National Indian 'Association" of which Her Royal Highness Princess Alice of Great Britain is President, and the celebrated Miss Carpenter, now in India, the Honorary Secretary. The last number of the Journal that has reached this country contains, among other papers relating to Indian affairs, an article by Vanian Abaji Moduk on "Female Education in India," a subject of so much importance as regards the future welfare of this Empire, that it can hardly attract too much of the attention of either Native or European writers. Mr. V. A. Moduk is, it seems, principal of some College or High School in the so-called "benighted presidency" which may account for his seeming to be in the dark as regards much of what has been done in the way of female education in the North of India. His remarks on female education and on the peculiar difficulties which beset the subject here are judicious, and his suggestions as to the way in which those difficulties may be overcome would be valuable, were they always practicable. But, as with most native writers and speakers that one meets with, or hears of, so with this gentleman. There is the evident desire to remove the burden from the shoulders of those whose duty it is to bear it, and to cast it upon others, to be, in short, highly philanthropic at the cost of others. It matters not to such men by whom the work is done so long as they themselves are not troubled with it. Government, they think, ought to do it; indeed, such people seem to think that Government ought to do everything. But if Government will not, or cannot, educate the female population, Mr. Moduk and the class of men whom he well represents would have no objection to its being done by "British and American philanthropy," even should it flow through the channel of missionary societies. Missionaries may do the work and pay for it; the Baboos would like to stand by and dictate as to the manner in which it shall be done. It is a trite but a true saying that, "God helps those who help themselves," and until we see more educated men like Vanian Abaji Modak rising superior to the prejudices of their countrymen generally, especially in their treatment of woman, determined first of all to educate their own wives, daughters, and sisters, and then uniting their efforts in doing what they can to enlighten their poorer countrywomen, they may talk and write as they please, but we must be excused if we continue to question their earnestness, or are even in doubt of their sincerity. With the exception of the Maharajah of Vizianagram, who maintains the largest and most successful girls' schools in India, what native of position and wealth is there who is doing anything worth speaking of, either by personal effort or by the supply of means, towards raising the condition of woman in India? Is it not well known that some who are supposed to be among the most advanced in freedom of thought and action, and who even lay claim to the title of "reformers" of the social and and moral life of their country, do not, and will not, educate their own female relatives?

But to the point more immediately before us, *viz.*, child-marriage and its bearing on the intellectual and social condition of the people. In the lecture above referred to, Mr. Moduk says, "so long as the marriage customs of the Hindoos remain unchanged, so long as Hindoo girls are not allowed to grow fully up before their marriage, no progress in female education is possible. In most cases Hindoo girls are married about the age of eight, after which, as the girls are placed under the care of their parents-in-law, they are not allowed to read or write or do anything of the kind. This is the greatest drawback to female education among the Hindoos, one which there is no chance of removing till Hindoo society is entirely reconstructed and provided with an enlightened marriage law." These remarks, coming as they do from a native and the Principal of an educational establishment, are important, for they express the growing conviction of the most thoughtful and least prejudiced part of the native community. Men of this class in all the large cities and towns of the Empire are beginning to see that child marriage and anything worthy of the name of female education are utterly incongruous; one or the other must give way. The annually increasing number of them who have sufficient manliness to throw off the yoke of caste and visit Europe learn that, just at the age when girls in India are taken from their toys and married to be immured for life in a Zenana prison, their more fortunate sisters in England are supposed to be just acquiring the habit of learning, in order to commence the work of education which is to continue through a long and happy girlhood. Apart altogether from the matter of education, which for girls at least is simply out of the question whilst child-marriage prevails, what a terrible effect this evil custom has on the physical and social condition of the people! How soon the close, monotonous, dreary, prison-like life of the Zenana tells upon the soft, delicate, graceful forms that may often be seen among the children of the higher classes! How quickly they droop, wither, and shrink into a premature old age! The mind shut out from this beautiful world with its never-ending wonders, finding little or nothing in the dreary routine of Zenana life upon which to exercise its wondrous powers, literally stagnates. To an English lady, on first visiting a Zenana, the inmates all seem sickly; the unfurnished rooms, destitute of even what she is accustomed to regard as necessaries, not to speak of comforts, seem more like the wards of an hospital than anything else; and accustomed as she is to the light and air of heaven, it is seldom that the atmosphere of the Zenana can be long endured. We are told that the wonder excited and the pleasure imparted by such occasional visits are childish, but pleasing to behold; but the ignorance betrayed by the questions put by the wives and daughters of even rich and educated men is simply brutish and saddening to behold. There is, however, nothing in their condition but what might have been expected. When mere children, the terrible wrong is done of imposing upon them the burdens and cares of wives and mothers, duties for which nature has not yet fitted them. Is it any wonder that they so quickly fade, and become weak in body and enfeebled in mind, at an age when in England girls have scarcely done with their dolls! It is thus that nature avenges herself for the wrong that is done to her; would that it were more directly on the men who are the perpetrators of the wrong. But they do not altogether escape. The consequence of woman's degradation, in whatever nation or age it has come about, or whatever may have led to it, has been a proportionate decrease of man's power and of his happiness. The Hindoo and Mahomedan communities of to-day are no exception to the law. There are millions of houses, but scarcely a *home* in the land; millions of fathers, of mothers, and of children, but scarcely a family, at least in the home sense, as representing not the number of mere dependants, but the hearts around which the affections entwine. In India the family is a *gharáná*, and the master of it, wearied with the labors and cares of the day, returns to his *ghár*, the place where he eats and sleeps, but not to a home, for he has none. He may see and talk to his *ghár ke log*, the people of his house, but he cannot enter into the bosom of a family. You may wander through the length and breadth of the land and not find a family board in a thousand around which parents and children meet to enjoy that domestic happiness which is so common in the happy homes of England. Among rich and poor alike there is a great gulf fixed between man and wife. Brought together without any choice in the matter, at an age when conjugal affection is not known, ignorant of one another and of almost everything that might fit them for the duties and the joys of married life, need we wonder at the result? The husband gives orders to his child-wife, but rarely sits down to converse with her, and never on subjects of any importance. She is generally uninformed as to the nature of his duties or business, and he never thinks of looking to her for advice in any difficulty, or for sympathy in sorrow. He is taught to believe that "women are ever ready to corrupt men, whether wise or foolish, and therefore, whether it be a mother, a sister, or a daughter, no man should sit alone with her." (Menu's Institutes I. 213-5.) She is told that it is her privilege first to wait upon him as a servant, and then eat her morsel in a separate apartment alone and in silence. She must even "wash the feet of her lord and drink the water, for a husband

is to a wife greater than Sankara or Vishnu." (Skan la Puran IV. 35.) In a word, as a more modern writer has said, "the excellence of woman unmarried, married, or widow, throughout the country among great and small, is rated only by the scale of servile fear and capacity of endurance and toil." (S. C. Dutt's *Miscellaneous Essays*, p. 155.)

It is well known that infanticide prevails to an alarming extent in many districts of Northern India. Government has for years attempted to suppress it, but in vain. A village or district is suspected. The magistrate of the district issues an order to the police to keep an eye on it. The midwives must be registered, all births and deaths of children must be reported, and if the number of female births does not bear a certain proportion to the number of male births, a heavy fine must be imposed on the village. This is a method of suppression which may be productive of as much evil as good. To the people it must seem unjust, for it punishes the innocent as well as the guilty, and opens a wide door for bribery. It is known to lead in numberless cases to concealment of birth, which is easily effected by temporary removal to unsuspected districts or native states. Why does not Government, if earnest in the matter, strike at child-marriage, the real root of the evil? A family is supposed to be disgraced if there be in it a daughter who remains unmarried beyond a certain age, generally from six to eight. If there be more daughters than are likely to find suitable husbands, or if the parents be unable or unwilling to bear the heavy marriage expenses, the most direct way of avoiding the supposed disgrace is to despatch the surplus girls as they come. If our Government were morally strong and bent upon doing the right thing, child-marriage would be put down with a strong hand. There can be no doubt but that if a law were passed for all classes, without respect to creed or caste, making the marriage of females illegal under sixteen years of age, Government would no longer be troubled with infanticide; it would die out of itself.

Disease is another of the evil brood to which child-marriage gives birth. We have only to think of mothers at ten or eleven years of age to understand what is meant. To some it will seem incredible that at such a tender age a child should become a mother, but not to those who are admitted beyond the *purda* of zenana life. Such child-mothers are common enough in Northern India; they are said to be numerous in Bengal An American medical lady, with ample means of arriving at the truth, has declared that nine-tenths of all the female disorders that came under her treatment were the result of marriage at an improper age. And yet our Government looks on unconcernedly because it is imagined that this barbarous custom is, for those who follow it, a religion obligation! The *shastras* never speak of it as such, and intelligent Hindoos have no more to say in its defence than that it is a custom which has grown up among them, an evil custom which many of them would rejoice to see legally suppressed, if Government had but the courage to do it. Child-marriage is not more a part of religion than infanticide, the exposing of the dying on the banks of the Ganges, or dying under the wheels of Juggernath's car, and has never been regarded as a religious duty in the sense in which *suti*, or the burning of widows, was. Government seeks to prevent infanticide, it has made the exposure of the dying illegal, and has so effectually quenched the *suti* fires that the present generation scarcely knows that such a barbarous custom ever disgraced the land. Is there to be no legal protection for the helpless child? Must she be betrothed, without being consulted, to one whom probably she has never before seen, for whom she has not, and may never have, any regard? Must she (as thousands of them yearly are) be left a child-widow to be regarded as the disgrace and reproach of her family, till driven by neglect and cruelty to seek relief in a life of infamy? It has been asserted by native gentlemen, well acquainted with native society, that by far the greater number of children whose husbands die when they are but a few years old, as they cannot remarry, go astray. The English Government has done much by just legislation towards raising woman in India from her degraded position; it seems unaccountable that it should still hesitate to take what ought to have been the first step. *Suti* killed its thousands, but child-marriage kills its tens of thousands. The *suti* was generally a willing victim, but the child-bride is committed to an act the nature of which she cannot understand; the *suti's* sufferings were sharp but short, but the little child-wife is doomed in tens of thousands of cases to a life from which the *suti's* death would be a merciful deliverance. Once betrothed she may not hope to escape, for let the man to whose tender mercies she is handed over "be choleric, or dissipated, irregular, a drunkard, a gambler, a debauchee, reckless of domestic affairs, agitated like a demon; let him live in the world destitute of honor; let him be deaf or blind, his crimes and infirmities may weigh him down, but never must his wife regard him otherwise than as a god." (Padma Puran.) Well may such men as Mr. Moduk despair of female education and of even true enlightenment and all refinement of feeling among their countrymen "till Hindu Society be reconstructed and provided with an enlightened marriage law."

THE INFLUENCE OF PERSIAN AND GREEK ART ON INDIAN ARCHITECTURE.

THE greater the attention paid to the various styles of ancient and modern Hindoo architecture, the more important and interesting becomes the question, how far that architecture is indigenous, and to what extent it is indebted, if at all, to the influence of other countries. It is only natural that natives of the soil, in their anxiety to sustain the honour of their race, should lay claim to originality in regard to the styles introduced into their ancient buildings; and they have found an able advocate in their distinguished countryman, Baboo Rajendra Lal Mitra. Every one acquainted with the subject will frankly acknowledge that the architecture of India has its peculiar types and forms, which are not to be seen elsewhere, and which rightly claim for it a distinctive position. There may not be great refinement of thought, or sublimity of conception, in any of the Indian orders, and yet undoubtedly they are in many respects unlike all others, and must be placed in a class by themselves. The question before us however, is one of a different character, and in fact resolves itself into this, whether the *most characteristic features* of the earliest styles found in India, are not mainly of a foreign origin.

Hitherto, no sculptured remains have been discovered in India more ancient than B. C. 250, the era of Asoka. Those of this date are scanty, yet display striking marks of similarity to sculptures at Persepolis and Susa. The chief of them are observed in the elaborate formation of the capitals of pillars. It is manifest that capitals are susceptible of many and very diverse variations. But it happens that the earliest Indian pillars are surmounted by a double capital, almost exactly like that which crowned the Persian pillar of a previous age. It has three divisions, the lowermost consisting of a bell-shaped figure, and the uppermost of lions or other animals, back to back in a recumbent posture, while between these two figures is a third resembling a reversed bowl. These are found on columns at Bharhut, Mathara, Sanchi, and other places. The curvation of the bell, its perpendicular and lanceolated lines, and its general form, admit of considerable divergence, according to the taste of the sculptor. But the type in all cases is one and the same. Nor is the similarity in these respects at all affected by the circumstances, that there are certain peculiarities of style in the Persian pillar not met with in the Indian, and *vice versâ*. For instance, the Persepolis column has a singular harp-like ornamentation between the head of the capital and the bell and bowl formations just described; while the Indian column has an ornamentation of its own, and moreover has in some cases a peculiar construction of the head of the capital itself. It is manifest therefore that the Hindoo sculptor has not slavishly followed his Persian model, but has embodied his own thoughts, though in a subordinate manner, in the subject he has undertaken to represent, sufficiently indeed for his style to be designated as Indian, in association with its Persian proto-type. Nevertheless, it is beyond all question that its fundamental, most important, and most significant architectural types have been derived from Persia. General Cunningham very properly terms this mixed style Indo-Persian, the earliest examples of which are still to be seen at Bharhut,

where he had the good fortune to discover them in 1873. Each of the four gateways of the magnificent Boodhist railing standing there, has, he remarks, "two clustered columns of four octagonal shafts, surmounted by bell capitals carrying four recumbent animals. These are humped Indian bulls, and fabulous lions with men's and griffin's heads." This he considers to have been the prevailing style in India at the period of Asoka, for it is remarkable that all the numerous pillars and pilasters of the Bharhut sculptures are decorated with the bell-shaped capital. An additional argument for the foreign origin of this style is based on the fact that all the pilasters of these gateways have Arian letters upon them, Moreover, the honey-suckle ornamentation found on some of the old Indian pillars was undoubtedly brought from Assyria, whence in all probability the Greeks also derived it. The Indo-Persian style at one time prevailed over the whole of Northern India.

The traces of Greek influence in ancient Indian architecture are chiefly confined to the Punjaub, Cashmere, and contiguous provinces. It would have been exceeding strange had they not existed. Just as the Bactrian kings changed the Indian coinage, and were the means of introducing into it elegant designs, in place of the coarse types previously prevalent, so it was only natural that, not merely in sculpture and other forms of art, but also in social usages, and in many other ways, they should powerfully affect a receptive and imitative people like the Hindoos. Indeed, it is our belief that Greek taste and refinement greatly re-modelled native society about the commencement of the Christian era, especially by the æsthetic ideas which it could not have failed to borrow from the neighbouring Greek kingdom of Bactria. We shall however confine ourselves to the subject of architecture. General Cunningham remarks that "the Corinthian order is found in all the Boodhist ruins in Gaudhama, to the west of the Indus, and in Manikyala, to the east. All the large capitals hitherto found in Peshawar and Yusufzai belong exclusively to the Corinthian order." That there can be no doubt on this subject is manifest by comparing various important elements of the pure Corinthian order of Greece with those which the Corinthian order of India displays. In each case, we find the capital is ornamented with three rows of acanthus leaves, eight being in each row ; volutes are at the four corners ; and the abacus is painted four times, and has a curved depression on each outer face. This striking similarity of the capital both of Greece and of India, is amply sufficient to prove to demonstration that the latter must have borrowed the style from the former. On the other hand, the Indian sculptor added elements of his own invention, and thereby established a new order rightly termed Indo-Corinthian. These, as given by the eminent archæologist already referred to, are chiefly five. The abacus is larger, and occupies a much more important position in the Indian order than in the original Grecian. The sharp points at its four corners are retained, and not removed, or smoothed down, as in Greece. A fourth row of acanthus leaves is inserted. The abacus supports flowers whose stems are attached to the volutes. Human figures are interspersed among the acanthus leaves. This is the most remarkable difference of all. The figures are skilfully introduced, and frequently represent Boodha in a sitting or standing posture. The Indian form of the Corinthian order is more varied, and admits of more luxuriant ornamentation in its tracery than its severely correct prototype of Greece. Examples of the Ionic and Doric styles have been discovered, the former at the ancient Taxial, the latter in Cashmere, and in the salt Range of the Punjab. General Cunningham furnishes some interesting information respecting remains of Ionic pillars found in a Buddhist temple at Taxila. "Of the larger pillars," he says, "the bases only remained, of which two are now carefully preserved in the Lahore Museum. Their mouldings correspond very exactly with those of the pure Attic base, as used in the Erechtheium at Athens. The shafts are circular and plain. The capitals have the peculiar volutes of the Greek Ionic order, presenting the same baluster shape on the two sides. But the abacus is heavier ; and altogether this unique specimen of Indian Ionic is of a very primitive and rather nude type. It seems probable that the shafts were originally plastered, and their capitals gilded, as gold leaf was found in several places." Now that careful attention is being paid to the ancient architecture of India, not in one province merely, but throughout the whole country, there is every reason to hope that other discoveries similar to those which have formed the basis of these observations, will from time to time be made, illustrating yet more clearly and decisively the nature and extent of the influence formerly exerted upon India by Persia, Assyria, and Greece. The subject is one of great interest to lovers of antiquity. The Hindoo need not be dismayed, or imagine that by showing the connexion subsisting between ancient India and other nations, his country will suffer in dignity or reputation, in as much as Hindoo architecture, especially that of former times, displays many novel types of indigenous production, by reason of which its orders have a character and rank of their own.

CHRIST : OR ANTICHRIST: WHICH ?

THE history of Newman's mind as he has himself narrated it, is, we think, the most interesting study the Christian world at this moment possesses. Taught as a child that the Pope was Antichrist, and convinced that he was so, he had got no further, he tells us, by 1838, when he was 35 years old, than to consider Antichrist not as the Church of Rome, but the spirit of the old pagan city which was still alive, and which had corrupted the Church planted there. Such substantially is the view, we think, of most educated Protestants. The Papacy is a political organization just as much as the Republic of the United States. A concurrence of favourable circumstances—the removal of the Empire to Constantinople being the chief of them—ended in the papacy becoming the Christian *Cæsar*. To it went over all the prestige of the Imperial city, and by degrees all the prerogatives of the pagan Cæsar were one after another ascribed to it, and assumed and asserted, until the world at last saw the strange spectacle of a man sitting and reigning over all the earth as Cæsar under the astonishing disguise of Christ. The darkness of the middle ages, the spurious Decretals, the impressive traditions of Imperial Rome, the real superiority of the Popes and Clergy over the barbarian nations brought into the Church, and the worldly ambition that lives in us all, ended naturally at last in the re-establishing of the Roman Cæsar under a new form—the disguise of Christ. And it is against the pretensions of the Papacy to universal dominion over the nations, and the submission of every civil authority thereto, that Christendom has been in conflict with ever since the emancipation of the human mind in the Renaissance and the Reformation of the 14th and 15th centuries.

We are digressing, however, from Newman, who tells us that soon after 1838 he underwent a change of opinion on the subject, which we must relate in his own way. "I saw," he says, "that "from the nature of the case, the true Vicar of Christ must ever "to the world seem like Antichrist, and be stigmatized as such, "because a resemblance must ever exist between an original and a "forgery ; and thus the fact of such a controversy was almost one "of the notes of the Church." The passage is strikingly illustrative of that prevailing habit of mind which made him, seven years afterwards, go over to the Roman Communion. It requires a very subtle perception to get any meaning at all out of the words, but carefully looked at they seem to affirm that the world, from the nature of the case, must have a false idea of Christ's character, and must necessarily therefore have also a false idea of that of His Vicar. But the moment the dilemma is examined, it breaks down. For "the world" *has* in fact a true idea of Christ's character. It may hate that character and misrepresent it, but it discerns clearly what its essentials are ; —meekness and lowliness, and unworldliness and self-sacrifice. Such is the character of Christ, as the world apprehends it. Turning now to the Roman pontiffs, we find them often animated by the fiercest ambition, sitting in Imperial purple, claiming dominion over kings and princes and nations, controlling the issues of peace and war, and claiming to administer all the kingdoms of the earth. We find that in personal character the Popes have not unseldom been the opprobrium of the age for their morals. While we are to understand that from the nature of the case the world is unable to form any judgment as to whether these men have been like Christ or not. "My Kingdom is not of this world" said Christ. "All the kingdoms of the world are mine" says the Papacy, and it is only the moral obliquity of the world, that prevents its discerning that the two assertions are identical. When the world defines what its idea of Christ is, Dr. Newman dare not say it is erroneous, but is compelled to allow that

it is "a true conception of Christ." But when, with the same powers of observation, it describes what the Papacy is, then it mistakes the character of the institution altogether. But the world is able to discover the character of both or neither, and the supposed logical dilemma is a mere verbal trick. Moreover, it is not "the world" in Dr. Newman's sense of the term, that has judged the Papacy to be antichristian; but a mass of the purest and most devout minds of the last four centuries: which have all been repelled therefrom because of its unlikeness to the Christ who is enshrined in their hearts. The dilemma did not impose even upon Newman himself, and it was by force of will that he finally submitted his intellect to papal pretensions. Thus with childlike and touching simplicity he writes (p. 239), "People say "that the doctrine of Transubstantiation is difficult to believe: "I did not believe the doctrine till I was a Catholic. I had "no difficulty in believing it, as soon as I believed that the "Catholic Roman was the oracle of God, and that He had declared "this doctrine to be part of the original revelation." The position is quite intelligible, but very mournful and humiliating. If the Church were to declare that Christ was never incarnate and was never crucified, Newman would believe it because the Church is the oracle of God. No man knew better than he the history of the Transubstantiation controversy in the Church: but the Church assured him that the Apostles held the Dogma. And if the Church were to tell him to accept any other historic delusion, he would do so at once in the same way. There is something very mournful in the spectacle of a great mind's disloyalty to what is true. "I do not know what is true," says Newman, "and "I despair of finding it, but the Church does. I give up my search "and enter her bosom. She may tell me that there is neither sun, "nor moon, nor stars, nor men, nor angels, nor world to come, it "will all be true. In 1841, in my Tract 90, I called the mass 'that "shocking doctrine.' Now in 1845 the Church tells me the Apostles "held it, and it is no longer shocking, but true."

In his essay on Cæsar and Ultramontanism, twelve months ago, Dr. Manning maintained that "the Revelation of Christianity "has withdrawn the province of faith and conscience from the "civil power and has intrusted it to the jurisdiction of the Church, "which is separate from all civil powers, and in all matters of "faith and morals supreme." Never certainly were any half-dozen lines written in which the necessity of strictly defining the terms was more apparent. What does Dr. Manning *mean* when he says, that "the whole province of faith and conscience has been "withdrawn by Christianity from the civil power and intrusted to the jurisdiction of the Church"? If he simply means that Christianity, as a Revelation, prescribes what men are to believe concerning God and themselves, and to practice as sound morality in all the relationships of life and between man and his Maker,—most so-called Christian men will agree with him; and because all Churches do agree with him in this, and declare a certain religious belief and a definite code of morals called Christianity to be binding upon the conscience, he paradoxically declares them to be Ultramontanes without knowing it.

Dr. Manning is able to believe so much, that he probably believes even this; and that the Protestant Churches as well as the Jesuit Colleges are Ultramontane without suspecting the fact. But every candid student of history knows that what the Papacy really claims for the Church is a right of passing beyond the domain of faith and conscience. It has claimed, and still claims (in Chili for instance), the right of setting up tribunals of its own, to which the civil power is bound to resign all causes which the Papacy chooses to declare to involve questions *either* of faith or of morals. In other words, disguising itself as Christ, it claims in His name the prerogatives of Cæsar, leaving to the civil tribunals only such matters as it chooses to resign thereto. *That* is Ultramontanism defined truthfully. The Papacy has ever addressed the civil powers of the world thus:—"It is a usurpation of "Christ's tribunals on earth, the Church Courts, for you lawyers to "affect the right of bringing ecclesiastics to your bar; of determi-"ning questions of marriage and divorce, of inheritance, of "guardianship of minors, conduct of schools, colleges, and univer-"sities; of the public press, of amusements, and opinion; in fine "of any question whatever that we declare to involve conscience, "faith, or morals." These are the claims which held Christendom in slavery in the past, and which the civil powers of Europe have been repressing for centuries, as opposed to all progress and to human freedom. The Papacy of history is simply Cæsar, claiming to domineer over human society in its most important concerns, and calling itself "Christ," to disguise the tyranny it has set up. Had the Papacy the power to do so, it would at once withdraw from the State all jurisdiction whatever seven-tenths of the affairs which occupy our law courts, on the ground that faith or moral was mixed up therewith. When Dr. Manning therefore speaks of the "jurisdiction of the Church," he really means the "jurisdiction of the Church Courts," which was being fought for so passionately a few months ago in Chili. The liberated mind of Europe insists that the Church shall confine her jurisdiction to conscience in reality, and that all power over the persons and property and civil rights of mankind be denied her. It is the province of the Church, by her ministers, to press upon mankind individual conformity to a morality higher than human law enforces, or can enforce; and *there* her office ceases. The men she so addresses are answerable to God alone for deference to her voice. In the same way, it is her business to teach the Christian faith; but to concede to her the right to compel men to receive that faith is simply Cæsar in his worst form, the very same form in which Nero consigned the ancient Christian confessors to the arena or the stake. Rome does not know the spirit she is of. It burns fiercely in men like Manning, while Dr. Newman has persuaded himself it is the Spirit of Christ—and that the world mistakes it for Antichrist.

PETTY CIVILITIES.

THE individual who asserted that civility cost nothing never lived in India. A years' experience of the trials of patience we must all endure out here, would have convinced that philosopher of manners that civilities are often the most expensive thing we can deal in. There are certainly seasons and places wherein civility is a burden that sits lightly, but there are others again where one would willingly purchase immunity from being civil at the cost of the currency of the country. People are scarcely to be thanked for their civility when they put on their best clothes, and go to dinners or Badminton with the determination of being pleasant. They have their company manners on with their dress coats, and they would be justly stigmatized as bears if they did not grin and chatter like monkeys. This kind of civility costs nothing, for it becomes a habit with people accustomed to society, but it is a question if it is worth anything——perhaps not. The civility that really puts one's temper and patience to the test is that which is asked for at untimely seasons; when, for instance, we are out of gear for such vanities, or busily employed on more important affairs, or in ill-health, or low spirits. There is an individual often seen in India who seems to have been born for nothing else but to judge the civility of his fellow creatures under the latter inopportune circumstances. We might call him a loafer only that unfortunately he is not one He is an idler, however, and he is always most idle when others are most busy. He is of that good natured class of friend, who is ever ready to drop in upon you at unseasonable hours to smoke a cheroot, to have a peg, to talk the Government Gazette, or to abuse the powers that be. Possibly business of some kind or other is waiting to be attended to, or dyspepsia has set in as the result of bad wines and greasy dishes at some dinner offered on the shrine of civility the night before, yet for all this the mind has to be tutored and tutored to listen to the inanities, or the Pedlington gossip, of one's loafing friend, who, by the way, is especially sharp to detect the smallest symptom of inattention or disatisfaction, and to brood over it afterwards as studied incivility. The man who can exhibit an agreeable cheerfulness under conditions of this nature is one not belonging to the ordinary ruck of humanity. There is greatness in him, if it is ever discovered. Another test of civility is that of dining and amusing persons one does not care a straw about. So and so must be invited to dinner because he belongs to the same department, or office, or profession as the entertainer. And so and so comes with his wife——people who may have resided hitherto in Jericho for all one knows to the contrary. Now a little dinner among friends and without ceremony is a very pleasant thing. Civility costs nothing here, for it never comes into consideration. It is spontaneous and unfelt. But a labored feast for strangers is another affair, and a stock of artificial civility—machine—made as it were—has to be laid in with the ice for the occasion. The odds are much against the strangers being pleasant people, or people of any intellect or conversation. It is much more likely that they are soured with Indian exile, and discontented with something or other—with the Commissioner, or the Staff Corps, or the Bishop or one another. One has got up a little feast at some expense and much inconvenience to please people who don't know how to be pleased, and would not be pleased if they could. For this the entertainer has discarded the easy Sac coat of his every day life, and encircled his throat in a choker, and his poor feet in patent leather shoes. For this the wife of his bosom has been harassed by the cook, and cheated by the butler; for this the baby has to go to bed supperless, and

screeching like an infant hyena for its mother. And with disagreeable people of the stamp alluded to, the more civility one gives them the more they want. They take one's labored politeness as their right, and are insulted if one relaxes the strain on one's manners a hair's breadth. How be inexpensively civil with such wet blankets as these? The politeness of their hosts they will estimate as the natural homage paid to their own excellencies, and one would laugh at the conceit this sort of civility fosters only that the trouble of practising it puts laughing out of the question.

Petty civilities of the inexpensive kind come very easily to women. Perhaps it is because they are so delightfully hypocritical in small social matters. Ladies will be seen smiling on the most unmitigated bores even while they are suffering from *tic doloreux*, or anxieties regarding the new silk dress the tailor is cutting out in the verandah. *Like the Spartan boy with the fox in his* small clothes, they permit civilities to gnaw them with an uncomplaining countenance, and take their punishment—we were about to say like a man, but far better,—a woman. Still, there are times when the other sex must feel the strain even as we do. To go about "calling" all over a place, scattering paste—board to the winds in one's best bib and tucker, must often try the patience of the martyr-wife and mother, and yet people define visiting as one of those civilities which cost nothing! Women, however, are not slow to demand civilities from men in return for those they dispense themselves, and though it may be ungallant to say so, these demands are at times vexatious. So much depends on the woman. If a man is smitten with any fair creature, he of course, never estimates the cost of the little services he offers at her shrine. It is a glorious gratification for him to turn over her music, pick up her tennis balls, or rise up before cock crow to go out riding in the raw morning air and in a damp saddle with her. There is bliss for him in dressing, after a heavy breakfast, in hot London clothes to pay his devoirs at the lady's bungalow. He finds it very good to play cat's cradle there, or to hold skeins of wool on cramped fingers, and with cramped toes in hot tight boots. No one thanks him for these civilities, for they don't cost him a half-penny. It is another affair though when one does not feel any excessive cordiality, but possibly the reverse, for the dame who asks for sacrifices, and yet the code of civility requires, most unjustly, that every man should act towards every woman precisely as if he were in love with her. One must smile and ogle and compliment the woman whom we know speaks ill of us behind our backs, and affect a violent admiration for the spoil—sport damsel who has told young Muffkins that our eldest marriageable daughter has the disposition of a demon. Are these inexpensive civilities? Do these blandishments cost nothing? On the whole, we think them good value for rupees, and better rupees than we have just now. Nothing is more common in Society than to hear such a one spoken of as rude and ill-mannered, when in fact he may be only natural. An exaggerated importance is given to etiquette, as we call it, in India, where every one holds on by the skin of his or her teeth to the individual's position in the precedence table, and offence is often taken where none is meant by idle people who have nothing to do but pick holes in their neighbours' coats and bustles. A man is often discountenanced in Station Society because he minds his own business and lets that of others alone. A business man, or any man who has useful work to do, can scarcely find the time or the inclination to practice those petty civilities which go a long way to sum up the existence of the Social Loafer. He cannot go about visiting and returning visits, or go dining and dinnering if he wants his work done; however, if he ignores the long catalogue of civilities supposed to cost nothing, he is publicly set down as a miser of his manners and a curmudgeon of civilities at the very least. Censures of the kind may not kill him; still, the social dog can no more afford a bad name than any other dog, and there are social Christians too who would hang him for not going their ways instead of other ways. It has ever been the same since humanity sweated on this earth. We are not content with the original curse on man, but strive to enhance it, with little laws and their penalties of our own. Civility unabused is no hardship. Where natural and unforced, there is nothing cheaper, and few things more profitable, but, like all good things, the virtue has undergone the process of adulteration, and half the civility to be met with is as spurious as tedious. Downright incivility would almost be a relief to the transparent hypocrisy that often passes muster for civility, and we might wish for an Abernethy now and then in those places wherein the smiles defined as coffee-house grins are too prevalent. Even as we are, it is very refreshing when some big-wig of the herd is impelled to smite a toady or subordinate in Johnsonian language, and with the brusque incivility of that bearish lexicographer. Or there is something not altogether unpleasant in the rudeness of Jacks in Office, which lays claim to no civility cheap or costly Anything is sometimes preferable to the civility of the Social circle wherein we are often taxed to the utmost with the consolation of knowing that we get no thanks for it. Other virtues obtain all the credit which is their due, and full allowances are made for the difficulty of practising them to perfection, but civility, by right of its costing nothing, goes unrewarded—a great mistake that is due to our Social selfishness.

"QUEEN MARY."

III.

IT is perhaps to be regretted that Elizabeth does not figure more frequently in this drama. Her character is well conceived by the poet, and, in the few scenes in which she appears, it is well represented. She is a right royal woman, of great mental gifts and noble instincts, who felt her superiority to all whom she encountered and seldom sought to conceal it, but whose shrewdly politic nature was, in times of deep hazard to her person, easily led into duplicity, though it was hardly to be decoyed into rashness even by the flattery which she could not dislike, even when she knew its worthlessness. We cannot do better than quote the following snatches of her conversation with Howard, which besides illustrating her character contains two out of the few fine word-portraits in the poem—Howard's description of Courtenay, and Elizabeth's of Gardiner:

HOWARD.—Was that my Lord of Devon? do not you
Be seen in corners with my Lord of Devon.
He hath fallen out of favour with the Queen.
She fears the Lords may side with you and him
Against her marriage; therefore he is dangerous.
And if *this Prince of fluff and feather* come
To woo you niece, he is dangerous everyway.

ELIZABETH.—Not very dangerous that way, my good uncle.

HOWARD.—But your own state is full of danger here.
The disaffected, heretics, reformers,
Look to you as the one to crown their ends.
Mix not yourself with any plot I pray you;
Nay, if by chance you hear of any such,
Speak not thereof—no, not to your best friend,
Lest you should be confounded with it. Still—
Perinde ac cadaver—as the priest says,
You know your Latin—quiet as a dead body.
~~What was my Lord of Devon telling you?~~

ELIZABETH.—Whether he told me anything or not,
I follow your good counsel, gracious uncle.
Quiet as a dead body.

Gardiner calls her to the Queen's presence, nforming her that Mary proposes to send her into retirement:

HOWARD.— See,
This comes of parleying with my Lord of Devon.
Well, well, you must obey; and I myself
Believe it will be better for your welfare.
Your time will come.

ELIZABETH.— I think my time will come.
Uncle,
I am of sovereign nature, that I know,
Not to be quelled; and I have felt within me
Stirrings of some great doom when God's just hour
Peals—*but this fierce old Gardiner—his big baldness,*
That irritable forelock which he rubs,
His buzzard beak and deep incavern'd eyes
Half fright me.

HOWARD.—You've a bold heart; keep it so.
He cannot touch you save that you turn traitor;
And so take heed I pray you—you are one
Who love that men should smile upon you, niece.
They'd smile you into—treason—some of them.

ELIZABETH.—I spy the rock beneath the smiling sea.
But if this Philip, the proud Catholic prince,
And this bold priest, and she that hates me, seek
In that lone house, to practise on my life,
By poison, fire, shot, stab—

HOWARD.— They will not, niece.
Mine is the fleet and all the power at sea—
Or will be in a moment. If they dared
To harm you, I would blow this Philip and all
Your trouble to the dog-star and the devil.

ELIZABETH.—To the Pleiads, uncle; they have lost a sister.

Her thoughts in retirement are disturbed by suspicions of hidden danger. We shall next quote part of her soliloquy in the chamber at Woodstock, after she has been listening to the milkmaid's song—a song which we may remark in passing is very pretty, and naive, but perhaps a little too delicate in its refinement for a milkmaid's song.

ELIZABETH.—Right honest and red-cheeked; Robin was violent
And she was crafty—a sweet violence,
And a sweet craft. I would I were a milkmaid,
To sing, love, marry, churn, brew, bake and die,
Then have my simple headstone by the church,
And all things lived and ended honestly.

I could not if I would. I am Harry's daughter:
Gardiner would have my head. They are not sweet,
The violence and the craft that do divide
The world of nature; what is weak must lie;
The lion needs but roar to guard his young;
The lapwing lies, says "here" when they are there.
Threaten the child; "I'll scourge you if you did it"
What weapon hath the child, save his soft tongue,
To say "I did not?" and my rod's the block.
I never lay my head upon the pillow
But that I think, "wilt thou lie there to-morrow?"
How oft the falling axe that never falls,
Hath shocked me back into the day-light truth
That it may fall to-day? Those damp, black, dead
Nights in the tower; dead—with the fear of death—
Too dead even for a death watch! Toll of bell,
Stroke of a clock, the scurrying of a rat
Affrighted me, and then delighted me,
For there was life—And there was life in death—
The little murdered princes, in a pale light
Rose hand in hand, and whispered, "come away,
The civil wars are gone for evermore:
Thou last of all the Tudors, come away,
With us is peace!" The last? It was a dream;
I must not dream, not wink, but watch.

The length of the quotation may be excused, as, while we are not sure that it, or any other of the long speeches in this drama, is likely to prove effective for stage declamation, it appears to be a favourable specimen of what Tennyson can do in dramatic composition. In some of the other soliloquies—those of Mary—he rises to a finer height, but the sublimity which he almost reaches in these is more of the lyric than of the dramatic order. This fact forbid us to hope that Tennyson can even gain decided success as a writer of stage-plays. His best dramatic writing is deficient in passion, and as soon as he gives way to passion he becomes lyric.

We shall give another quotation illustrative of Elizabeth's character. It shows her caution and shrewdness and her skill in tongue-fence, and closes with a fine out-burst of the spirit of old king Harry which she had long suppressed, and gives us by anticipation, by one quick flash, a glimpse of the imperious Queen Bess. Even before the death of Mary, the Spanish ambassador has come to Elizabeth to sound her inclinations with reference to a marriage with Philip, She cleverly pretends to misunderstand the proposal, affecting to think it has reference to the boy Carlos, and after some smart dialogue she says,

ELIZABETH.— Count de Feria,
I take it that the king hath spoken to you;
But is Don Carlos such a goodly match?
FERIA.—Don Carlos, Madam, is but twelve years old.
ELIZABETH.—Ay, tell the king that I will muse upon it;
He is my good friend, and I would keep him so;
But—he would have me Catholic of Rome,
And that I scarce can be; and, sir, till now,
My sister's marriage, and my father's marriages,
Make me full fain to live and die a maid,
But I am much beholden to your king.
Have you ought else to tell me?
FERIA.— Nothing, Madam,
Save that methought I gathered from the Queen,
That she would see your grace before she—died.
ELIZABETH.—God's death! and wherefore spake you not before?
We dally with our lazy moments here,
And hers are numbered. Horses, there, without!
I am much beholden to the king your master.
Why did you keep me prating? Horses, there!
[*Exit* ELIZABETH, &c.
FERIA.—So from a clear sky falls the thunderbolt!
Don Carlos? Madam, if you marry Philip,
Then he and I will snaffle your "God's death,"
And break your paces in, and make you tame;
God's death, forsooth—you do not know King Philip.

We must add Cecil's clear terse character of Elizabeth, given near the close of the drama, just before Elizabeth is greeted queen by acclamation.

Many points weather'd, many perilous ones,
At last a harbour opens; but therein
Sunk rocks—they need fine steering—much it is
To be nor mad, nor bigot—have a mind—
Nor let priest's talk, or dream of worlds to be,
Miscolor things about her—sudden touches
For him, or him—sunk rocks; no passionate faith—
But—if let be—balance and compromise;
Brave, wary, sane to the heart of her—a Tudor
School'd by the shadow of death—a Boleyn, too,
Glancing across the Tudor—not so well.

It is reported that Tennyson is meditating another drama. He could not do better than follow up his "Queen Mary" by "Queen Elizabeth." The play before us might then posses merit as the first part of a great drama, the subject being the period of Spanish influence in England ending with the defeat of the Armada, and its heroine Elizabeth. In portraying the last of the Tudors, he would find a more genial task than in depicting Bloody Mary, and the present drama affords evidence, we think, that he could achieve greater success.

Philip is scarcely one of the leading characters in the play, though the part has importance on account of his close connection with Mary, and with the great events of her reign. The poet seems not to have been able to overcome his antipathy to the haughty, heartless, and licentious Spaniard, and seems to have introduced, him here and there in the course of the drama with reluctance and because he could not help it. But the character, so far as he exhibits it, is we think, successfully handled. One brief quotation will illustrate sufficiently his bearing towards his unloved but doating spouse. He has reluctanly consented to defer his departure for a single day, and Mary says:

The sunshine sweeps across my life again.
O if I knew you felt this panting, Philip,
As I do!
PHILIP.— By St. James I do protest,
Upon the faith and honour of a Spaniard.
I am vastly grieved to leave your Majesty.
Simon, is supper ready?

Wyatt's rebellion fills the second Act, and is, on the whole well represented. Wyatt himself, with his literary proclivities, and high-souled patriotism, and his staunch retainer William, who hated Spain because when he was there he could neither eat nor sleep, are good characters, but one of the weak points about the play is that the persons introduced are so numerous, that we never make a full and intimate acquantance with any of them. Wyatt storms across the stage in the second act and disappears. His speech to the men of Kent is a failure, and seems to prove sufficiently that Tennyson should avoid prose. It begins well, with terse, soldier-like utterances, but passes into a shriek very unlike a general's war speech.

"And if we move not now, yet it will be known that we have moved; and if Philip come to be King, O, my God! the rope, the rack, the thumbscrew, the stake, the fire. If we move not now, Spain moves, bribes our nobles with her gold, and creeps, creeps snake-like about our legs till we cannot move at all; and ye know my masters, that wherever Spain hath ruled she hath wither'd all beneath her. Look at the New World—a paradise made hell; the red man, that good helpless creature, starved, maimed, flogg'd, flay'd, burn'd, boil'd, buried alive, worried by dogs. &c." The speech is fitter for an old woman than for Sir Thomas Wyatt.

We can do no more than mention Sir Ralph Bagenhall, honest, sturdy, shrewd, and bitterly sarcastic, but tender-hearted, and full of staunch patriotism. He is our favorite among the secondary characters and is one of the few whom we see enough of to rank him as an acquaintance. But the use that the poet evidently makes of him as cicerone, somewhat lessens our appreciation of this excellent character. Howard, Paget, Courtenay, Cardinal Pole, Gardiner, and Bonner with mouth "to gorge a heretic whole, roasted or raw," are all characters of more or less importance, but it does not seem necessary to occupy further space with either criticism or quotation.

We now take leave of "Queen Mary," not with unmixed praise but with undiminished respect for the author. He has entered a region of art to which his muse was unaccustomed, and attempted a subject which would have presented great difficulties to the highest dramatic genius, and the result, though far from being of the first quality, is certainly of a higher order, than from our previous knowledge of Tennyson's genius, we were prepared to expect. But we are strongly of opinion that he should not gag and fetter his genius by writing for the stage. He has already produced a good drama for closet study, and, would he but leave stage requirements out of his view, he might produce a far more excellent one.

THE ILIAD AND ODYSSEY OF INDIA.

[*By Edwin Arnold.*]

III.

WE pass over the long episodes of their adventures in the jungle till the time when the Pandavas emerge, and, still disguised, take up their residence in King Viratá's city. Here the vicissitudes of Draupadí as a handmaid of the Queen, of Bhíma as the palace wrestler, of Arjuna disguised as a eunuch, and of Nakula, Sahadeva, and Yudhishthira, acting as herdsmen and attendants, are most absorbing and dramatic. The virtue of Draupadí, assailed by a Prince of the State, is terribly defended by the giant Bhíma; and when the Kauravas, suspecting the presence in the place of their cousins, attack Viráta, Arjuna drives the chariot of the Heir Apparent, and victoriously repulses them with his awful bow *gandíva*. Subjoined is the curious passage relating to the punishment of Draupadí's insulter.

When Bhima had thus promised to chastise Kichaka, Draupadí was filled with joy, and agreed to act according to his words; and when the night was over she returned to the apartments of the women and did her duty as she was accustomed. Now it so happened that after a while Kichaka paid another visit to his sister, the Rání; and he began, as his custom was, to set himself off in the presence of Draupadí, and he said to Draupadí, "Raja Viráta cannot interfere with me, for all his affairs are in my hands; if, therefore, you refuse any longer to become my wife, I shall carry you away by my own power, and the Raja will say no more to me to-day than he did yesterday. But if you will accept me as a husband, and enter my house, I will do you no harm; and I will give you a hundred pieces of gold every day, and a hundred slaves and slave girls to wait upon you, and a chariot, drawn by mules, to be always at your command." And Draupadí answered; "How can I refuse such generosity? but I yield on one condition only. I know that you admit many friends into the apartments of your women, and if my consent should be known unto them, it may bring both you and me to shame. Moreover, I have five invisible Gandharvas who watch over me; and should they discover this matter they will slay you." So it was agreed between them that at midnight Draupadí should grant a meeting to Kichaka in the dancing-room.

Kichaká then left the palace, and went to his own house, and his heart was filled with delight; but he was so impatient to meet Draupadí that the remaining half of the day appeared to him like half a year; and when it was night he arrayed himself in new garments, and perfumed himself with the choicest odours, and he was more resplendent than he had ever been before, in the same way that a lamp becomes most brilliant just before it goes out. Meanwhile Draupadí had gone to Bhíma, and told him all that she had done, and Bhíma said that he would slay Kichaka in such a fashion that no man should discover who had done it. So when the hour of midnight arrived, Kichaka went in all joy and expectation to the dancing-room, and seeing in the darkness that somebody was there, he thought it Draupadí, and put out his hand to take hold of her; but at that moment Bhíma arose from the gloom in great wrath and seized him by the hair of his head, and would have dragged him to the ground, but his locks were oiled, and he slipped through the fingers of Bhíma. Now Kichaka was a warrior of great valour and exceeding strength, and he so fell upon Bhíma that they struggled mightily together, and they fought with their clenched fists, and tore each other with their nails, and strove to throw each other to the ground. And Bhíma was brought to the earth; but he put forth all his strength, and seizing hold of Kichaka, he whirled him swiftly round his head, and dashed him against the ground, and he put his knee upon the breast of Kichaka, and kneaded him as a baker kneads bread, and pommelled him until the soul of Kichaka departed out of his body, and Bhíma broke every one of his bones into the smallest pieces, and formed his body into a mere ball of flesh. Bhíma then lighted a lamp, and brought in Draupadí, and showed her all that he had done, saying, "This will I do unto any man that offends you." And Draupadí rejoiced greatly, for she saw that she had been fully avenged.

Then Bhíma departed out of the palace and went to the cook-room, and fell asleep; but Draupadí went and called the watchmen of the palace, saying, "Kichaka forced me to grant him a meeting in the dancing room, notwithstanding all my warnings that the invisible Gandharvas would slay him; and behold, when he came to me, the Gandharvas, who are my defenders, fell upon him and slew him, and his dead body is lying there." So the watchmen lighted a lamp and went in, and they beheld the dead body of Kichaka like a ball of flesh, and they said one to the other "Surely, no man hath done this. It must be the Gandharvas." And as soon as it was morning there was a great uproar amongst the people, and the whole city was in commotion, for it was said that the mighty Kichaka, who commanded all the soldiers of the Raja, had been put to death by the Gandharvas, out of his love for a woman. And the brothers of Kichaka hastened to the spot, and saw the dead body, and desired to take it away to the place of burning; and when they saw all the women of the palace gathered together, their eyes fell upon Draupadí, and they said one to the other: "This is the woman on whose account our brother has been murdered—we cannot kill her, because it is not proper to kill a woman. Let us then burn her with the dead body of Kichaka, and since he died out of love for her, let him espouse her in the world of Ghosts."

They then went into the presence of the Raja, saying, "We wish to burn the waiting maid, who caused the death of Kichaka, along with the corpse of our brother." And the Rajah was in awe of his wife's brethren, and dared not forbid them; for it is an old proverb that the brother-in law is master of the house. So they seized Draupadí by force, and bound her with cords, and threw her upon the bier of Kichaka, and went out of the city to burn her alive, together with the dead body. And Draupadí, seeing that her life was in mortal peril, shrieked and screamed in piteous tones, and the air was filled with her cries. All this while Bhíma was lying asleep in the cook-room, when he was awakened by the cry of Draupadí; and he rose up and hastened out of the palace to follow her to the burning ground; and he went to the city wall and threw himself from the ramparts, for he would not go through the city gate lest he should be known.

Then Bhíma drew his hair over his face, so that no man could discover him, and tore up a large tree by the roots, and carried it on his shoulders as a club, and went with all speed to the place of burning. And as he came near Draupadí saw him, and knew who he was; and when the brethren of Kichaka beheld Bhíma approaching them, they were seized with trembling, and said "This is the Ghandharva; let us fly and leave this woman, who is the cause of all our sorrows." Thus saying, they left Draupadí and the dead body of Kichaka, and fled towards the city, and Bhíma returned to Draupadí and released her; and they went back to the city by different ways, so that no one might know that the Raja's cook was the terrible Ghandharva.

After all these evidences of prowess and the help afforded in the battle, the king of Viratá discovers the princely rank of the Pandavas, and gives his daughter in marriage to the son of Arjuna. A great council is then held to consider the question of declaring war on the Kauravas, at which the speeches are quite Homeric, the god Krishna taking part. The decision is to prepare for war, but to send an embassy first. Meantime Duryodhana and Arjuna have a singular contest to obtain the aid of Krishna, whom both of them seek out. This celestial hero is asleep when they arrive, and the proud Kaurava, as Lord of Indradrastha, sits down at his head—Arjuna more reverently takes a place at his feet. Krishna, awaking, offers to give his vast army to one of them and himself as councillor to the other; and Arjuna gladly allows Duryodhana to take the army, which turns out much the worse bargain. The embassy, meantime, is badly received; but it is determined to reply by a counter message, while warlike preparations continue. There is a great deal of useless negociation, against which Draupadí protests, like another Constance, saying, "War, war! no peace! peace is to me a war!" Krishna consoles her with the words, "Weep not! the time has nearly come when the Kauravas will be slain, both great and small, and their wives will mourn as you have been mourning." The ferocity of the Chief of the Kauravas prevails over the wise counsels of the blind old king and the warnings of Krishna, so that the fatal conflict must now begin upon the plain of Krurukshetra.

All is henceforth martial and stormy in the "parvas" that ensue. The two enormous hosts march to the field, Generalissimos are selected, and defiances of the most violent and abusive sort exchanged. Yet there are traces of a singular civilization in the rules which the leaders draw up to be observed in the war. Thus no stratagems are to be used; the fighting men are to fraternize, if they will, after each combat; none may slay the flier, the unarmed, the charioteer, or the beater of the drum; horsemen are not to attack footmen, and nobody is to fling a spear till the preliminary challenges are finished; nor may any third man interfere when two combatants are engaged. These curious regulations—which would certainly much embarrass Moltke—are, sooth to say, not very strictly observed, and, no doubt, were inserted at a later age in the body of the poem by its Brahmin editors. Those same interpolators have overloaded the account of the eghteen days of terrific battle which follow with many episodes and interruptions, some very eloquent and philosophic; indeed, the whole *Bhagavad-Gita* comes in hereabouts as a religious interlude. Essays on laws, morals, and the sciences are grafted, with lavish indifference to the continuous flow of the narrative, upon its most important portions; but there is enough of solid and tremendous fighting, notwithstanding, to pale the crimson pages of the Iliad itself. The field glitters indeed, with Kings and Princes in panoply of gold and jewels, who engage in mighty and varied combats till the earth swims in blood, and the heavens themselves are obscured with dust and flying weapons. One by one the Kaurava chiefs are slain, and Bhíma, the Giant, at last meets in arms Duhsusana, the Kaurava Prince who had dragged Draupadí by the hair. He strikes him down with the terrible mace of iron, after which he cuts off his head, and drinks of his blood, saying "Never have I tasted a draught so delicious

as this." So furious now becomes the war that even the just and mild Arjuna commits two breaches of Aryan chivalry, killing an enemy while engaged with a third man, and shooting Karna dead while he is extricating his chariot-wheel and without a weapon. At last none are left of the Kauravas except Duryodhana, who retires from the field and hides in a chamber under a table. The Pandavas find him out, and heap such reproaches on him that the surly warrior comes forth at length, and agrees to fight with Bhima. The duel proves of a tremendous nature, and is decided by an act of treachery; for Arjuna, standing by, reminds Bhima by a gesture of his oath to break the thigh of Duryodhana, because he had bidden Draupadí sit on his knee. The giant takes the hint, and strikes a foul blow, which cripples the Kaurava hero, and he falls helpless to earth. After this the Pandava Princes are declared victorious, and Yudhishthira is proclaimed King.

ASSISI AND ITS NEW COLLEGE.

[FROM OUR OWN CORRESPONDENT.]

ASSISI, ITALY, OCTOBER 8.

THERE are surely few places in the world like Assisi—few places which so bear the impress of one man. St. Francis has left upon this Umbrian town an impression which has been deep and prolonged. For 600 years his memory has been here cherished in a wondrous manner. Churches have been built upon the various spots associated with the incidents of his life. That life so strange and beautiful has its story told upon their frescoed walls. Not only are the undoubted events of his life so depicted, but also the legends and traditions which have clustered around his name here present themselves so much in the guise of things that have really happened, that as I look around me I am tempted to crave for some of the believing spirit which inspired the artists in their work. Desirous to see whatever will help me to realise the actual life of the saint in this picturesque hillside town, and to form an estimate of the influence which his name has exerted ever since his body was hidden away in its deep rocky tomb, I linger in Assisi, and with the diligent zeal of a devotee turn my steps to every spot which the guardians of the Saint's memory have marked as sacred. I go first to the Chièsa Nuova, built upon the site of the house of Francis's father. A gentle-faced, softly-gliding friar comes forward to show me the spot where Francis was born, to which his mother retired in obedience to commands received in a vision of the night. He shows me also the little dungeon in which Francis was chained by his father for selling a pile of rich stuffs and giving the money he received to help to rebuild a ruined church. Through an iron grating I see the kneeling figure of the saint, his chained hands clasped in prayer. The picture over the high altar of the church represents the vision vouchsafed to Francis on the very spot where the altar stands—the vision of our Lord pointing to a castle adorned with banners bearing the device of the cross. I pass from this interesting church through the streets along which Francis often went in early youth, gaily attired and singing Troubadour songs in the Provencal tongue, to which he was almost as much attached as to his own Italian. I think too how afterwards he passed through the same streets, clad in the coarse brown gown, the peasant attire which has become the dress of the Franciscan order, singing the psalms he seemed to love so much. I walk down the hilly road, with the same sweet Umbrian landscape he must oft have looked on before me towards the church of St. Damian, the church in which he heard a mysterious voice bidding him restore its ruined walls, which bidding he first tried to obey by selling his father's goods and handing over the money he thus obtained to the priest in charge. I look upon the very walls, which to a large extent were raised by his own hands, upon the stones bought with the alms gathered by himself, after he had, in obedience to the bishop, given back the money he had no right to, to his father. I am reminded that in the convent attached to this church, St. Clara, attracted towards the religious life by what seemed to her the heroism of St. Francis, lived her cloistered life and founded her order of Poor Clares. In the same Umbrian valley I walk in another direction to the Basilica of Porzuincula, dedicated to St. Mary of the Angels. Within the walls of this edifice, beneath its lofty dome, is the little chapel once surrounded by the huts in which Francis lived with the brethren who gathered around him. Here it is that Francis, once hearing the officiating priest read the precepts of poverty given by Christ to his disciples, resolved to follow those precepts literally and faithfully. Here too he was favoured with a vision of Mary surrounded by a choir of angels. In the convent garden hard by still grows the rose tree which spring up amidst the thorns upon which Francis threw himself to repress the desires with which the flesh was trying to beguile his saintly spirit. I turn back to Assisi, and enter there what after several visits I must speak of as the most interesting of all the ecclesiastical edifices of the town. This is the Basilica of St. Francis. With the adjoining convent, whose walls spring up from the rock to a great height, it is placed like a fortress upon the verge of a precipice. Three churches are really contained beneath one roof. Of these the upper church is now rarely used. Only on great festival days do its frescoed walls resound with music. The lower church, with its groined roof, its marvellous frescoes—some of which have furnished Mr. Ruskin with themes for his Oxford lectures—and the weird music of its services, I shall never cease to think of as one of the strangest churches it has been my lot to enter. Such a scanty amount of light finds its way into the church that it is only for a brief time at noon on the brightest day that the frescoes on its walls and roof can be clearly seen. The four above the high altar, representing the Poverty, the Chastity, the Obedience, and the Glorification of St. Francis, are masterpieces of Giotto. But with all the beauty of its frescoed walls the church has the greatest interest for a stranger when its pictures and monuments are veiled in evening gloom, and the only lights are those which produce a dazzling effect upon the high altar, and a few lone tapers in the apse behind, by the feeble light of which an almost invisible choir of men and boys sing out their vesper music. The effect of this singing, whether it be due to the peculiar construction of the low vaulted roof causing the echoes to mingle with the original sounds, or to a style of singing caught by the choristers from the friars who are their instructors, is very strange. A listener's first impulse is to accuse the choir of inattention to time. A note which would be expected to reach the ear as though uttered by one voice, seems to form a series of impulses rapidly succeeding one another. But there is such uniformity in the irregularity that the effect is to add to the main melody of the chant a rhythmic undertone. To this music I have listened on successive evenings, and each time it has impressed me with its strangeness, as though the dimly seen figures behind the altar had an unseen choir singing with them, but at the same time lagging somewhat behind. Below this church there is one still lower. This is the crypt, which has been hewn out of the solid rock on which the upper edifice stands. In 1818 St. Francis's body was discovered in a cleft of the rock, deep down below the altar of the lower church. The cleft had been arched over with stone. Bars of iron had been added as an additional protection, and above these were huge slabs of stone. These precautions had been considered necessary in an age when the relics of a saint were looked upon by an invading band as a trophy of the most valuable and auspicious kind. Shortly after, in 1822, the subterranean Church was constructed. Very little daylight enters into it. From early dawn for some hours afterwards, the lights upon the altar, at which mass is said by a succession of priests, illumine its rocky walls and marble columns.

But great as has been my interest in seeking out everything associated with the patron saint of Assisi, I have taken an equal interest in the transformation of the old Franciscan convent into a college for Italian youths—a transformation which has been prepared for during the last few years, and which has been accomplished during my stay in the town. It is now eight years since the Italian Government laid its secularising hand upon the various convents of Assisi. The members of the religious orders have been reduced from more than four hundred to rather less than a hundred. These are allowed to remain at Assisi or in its neighbourhood, in order to serve the churches and to carry on the work of the various charitable institutions which the Franciscans had the management of. They are allowed the merest pittance. The wish of the Government is that they shall be gradually replaced by secular priests. The old Franciscan convent has since its suppression been unoccupied. It is however now on the point of receiving a new set of inmates. Its cloisters running round the summit of its walls and looking upon the beautiful valley of the Tiber, will soon be echoing with the shouts of Italian boys. The building has been transformed into a College and Hospice. The college is for the sons of the schoolmasters and professors of the whole of Italy; the Hospice is to be a retreat for teachers who in their old age have been overtaken by adversity. The college owes its foundation to Professor Raffael Rossi, of Perigià. It was in 1870, at a congress of professors at Turin, that he first introduced his proposal to the Italain public. It was at once received with favour. In all the cities and large towns of Italy committees were formed and subscriptions collected. After a while the Government was asked to render aid to the movement by bestowing upon its promoters the Franciscan convent deserted and unused in this Umbrian town. What was desired was at once granted, and for some time past the convent has been undergoing extensive alterations. It will ere long be prepared for the reception of four hundred students, one hundred can now be received. Five hundred francs a year is all that a student will be charged for board and tuition, but it must be remembered that the Italian schoolmasters and professors are an illpaid race of men, and that it would not be possible for them, to afford large fees for the education of their children. It is well known that many of them will need help to enable them to send their sons to the new college, low as its fees are, and so scholarships are being founded by friends of the college in the various provinces of Italy. The Hospice under the same roof as the college has already provision for about twenty-five aged schoolmasters. The combined institutions are really of national importance, and widespread interest has been taken in the inaugural ceremonies which have just imparted unwonted liveliness to Assisi. In the town itself the remnant of the Franciscans and the old fashioned townspeople who have not been able to regard the suppression of the convents with favour, have no liking for the new colleges. Their hearts are sad at the thought of the building being alienated from the uses to which its founders devoted it. In the sacristy of the church I meet with Fra Antonio, of whom Mr. Ruskin speaks in his *Fors Clavigera*. He at once places before me a book in which I am asked to enter a subscription for the college. I express my surprise that a friar should be interested in what I know his brothers are grieving over. But poor Antonio, it turns out, cannot help himself. In placing the book before me he only obeys orders from government. In the list of names I see that of Mr. Ruskin. Rookini is the form the name takes on the lips of Assisians generally, to whom the Oxford professor is well known. Has he added to Antonio's sadness by contributing to the intruding college? There is his name, but not a single lira is entered by the side of it. "No" says Antonio "he would give nothing. He said the friars ought to have the convent; it belonged to them and not to the college."

But in Assisi the friars receive the sympathy of only a few aristocratic devotees. Many very favourable to the Franciscans consider that it was well that their numbers should be cut down. The whole town has taken an interest in the opening proceedings. The municipality has prepared for the festivities with great energy. Three days in all have been devoted to the inaugural proceedings. To begin with, on Sunday afternoon vespers are sung in the lower church. The Assisi choir is assisted by choristers from Rome and Soreto. The music is very beautiful, but the sadness of the Franciscan priests is evident to all. How can they sing jubilantly the songs of Zion to celebrate the triumph of their enemies? In the evening my English notions receive something of a surprise when I see the piazzas illuminated. But Monday is the day devoted to the principal ceremonies. They begin at nine o'clock in the morning with a Missa Cantata in the lower church, with the same associated choirs as at the Sunday vespers. The church is full of people, who flock into the town at an early hour. The musical mass is very long, and want of fresh air prevents listeners from fully enjoying it. The inauguration ceremony in the college at mid-day is of great interest. Everything is very decorous. No one trusts himself to an extempore speech. Every one reads what he has to say. The opening speech by Professor Alessandri is really a history of the college. Professor Rossi, who initiated the movement which had been brought to a successful issue, had not lived to see the success attained. His bust and a tablet recording how he had toiled in behalf of the college is placed in the entrance corridor. Every speaker pays his tribute of praise to the memory of the Perigian professor. When the half-dozen speeches have been read, the minister of public Institution, Signor Ruggiero Bonghi, in a few words declares the college to be opened. The crowds on the piazza and in the roads leading to the college are made aware that this part of the ceremony is reached by the band, which instantly begins to play. A little later we are listening to a concert in the upper church. The temporary transformation of the church into a concert hall shocks the devout old countesses who bemoan the changes wrought in Assisi by a daring government. They cannot reconcile themselves to the sacrilege. Is it due to their influence that so few ladies of Assisi are present? An English lady from my hotel is pronounced the "Regina dell' Assisi" for the occasion. She is inclined to think that it is the twelve francs for admittance that keep the Assisian ladies away. The aristocracy of the town, though titled, is not wealthy, and twelve francs for a concert ticket cannot always be afforded by Italian countesses. Early in the evening there is a theatrical performance at the Teatro Metastasio. The Minister is present, and has to come forward at the end of every act to bow his acknowledgments of the enthusiastic shouts which greet him. After this brief performance there is a banquet at the College. The banqueting hall is prettily decorated with flowers. Instead of a carpet the floor is laid with moss, into which paper flowers are fitted so as to form a uniform pattern. Nothing can be pleasanter or softer than this mossy carpet. At the close of the banquet, all the arrangements of which are tastefully carried out, Signor Alessandri treats those present to a real piece of oratory, upon education and the great need of it in Italy; and then the banqueting hall is quitted for the piazzas and streets, which are brilliant with illuminations and fireworks. On the Tuesday there is great fun in the principal piazzas. There is a public lottery. A vast crowd is present. A band adds to the liveliness of the proceedings. In the evening another performance at the theatre brings to a close the inaugural ceremonies, so different to anything that can be witnessed in England on similar occasions.

Assisi has reason to congratulate itself on the establishment of the college for the sons of schoolmasters within its walls. The Franciscans, who have been the only teachers for Assisian youths not destined for an ecclesiastical career, are not a cultured order; culture is not with them a saintly acquirement. Amongst all the Franciscans now resident in Assisi there is not a single copy of the Greek Testament. Not even their superior could the other day put his hand upon one for the English lady. There is, it is true, a fine college at Perigiá on the other side of the Tiber valley. Perigiá, though its pictures bear witness to the influence exerted by St. Francis upon the minds of those who in the fifteenth century devoted themselves to religious art, has not been so absorbed in its devotion to a saintly memory as to forget to provide the means of secular culture for its sons. It possesses a thriving college, to which the other Umbrian towns send their youths. The modern Assisians are glad that their town has now, like its ancient rival, a college which bids fair to attain the national importance which its promoters desire for it.

I shall not soon forget an excursion I have made to a ravine in the mountain Subasis overhanging Assisi, in which is a small monastic building called Il Carcere. St. Francis is said to have passed much of his time there in lonely meditation. A solitary friar is left in charge of this hermitage. But only a limited number of friars are allowed to wear Franciscan garb. He does not possess the privilege; despite of this he persisted in wearing his old habit until the municipality sent a peremptory order for him to discard it. He has obeyed the order, but as he has not fully attired himself in secular costume he presents a comical appearance. He wears trousers and waistcoat, and beneath them a full sleeved dress of white serge, and so garbed he toddles about showing his wondrous relics to all who make the ascent to his lonely retreat. One of his relics is labelled as a piece of the earth from which God made Adam, and must accordingly be the most ancient of all relics. But the old man, as he gropes about the gloomy cells of the hermitage in a costume midway between his monastic garb and secular attire, is typical of the timid ones in Assisi who withhold their full approval from the college which has just been established in their midst, but find themselves forced to accommodate themselves in some measure to the changing order of things in the new kingdom of Italy.

LETTERS TO THE EDITOR.

A CORRECTION.

To the Editor of the Friend of India.

SIR,—I have just read with surprise, in the *Friend of India* for July 17, that 'in New Zealand the Athanasian Creed has been removed from the formularies' of the Church. Many of your readers will, I am sure, be relieved to hear that this statement is entirely without foundation; inasmuch as it has never been even suggested in our General Synod that Creeds should occupy any other place with us than they do in the Church of England.

Hoping that you will find space in your valuable paper for this communication.—

W. G. AUCKLAND.

NOTE.—We gladly publish the above contradiction of a statement which we are sorry should have been made by us. Our authority was an English journal which we have always considered trustworthy.—ED., *Friend of India.*

AN INQUIRY.

To the Editor of the Friend of India.

SIR,—I hope you will kindly furnish me with the required information regarding the following subject.

I desire to appear in the Indian Medical Service examination in England. I am here a non-graduate of the University. I am now attached to the Calcutta Medical College as a casual student. This is my third year, I wish to start for England next year. I have deposited here Rs. 640 as a casual's fee for three years in the college. The Principal of the institution will favour me with a certificate stating that I have finished my junior courses of lectures here.

Sir, whether I shall be entitled to present myself in the M. D. and the Indian Medical Service examinations or not, I know not. I am now placed in dubious circumstances.

Shall I be obliged to present myself in the matriculation examination there before I enter the colleges for the service and M. D. examinations?

Mr. Editor, I hope you will be good enough to state the particulars regarding the course I must pursue to attain my object.

By inserting this in a corner of your valued journal you will greatly oblige me.

ENQUIRER.

NOTICE TO CORRESPONDENTS.

JUNIUS.—Many thanks: It is not worth notice.

THE WEEK.

MOST of the topics of the week have been dealt with in our editorial notes, and of the one all—engrossing subject of the hour, the Prince's doings at Bombay, an account will be found in another column. His reception appears to have been magnificent. We are told that Christians, Hindoos, Mussulmans, and Parsees, vied with each other in enthusiasm; that almost the whole population of the town emptied itself into the streets; and that as if that were not enough, many thousands of visitors flocked in from the Mofussil to help in giving the future Emperor of Hindostan and eldest son of their Queen a right royal welcome. The native princes were ready with such a display of "barbaric pearl and gold" as has probably never been equalled before, even in India. At night the town was brilliantly illuminated, and everything from first to last appears to have passed off well. Want of space, we are sorry to say, compels us to cut "the Week" unusually short to-day, but our readers will find comments on most current subjects elsewhere.

LATEST INTELLIGENCE.

PERAK.

THE MURDER OF MR. BIRCH.

THE murder of Mr. Birch, the British Resident of Perak, has brought into prominence a comparatively insignificant State regarding which very little is known, if we are to judge from the fact that several standard atlases which we have consulted contain no mention whatever of the name. We should not be surprised if many of our readers have never heard of the State or know where it is situated. Perak is situated on the west coast of the Malay Peninsula to the south of Penang and the province of Wellesley, and to the north of Salonpore. The State has for some time been the source of considerable trouble, the difficulties commencing in the time of Sir A. Clarke, and continuing after the accession of Sir William Jervois. The other day, Sir W. Jervois visited Perak, and it was thought the difficulties had been brought to a satisfactory conclusion. The reigning chief of Perak is one whose succession was for some time disputed; but he was set on his throne by the

British Government, who recognized him as the legitimate ruler of his State, and he in return entered into several engagements promising good government as well as guaranteeing the protection of British subjects. This man, however, has recently proved refractory, and we are told by a Straits contemporary that "His Excellency the Governor found it necessary to assume a firmer attitude towards him, and gave him to understand that Her Majesty's Government would not permit him to violate the engagements he had voluntarily entered into, and that if he persisted in the obstructive course he had pursued since the appointment of a British Resident, stronger measures would be adopted. Frightened by this threat, only a few weeks ago Sultan Abdoolah wrote to the Governor of the Straits Settlements declaring that he was unable to govern his State, and absolutely resigning the Government into the hands of the British Government, and, it is stated, consenting to occupy a secondary position under the officers who may be placed over him. Moreover, the principal chiefs, including the heir-apparent to the throne, have promised entire concurrence in this arrangement, which the Government promised would be entered into without delay, and from which no recantation will be permitted."

The offer was accepted, and on the 15th ultimo a proclamation was published by the Government announcing that "In compliance with the request of the Sultan and Chiefs of Perak, "Her Britannic Majesty's Government have determined to administer the government of Perak in the name of the Sultan, and to "this end His Excellency the Governor of the Straits Settlements "is about to appoint officers, who will be styled Commissioners "and Assistant Commissioners of Her Majesty the Queen, to "carry on the Government of that State under His Excellency's "instructions; further, that the Sultan of Perak has invested "such British Officers as are, or may be accredited to His "Highness from time to time as such Commissioners or Assistant "Commissioners, as aforesaid, with powers to issue and enforce "Proclamations and Orders, and generally to administer the "Government of Perak."

It is further made known that a Malay Council, consisting of Rajas of Perak of the highest rank, will be appointed to aid the aforesaid Commissioners in matters touching the affairs of the Government of Perak.

The proclamation further recites the following list of misdeeds for which the State is responsible:—

"The people in Perak are greatly oppressed by certain lawless Chiefs and Rajas, whilst no steps are taken by the Sultan and other Native authorities to put a stop to these evils, so that the gravest crimes are committed without fear of inquiry or punishment.

"Secondly, that the conduct of the Perak Chiefs, with the absence of all law to protect life and property, has hitherto deterred foreigners from investing capital in Perak to any considerable extent, and the resources of the country are still undeveloped and likely to remain so, without some radical change in the Government and Administration of Justice.

"Thirdly, that the Rajas and Chiefs of Perak are divided into factions, parties, and individual interests, fostering and encouraging jealousies and enmities which they confess themselves unable to reconcile. And British subjects and others, not subjects of the State of Perak, have engaged and are engaging in illegal transactions with certain Chiefs of Perak which tend to create interests subversive of order in the State and hostile to the interests of the Straits Settlements;" and lastly that "the British Government has incurred, on behalf of the Government of Perak, financial responsibilities for which there is no adequate security under the present system of Government."

The knowledge that this action on the part of the British Government is about to be taken has doubtless stirred up the Perak Chiefs, who probably are incited to rebellion by Sultan Ismael, the unsuccessful claimant for the Sultanate of this province, and they have struck the first blow by murdering the British Resident. The Residency, we are told, is in a state of siege, and all the Chiefs in the neighbourhood are preparing to resist any British force sent against them. We trust the Government will not be satisfied with sending a small military force to subdue this rebellion. The only course now open is to teach these Malays a lesson they will not easily forget, and nothing short of a thorough subjugation of the whole of the refractory tribes will make them feel that the British Government cannot be trifled with.

There are several regiments which are in course of relief, and the officers and men of which would be only too glad to have a shot at these Malays, either before going home or landing in India, so that without much trouble a sufficiently large force can be made available to amply revenge the murder of the British Resident.—*Indian Public Opinion.*

MONEY MARKET.

FRIDAY, 12TH NOVEMBER.

NOTWITHSTANDING the increasing volume of export trade that is now going on, the position of money is becoming easier and easier, a remarkable phenomenon at this season of the year, the more especially as no outside supplies of bullion, to any extent, have found their way here for a long time past. In the bazaar, money is very plentiful and cheap, and the Bank of Bengal has reduced its rates by one per cent, the minimum now standing at 4 per cent, the lowest point touched since the 7th of January last. The public demand upon the Bank has fallen off 75 lakhs since the Poojahs, and the total amount of the Bank's money now earning interest in the hands of the public is only 230 lakhs. On the other hand there are private deposits in the hands of the Bank amounting to 280 lakhs. Last year at this time the deposits were about the same as they are now, but the outstandings were 60 lakhs more. The Bank's cash balances continue strong notwithstanding continued government withdrawals on a large scale. The government balances are now down to 276 lakhs, and as the Bank's cash balances stand at close upon 4 crores, everything points to continued ease in rates.

A very considerable export business is going on now, and the demand for Jute has been large:—prices are gradually creeping up, both for bales and loose, and 19-8-0 per bale may now be quoted for first marks. The Freight market has been very active, and nearly all the tonnage available promptly has been engaged, £3-2-6 to £3-5-0 being the leading rates for first class iron vessels.

The first fruits of the Indigo crop will be at market before the end of the month, but up to this time no private sales have been reported, and exporters will probably hang back to let the extent of the crop tell fully on the market: from 125 to 130,000 maunds is the probable outturn, so it is quite a bumper crop.

The Import market has been somewhat quiet since last Friday, and prices are scarcely so strong as they were:—still, this trade is now without doubt in a much better position than it has previously occupied for years, and if supplies keep reasonable, everything else is in favour of a favourable future

Now that the late Government Loan is all paid up, a stronger appearance exists in the paper market, but prices have not yet got the better of the collapse they experienced on the issue of the Loan. During the past week, a very extensive business has taken place, and since the reduction of the Bank rate a slight lifting of prices has occurred. Prices of paper being comparatively low, it is likely to continue to be availed of as a temporary employment for money during the present superabundance of means. In the large business that has been done, both the four and four and a half per cent stock have participated, but for the five and a half stock there has not been a demand. The course of the market business done has been as under.

4	per cents	102.1, 2.2, 2.1, 2.2, 2.1, 2.2, 2.0, 2.1, 2.2, 102.3.
4½	,,	102.15, 2.15, 103, 3.1.
5½	,,	107-14, 108.

The closing quotations standing at,

4	per cents	102.2, to 102.4.
4½	,,	103 to 103.2.
5½	,,	108 to 108.4.

Against every previous appearance, Sterling Exchange has receded this week, and mercantile paper has been bought for delivery up to end of the year so low as 1-10-5-16. There must be large amounts of money in the hands of some of the Banks, waiting for employment, to justify rates going back at present. The Banks generally have shown very little disposition to sell this week, and one of them has stood out nearly all the remitting demand, which has been rather considerable. The first rate was 1-10¼, then 1-10-3-16, and small sums have been taken from one or two of the other Banks at 1-10⅜. Three months' sight has been done at 1-10 to 1-9⅞ demand at 1-9¾ to 1-9-11-16, and telegraphic at 1-9-11-16, but no more can now be had at the price. At one moment the market had a very weak appearance, but it seems to be regaining more tone towards the close. The quotations are now,

Bank Bills	1-10⅜ to 3-16.	6 months' sight.
Credit Bills	1-10-3-16	
Document Bills	1-10⅜	

There have been very few credits offering, which accounts for their having obtained so fine selling rates as 1-10¼ and 1-10-3-16. Documents Bills have been wanted by the Banks, and for ready delivery the rate has been 1-10⅜

The stock of the Bank of Bengal has been run up a good deal, although scarcely any actual business has been done. The chances of some coalition being formed to take off the market the Government's holding has started a speculative demand for the stock, but sellers are showing no disposition to meet the demand even at the advance. At 1350 shares are not to be had to any extent, if at all.

Other Bank stock is active, and Nationals are wanted at 112, whilst Agras have brought 93.

The share market generally is dull and flat, but transactions are slightly more numerous. Tea stocks are scarcely enquired for at all, but Spinning Mills look healthy, and seem to tend upward. The only thing in active demand has been Carew & Co., for which 17 to 18 premium may now be quoted, and shares very difficult to obtain. The principal business of the week is given below, the prices in the order paid.

Bank of Bengal, 1325, 1350.
National Bank, 110¼, 11, ¼, ½, 112.
Barnagore Jute Mills, 97.
Fort Gloster Jute Mills, 84.
Howrah Jute Mills, 75, 76.
Seebpore Jute Mills, 73.
Budge Budge Mills, new 5 discount, original par.
Bowreah Cotton Mills, 92.
Goosery Cotton Mills, 212.
Carew and Co., Distillery, 15, 16 premium.
Bisnauth Tea, 360.
Singell Tea, 98½, 9.
Burkola Tea, 100.
East India Tea, 83.
Central Cachar Tea, 135, 134.

The English Mail of 22nd October will be delivered here tomorrow (Saturday) morning.

THE PRINCE.

THE *Serapis*, with H. R. H. the Prince of Wales and suite on board, anchored in Bombay harbour at 9-30 A. M. on the 8th instant. She had been sighted at about four, and was welcomed

with salutes from the squadron, the *Euphrates* troopship, and the Apollo Bunder Battery. Great excitement prevailed. The Prince landed at four in the afternoon, accompanied by the Viceroy and suite. A Naval procession was formed astern of the Royal Barge, headed by Admirals and Captains of the ships of the fleet in their boats. Thundering salutes were fired from the squadron and shore Batteries. All the ships were dressed, and men-of-war's yards manned, forming an imposing spectacle. The Prince was brilliantly received by the Governor of Bombay, the Chief Justice, the Commander-in-Chief of the Bombay Presidency, and other officials, and upwards of seventy Indian Princes, Chiefs, and Sirdars, magnificently jewelled and glitteringly costumed. An address of welcome from the Municipality was read. The Prince of Wales, in Field Marshal's uniform, replied as follows :—

"GENTLEMEN,—I thank you most sincerely for your kind address, and I shall not fail to communicate to Her Majesty the Queen my sense of the loyalty to Her Crown and Person which is expressed not only in your dutiful expressions of welcome but in all I see around me on first landing in your beautiful Island. It is a great pleasure to me to begin my travels in India at a place so long connected with the Royal Family of England, and to find that during so many generations of British Rule this great port has steadily prospered. Your natural advantages would have ensured a large amount of commerce under any strong Government; but in your varied and industrious population I gladly recognize the traces of a rule which gives shelter to all who obey the law, which recognizes no invidious distinctions of race, which affords to all perfect liberty in matters of religious opinion and belief, and freedom in the pursuit of trade and of all lawful callings. I note with satisfaction the assurance I derive from your address that here, under British Rule, men of varied creeds and nations live in harmony among themselves, and develope to the utmost those energies which they inherit from widely separated families of mankind; whilst all join in loyal attachment to the British Crown, and take their share, as in my native country, in the management of their own local affairs. I shall gladly communicate to Her Majesty what you so loyally and kindly say regarding the pleasure which the people of India derive from Her Majesty's gracious permission to me to visit this part of Her Empire. I assure you that the Princess of Wales has never ceased to share my regret that she was unable to accompany me. She has from Her very earliest years taken the most lively interest in this great country; and the cordiality of your greeting this day will make Her yet more regret the impossibility of Her sharing in person the pleasure your welcome affords me. Gentlemen, I heartily thank you for your good wishes for my health and for a prosperous return from my journey; and I fervently trust that the same good Providence which has prospered the Rule of the British nation in India heretofore, may yet further bless our efforts for peace and the good government of all this part of Her Majesty's dominions."

The Address, which was engrossed on vellum with a beautifully emblazoned border, was enclosed in a handsome casket, and was handed to His Royal Highness.

A brilliant procession was then formed, proceeding slowly to the Government House. Troops lined the road as far as the native town, whence the road was kept by the police. The inhabitants received the Prince with the utmost enthusiasm and intense excitement. The whole route was one dense seething mass of people of all castes from ground to house tops. It is computed that there were nearly 20,000 visitors from the Mofussil. The whole city was splendidly decorated with a series of eight triumphal arches along the route. The excitement increased as the Prince neared certain points, a mob gathering round his carriage, catching the enthusiasm of Europeans, but nevertheless order prevailed. The Prince looked well, and highly pleased with the demonstrations. On Tuesday morning the Prince received a number of the native Chiefs and Sirdars, and returned the *Admiral's* visit in the afternoon. All the Captains of the Vessels of War in the harbour were introduced to him on board the Admiral's Flagship, and royal salutes were fired in honor of his birthday. The Prince afterwards saw the illuminations. Almost every street was illuminated and crammed with people. On Wednesday a grand reception was held at Government House of the Rajahs of Kolapoor, Dhrangdra, Rajpeela, Baria, Soonawara, Oodeypoor, Soonth, Dharampoor, the Gaekwar of Baroda, Sir Salar Jung, and the members of the deputation representing the Nizam, the Maharajahs of Edur and Mysore, Jam of Nowannuggur, Thakoor of Bhownuggur, Dewan of Palanpoor, Nawabs of Radhunpoor, Joonagurh, Dalasionor, and Jinjeera, and the Sir Desai of Sawant Wari. After the levee the Prince went to the children's fete, and met with a most enthusiastic reception from ten thousand children who sang "God Bless the Prince of Wales" in the native dialect. The large *Maidan* in front of the Secretariat was crowded with people of all castes. The Prince was greatly pleased with the novel spectacle and the enthusiasm exhibited by the children. Wreaths of flowers were placed around his neck by the Parsee girls, and the extreme affability of His Royal Highness was the subject of general comment. Having again visited the *Serapis* in the afternoon, the Prince and party landed in the evening, and then traversed in procession the leading thoroughfares, the fort, and the native town. His reception was more cordial than ever. The utmost enthusiasm prevailed, and the whole route was literally blocked with natives. The streets were a wild scene of good humoured excitement, and the Prince was highly pleased with his reception and the magnificence of the illuminations.

On Thursday the Prince of Wales returned visits to the Maharajahs of Edur and Mysore, the Rao of Cutch, Meer Ali Morad Khan of Khyrpoor, the Nawabs of Joonagurh, and Radhanpore, the Jam of Nowanuggur, the Thakoor of Bhownuggur, the Rajahs of Durangdra, Rajpeepla, the Dewan of Palumpoor, and Sir Salar Jung at their own residences, besides other Native Chiefs at the Home Secretariat. His next visit was to the University Hall, where an address was presented. His Royal Highness replied, alluding to his own early training and associations when he himself was a student at Oxford, Cambridge, and Edinburgh, and to the generous manner in which the Native Princes supported the University. He then visited the enormous Marquee erected on the Esplanade, where upwards of 2,000 Sailors, Marines, and Soldiers were banqueted. The Prince entirely won the hearts of the men by moving among them, drinking their health, and making a short speech. He afterwards laid the foundation stone of the New Wet Docks with Masonic ceremonial. A large attendance of Brethren and guests was present and the affair was a great success. An address was presented to the Prince, to which he replied that he learned with great pleasure of the flourishing condition of Masonry in Bombay. The fact of its annually increasing in numbers and efficiency shows that the objects of the institution are fulfilled in uniting together men of various races and creeds in a bond of Brotherhood by giving them common objects of exertion, and extending the knowledge of English organisation for the good of mankind. It was a great pleasure for him to join the Bombay Brethren in a work tending to the protection of life, property, extension of trade, and the advantage and prosperity of their fellow men. In the evening the Byculla Ball took place. The Prince danced several times.

INDIAN INTELLIGENCE.

BENGAL.

ALL the gentlemen, official as well as non-official, who distinguished themselves during the late famine in Behar and Bengal, will, as a mark of special recognition, be presented to the Prince of Wales at the Bankipore Durbar.

IN recognition of the services rendered to Government by Baboo Deno Bundhoo Patnaik, Tehsildar of the Khund Mehals, Cuttack, the Viceroy has conferred upon him the title of "Rai Bahadoor" as a personal distinction.

A SHILLONG correspondent says that the telegraph will very likely be extended to Dibrogurh this year. At any rate there will be a cable laid across the river at Dhoobrie, and this will put stations east of Dhoobrie in direct communication with the rest of India, and save endless delays.

DACCA is preparing to receive Miss Carpenter. Baboo Anand Mohun Bose has, we believe, been deputed by the Dacca Philanthropic Society to receive that distinguished lady at Calcutta on behalf of the society. It has been proposed that Miss Carpenter should meet all the native ladies of Dacca in a private house, or in a place suitable for the purpose.

THE *Official Gazette* of Saturday shows the prospects of the crops to be favourable all over the Empire, except in unhappy Behar, concerning which the report is "No rain or next to none, "in Behar and in most districts of the Rajshahye and Cooch Behar "*divisions*, where it is much wanted. ~~Crops in these~~ parts have "suffered very seriously from drought; rice on the high lands is "dying off, and but a moderate yield is expected from the crop on "low lands. The cold weather sowings too are impeded in consequence of the absence of rain." From every other part of the country the news is favourable, except the little kingdom of Mysore, where "prospects are not favourable" in spite of the rainfall in October.

WE are informed by the Darjeeling paper that one of the results of Sir Richard Temple's late visit to Sikkim has been the issue of orders for the building of a suspension bridge over the Tista below Kalimpong, for the building of substantial wooden bridges over the Rishi and Rilli rivers, and for the zig-zagging of the very difficult ascent of Mount Lingtue. These were and are the principal obstacles on the road, which deter traders from undertaking the journey from Thibet to Darjeeling and *vice versa*, for once the ascent of Lingtue—12,500 ft.—is accomplished—speaking from this side—the remainder of the march to the passes over the upland grazing grounds is comparatively easy. As regards the line of the proposed road, it is said that Sir Richard Temple is of opinion that it will be sufficient for the requirements of the present trade between the two districts, or for any moderate increase which may take place, to spend a reasonable sum on the projects mentioned, but that should occasion arise to push an engineered line of road to the Thibetan passes, it will be necessary to seek another line, having an easier gradient and a shorter mileage.

NORTHERN INDIA.

CHERAT seems to be very highly spoken of by all who have passed the hot season there. It is easily reached from Peshawur, and would no doubt be a capital sanatarium *en permanence* for European troops.

IT is announced that tenders for the construction of the works on the proposed line of Railway between Agra and Gwalior, including the bridge over the River Chumbul, a distance of 75 miles or thereabouts, will be invited shortly.

HIS Highness the Maharajah of Kashmir is expected at Lahore on the 19th instant, and after a stay of two days will proceed to Calcutta, where he has been invited by His Excellency the Viceroy to attend the Chapter of the Star of India which is to be held by the Prince of Wales.

SIR GEORGE COUPER, C. B., Chief Commissioner of Oudh, will arrive in India from leave to Europe on the 20th November, or before the expiry of his furlough. The Hon'ble Mr. J. Inglis who is now officiating for Sir George, will then have to revert to his substantive appointment as Senior Member of the Board of Revenue, N.-W. P. This will necessitate some changes in the higher appointments of those Provinces.

THE Palampur fair, which is held every November, is this year to be better than usual. Some Yarkundis, with a good many ponies, are already on the spot, and more are expected every day.

The Deputy Commissioner, under the orders of the Financial Commissioner, has offered liberal prizes for the best bulls, cows, buffaloes, bullocks, and sheep. For these last there is to be a special prize to be taken by the best pen of fifty. There are prizes too for ponies, mules, and stallion donkeys.

THE *Pioneer* hears of "a cantonment magistrate in an important station having been required by the operation of some recent examination rules to re-commence forgotten studies in Hindi. The absurdity of the arrangement is made manifest by the fact that the victim has passed twice before, and has actually been employed to examine other officers for the higher standard. But the knowledge he is now called on to exhibit has been so totally useless to him in connection with his work, that he has forgotten it utterly, and has to study it with a pundit all over again, to the neglect almost inevitably of some among his onerous and important public duties."

ON the 1st instant the special train containing the Viceroy's party ran over a man about two miles on the Sutna side of Tichara station; the driver being under the impression that they had run over a deer or some other animal passed on, and on the arrival of the special at Myhere, intimated to the driver of the down mixed, which train was awaiting the arrival of the special, that they had run over something. The driver of the down train came along slowly towards the spot, and found to his consternation that it was a native traveller who had been run over; he stopped the train a few yards from the body, and found that the man was quite dead, although the body was warm. The body was put into the train and taken on to Sutna, and handed over to the authorities. The strangest part of the story is, that when picked up there was no visible mark of injury on the body except a bruise on the temple; he carried a bundle of clothes with him, as though on travel, and must have got on the line with the view of deliberately committing suicide: no blame can possibily attach to the driver under such circumstances.

THE Bataisur Fair promises to be well attended this year. Monday was the official date of its commencement, but the horse lines began to fill a week earlier, and cavalry officers and others seeking remounts and purchases always assemble at the fair long before the devotees, who come in thousands on the day before the great bathing day, which falls on the 11th. Upwards of 200,000 natives are usually present on that day. The business of the fair, as far as the European visitors are concerned, consists in buying horses and giving away the prizes, aggregating Rs. 2,000, offered by Government; and these tasks are usually completed before the time arrives for the natives to perform their religious duties. These last are chiefly comprised in taking a cold bath in the Jumna immediately after midnight of the 13th; and in this pious act the sexes vie with each other in exhibiting their zeal. The show of horses this year will, it is thought, from present appearances, be quite equal to those of former years, and an exceptionally large number of cavalry regiments have sent representatives to purchase remounts. The plain presents the aspect of a canvas city, and lines of native shops seem to have sprung up as if by magic in a single night. The dust and smoke, which increase daily, alone mar the prospect. An enterprising hotel proprietor has started a large mess, thus enabling casual visitors to the fair, as well as those who are present on duty, to dispense with their own commissiariat, the conveyance of which to Bataisur has proved very troublesome in former years.

BOMBAY.

THE cotton shipped from the port of Bombay to foreign external ports and foreign Indian ports, during the month of September 1875, amounted to 20,901 bales, or 81,56,680lbs. or candies 10,403 13-14 of the value of Rs. 18,54,171.

IT is stated that an intimation has been given to the Rajahs and Chiefs whose visits have been returned at the Bombay Secretariat, that the Viceroy was constrained by want of time to take that way of acknowledging their visits, and that he regretted that circumstances did not allow him to act otherwise. But the affair is not to be held as a precedent; it is entirely exceptional. And to make some amends, His Excellency will personally present each and every Chief to His Royal Highness the Prince of Wales.

The Viceroy left Government House, Malabar Point, soon after tiffin, on Saturday, and proceeded to see the Elephanta Caves. Two carriages started from Government House, containing Lord Northbrook, the Hon. Miss Baring, the Miss Foulkes, Captain Evelyn Baring, the Hon. Mr. Baring, and two aides-de-camp, and drove up by the Obelisk Road and the Jamsetjee Hospital to the Mazagon Bunder, accompanied by a party of the Viceroy's bodyguard. At the Bunder, Lord Northbrook was joined by Captain Robinson, Superintendent of Marine, and the party then embarked on board the *May Frere*, which soon after set out for the Elephanta Caves. The carriages, horses, and the bodyguard stopped at the Bunder under the shade of a tree until the return of the party, about 6 P M. His Excellency then drove back to Government House.

MADRAS.

THE Madras Harbour Works appear to have been fairly started. The steam-ship *Merkara*, containing materials for the Harbour Works, is reported to have arrived.

THE Government of India have determined on abolishing the Bullion Depôt at Madras from 1st April 1876. This information has been communicated to the officers concerned, and the Accountant-General has been directed to submit a Notification for the *Gazette* intimating the decision to the public.

A MADRAS paper says that to prevent any heartburning on the part of the Madras clergy, or any disorganisation on the part of congregations, it has been determined, with the consent of all parties concerned, that H. R. H. the Prince of Wales will be indisposed on the Sunday he spends there, though no serious consequences need be apprehended.

THE South India Missionary Conference is to be held at Bellary this year. Of the important subjects that will be discussed there, native minister's salaries will be one. A set of questions has been circulated among the South *India* native clergy by the Secretary, with a view to determine their exact wants and what steps the Churches have taken to support their pastors.

THE Prince of Arcot has addressed the Madras Government, requesting that an ancient and very valuable sword, an heirloom of the Carnatic family, which was taken from the late Nabob, and is just now preserved in the Grand Arsenal, Fort St. George, may be delivered up to him for presentation to His Royal Highness the Prince of Wales. This sword is fellow to the one which was taken out of the Arsenal for presentation by the late Prince of Arcot to the Duke of Edinburgh.

THERF was an unpleasant interruption to the service held at the Methodist Pandel, on the Esplanade, on a Sunday evening lately. When the preacher had got about half through his discourse, a respectable looking Hindoo suddenly rose and challenged him to a discussion as to the truth of Christianity, declaring himself a sceptic. The congregation, as well as the preacher, listened in mute surprise to the man, as with stamps of his feet, and excited gesture of his arms, he asked such questions as "Who is Christ?" "What do the Missionaries come here for," &c. To the last query the man himself appeared to have a ready answer. It was one, however, so indecent and libellous to the Missionaries, that at length the ire of the audience was roused, and the Hindoo was bundled out of the Pandel.

ACCORDING to the latest published trade returns, there are seventy-nine ports in the Madras Presidency open for trade against eighty-one last year. There are twenty-five ports the trade of each of which is above five lakhs per annum; eleven with a trade of ten lakhs, and fourteen with a trade of a crore of rupees a year. The trade of Madras is said to be close upon eight crores. There is a large trade carried on between the ports in the Presidency and foreign countries, but with the home ports the business done is very extensive. The foreign trade of the Presidency in 1873-74 was in excess of that of 1873-74 by fifty-four lakhs, seventeen lakhs in imports and thirty-seven in exports. The United Kingdom exported to this Presidency goods valued at Rs. 2,64,66,697 in 1872-73 against Rs. 2,70,03,579 in the following official year. The imports from France increased from eight to a little more than eleven lakhs; imports from Germany have gone up a little, and from America too the imports have increased considerably. From China the trade in tea must have been large, as the imports have increased by a little more than a lakh. The imports from the Laccadives, and the Maldives, from the Straits Settlements, and even from the Australian colonies have risen. The opening up of a trade between India and the colonies will be productive of much good and will, it is hoped, continue. From the particulars of the articles imported we find that the piece-goods trade and the trade *in twist* have risen; woollen *goods* have fallen off; in railway stores too there has been a decline. The importation of horses increased, while in fuel and coke there was a decline. The value of goods exported was Rs. 6,24,49,851 in the year 1872-73, against Rs. 6,61,83,930 in the following official year. The increase is chiefly due to the increased value of coffee, indigo, grain, and pulse. The coffee shipments keep steady, as the demand for supplies in the English markets continues. Grain shipments went forward chiefly on account of the Bengal famine. Shipments of sugar and cotton fell off owing to a slack demand for those articles in the United Kingdom. The trade between the Malabar Coast and Germany is said to be gradually advancing, and the West Coast is the only place whence shipments go forward to Germany. Shipments of coffee, oils, and coir went forward; there were but small supplies of indigo sent from Madras to Central Europe.

CEYLON.

A *MEETING of native* Singhalese *gentlemen was held at Colombo* on the 16th of October, at which it was resolved unanimously that in order "that the visit of H. R. H. the Prince of Wales may be preserved in the memory of the Singhalese nation, a College be founded for giving instruction in the Singhalese, Sanskrit, and Pali languages, as well as native medicine, and other useful sciences, and that the said College be called the Prince of Wales's College." And "that for the purpose of founding the College contemplated, a subscription be collected from all the Singhalese throughout the island."

BURMAH.

THE local paper gives particulars of a horrible crime perpetrated at Bassein on the 12th ultimo. A man named Nga Shoay Yoh was invited by his wife Mee Oh to accompany her into the jungles from the village Mankya for the purpose of felling fire-wood. Shortly after arrival there, she, being armed with a heavy *damah*, struck her husband two blows, one of which almost severed his head from his body. The unfortunate man's remains were left in the position of a person kneeling with the head drooping over. About three in the afternoon of the same day the children of this unfortunate pair were met by their aunt on their way to the jungles in search of their parents. The circumstances led to enquiry, and search having been made, the poor man was found in the above position, and a few yards from him the disembowelled body of his wife. The wretched woman survived a few moments to tell the story of the consequences of her jealous anger. Her husband had taken a younger wife to heart, and Satan entered where late he had reigned supreme. She confessed to having taken her husband out that morning with the intent to take his life, after which, with a power of nerve that defies description, she inflicted wounds on her person extending from breast to hip on either side.

ASIA.

HIS Highness the Maharaja of Johore, a Malay chief, whose territories are near Singapore, has been invited, to proceed to India

to attend a grand investiture of the Star of India, during the visit of H. R. H. the Prince of Wales.

THE Peshawur correspondent of the *Indian Public Opinion* learns that some Afridees have been caught at Kohat and are awaiting their trial, also that many Cabulees have this year come to Peshawur, who complain of ill-treatment at the hands of the Ameer in forcing them to drill for military purposes morning and evening.

A CORRESPONDENT of the *Straits Times* writes from Bangkok, 9th October, about the war in Siam, as follows:—The nucleus of the 1st Corps of the Siamese Army left Bangkok about a fortnight ago, and is now at Saraburi, seventy miles N. by E. of Bangkok, collecting transport for its advance to Korat and North Eastern Siam. The nucleus of the Army of the North will leave to-morrow, and establish its head-quarters at Pi-chai, two hundred miles north of Bangkok. The third Army, the principal army of which the 1st Corps is but the advance guard, will leave one month hence, and march to North Eastern Siam *via* Korat, which is to be its base. The first Corps consists of six thousand men led by Chao Phya Mahindr, formerly second Ambassador to England. This General will be under the orders of His Royal Highness Somdet Krom Phra Bamrap Parapax, the King's uncle, Commander-in-Chief in the Army of the North East. The Army of the North is commanded by the Minister of the North in person. I have not heard the number fixed for these armies, but gather that at least thirty or forty thousand men will be engaged. Strange to say, scarcely anything is known of the enemy, the Haw Chinese. It is reported they are rebels driven from China, who first with permission of the King of Cochin China established themselves in Tonquin, and now are extending their dominion into North Eastern Siam.

MILITARY.

A PESHAWUR correspondent states that Brigadier-General Wilson, C. B., Commanding the Peshawur District, will be going home next year, and that Brigadier-General Ross, Commanding the Mooltan District, will succeed him.

MAJOR-GENERAL Forbes, who was formerly Brigadier-General at Ahmednuggur, has been appointed to succeed Lieutenant-General Russell in the command of the Northern Division of the Presidency. There was some discussion whether this important appointment should not be given to General Schneider, but finally it was decided to give the command to General Forbes.

COUNT Seckendorff, who arrived in Bombay by the mail on Saturday morning, has come out as the the representative of the German Government to attend the manœuvres at the Delhi Camp of Exercise. The Count, who is one of Moltke's most trusted officers, and holds the high honorary appointment of Chamberlain to Her Imperial and Royal Highness the Crown Princess of Germany, was present with the British forces in the campaigns of Abyssinia and Ashantee.

THE Government of India have decided to place the armaments of Fort William, Agra, and Ferozepore Forts under the orders of the Officer Commanding the Royal Artillery *in the divisions and* districts concerned, instead of under the Ordnance Department as at present. The immediate charge of the armament will be held by the Officer Commanding the Royal Artillery located in each of the forts named, who will make the usual reports to the Officer Commanding, Royal Artillery, of the division or district for the information of His Excellency the Commander-in-Chief, and render the needful returns to the Examiner of Ordnance Accounts.

GENERAL.

IT is said that a remarkable article—fish flour—has lately been introduced. It is prepared from dried fish of the first quality; it is throughly desiccated and then ground in a small mill.

A NEW railway is projected between London, or rather the suburban metropolitan system, and Brighton. It is to cost only £1,250,000, and to be wholly a passenger line—no goods traffic and no expensive sidings.

HER Majesty's gun-boat *Daphne*, which arrived in Kurrachee harbour from Muscat on the 3rd instant, brought down as a State prisoner Syud Selim, who was lodged in the Kurrachee jail the same night, and was to be conveyed to Hyderabad by the train the following morning.

A NUMBER of Burmah ponies, valued at Rs. 2,465, have been shipped from Rangoon by native traders in the steamer *Burmah* for Calcutta. Owing to the numbers of people who will visit Calcutta during the stay of H. R. H. the Prince of Wales it is thought there will be a good demand for these useful animals.

A COURT-MARTIAL will be held on Prince Leiningen and Captain Welch of the *Alberta* for running down the yacht *Mistletoe* as soon as the inquiry still pending in the Civil Courts is disposed of. Mr. Heywood, the owner of the *Mistletoe* yacht which was run down by the *Alberta*, has hitherto made no claim on the Government for the value of his vessel; but it is probable that means will be found of making good his loss by private arrangement without raising the necessity for reopening the case in the Law Courts.

THE London correspondent of the *Times of India* writes: "I have good authority for stating that the supreme command of the Turkish Army has been offered to, and accepted by, ex-Colonel Valentine Baker, late of the 10th Hussars, and that this clever cavalry officer will step from his prison, though not one hour before the full time, into the chief military command of the Sultan's land forces, where he will find full scope to retrieve his lost position and to recuperate his somewhat shattered fortunes.

JUDGEMENT has been given by Colonel Mercer in the Bertola case, which has been decided against the plaintiff on every issue. In fact the decree gives the Government a sum of Rs. 1,479, the balance shown due after both accounts were examined. The plaintiff has therefore got nothing, and the Government, instead of having to pay some two lakhs of rupees have to be paid nearly Rs. 1,500, Mr. Bertola will also have to pay the costs of the suit, which will amount to about Rs. 1,000. The judgement-debtor in this case, however, is a bankrupt, so that there is very little chance of recovering as far as he is concerned.

THE monetary reform in Germany is being carried out on a steady and systematic plan. It comprises the withdrawal of all the old national silver coinage, the provincial token money, and the bank notes of small denominations. To some extent this change will be formal, because most of the separate States have already adopted the Imperial gold standard; but it is evidently associated with other measures which tend, more or less, to complete the coinage reform and make the new Imperial money in demand. The demonetising of the German currency, when effectually carried out, will release a considerable amount of silver, which may find its way to India, where it will readily be absorbed.

THE *Delhi Gazette* says:—"Those interested (and few are not) in the war of words and the din of experiments bearing on modern navies in general, and the British Navy in particular, will have noticed-perhaps that the circular turret ship invented by the late Mr. John Elder, of Glasgow, rejected by the British Government, has obtained the favour of the Russian and German powers. It's the "old, old story." The British Government is invariably the last to recognize merit in any invention of the kind not coming through the "usual channel" and free from the numbing, if not deadly, coil of red tape. Circumlocution still flourishes unchecked, and Barnacles abound in the regions of officialdom. The foreign powers we have named consider Ekler's circular turret ships the most formidable batteries afloat. The Russian Navy already has them."

ACCORDING to Mr. Anthony Trollope, the value of gold found in Melbourne between 1851, the date of its discovery, to the end of 1873, was £173,000,000, or about three times the whole revenue collected in that period. The past year was the worst known as far as the yield of gold was concerned, the produce having fallen as low as 1,012,152 ozs. In the Bendigo district, which includes Sandhurst, there is a population of 50,000, of whom 9,000 are working miners. The pay of a miner is set down at £2-5 a week, and is considered sufficient, though he has to pay 4d. for a pound of meat. When the gold mines were first opened, about twenty-five years ago, there were no roads, and £100 a ton was the common price of conveyance for goods over 60 or 70 miles of ground. The digger who could not walk the distance paid £10 to be carried in order that his hands might be in the gullies a day or two sooner.

A STRIKING illustration of the value of "unconsidered trifles" may be found in the fact of a profit of £10,000 a year being realized in a single city from an industry based on the collection and re-manufacture of cigar ends carelessly thrown away in the streets by smokers. Such it appears is the revenue derived from one of those *petites industries* for which Paris is so famous. The *chasseur de cigares* starts on his rounds at the peep of dawn, taking in his course the fashionable promenades, such as the Boulevards and the Champs Elysees, gathering, as he passes from street to street, all the stumps he can find, or purchasing them at wholesale prices from the garcons of café's. After completing his rounds he carries off his stock to his workshop, where they are manufactured into an inferior kind of cigars for the consumption of the poorer classes. This singular industry affords employment to some two hundred people in Paris, whose daily earnings vary from two to four shillings.

A MAN named John Renton has been recently rescued from the island of Malayta, in the Solomon Groups, by Captain Murray, master of the *Bobtail Nag*, a trading schooner. He is a native of Stourness, in the Orkneys, and was an able seaman. When 19 years of age he was sent to San Francisco on board a vessel bound to M'Kean's Islands, and was persuaded to join four others (all Americans) to desert. They left one night in a small sailing boat, with some provisions, and on the thirtieth day out, after severe sufferings, reached the Island of Malayta, the direct distance being 1,200 miles. The natives destroyed the boat, and Renton's companions died shortly after landing. Renton was retained by a chief, who, esteeming his usefulness, had repeatedly averted his threatened death and cannibalism. A present from Mr. Slade, the Government Agent, induced the natives to bring Renton down to the beach, and about 200 natives assembled to witness the interview. After negotiating for his release, and taking necessary precautions, the boat pulled off with the rescued man to the schooner.

LITERARY.

DR. DUTTON COOK has resigned the post of dramatic critic of the *Pall Mall Gazette*, which he has held since 1867, and has transferred his services to the *World*.

COLONEL BAKER is engaged in writing an account of his travels in Central Asia, including a particular account of the Valley of the Attrek and the country adjacent to Merv, which he visited last year, and on which he has already furnished valuable reports to the English Government.

WHEN reporting on some recent discoveries of Sanskrit manuscripts in India a few months ago, we (*Athenæum*) took occasion to express a wish that some competent scholar might before long be commissioned by the Indian Government to examine the public and private libraries in Cashmere, We are glad to learn that Dr. G. Bühler, Inspector of Schools in the northern division of the Bombay Presidency, who has done such good work in Guzerat and Rajpootana, has actually been sent on a tour through the "Eden of India" and is already busily engaged in examining the libraries at Sreenuggur. An interesting paper, recently published by Professor Roth of Tübingen, on a hitherto unknown recension of the Atharvavda, lately discovered in Cashmere, had led scholars to expect some valuable accessions of Sanskrit works from that quarter. There is reason to believe that these expectations will not be disappointed. Among the books hitherto examined by Dr. Bühler,

several will probably prove of considerable interest, such as a law recension of a Vedic work the 'Charakakathaka;' the ancient law book of Laugakshi, and some works on Saiva grammar and philosophy. Not less important will be the materials which are pouring in from all sides, bearing on the famous Cashmere Chronicle the Rájataranginí, the only real historical book in Sanskrit literature. On comparing some manuscripts of Kalhana's important work, from which so much of our knowledge of the ancient history of India is derived, Dr. Bühler found that the editions hitherto published are extremely faulty, and he has therefore determined to collate himself the entire work. His time could scarcely be spent more profitably. The Nílapurána, one of Kalhana's sources, has already been recovered by him, and he hopes also to receive copies of the works of Suvrata and Kshemenda. Dr. Bühler thinks that nearly all the Cashmere places mentioned in the Rájataranginí, can be identified. He has visited the author's birth-place, Khonamukha or Khonamusha, and discovered Jayavana in the present Jovan or Jovar.

ECCLESIASTICAL.

"PUBLIC opinion among the Syrian Christians of Travancore," says the *Madras Mail*, "which has veered round a good deal with regard to the Patriarch of Antioch, who has lately come to India to reform the Syrian Churches, deprives Mar Athanasius, the present Metropolitan of Malabar, of the power he has enjoyed for upwards of a quarter of a century, and enforces the recognition of Mar Dyonisius, the recently appointed Metropolitan, as the head of the Syrian Church in India. The various churches are all rallying round his standard, and Mar Athanasius, who at first had numerous partisans, is now almost entirely forsaken, there being but a few of the Churches which adhere to his cause, refusing to acknowledge the authority of the Patriarch of Antioch, or consider themselves under his jurisdiction. Some innovations have already been introduced by the Patriarch, the priests being forbidden to wear the tonsure in imitation of the Roman Catholic priests as formerly, and are directed to wear black robes instead of the white nondescript garment now in vogue. The laity also are enjoined that they must improve their style of dress, wearing an upper garment in addition to those at present worn, and failing this, they are not permitted to kiss the golden cross carried by the Patriarch in Church, or to kiss his hand on ordinary occasions. The Patriarch, accompanied by the Bishop of Jerusalem, is now on a tour of inspection through the various Syrian Churches and communities in Travancore, and is everywhere being received most enthusiastically."

London, 9th November.

AT the Lord Mayor's banquet last night, Mr. Disraeli said that war with China was imminent a month ago, but was now averted, and that England desired to strengthen the Chinese Government. He then eulogized Mr. Wade's conduct of affairs, and he regretted that affairs in Turkey were less satisfactory. The late financial catastrophe had revived the expiring struggle, and the circumstances were critical, but he was convinced that a result would be attained consistent with peace, and satisfactory to public opinion. The interests of the Northern Powers were not more considerable than England's Government, and was deeply conscious of the magnitude of England's interests which it was resolved to guard Frantic cheering followed these remarks. He then referred to the arrival of the Prince of Wales in India, saying that his setting his foot for the first time in the Empire which he was destined to rule was inspired by no ordinary motives, and that the visit was rife with consequences. He had received an enthusisastic reception in India which coincides with the sympathy wherewith he left England.

The Khedive of Egypt has asked the British Government to recommend two gentlemen to organise the Egyptian financial services on the European system.

—Hamilton, R.A.	J F. Herring, Lieut.
J. Webb.	Sir F. Grant, R.A.
Sir E. Landseer, R.A.	—Neiman.
Paul Delaroche.	J. J. Chalon, R.A.
W. P. Frith, R.A.	J. B. Greuze.
A. H. Payne.	T. Gainsboregh, R.A.
J. Constable, R.A.	W. Hogarth.
W. Fyfe.	J. M. W. Turner, R.A.
A. S. Lumley.	Sir J. Reynolds, R.A.

And others.

Statuary, Marble Busts and Figures, Noble Vases, &c. Now Open from 9 A.M., to 6 P.M.

ADMISSION, INCLUDING CATALOGUE, RUPEES 5.

13, *Old Court House Street, opposite the Currency Office.*

Will be published on the 1st January.

POSTPONED FROM 1ST DECEMBER.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

Life Business only Transacted.

The Company's Affairs are periodically investigated by an Independent Actuary.

Indian Life Assurance Company, Limited.

COMBINING LIFE ASSURANCE, ENDOWMENT, AND PENSIONS. FUNDS ARE ENTIRELY INVESTED IN GOVERNMENT SECURITIES and REMAIN IN INDIA. Policyholders can appoint an AUDITOR. NO AMALGAMATION. ENTIRE DIRECTION IN INDIA. ECONOMICAL MANAGEMENT, *the greatest economy being exercised in conducting the business of the office. Life Business only transacted. Punctual Settlement of Claims.*

Intending Assurers are invited to consider the RATES *and* FEATURES *of the* "INDIAN"; *its Rates have been accurately calculated from the most recent and reliable data, showing the true risk of Life in India and Europe and its features are liberal and peculiary adapted to meet the wants of all* ALL *classes, whether European or Native, Civil, Military, Uncovenanted, Professional, or Commercial.*

Established 1869 on New, Sound and Popular Principles.

Registered under Act X. of 1866.

CAPITAL.—Rs. 500,000 FULLY SUBSCRIBED (WITH POWER TO INCREASE.)

HEAD OFFICE—MEERUT, BRANCH OFFICE—BOMBAY.

DIRECTORS AT HEAD OFFICE:

W. MCLEAVY, ESQ. *Manager, Bank of Upper India, Chairman.*
C. J. COLLINS, ESQ.
W. HOBSON, ESQ., *Manager, Mussoorie Bank.*
F. PETERSON, ESQ., *Manager Simla Bank.*
C. W. STOWELL, ESQ., *Manager, Uncovenanted Service Bank.*
A. E. SHARPLEY. ESQ., LL.D., *Barrister-at-Law.*
G. BLADEN TAYLOR, ESQ.
E. WARNER, ESQ., *Government Advocate, N.-W. P. Barrister.*
SHAIK ELAHIE BUX. *Banker.*
Medical Adviser:—W. MOIR, *M.D., Civil Surgeon, Meerut.*
Secretary:—D. LANCASTER, ESQ., F.S.S., and Fellow, *Institute of Actuaries, London,*
CONSULTING ACTUARY J. HILL WILLIAMS, ESQ. *President Institute of Actuaries, London,*
Extract from the Actuary's Report. dated 10th September 1875.

"It will be a matter of congratulation to the Directors, the Assured and the Proprietors, that the close of the first five years of the business of the Company a valuation made on the strict principles I have adopted should exhibit such satisfactory results."

Participating Policy-holders who have paid five complete premiums to end of 1874, are entitled to have their *premium* reduced 40 per cent. during the 5 years ending 1879. Policies of more recent date share in proportion,

INDIAN RATES of Premium charged while in India, English Rates on leaving for Europe. Assurers who do not contemplate spending a *life-time* in India or other tropical climates will find that the rates of this Company compare *favorably* with *enhanced English Rates.* They have the advantage of *consistency* as it is proved *beyond doubt* (by the various Civil and Military Funds &c.) that English life is of *less value* in India than in Europe.

ASSURANCES EFFECTED IN THE FOLLOWING FORMS:—

(1.) WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
(2.) POLICIES, FOR SHORT TERMS, for 1,3,5,7, and 10 years at low rates.
(3.) PENSIONS granted. The Rates are more *favourable* than those of any similar Fund in India.
(4.) EXCHANGE OF POLICIES by substitution of Lives.
(5.) WHOLE LIFE POLICIES with payment of premiums *ceasing at the option of the Assurred* after 5, 10, 15, or 20 years.
(6.) ENDOWMENT POLICIES payable at 50, 55, or 60 years of age, *or earlier in the event of death.*

PROMISSARY NOTES OR PAID-UP POLICIES issued under Forms 5 and 6 *for each Premium paid* if assured on the With-Profit scale, 40 per cent. or if on the Non-Profit scale, 30 per cent. of the Premium is withdrawable at three days' sight. As each Premium effects a *Complete paid-up* Assurance independent of any further payment, *the Forfeiture of a Policy is obviated,* and it also ensures a *Fixed Surrender value payable in cash at the will of holder.*

LAPSED POLICIES REVIVED WITHOUT FINE.

REDUCTION OF PREMIUM to English Rates from date of *leaving* any Port in India, Ceylon or China.

In Assurance transactions what *ought* to be sought *beyond everything else* by the Assurer is *absolute Security,* which can only be obtained by *sound* and *consistent* rates, combined with investment of Funds in securities of an *unimpeachable nature.*

The two Grand Inducements to Policy-Holders.

MUST ALWAYS BE

UNQUESTIONABLE SECURITY, AND AS LARGE PROFITS AS THE SYSTEM OF LIFE ASSURANCE ADMITS.

Assurances effected on lives of EUROPEANS, EURASIANS, HINDOOS and PARSEES.

LIVES BELOW the average Standard of Health may be assured at increased Rates in proportion to the extra risk.

For Forms of proposal, Tables of Rates, and information, apply to the Company's Agents, or to

D. LANCASTER, *Secretary*
Meerut. *Fellow, Institute of Actuaries.*

AGENTS.—The following Banks are Agents for the "INDIAN LIFE":—Agra, Agra Saving. Allahabad, Alliance. Bank of Upper India. Delhi and London Himalaya, Mussoorie, Punjab, Simla, Unocvenanted Service.

PHŒNIX FOUNDRY CALCUTTA

DISTRICT DOG-CARTS.

(ON A NEW PRINCIPLE.)

MESSRS. NOWRAJEE & CO., COACH BUILDERS, &c., LUCKNOW, beg to intimate that they undertake to construct the above Carts, with all the latest improvements, for the trifling sum of Rupees

ONE HUNDRED ONLY

For Cash.

N. & Co. have supplied these Carts to all parts of India, *viz.*, the *N.-W. P., Punjab, Central Provinces, Bengal, Oudh,* and recently *Burmah.* Most of the Planters in *Tirhoot* and *Lower Bengal* provided themselves with these Conveyances during the Famine operations, and found them very useful; while the Officers in the Customs and Survey Departments use no other now while out on duty.

Being light and movable, they are easily forwarded to any part of the Country at a trifling cost, and can easily be drawn by Ponies or Galloways.

Harness and Lamps to suit, at Rs. 30 and 20 extra.

N. B.—Orders from Out-stations must be accompanied with a remittance.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt,* by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if *not* superior, to the more costly Jamaica or Hondurus Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood,* and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children. CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medica Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

MANUFACTURERS OF

Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware,
&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office, No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

Candelabra,

On Plain and Jewelled Bases, elegantly Cut Crystal, Ruby, Emerald, &c., from 5 lights to 100 lights.

Lusters, Fountains and Fountain Candelabra.

Specialities and Novelties in India.

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings *within* that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No. 10 *and* 11 *Park Street.*

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13*th May* 1875. E. LAFONT,
Rector.

OPINION OF BRADFORD LESLIE, ESQ., C. E.,
Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.
Calcutta, 9*th August* 1875.

Letter from Chevalier Blondin's Secretary
P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—*a proof* of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,

GREAT EASTERN HOTEL, NIAUDE,
Calcutta, 17*th January* 1874. *Secretary.*

Calcutta, 28*th December* 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

PROSPECTUS.

CENTRAL ASIAN TRADING COMPANY "LIMITED,"

CAPITAL £1,20,000,

WITH POWER TO INCREASE:

IN 12,000 SHARES OF £10. OR RS. 100 EACH.

Managing Director, Pro. Tem.

C. E. HERBERT, Esq.

Manager.

T. RUSSELL, Esq.

As soon as a sufficient number of shares have been taken up a full Board of Directors will be elected :—

Bankers in the Punjab.

THE PUNJAB BANK LIMITED.

Bankers in London.

THE DELHI AND LONDON BANK LIMITED.

Bankers in Calcutta.

THE DELHI AND LONDON BANK LIMITED.

Bankers in Bombay.

THE NATIONAL BANK OF INDIA LIMITED.

Agent in England.

GEORGE HOLME, Esq., PRESIDENT, DERBY CHAMBER OF COMMERCE.

Agents in Bombay.

Messrs. FORBES and Co.

Agents in Calcutta.

Messrs. FITZE and Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only or by barter.*

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager, C. A. T. Company.

Murree, September 1875.

THE LONDON ASSURANCE CORPORATION

FOR FIRE, LIFE, AND MARINE ASSURANCES,
INCORPORATED BY ROYAL CHARTER, A.D. 1720.

HEAD OFFICE.
No. 7, ROYAL EXCHANGE, LONDON, E.C.

GOVERNOR,
JAMES BLYTH, ESQ.
SUB-GOVERNOR, DEPUTY-GOVERNOR,
EDWIN GOWER, ESQ. DAVID POWELL, ESQ.
JOHN P. LAURENCE, ESQ., Secretary.
JOHN ANTHONY RUCKER, ESQ., Underwriter.
ARTHUR H. BAILEY, ESQ., Actuary.
THOS. B. BATEMAN, Esq., Manager of the Fire Department.

LIFE DEPARTMENT.

This Corporation has granted Assurances on Lives for a period of nearly One Hundred and Fifty Years, having issued its first Policy on the 7th June 1721.

Two-thirds of the entire profits, without any Deduction for expenses of management, are alloted to the Assured.

The profits are declared at the end of every five years, and the share of the Policy-holders may be appropriated either in increase of the Sum Assured, or as an immediate Cash payment.

Assurances may also be effected without participation in profits, at reduced Rates of Premium.

The premiums have been computed from the most recent information on the subject of European mortality in India, and they will be reduced to the corresponding English rates on the return to Europe of the persons whose lives are Assured.

Premiums may be made payable either yearly or half-yearly.

Policies on lives of Military Officers in civil employ issued at the Civilian Rates.

Risks on Male Parsee and Eurasian lives, under 40, accepted at European Rates.

Medical Fees and Stamps are paid by the Corporation.

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.
AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by *eminent* Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

THE QUEEN. | THE DUKE OF SUTHERLAND.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2123.] Calcutta: Saturday, November 20, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

AS an impression seem to be wide spread that Mr. Rodway's *Royal Tourist* and *Entre-Acte* are in some way connected with the *Friend of India*, it is desirable perhaps to explain that such is not the case, but that they are the sole enterprise of Mr. Rodway himself. Whatever credit therefore may belong to either, belongs exclusively to Mr. Rodway; the proprietors of the *Friend of India* being in no way interested therein. Mr. Rodway resigned his appointment as Assistant Editor of the *Friend of India* in September last, and simply rents the ground premises of No. 3 Chowringhee as his publishing office.

EDITORIAL NOTES.

THE Prince of Wales has begun his Indian tour brilliantly in Bombay. Our readers are in possession of full descriptions and narratives of all things that were done in Bombay and it hardly comes within our province to chronicle the events of the tour. But we notice with the greatest satisfaction that all accounts agree in declaring that the Prince's bearing towards the native princes, has not only been well meant—that we knew to expect—but has been most successful, by its honest frankness and genuine geniality, in winning their admiration, and, indeed, charming them into kindly attachment. His manner towards them is seen not to be the effect of constraint, and it has been noted that he appears to take a real pleasure in his contact with them. We trust the feeling will last throughout his sojourn, for on nothing more than on this, do the high hopes that have been based on his visit, depend. We have noticed elsewhere that there was some temporary—but, we are sure, only temporary, irritation arising from the manner in which the return visits had to be paid. But not even the expectant Emperor of Hindoostan can achieve the impossible, and the Chiefs seem to have shortly comprehended the impracticability of his visiting them all at their private lodgings. The Maharana of Oodeypore is perhaps the only one who will carry away a grudge in his mind, for he seems to have deeply resented his being ranked below the boy-Gaekwar. It was scarcely to be hoped that the difficult question of precedence could be settled without hurting the feelings of some one, and if this is the only case of vexation there is perhaps reason for thankfulness.

***

WE are glad to learn from later accounts, that the Maharana left Bombay fully satisfied, so that not a cloud may be said to have darkened the brightness of the Bombay reception. But we are sorry to learn that the prevalence of cholera in the Madras Presidency, threatens to modify considerably the plan of the tour in Southern India.

***

THIS is not the time to harp on bitter themes in connection with this visit, but we must not forget, in reading of the reception of Sir Salar Jung and the Hyderabad deputation, that one seed of mischief has been sown by the Indian Government in a soil where too many of like nature have formerly fallen. Some of the letters that passed between Mr. Saunders the Resident at Hyderabad and Sir Salar Jung, on the subject of the little Nizam's much desired journey to Bombay, have appeared in contemporary columns, and the more light that we receive on this unpleasant subject, the more clearly does it appear that the treatment of the Nizam and his guardians by the Government, was nothing short of tyranny and persecution. The history of this case is another instance to show how closely weakness in a Government is allied to tyranny. The public must be prepared to hear more of this matter.

***

THERE has been a good deal of dissatisfaction among the native chiefs in connection with the receptions accorded to them at Bombay. On all former occasion, they say, the custom has been to pay the return visits to the princes at their temporary residences, but, on the present occasion, rooms were assigned to them at the new Secretariat, and in these they received the return visits of His Excellency the Governor, and afterwards of the Viceroy and of the Prince of Wales. This treatment has been felt as a slight, and the chiefs, sensitive to an extreme on matters of etiquette have had to suppress as well as they could a good deal of discontent and resentment. The *Hindoo Patriot* says:—

> If the custom had been that which Sir Phillip Woodhouse followed, there would have been no heart-burning, dissatisfaction, or discontent. If it was thought necessary to alter the custom, the time selected for the change was most ill-chosen. Oriental princes are particularly sensitive in matters of etiquette, and we regret that they should have been made to feel humiliation at a time, when they did their best to shew their loyalty and attachment to the British Crown.

We can hardly believe that this wound to the princes can be very deep or lasting. We are inclined to think the arrangement was a simple necessity, the number of ceremonial visits to be paid having been so great that it would have been impossible to pay them at the private residences. On reflection the chiefs themselves will see this, and any temporary irritation will vanish.

***

IT is some satisfaction to hear that India has at last been enabled to join the Postal Convention, and that a small reduction in the rates of postage will be the result. It is a step in the right direction, though our London letters will still be dear enough at six annas *via* Brindisi, and five annas *via* Southampton—the contemplated rates.

***

THE small state of Perak, which lies from seventy to eighty miles south of Penang, on the west coast of the Malay Peninsula, has leaped at once from comparative obscurity into an unfortunate notoriety, by the murder of the British Resident, the Hon'ble J. Woodford Birch. The immediate cause of the outrage is not yet perfectly clear, but the few facts that have been published are briefly, as follows. Perak, a state of considerable area, rich in vegetable and mineral wealth, has been for some time in a state of anarchy which prevented the opening up of its resources, and the security of persons engaged in industry, and was a standing menace to the peace and good order of the adjacent States. The reigning Sultan Abdoolah was set up as legitimate ruler by the British Government, after a disputed succession, but he either would not, or could not, govern his state to the satisfaction of the paramount power. Wild Rajahs and Chiefs, split into factions, oppressed the people, contended with each other, and in this state of misrule serious crimes were committed without fear of justice. When strong pressure was brought to bear on the Sultan to put down the anarchy, he declared his inability to do so, and, at his request, the British Government determined to administer the Government of Perak in the name of the Sultan. A proclamation to this effect was published on the 15th ultimo, in a *Government Gazette Extraordinary*, by Sir W. F. Jervois, who succeeded Sir A. Clarke as Governor of the Straits Settlement. Although many of the Rajahs were said to have united with the Sultan in requesting the British Government to assume the administration of affairs, it is not improbable that the proclamation, which is couched in pretty strong terms, may have excited them to violence. It is stated that all the Rajahs are suspected of complicity in the crime, and the Residency was in a state of siege. After some days, Mr. Birch's body was found in the river

considerably mutilated. It appears that the party that went in search of the body must have been attacked, and Captain Innes R. E. was killed, and two officers, Messrs. Elliot and Booth, were wounded. The affair seems to be recognised as of considerable importance, for forces are proceeding to the Straits from Calcutta, Bombay, and Hongkong.

***

WE regret to be able to report no improvement in the prospect of the crops in Behar. The season is now so far advanced that no more rain can be expected, the rubbee crop is reported to have died away, and the outturn of Indian corn, which fortunately promises to be good in some localities, will suffice for the support of only a small proportion of the population. A scarcity as severe as that of 1874, is prognosticated by those on the spot best acquainted with the state of affairs. The Lieutenant-Governor, it is said, intends proceeding to Mozufferpore shortly to enquire into the state of the district for himself.

***

THE defeat of Mr. Roberts on Wedesday, and the appointment of Baboo Sreenath Ghose to the Vice-Chairmanship of the Calcutta Municipality will probably prove the best thing for the Municipality and rate-payers that has happened since they began to have a history. It has been said that there is a point beyond which endurance is sin, and the community of Calcutta will not bear the disgrace and responsibility of submitting tamely, or at all, to the unblushing tyranny of Mr. Hogg, however powerfully he may be backed on this, as on every other, occasion. The facts of the case are in every one's month, and no man of honest and independent mind is at all doubtful that the moment has arrived—thanks to Mr. Hogg and Sir Richard Temple—when the fate and future character of Municipal Government in Calcutta must be decided by a trial of strength. Mr. Hogg and his backers have courted it, and have struck the first blow on the face of the rate-payer, and resistance has become not merely the best policy, but an imperative duty. Steps to bring the matter to an issue with the Government are, we believe, being taken, and it is manifest, that if we have a spark of spirit, or a wish for good municipal government in the future, we must do what in uslies, to make the movement strong, determined, and persistent. It is expedient that Mr. Hogg should be removed, and at the earliest possible date.

***

THE alarmist rumors that reached us, as to a probable disturbance of the peace of Europe were, at the least, premature and exaggerated. Were there any likelihood whatever of war, we may be very sure Emperor William would not be at Milan, nor Bismarck laid up sick in his chateau. While the interests of Austria and Russia are completely irreconcilable, and no understanding for a readjustment of territory can be come to between the three Northern Powers, there will be no war. Germany has two wants: she wants the Baltic Provinces from Russia; and from Austria, the provinces that belong to the fatherland. The German Empire will be incomplete till these provinces are joined thereto. All three Powers alike are conscious that that is the "far-off event" to which all Germans are looking. But neither Russia nor Austria will cede a foot of land without two in return, while Austria has to be indemnified for the loss of Italy. The consent of the other two powers that she should occupy Bosnia and Herzegovina is in all likelihood looked upon as compensation for her losses on the other side of the gulf (Adriatic), while it is a step towards the dismemberment of Turkey, and the restoratien of its Christian population to Christian rule. With Bosnia ceded to Austria, the three powers will probably now look upon themselves as starting fair, and the problem is so to divide Turkey as to enable Russia to let go her Baltic provinces, and Austria her German ones, while giving both such compensation out of the sick man's estate as will restore the balance of power between the three. Egypt has in all likelihood been tacitly ceded to ourselves by them already, unless they can awaken sufficient jealously in France to prevent our acquiring it. Seeing no immediate solution of the problem possible, the three powers have agreed to play Mr. Micawber's game, and "wait for something to turn up." Herzegovina makes all square with Austria for a fair start between the three, and as Reuter says "a good understanding existing between the powers war is impossible."

***

Vanity Fair has given utterance to a few exceedingly unpleasant truths regarding the relations between the Government of India and the Nizam of Hydrabad, and, as was to be expected, the *Pioneer* assumes a tone of contemptuous pity towards the London paper which has allowed itself to speak disrespectfully of the "angels." But those who know how the Indian Government has of late years borne itself towards its most important feudatory, will see that *Vanity Fair* is, in the main, right, and that the Allahabad paper is simply endeavouring to throw dust in the eyes of its readers. We briefly summarise the allegations of *Vanity Fair*. The Indian Government has always borne hardly on the Nizam. Heavy pressure, financial and political, has been exerted towards him by the Foreign Office. Whoever has been Viceroy, the treatment has been uniform, and that treatment is summed up in the words, denial, repression, and pressure. Even Lord Salisbury's political sagacity is supposed to have failed him in this case. We have fully possessed, administered, and enjoyed the patronage of the Nizam's most fertile province for nearly a quarter of a century. We have kept up at his expense a British army able to sweep, not the Nizam's dominions only, but all Southern India. And when last year Sir Salar Jung made an earnest effort to regain the province, proposing to the Government of India to lodge in its own keeping as many millions of its own stock as would suffice to redeem or guarantee the debt and military obligation, which form our excuse for holding the districts, he was met by a decisive refusal. The Nizam's Dominions being a splendid military centre, it was desired to connect it with our railway system, and as Sir Salar Jung was anxious to open up the conntry, an opportunity was afforded of making a railway at the Nizam's expense. A light line, sufficient for the wants of the country was at first sanctioned, but this grew into a railway on the same guage as our own trunk line, and a vast additional expense was saddled on our "faithful ally." Then the Government of India insisted that it should take a course to suit our military cantonments, thus avoiding the fertile and well-peopled tracts, and demolishing the prospect of satisfactory returns. Next, the Governor-General vetoed the appointment of a financial secretary to the undertaking, the capital account of the railway became embarassed in consequence, and the Nizam's treasury had to be heavily drawn upon to complete the work. The Nizam's Government sought to raise a loan in the English money market and, though the amount—half a million—was subscribed and ready to be remitted, the Government of India, or the Secretary of State on its behalf, stepped in and prevented the bonds being taken up, or the subscribed money remitted.

Such is the drift of *Vanity Fair's* accusation, and there is more than a grain of truth in it.

***

DR. STEER, the Bishop of Zanzibar is engaged on a somewhat hazardous enterprise. Some weeks ago he was on the point of starting for inner Africa, from the same spot on the sea-coast whence Livingstone started on his last expedition. The Bishop is accompanied by three Englishmen, together with "Chumah" and "Susi," Livingstone's two faithful followers. His destination is Lake Nyassa, among the Agao tribes where he hopes to found a mission. Another traveller, Mr. Young, of the Scotch Presbyterian Mission, set out some time back, for the same place, with the object of founding a "Livingstonia."

***

THE Nagasaki *Rising Sun* says, the Boodhist religion appears to be dying a natural death in Japan, if we may credit the statements of the natives on this subject. In Yamashima Ken alone, it is said that 71 Booddhist temples have been turned into dwelling houses, and made use of in other ways, since 1873; and during the last six years, between six and seven hundred temples have been converted to other purposes than those for which they were originally intended. Although the Japanese do not appear to accept the Christian religion so readily as could be desired by earnest Christian men, still they are becoming convinced of the absurdity of worshipping idols, much quicker than is generally conceived by foreigners. It is the *rising generation* that is become alive to the fact, that it is sheer nonsense bowing down to images made of wood and stone. The true cause of this deviation from the faith of their forefathers, may justly be attributed to an increased amount of secular knowledge that is being diffused among the people. In nearly all the principal towns and cities in Japan, the youth are instructed in the English language, consequently many of the best customs practised in modern days in the more enlightened countries of the West, are learnt, the natural result being a gradual removal from the minds of the young, of the superstitious and idolatrous customs which are so largely practised by the elder people. The singular antipathy the government of this Empire manifests towards the Christian religion, is diametrically opposite to its actions in other respects, and consequently not a little remarkable, especially when we consider

that it is really doing a very great deal towards disseminating the truths of Christianity by doing its best to raise the people out of the depths of ignorance in which they have been wallowing so long.

***

WHAT is Sir Louis Mallet coming to India to do? We have been puzzled to account for his visit, and we are not much wiser after reading the *Pioneer's* utterances, which are as usual somewhat oracular in their nature. But our contemporary knows that he is not coming to overhaul the tariff, or disturb the policy of the Viceroy in that direction. He is, indeed, a long confirmed personal friend of Lord Northbrook's, and whatever be the object of his mission, it is certain not to be in any way hostile to the Governor-General. The *Pioneer* conjectures that before Lord Salisbury sent out Sir Louis, he must have asked Lord Northbrook by telegraph if the visit would be acceptable, and further conjectures, that Lord Northbrook answered that he would be perfectly delighted; and we are compelled to conjecture that our sapient contemporary knows just as much as we do about the matter, and that is nothing more than has been publicly announced.

***

THE Lieutenant-Governor's Resolution on the Report of the Board of Revenue, on the administration of the Excise Department in the Lower Provinces, expresses a good deal of satisfaction, and is hopeful in its tone. The decrease in revenue from 58 lakhs in 1873-74 to 56¼ lakhs last year, is attributable to the distress in the beginning of the year in Behar and Northern Bengal. The Revenue from country spirits was Rs. 2,228,066, and from ganja and opium Rs. 1,058,178 and Rs. 1,196,532, respectively. There would have been a greater deficiency in the article of country spirits, but for the plan resorted to, of putting up licenses to auction twice during the year, for half yearly periods only, in order that the State and not the farmer might get the benefit of the returning prosperity. There was also, as was to be expected a slight diminution in the revenue from ganja and opium. The experiment that has been tried in some districts of Patna and Bhagulpore, of taxing the materials used in the manufacture, instead of the spirit itself, has not proved very successful, and may probably have to be given up. Sir Richard Temple believes that this branch of the revenue is now on a secure and satisfactory footing. He also expresses a confident hope, which it would be a real happiness to be able to share, that the system pursued will be so managed by the officers as to diminish the consumption while increasing the revenues, and thus be made "an engine of moral improvement as well as a source of State revenue."

***

THE Land Revenue Report of the lower Provinces for 1874-75 shows that Sir George Campbell's proposed classification of estates has been carried out in the reports. It is as follows.

I. Estates settled in perpetuity.

II. Estates; the property of individuals, under temporary settlement.

III. Estates, the property of Government, not included in class IV.

IV. Ryotwaree tracts, the property of Government and held under direct management.

The revenue demand for the year was Rs. 36,644,861 showing an increase over the preceding year of Rs. 80,333, which, arising from re-settlements and extended cultivation, is to be taken as a sign of prosperity. The remissions of the year have been exceptionally heavy, amounting to Rs. 1,227,049, but a large part of this sum went to the final clearing off of the Orissa balance of 1866. One remarkable thing is the scanty remisssions made in the very heart of the famine district; the reason probably being, that under the tenure that prevails, though the demand on the zemindar might he remitted, it would be impossible to make the remission reach the cultivator. There is a marked difference between the amount of the collected balances on permanently settled estates, and that on estates that are the property of Government, and Government observes, that the fund for the improvement of Goverment estates was imperfectly utilized during the year, and concludes that, in some cases, the district officers failed to understand the orders regarding its distribution. Certain rules are under the consideration of the Board, which are expected to clear up any doubts that exist at present.

***

THE Guibord case had not, according to our latest intelligence, come to an end, but it was supposed that another attempt would be made to inter the body. Bishop Bourget had addressed a pastoral to his flock, counselling them not to interfere as they had formerly done. "The decree of the Privy Council" says the Bishop "must be obeyed." And accordingly the Bishop feels constrained to use his influence with his fanatical people to prevent another riot fiercer than the first. It is a pity that he had not the wisdom to see the inevitable result from the beginning. If he was able to restrain the French Canadians on a second occasion, he could have done so at first, but instead of issuing a pastoral, he addressed the authorities—so we have been told—predicting violence, and advising them to employ the military to prevent it. We have not been told that he attempted to use his authority with the Catholic rioters on the first occasion, and unless he did that, his warning and advice to the authorities seems to bear the complexion of a threat, as if he had thought that they would rather prevent the burial, than allow it to proceed at the cost of a riot which might have to be quelled by bloodshed. It is impossible to exonerate the Bishop from heavy responsibility in this miserable business. And when at last the interment seemed inevitable, the Bishop's submission, was not exactly like that of a Christian. "The ground will be cursed from the moment that the body is laid in it." The virtue of consecration it would seem can be easily taken away, for not only the body and soul of poor Guibord will be cursed, but the very soil in which his body lies. We trust the souls of the Bishop and his faithful adherents will feel at ease when this has been done. We shall hear by and by what effect the Bishop's Pastoral has had.

***

A CORRESPONDENT of a contemporary calls attention to a matter of importance relating to the causes of shipwrecks, and though the letter is an almost *verbatim* copy of matter that appeared elsewhere, the subject demands serious attention. It is stated that "drugging, drinking, and crimping are the cause of more shipwrecks than all the rotten ships that ever went to sea." Scarcely a sailing ship leaves port, in which the hands are not almost totally unfit for work from previous debauchery. It is suggested that some more effective measures must be taken to guide Jack's tastes in port, than any that are furnished by Sailors' Homes and other such benevolent institutions. We are not able to say how far the sailors' indulgences in port, unfit them for their duties when they put to sea. It is generally supposed that a taste of the salt breeze reinvigorates Jack in a marvellously short time. But of one thing we are certain—that, for his own sake, something requires to be done in Calcutta, to prevent him from killing himself or being killed by the pernicious stuff that is supplied to him on board ship under the shadow of the authorities. Is it generally known what is the nature of the drinks and eatables supplied to sailors in this port by bum-boats, licensed by the authorities, and permitted to sell their villianous commodities to the sailors, by the ship-captains? We have reason to think that a great proportion of the illness and death among sailors in this port is brought about from this cause. Who is responsible for these things? Whose duty is it to see that these bum-boats, which are said to carry licences, furnish nothing but wholesome articles of food and drink to the men? Jack in port is not able to take care of himself in these matters. One thing more we would ask. Are any statistics furnished to show the rate of mortality among the crews of vessels lying in the river? Is it known what proportion of the men in them, are removed to one or other of the hospitals, and of these how many are cured? A report giving reliable statistics on this subject, would we believe, startle the community, and might lead to some beneficial action.

***

The Lost Continent, by Mr. Joseph Cooper—reviewed by the Lahore paper, charges England, France, and America with doing something very like patronising slavery in the East. We quote the summary given of the Report of the Royal Commissioners regarding the treatment of coolies in the Mauritius:—

"The Report shows that the labour system in the Mauritius at the present time is a form of slavery, and that the most flagrant abuses exist.

That the coolies are recruited in India without regard to their fitness for outdoor labour.

That when an emigrant is placed on an estate in the Mauritius he is quite at the mercy of an unscrupulous employer, who pays him what he likes, and when he likes.

That the so-called "protectors" of immigrants have no power corresponding with their title.

That the magistrates are in most cases either planters or connected with that interest.

That the inequality of the sexes is a fruitful cause of murder, and of many other terrible evils.

That emigration from India has not elevated their physical, moral, or intellectual condition, nor does it seem likely to do so."

The whole question of coolie emigration, and our treatment of coolie labourers is a very serious one. Our philanthropists have still much work to do.

A CORRESPONDENT writes :—"Is it in any degree within the power of man to *alter* the weather ?" asks Sir John Herschel in one of his "Lectures on scientific subjects," delivered ten years ago, and his solution of the problem seems to have been as little regarded then as it is now. We still want to know *more* about the weather, as if we had not already accumulated for many years past all that is required to be known on the subject in almost every part of India, and as if the bare knowledge of the averages of rain-fall for any number of years, beyond a very few, in any place or in all places, is of any practical value. Yet the Government of India will have a new meteorological department, to begin a *new* series of registrations of the weather, and the programme of this new department, just issued, is one of the baldest and most disappointing—if we omit the confortable distribution of salaries and appointments—that one could expect. What is to be known beyond what we know? Extreme accuracy may make the inches of averages one or two more or less—what then? The correlation of wind currents, of heat, of atmospheric pressure, and other things, may be found to a decimal certainty—all concurrent or confluent phenomena. Still we ask—what then? Mr. Blanford can only say that it would be "interesting." This may be very modest, and he may mean more than he says; but it is rather an impractical view to put before the tax-payer. The study of meteorology for the purposes of storm signals along a coast line, is intelligible : for purely scientific purposes we have information quite enough already, if it could all be put into the hands of an expert, and thoroughly digested ; but for any other human purpose, we see in the registration of these erratic phenomena over a wide Continent a mere waste of labour, and financial extravagance. We know, for instance, when meteorology has been studied for a long course of years for a special purpose, that a forecast of a few days is all that has ever been attained, but of what possible use could such forecasts be to the agriculturist? We think the Agricultural Department has here gone a little astray, and with the best intentions perhaps; but it is not too late to reconsider the matter, and the department might try its powers on the problem stated at the opening of this paragraph.

***

THE injudicious circular of the Admiralty with reference to fugitive slaves, has formed the subject of much discussion and of remark in the speeches of several distinguished politicians. We find, that while Mr. Forster was denouncing it with vehemence at a meeting at Bradford, Lord Derby at Liverpool and Sir Stafford Northcote at Middlesborough, were anouncing its "suspension" to their hearers, and offering such qualified defence of the motives of its authors as they were able to suggest. The latter contented himself with a general assurance that "there was no idea whatever "of introducing any change, either in principle or practice, in the "established policy of Great Britain in respect to slavery." The Foreign Secretary dealt more fully with the case. He undertook to explain how the Admiralty in this matter, seemed to belie their principles, and while declining to admit the popular construction put upon it, he went on to explain how the occasion was afforded for the misconception which he deprecated. "The statement of "law contained in the document I have referred to, whether or "not it embodies the popular view of our rights and obligations, is "simply that which we have received on the highest legal "authority ; but, looking at the construction placed upon it "feeling the extreme inexpediency of exciting popular passion "on a matter which requires careful handling, and considering "that the question dealt with, is not one requiring urgent haste, we "think it better to cancel what has been done, so that the whole "question may be considered *de novo*, and that any future discus-"sion upon it may not be prejudiced." The *Pall Mall* considers it disquieting to learn that principles of English law which have always been looked upon as of the clearest certainty, have been overruled by the "highest legal authority," and that there will be much curiosity to learn the grounds upon which the legal advisers of the Crown have based their opinion. That the circular was issued at all, was a manifest blunder and the only course to be pursued was to substantially withdraw it. Its mere "suspension" with a view to the whole question being considered *de novo* at some future time, is a partial defence of its promulgation. The prevailing opinion on the subject is that the Admiralty had fallen unwittingly into the error in which they were discovered, and were innocently led into issuing instructions to the fleet conveying the impression that they were willing to countenance slavery and surrender the claim to territoriality of the Queen's ships, and it would be as well to let it remain undisturbed. To have attempted a vindication of the circular would have oused the indignation of the whole nation. Either the Admiralty under-estimated the import and effect of their circular, or they meditated a reversal of policy and a surrrender of privilege.

WE are sometimes provoked to enquire whether British fair-play is, after all, the sterling virtue which we have fondly thought it. If it be so at home, it seems, as if it cannot adapt itself to tropical climates, and sickens and dies from contact with inferior races. Here, in India, we make a great profession of impartiality, and in judicial dealings with the people we are glad to believe that impartiality is the rule and the want of it the exception. But we have had some disagreeable cases to the contrary. We shall be compelled to face this subject shortly, but in the meantime, we call attention to two cases of recent occurence in the Mauritius. This is how the *Madras Standard* narrates and remarks upon them :—

> The chief topic of interest in the colony, appears to have been the decision of Mr. Justice Bestel in respect to certain cases that came before him. In one case a Mr. Tampier, a young Frenchman, was charged before Judge Bestel with causing the death of an Indian cooly named Pultoo by assaulting him. The cooly had one of his ribs broken and died from the effects of the injuries he received. The sentence passed upon the accused was one year's imprisonment with hard labor. In another case tried at the same assizes, six Indian coolies were charged with having attempted to murder M. Faydherbe, the sub-overseer of St. Aubin estate, on which they were all employed. The sub-overseer was rather roughly handled, but is now said to be quite well. The sentence passed upon the six coolies who where found guilty, was two years' imprisonment each and a fine of £100 ; if the fine be not paid, the coolies to work it out by a shilling every day, so that they will each have to submit to above eight years' imprisonment. We are not at all surprised to learn that these decisions have created "most stir" in Mauritius. That a European overseer should have *to* undergo imprisonment *for* one year for an offence tantamount to murder, and that six coolies should have to submit to *eight years'* imprisonment for committing an assault on a sub-overseer is what people will not consider even-handed justice, which we are told is dispensed to all subjects under British rule. It is decisions like these that bring the administration of justice into disrepute, and a few more of such judgments will have the effect of driving away Indian laborers from the Mauritius, or if it does not, it will be a difficult matter to get coolies from India to go to the colony.

"MRS. BLACK, BYRON'S Maid of Athens, has just died, aged seventy-six." The famous song in her praise was written when Theresa Macri was the belle of Athens, and Byron's description is confirmed by other testimony. We have no poet who has a juster eye for female beauty than Byron, and it is perhaps not too much to say that in describing it he has no equal. The Maid of Athens was afterwards married to a Scotchman, by whom she became the mother of two sons and two daughters. One son fell in the Crimean War, fighting in the French army, and the *Home News* conjectures that the other is occupied with commerce in Liverpool. "We remember, to have paid Mrs. Black a visit in Athens two years ago, when she was living in a quiet little house in the new—we should rather say the newest, portion of the town of Athens. She could speak nothing but modern Greek. Her face was singularly intelligent, and her expression very pleasing ; nor had the fire burnt out in the bright black eye which fascinated her immortal panegyrist."

M. DE VALBEZEN gives us "New Studies" on the English in India, and compares with them, in a small way, the French in Algeria. Speaking from experience, the author attributes the mutiny, not to want of military discipline in Bengal, but to the English having made too rapid and too extensive conquests, without causing internal reforms to keep pace with the growth of empire. He avows that the English have been compelled to extend their borders, not from any lust of territory, but to defend what had been already won. They are laboring to introduce into India, he states, along with the material advantages of modern life, individual respect, permanence of property, and an equitable system of taxation, and sooner or later, the natives must come into a certain harmony with their rulers.

***

THE Abbè David has long been known for his voyages in Mongolia, and his beautiful discoveries in natural history. He has brought out the "Journal of his Third voyage in China." Travellers can agree upon the picturesqueness of a landscape and the productions of the soil, but accord is not so easy in estimating peoples, their customs, and their institutions. The Abbè judges China from the Missionary point of view, and reprobates Europeans as much as Mandarins. Both trouble the work of conversion, which it seems "has want of mystery and calm." While commerce demands the opening of ports, the Missionaries complain of this exacting and audacious invasion of civilization. The Chinese, the oldest conservatives in the world, oppose this process of civilizing *à outrance*, and resist this summons to strip the

old man, and clothe him in a new costume, neither cut for his figure nor in harmony with his manners.

***

GREAT improvements are about to be made in Peshawur. The fire which broke out in the bazaar in May last, destroyed 2,116 buildings, covering an area of over twenty-one acres, and made 5,557 people homeless. The rapidity with which the flames spread was unquestionably attributable to the narrowness of the streets and lanes within the burnt area, and the Municipality has therefore wisely determined to take advantage of the opportunity afforded by the re-building operations now going on, to widen all the most important of them. On the principle of not doing things by halves, its plan has been drawn upon rather an extensive scale, and the estimated expenditure amounts to about Rs. 2,50,000. The Municipal Committee expect to be able to defray the greater part of this outlay from current revenue—for the remainder, a balance of Rs. 100,000, they have applied to the Government of India offering to repay the loan by ten yearly instalments of Rs. 10,000 each. Their application, it is to be hoped, will be granted. All visitors to Peshawur are aware that a great change for the better is desirable in both the appearance and the healthiness of our principal frontier station, and the requisite reforms can certainly never be commenced at a better time than now, when the ground for them has been cleared by a fire which must have convinced the whole population of the necessity of widening the streets.

***

THE Socialist agitation in Russia, seems to be giving the authorities a great deal of trouble. By the last mail, we again hear that numerous arrests have been made in places so widely apart as Moscow, Tula, Odessa, Riayan, and St. Petersburg. In one village alone, thirty men were seized by the police. Some of the prisoners attempted resistance, and one man named Rogatcheff, suspected of being an active leader of the movement, defended himself so desperately that he had to be killed. This conspiracy against all established Russian institutions, for it is nothing less, now counts so many adherents that the out break, at no distant date, of disturbances of the most bloody and desperate character appears far from improbable. With so much cause for anxiety at home, it is strange that Russia should choose this particular moment to risk a foreign war on behalf of the persecuted Christians of Turkey, who, however badly they are treated, do not seem to be a whit more discontented than a great part of her own population. Can it be that a desire, inspired by the fear of coming troubles in this direction, to divert the attention of the peoples at any cost, from domestic matters, has anything to do with the present attitude of the Government.

***

COURT ARNIM'S attempt to obtain a reversal of his sentence has been unsuccessful. His appeal was heard before the High Court of Berlin on the 20th October but was rejected and the Court has to pay the costs of the proceedings on both sides. The judgment of the lower court therefore remains in force, and this is, we suppose, the last that we shall hear of this celebrated case.

***

THE *Spectator* sees no reason to believe that the Turkish Government will continue paying even half the interest on their debt. Why should they? There is no external force to compel them, they clearly have no conscience in the matter, and it is not their immediate interest to do it. The talk about the external pressure to be applied at Constantinople, is obviously the mere result of bondholders' indignation. Who is to apply it? Will the clergymen and widows bombard Constantinople, or will the Sultan be shocked by the curses of infidel speculators for the rise? No one can apply it but a Great Power, and the Great Powers, for different reasons, will abstain. The *Spectator* is asked whether the prospect in Egypt is as bad as in Turkey. Not just yet, if the Khedive can raise a loan on any terms whatever, say by issuing sixes at 50 per cent. discount. If he can do that, he will go on paying while the money lasts. But we can see no reason for supposing that when loans stop, and he is pressed beyond endurance for money, he will go on paying the foreign bondholders. Why should he? We shall not be allowed to annex Egypt because of his default, and cannot allow any other Power, not even Italy, to do so in our stead There is, therefore, no external complusion, and no internal complusion, for Ismael's conscience would probably tell him not to skin his Fellaheen for the benefit of foreigners, and loans being refused, he has no interest in keeping up a struggle already unendurably severe.

HER Imperial Highness the Crown Princess of Germany (Princess Royal of England) still continues the practice of the art of painting, in which she showed such marked talent before she left England years ago. In fact, she is a most enthusiastic follower of art, and has a studio arranged in the New Palace, Potsdam, where she and the Crown Prince reside. Her imperial highness has produced several very good portraits of members of her own family. They are not only good portraits, but are most creditable works of art, having qualities which show the true touch of the artist rather than the treatment of a mere amateur.

***

LORD CARNARVON'S scheme of confederation seems after all likely to be accepted by the South African Colonies. Public opinion at the Cape has declared strongly in its favour and when Parliament meets, the Molteno ministry will have to choose between withdrawing its opposition or resigning office. The Transvaal Republic and the Orange River Free States have signified their readiness to consider the plan, subject to certain reservations about boundaries. The question of the best site for the new capital, is causing some discussion, Cape Town not being, considered sufficiently central. But the reasons in favour of confederation are so strong, and are now, it turns out, so well appreciated by the people, that so trifling a difficulty is certain to be easily surmounted. The new state will have a territory double the size of France, with frontiers capable of indefinite extension northwards, and a population of over a million, of whom perhaps one third are English or of European descent. Its climate is healthy, its natural resources are very considerable, and will now have the advantage of being developed by the joint action of the different provinces. It may therefore be expected to become a favourite field for emigration and to be soon capable of dealing single-handed with any rising of the natives, should their latent disaffection, as is feared, break out in open rebellion. Among British Colonies it will rank next in importance to the Dominion of Canada, and its successful creation will undoubtedly redound in no slight degree to Lord Carnarvon's fame as an administrator.

***

A LETTER from Mexico in the *Cologne Gazette*; gives an interesting account of the decline of the influence of the Roman Catholic Church in the Mexican Republic. In 1854 the city of Mexico contained twenty-nine religious houses, with about 500 monks and nuns. All the religious orders have now been abolished, and the extensive buildings which formerly belonged to them, are used as barracks, schools, and so on. Some of them are magnificient specimens of architecture, and the schools especially may congratulate themselves on the spacious quarters which have been assigned to them in the finest monasteries of the country. They have large halls for lectures, courtyards surrounded by galleries, gardens, and fountains. The Palace of the Inquisition, which is one of the finest buildings in the town, is now occupied by the Medical School, a magnificent convent by the Law School, and the large Jesuit monastery of San Ildefonso by the so-called Escuela Preparatoria, or Training School. Several of the Churches are used as storehouses, two are used for Protestant services, and some are already falling into ruin. The law which forbids clergymen to wear their clerical costume unless they are in Church or at home, has deprived street-life in Mexico of much of its mediæval picturesqueness. The clergy are still recognizable by their high black hats and their long brown or black cloaks, but there are no more nuns or monks. Even the sisters of charity have been expelled from the hospitals; religious processions in the streets are strictly forbidden, and the outward life of Mexico presents as little of a religious character as that of any Protestant town in Germany.

MR. TENNYSON'S "Queen Mary" has been produced at the Arch-Street Theatre, Philadelphia, but as played there it is not, the American papers state, a great dramatic success.

***

THE Colonial Office having shown little disposition to undertake the annexation of New Guinea, a project was set on foot some time back by a few enterprising gentlemen for colonizing the much-coveted island, by means of an expedition which is to be fitted out by a "Colonizing Association," formed somewhat after the fashion of a joint-stock company. The project has obtained the support of influential commercial firms and private personages; among others, of the Marquis of Queensberry, who has subscribed some thousands of pounds, and proposes to join the expedition. The

funds already at the disposal of this "New Guinea Colonization Association" amount to above £10,000, besides a small steamer. The expeditionary force is to consist of 200 volunteers, exclusive of Officers. Officers and men alike joining the expedition, will be required to enter into a contract whereby they agree to submit to the same discipline which is carried out on board her Majesty's ships, and to be at all times amenable to the provisions of the Naval Discipline Act and other regulations in force in the navy. The contract is to hold good until the final annexation of New Guinea by her Majesty's Government. The members of the expedition will receive no pay; but on starting they will receive an outfit, while employed they will have daily rations, and eventually a land order for four square miles of unreclaimed land. The crew of the steamer will, however, draw the same pay as is allowed in the Royal Navy, in addition to which, each seaman is to be entitled to a land grant of 80 acres, each petty officer to 160, and each warrant officer to 320 acres. They are to be free to utilize such land according as they think fit, except by selling it to other members of the expedition. On reaching the island they are to proceed at once to clear sufficient land for cultivating as much produce as will make the expedition self-supporting; at the same time, buildings are to be erected to form the nucleus of a permanent settlement. The natives are to be encouraged to trade with the colonists. The expedition proposes keeping the steamer at the island for trading purposes, and as it abounds in timber, especially teak, they expect to be able to carry on a thriving business. As soon as a sufficient space is cleared and cultivated to make the colony self-supporting, more land is to be reclaimed, and there is to be a complete survey of the island. The programme of these sanguine emigrants winds up with the observation that there will be one or two clergymen attached to the expedition, and that the natives are to be encouraged to keep Sunday as a holiday.

THE BOMBAY REVENUE BILL.

THE Report of the Select Committee on this Bill, and the speeches of Members of Council in elucidation and defence of the amended draft, have come before us at a time when the country is so much engrossed with matters of keener popular interest, that were it not for the imperial importance of the principles involved in the measure, and the vital issues that depend on its enactment, we should prefer to withhold criticism and protest till a more convenient season. But the fittest season to oppose a comtemplated injustice, and to arrest the progress of a mistaken and dangerous policy, is ever the earliest. And in a matter affecting the well-being, contentment, and loyalty of several provinces that have hitherto been on the whole prosperous, contented, and loyal, the present is surely not an inopportune time to appeal to the Government of India to refrain from laying violent hands on privileges which the people of those provinces dearly value, which have not been shewn to be, in any way, injurious, and the loss of which will be accompanied by a deep sense of injustice, and a diminution of confidence in the rulers of the land.

The bill proposes to withdraw from the Civil Courts certain cases which arise in connection with the assesment and collection of revenue in the old provinces of Bombay, and to restrict appeals in these cases to the executive; to overturn the just and sagacious policy of Mount Stuart Elphinstone, which experience has proved to be as beneficent as it was liberal and considerate, and to set up in its stead the more modern and more despotic policy which is careful rather of the authority and self-esteem of revenue officials, than of the privileges, prejudices, and material interests, of the people. The days of Mount Stuart Elphinstone and John Malcolm have gone by. Messrs Hope and Hobhouse are most able and skilful in their respective departments, but, though their intentions are honorable and according to their light, it is not doubtful that they are inferior in statesman-like breadth of view, in knowledge of the native mind, and in large hearted consideration for native feelings and interests, to the heroes of Indian administration whose wisdom they impugn, and whose policy they propose to subvert. Mount Stuart Elphinstone, describing the policy inaugurated by him in those Provinces, mentions among other advantages the following: "that justice may be obtained by means of the *adawlut* even from officers of Government, or from Goverment itself; that the judges are pure, and their purity and correctness are guarded by appeals; and that the whole system is steady and uniform, and is not liable to be biased in its motions by fear or affection, policy or respect." *That justice may be obtained by means of the Adawlut even from officers of Government or from Government itself. That* is the great privilege which the old-provinces of Bombay received from Elphinstone and have hitherto enjoyed, but which the Government of India, now proposes to withdraw. It is idle to assert, with Mr. Hobhouse, that Mount Stuart Elphinstone did not foresee the consequences of his law, in the face of the words we have quoted above, and of Sec. IX of that law which runs as, follows. "First.—The Collector's decision upon any question arising out of the provisions of the preceding sections shall in the first instance, be obeyed and acted upon as the rule. Second.—But if any person shall deem himself aggrieved by any such decision, he may either present to the Collector a petition, addressed to Government, praying for redress, or may file an action against the Collector in the Civil Court under the ordinary rules, or he may pursue both methods at the same time."

It appears that, of late years, the people of these districts have had frequent occasion to contend against the revenue officials in the Civil Courts, and, in not a few cases, have succeeded in obtaining justice "even from the officers of Government and from Government itself." For the official does not defend his case without the sanction of Government, and it is therefore clear, we think, that but for the intervention of the *Adawlut* the complainant would have lost his right. It is not, so far as we have seen, contended that the Civil Courts have erred in their decisions, and if in some degree the revenue has suffered loss, the loss has been more than compensated by the contentment and loyal confidence fostered among the people. The reasons alleged for the proposed changes appear to be purely theoretical, and the only potent reasons we can discover are the desire of revenue officers to escape the control of the Civil Courts, and a passion for uniform legislation without regard to the wisdom of our ancestors and prescriptive rights. That the law in these provinces is different from the law in other parts of India, is a strange argument to use for its subversion, when the weight of evidence appears to show that it has worked exceptionally well. That many of the cases brought before the Civil Court judges, are of too technical a nature to be decided by any but trained revenue officers, is an assertion which ought to be supported by a statement of the cases in which the decisions of the judges can be shown to have been erroneous and mischievous. That embarrassments to the executive, and political difficulties are conceivable as resulting from the present system, would be a more cogent argument if it could be shewn that the state of affairs in the old provinces, contrasted unfavorably with the riots in the Deccan. We are much afraid that the proposed reform is more likely to be disastrous than beneficial, and are certain that more enquiry and far stronger justification are imperatively required before the Bill should become law. We are unable to see that Mr. Hope strengthens his position by appealing to the example of Native States. "In the course of his own "political experience, Mr. Hope had come across numerous "instances in which the British Government had aknowledged "this prerogative in such states. The latest was that of the "Gakewar. In the proceedings connected with the first com-"mission it was never, he believed, questioned that the Chief "had full power to regulate his assesments, or to resume any "or all grants of money or land, whether made by himself or "his predecessors; but it was merely held to be inconsistent "with good government and the preservation of peace and order "to exercise this power in a harsh, capricious, or vindictive "manner." Now if British Revenue officers should, as is not inconceivable, exercise at times a similar power in a capricious and headstrong manner, or acting with the best intentions, but on a mistaken judgment—how are good Government and the preservation of peace and order to be maintained? By giving to the aggrieved party merely a right of petitioning the official superiors of the Revenue officer for redress? By allowing, that is, the settlement of the dispute to be in the hands of the man himself against whom the complaint is lodged, or in the

hands of those who almost invariably act upon his report? Such was not the policy of Mount Stuart Elphinstone, who in addition to the right of presenting such a petition, gave the complainant the right of filing an action in the Civil Court in which there is no partiality and in which the people repose confidence. And that Elphinstone was right all experience for the past fifty years has gone to prove.

Mr. Hobhouse however contends that the collector and his official superiors are not prejudiced parties in cases where complaint is made against the action of the collector. To infer that they are, he considers to be a fallacy, but his exposition of the fallacy is itself we suspect fallacious. He argues that the collector's private interests are not considered in the decision, and that, on the other hand, his comfort depends so much on the contentment or discontentment of the people among whom he lives, that he has a strong motive for wishing that the complainant should receive satisfaction. Such reasoning is more honorable to his disposition and sentiments, than evidential of his acquaintance with human nature. We believe that in almost all cases the collector is upright in his intentions, but, suppose that he has committed an error of judgment. Do men generally review their own errors of judgment without prejudice or partiality, even when they have no private interests at stake other than self-esteem and official reputation? And when a clever officer supports his action by an able report to the Commissioner, does experience show that Commissioners and Governors have no official leanings in favour of their subordinate and against the petitioner? Unpleasant facts of experience refuse to harmonise with the amiable logic of Mr. Hobhouse.

We are sorry if we should seem to say an ungracious thing, but Mr. Hope's advocacy of this Bill must, we fear, be taken as an *ex parte* and in some degree prejudiced statement. Himself formerly one of the ablest of Bombay revenue officers, it has often been his lot to appear as defendant before the Civil Court judges and to receive an adverse decision. We have not the least doubt that in all these cases he had an honest conviction that he was in the right, and that the judgments of the Courts were often galling to him in his official position. He is now an influential member of the Legislative Council, and is naturally eager to deprive the Civil Court judges of a power which was formerly so annoying to himself.

We strongly feel that more enquiry, more deliberation, and far stronger justification, are needed before the wisdom of the proposed change can be accepted as a fact. We appeal to the Government to beware how it disturbs a peaceful prosperous and loyal community by "meddling and muddling" legislation. We call upon the press to snatch time from its observation of the events of the Royal tour to discuss this Bill. "*Light, more light*, is wanted, says the *Statesman*, before the legislature commits itself to this unstatesmanlike, and retrograde and mischievous measure." And we cannot do better than conclude with a quotation from the same contemporay:—"Let the Government of India call for a report of the cases which have been tried in the Admedabad, Surat, Tanna, Rutnagherry, and Canara Courts during the last six to ten years against its revenue officers, and let it be honestly stated in each case whether the plaintiff had not first sought redress in the revenue courts before filing his plaint. We should then see at a glance, how many of these cases would have been barred by the Bill now before Council; to what extent these cases were representative ones; and how far the decision in one prevented litigation in others. Let it be distinctly shown, moreover, whether there is any ground for the suggestion that the cases were of a kind to demand special training in questions of survey and settlement, on the part of the Judge for their adjudication. And let some estimate be formed, if that be possible, of the actual money loss which would have accrued to individuals if their rights, as recognized by the courts had been disallowed by the Government permanently. We might then estimate the amount of suppressed disaffection if not hatred to our rule, that would have been engendered by such disallowance. It is no reply to say that the greater part of India has no such law as Mount Stuart Elphinstone's code. It is an eminently un-English line of argument to take, as Mr. Hobhouse will know. If the law is a good one—extend it to all India but do not repeal it in Bombay."

THE OUDH TALOOKDARS.

"MANY of our readers," says the *Pioneer*, "may be aware that the working of the Oudh Talookdars' Encumbered Estates Act of 1870 has not been altogether successful. The Government has been obliged to reduce the cost of managing the encumbered property, and to this end has resolved to abolish the six special Superintendents, putting the management of the estates under the Deputy Commissioner, assisted by subordinate native agency. At present we believe the cost of superintendence is something like twenty six per cent of the profits—an arrangement which renders the disencumbrance of some of the encumbered states an almost hopeless task." This resolution introduces the principle of managing private property at the public expense. The Deputy Commissioners are paid from the imperial revenues, and lending their services or time to embarassed Talookdars is the same as a grant of money to those gentlemen from the general purse. It probably will have the effect of seriously impeding the administration of the Province, and as it is understood that the Deputy Commissioners can undertake so much work of a private nature only by neglecting some part of their official business, such a measure will be perfectly consistent with the whole of our policy in Oudh since the mutiny. Our land administration after the re-conquest of Lucknow was commenced by a declaration that the soil of the province was confiscated to Government. Lord Ellenborough, then Sectetary of State, denounced the proclamation in which this violent decree was published, saying that other conquerors, after they had crushed armed rebellion, punished the ringleaders and pardoned the misguided multitude, whereas Lord Canning had extended his clemency to the rich Talookdars, and struck down with what they would feel as the heaviest of penalties, the great body of the people. But Lord Ellenborough fell, and Canning's policy was upheld by his successor. Having thus disposed of the rights of the peasant proprietors,rights which we had ourselves acknowledged in the settlement effected before our sense of justice had been impaired by the passions of civil war, we proceeded to transfer the ownership of Oudh to a handful of men called Talookdars, many of them new and bad men, the scum which has risen to the surface during the anarchy which had prevailed for half a century before we annexed the Kingdom. We enacted laws giving to these new proprietors rights over their tenantry, and a power to enhance rents and effect evictions, hitherto unheard of in the annals of Indian administration. Such are these powers that some thousands of evictions are each year registered in Oudh, and the Chief Commissioner considers the number normal and satisfactory. We had by these means, be they good or bad, gained what Lord Canning wished for, a native aristocracy. It, however, soon became apparent that our native aristocrats could not manage to stand on their own legs. They would run into debt, and then came the usual consequences—mortgages, foreclosures, divided estates, and a new middle class, owing its position, not to state favor, but to its own industry and intelligence. It was argued that we had confiscated the rights of the Oudh peasantry, not for these men, but for the native aristocats, and that we should not permit the effects of our policy to be frustrated. If Humpty Dumpty would fall, all the king's horses and all the king's men should be employed to set him up again. With this object was passed the Oudh Talookdars' Encumbered Estates Act of 1870. We have all heard of the first encumbered estates courts, instituted to make it easy for creditors to sell up the land of debtors to facilitate the transfer of land from the improvident to the saving classes. We need hard y say that such was not the policy of the Oudh administration. It sought to bolster up spendthrifts, and to save them in their own despite. When an estate became embarassed, Government was empowered to assume its management, allowing to the proprietor a small sum for maintenance, and devoting the rest of the rental to the payment of the debts by instalments. Under this system, it was supposed that the land in Oudh would be practically entailed for ever, that the handful of Talookdars would never be superseded. It is now however found that the Act will not work. The surplus rental only pays the interest of the debt and the cost of management, leaving nothing for the reduction

of the principal. And so it is proposed or rather resolved, to saddle the state, that is the tax-payer, with the cost of supervision, to make each of us pay something towards the support of our great aristocracy in Oudh. The men who are thus selected for Government bounty are those who have proved themselves unfit to possess landed property, by squandering their means.

It may be asked, what have the Talookdars of Oudh done for the state, that they alone of all proprietors in India should be upheld by this law, opposed as it is to all economy and to all precedent? What great political services have they rendered? The answer is so well known that we cannot object to give it, though writing what will be read by natives we do so with a certain sense of shame. The only merit of the Oudh Talookdars is that they dared to rebel against our Government. In 1857, when the landholders and peasants of other provinces stood neutral, they threw in their lot definitely with the mutineers. They cut off our supplies, recruited the sepoy armies in the field, defended their forts, and probably prolonged for a whole year the curse of civil war. When peace was restored Lord Canning reasoned that our settlement policy had failed to gain over the ryots, who had in the disturbances followed not us but their Talookdars. The leaders had shewn that they retained great political influence. It would therefore be well to please them by giving them the land. It was replied that we had gained possession of Oudh only a couple of years before the mutiny, and that our policy had not as yet had a fair trial, that though good and honest government gains the affections of the people, and saps the influence for evil of such a turbulent class as the Talookdars then were, it cannot be expected to do all this in two years. Such considerations were not attended to, and the talookdari policy was embraced. Our enemies must have been surprised to find that, though beaten in the field, they gained all they fought for.

> He is the victor, only he,
> Who reaps the fruits of victory

Judged by this standard the real conquerors in the rebellion of 1857 were the Oudh Talookdars We can not disguise from ourselves that there is something mean and contemptible in the policy which reverses all ordinary rules to reward those who struck us, and who, we fear, may strike us again. Even if the danger of another struggle in Oudh were real we would rather have seen it faced bravely, than avoided by the confiscation of the property of the weak for the benefit of the powerful, and, at a later stage, by exceptional laws worked at the public expense to the injury of agriculture. And we are convinced that the peril which we thus seek to avoid is entirely imaginary, the foolish fear with which a child looks at a cobra after its fangs have been drawn. The Talookdars held supreme power in Oudh when we annexed the country. They retained their influence for a year or two, and were therefore able to injure us in 1857. But now they are ordinary subjects, raising the rents and ejecting ryots through the Courts which we have established, living in fear of their creditors, until we take from them the management of their estates. The authority founded on violence has faded with the power to commit outrage. Even the most timorous Government can now treat them like other men, on the plain principles of justice. In this particular matter we think that the reported facts should be made the occasion not of a new concession, but of commencing a more equitable policy. The Encumbered Estates Act will not work—then let it be repealed, instead of being altered to the injury of the tax-payer. This course would probably be the best for the Talookdars themselves, who are more likely to be provident if we remove the guarantee against the loss of their estates.

SECONDING OFFICERS.

THE practice of "seconding" officers employed extra-regimentally must have been originated to supply a want. That want could have been none other than that of extra hands required to make up for the paucity of officers available for regimental duties, caused by the withdrawal of officers for duties other than regimental. A battery of Artillery represents both an administrative and a tactical unit, and for these purposes a minimum complement of officers is provided by the State.

Should one be withdrawn for Civil or Staff employment this minimum is reduced, and the possible efficiency of the battery impaired—consequently, to remedy this, "seconding" is resorted to—and the place of the absentee is filled up by an effective officer. Now if we take a battery and, as a very exceptional proceeding, locate it by half batteries or by divisions, the temporary dismemberment of the battery still affords to each officer the opportunity, of fulfilling the duties assigned to his rank and position.

Next, if we turn to the Brigade Field Officers—Colonels and Lieutenant-Colonels, and look to the complement in each of these two grades allowed to a Brigade of Horse, Field, or Garrison Artillery, it will be apparent that even if it were the practice to locate brigades *en masse* or entire, in place of distributing these batteries as the distribution of the other branches of the army demands they should be disposed—it will be apparent, we say, that the complement in each of these two grades is practically excessive either for administrative or tactical purposes.

The late Franco-German war has clearly established that *unity of command and direction* is tactically desirable for Artillery. Imagine, for the sake of illustration, an entire Brigade of Batteries or forty-two guns being employed in action *en masse*—the latest improved modern system of employing guns in action—and that both its Colonels and four Lieutenant-Colonels are with the Brigade. Now seven batteries drawn up in action, with the proper interval between Sub-divisions and batteries, would occupy a frontage of less than half a mile. Now how is it possible to employ advantageously the collective talent of six Brigade Field Officers on so meagre a frontage? What a waste of mental power! What would be the duty of five out of the six Field Officers? Positively nothing. The Battery Commanders, assisted by their full complement of officers, would be able to fight their individual batteries without the aid or interference of the Lieutenant-Colonels, nor could these be employed as gallopers to the Colonel commanding the Brigade. If the batteries should be required to advance in couples or retire by couples, a most unlikely thing—then a Lieutenant-Colonel might find temporary legitimate occupation. If then we view the matter practically, a Brigade of Artillery does not require for the purpose of fighting its guns grouped in tactical units of a battery, the services of its four Lieutenant-Colonels; two is the utmost it could possibly require; and the second Colonel might remain in command of the Captains in charge of the waggons or with the General Officer of the Division.

A recent modification in the administrative command of a Brigade of Royal Artillery, has removed the basis on which the complement of Colonels is determined. It would be more reasonable perhaps to fix the complement of Colonels agreeably to the Army Divisional and District Commands in the Presidency in which a number of Brigades are serving. Thus in Bengal there are six Army Divisions, and five Districts. They are as follows, with Head Quarters and Batteries therein located:—

	H. Q.	Horse.	Field.	Garrison.	Batteries.
Sirhind Division ...	1	2	1	1	4.
Allahabad „ ...	0	0	4	1	5.
Lahore „ ...	1	1	3	3	7.
Meerut „ ...	1	2	3	2	7.
Oudh „ ...	1	1	3	1	5.
Rawul Pindi „ ...	0	3	1	2	6.
Gwalior District ...	1	1	1	2	4.
Peshawar „ ...	1	1	1	1	3.
Presidency „ ...	1	0	2	2	4.
Rohilcund „ ...	0	0	1	0	1.
Saugor „ ...	0	0	2	0	2.
... Totals	7.	11.	22.	15.	48.

These 48 Batteries are located in still further detail as follows—*viz.* 18 in single Battery Stations. Peshawar, Umballa, Meerut, Barrackpore, Lucknow, Meean Meer, and Morar, have each the Head-quarters of a Brigade and 3, 2, 4, 2, 3, 3, 4, Batteries respectively. And Rawul Pindi, Ferozepore, Agra, and Allahabad, have *respectively, 3, 2, 2, 2, Batteries. If* a complement of seven and not less than five batteries, be taken as the command suitable for a *Colonel of Royal Artillery*, the batteries and stations might be so located as to afford

employment to seven out of the fourteen Colonels borne on Indian rolls and paid out of Indian revenues. The other seven Colonels would be available according to their ability for any extra regimental employment which they might be fortunate enough to secure. There would be no absolute necessity to "*seconde*" them since their absence would in no way affect or impair the administration or efficiency of the Brigade, or Divisionally grouped, batteries. They are in fact "*de trop*"—and they might be permitted, as in England, to reside wherever they wished until their services were required. The Lieutenant-Colonels number six for the two Horse, and twenty for the five Field or Garrison Brigades, total twenty-six.

For seven of these twenty-six Lieutenant-Colonels there would be the command of the Head-quarters of the seven Brigades in Bengal, and of four or five more stations such as Ferozepore, Agra, &c. leaving fourteen Lieutenant-Colonels available for other than regimental duty, *viz.* for the manufacturing departments, Survey, Public Works, Sorie Brigades, or for furlough or leave at discretion, and without the necessity for "seconding" them their absence would in no way affect or impair the administration or efficiency of their Brigades.

We have shown that eighteen out of forty-eight Batteries (more than one third) are located in single Battery Stations. Their administrative and tactical requirements or duties are within competency of their Commanders and Battery Officers. But, with but few exceptions, each of these batteries is comprehended in some Divisional or District Circuit of administration and inspection. Again, we have shown that the Colonel commanding the Division, and the Lieut-Colonel Commanding the Brigade Head-quarters in that division, would be and are practically ample for the purposes of administration and drill, except perhaps at Meerut, where there happen to be two Horse Batteries, for which a Lieut.-Colonel would be required. The two Field Batteries would fall to the lot of the Lieut.-Colonel commanding the Brigade located there.

Without disturbing then the existing fixed complement of Brigade Field Officers, which are more than sufficient for all divisional Brigade and other commands suitable for Colonels and Lieut.-Colonels, it is evident that, practically considered, the "seconding" of Brigade Field Officers is not absolutely necessary, nor is it advantageous in the long run to the acceleration of promotion. It is, however, a source of expense which is hardly warranted. It is, perhaps, somewhat injudicious to keep a number of officers at a time of life and period of service when they are perhaps more efficient *all round* than at any other time or period in a state of professional inactivity, looking out and longing for a command by which they may keep up and add to their store of professional knowledge. Take the case of two Lieut.-Colonels, one holding a command for four or five years and the other doing what may be forcibly described as playing second, third, or fourth fiddle in a station for the same period; and moreover causing the existence of the strange anomaly of there being more Colonels and Lieut.-Colonels in a station than Subaltern Officers of Artillery. Now, we have come to the conclusion from personal observation, and from hearsay evidence which can be relied upon, that "seconding" is an absolute necessity for Battery Officers, otherwise our Batteries will decline from the enviable standard to which they have attained under this system of seconding and thereby maintaining the full complement of Officers with Batteries.

But it is different as regards Brigade Field Officers, simply because one half the Colonels cannot be employed regimentally, and the same is practically the case with more than one half the Lieut.-Colonels, and, notwithstanding this, we see the lists crowded with supernumerary Brigade Field Officers. It is a blunder differing in degree only from the army of 400 unemployed and unemployable Field Officers in the Indian Staff Corps.

It we consider the system of seconding from a promotion point of view, we must admit that in the long run it is a fallacy to suppose that promotion is materially accelerated thereby, because "seconding" at one time implies "absorption" at another, and it gives rise to great uncertainty in regard to promotion, since *nemo mortalium absorption horis sapit*—no one knows when absorption is to be made since there is nothing to regulate it.

Since then it is neither advantageous from a promotion point of view, nor absolutely necessary for the maintenance of Brigade efficiency from a practical point of view, but is unquestionably expensive from a State point of view, particularly in the ranks so highly paid as Colonels and Lieut.-Colonels (when unemployed and unemployable), for the pay and allowances in their grades are Rs. 15,540 and 12,384 respectively per annum—seeing this, it may not be inopportune at this present conjuncture, when a new system of R. A. Commands is under consideration for introduction in India conformably with that lately organised at home—a system which is not to entail extra charges on the State—to consider how the disbursements for the ordinance service throughout India can be so regulated and manipulated as to meet the wishes of the Secretary of State in regard to no extra expense being incurred, and the invariable rule which regulates the pay and allowances of officers agreeably to the responsibilities imposed upon them, being adhered to.

The financial aspect being a very important one and sound artillery organisation closely allied to our Home Auxiliary system, which appears to afford an outlet or field for the direct absorption of our superabundance of Brigade Field Officers with Brigades serving in India, we purpose devoting another colomn or two of our space to the consideration of this point on some future occasion.

GODLESS EDUCATION.

IN his great speech on University Reform at the convocation of the Calcutta University in March 1873, the present Viceroy said:

> I confess, Mr. Vice-Chancellor, that it would be very agreeable to my feelings and principles, if high English education were placed in the hands of institutions unconnected with Government. I cannot help feeling the great difficulties which have been placed in the way of education in India, by the necessity under which the Government has been obliged to dissociate it altogether from any religious introduction. I cannot but feel that the adoption, if ever it can be adopted, of the system which was shadowed forth in 1854 will get rid of the difficulty which Bishop Cotton—a most liberal-minded man and a very great authority upon all education questions—said pressed upon him in India as I am sure it has pressed on many of the most earnest supporters of education to whatever religious persuasion they may belong.

Now, here is an ample admission by the Chancellor of the University of the great defect of Government education in India, and it ought to be frankly and fully owned on all hands, that, whatever individuals exceptions there may have been, or may still be, the organisers of the system and its wisest friends have ever been conscious of this defect. A Christian Government has determined, whether wisely or unwisely we are not called upon to say, to attempt the education of a non-christian people without interfering with their religious principles and prejudices. Now it is impossible for a sincere Christian to separate between moral precepts and Christian truth; he cannot teach morality without appealing to the authority of the Founder of his religion, and he cannot appeal to the authority of Christ without ascribing to that authority the weight of divinity. When the *Indian Mirror* and others of like opinions, call on Government to give direct instruction in morals, they are really inviting Government to lay aside its faith and adopt in practice the Brahmoic or Unitarian religion. The *Mirror* sees no difficulty in the way of teaching morality apart from dogmatic Christianity, because the *Mirror* does not believe in dogmatic Christianity; but the Indian Government feels constrained to hold different opinions, and will probably continue to do so as long as it is also an English Government. That it should do so, may appear very absurd, and we can sympathise with the *Mirror*'s incapability of seeing two sides to this question. Still where a difference of opinion exists, it is better, even when it cannot be explained to both parties, that it should be clearly recognised; and it would be well, we think, if a power in public opinion so enlightened as the *Mirror*, would accept the position once for all, that Government cannot and will not take any measures more direct than those now in operation, for the public teaching of morality.

We urge the acceptance of this position on all Indian reformers in the sphere of education, because we believe the

force now wasted in exposing the defects of our present system, and in vainly appealing to Government to do what it is utterly hopeless to expect that it will ever do, might be far more profitably expended in preparing the way for a different and practicable remedy.

The true remedy, if it be found at all, will be found in the direction indicated by Lord Northbrook in the paragraph of his speech which we have quoted, that is to say, in the transference of high English Education from the hands of government to the hands of institutions unconnected with government. That was the policy contemplated by the despatch of 1854, and on the feasibility of adopting and gradually carrying out that policy, depends the true success of education in India. Where doctors differ on points of religion and morality, a government, which does not assume the functions of a theocracy, has but one wise course to adopt with regard to these subjects, and that is to leave the teaching of them in the hands of communities and institutions, and content itself with giving grants-in aid to all schools and colleges that provide a certain amount and quality of secular education. Had the government of India adopted this course, it must have begun its task of educating the people by fostering elementary education, instead of rearing a showy and unsubstantial fabric of high class education confessedly incomplete and incapable of completion. The filtration theory has long ago been proved a vanity of vanities, and the efforts of Government must henceforth be stenuously directed to the encouragement and assistance of the primary education of the masses. Governors or Lieutenant-Governors who strain after a delusive popularity, may now and then be tempted to spend the public funds on increased grants to colleges, but every wise statesman now sees that enough has already been done for these, and that whatever additional expenditure can be incurred, must go to establish and improve elementary schools. The Government grants-in-aid being given entirely on account of the secular instruction imparted, the moral and religious training of the young will be in the hands of the community or the society that supports the school. Can it be safely entrusted in such hands? It is an idle question, for there are no other hands in which to entrust it. Government avoids and must continue to avoid it. Communities and private societies must undertake the work. And the moral training of the masses—at least in this province—should be easier than we had believed, for according to the *Mirror*; "Bengalee boys are as docile, tractable, industrious, and honest, as any nation of school-boys can be. A little management on the part of the tutors, a systematic course of good examples and precepts would turn them into a generation of exemplary men—"as true as gold!" We accept this testimony as worth a good deal, and though our contemporary will be astonished to learn that we believe in original sin, and have our doubts if Bengalee boys are as honest as any nation of school-boys can be, we shall not fail to give due weight to his so strongly expressed opinion in our future observations of the youth of this province.

In proportion as Government increases its assistance to elementary education, it would be well if it could withdraw from the management and support of high Schools and Colleges. That such a course was contemplated by those who framed our education system, and is earnesty adovcated by such enlightened statesmen as Lord Northbrook, is well known, but so long as no practical steps are taken towards its adoption, the natives of the country will continue to upbraid the Government with its defective system and management, while they will take no steps to relieve it of a task which it is incapable of performing satisfactorily, and which it is anxious to transfer to the hands of those whose duty and privilege it ought to be to take up the work and discharge it for their country's good. The time is surely at hand, if it has not fully arrived when Government must in some more direct manner than heretofore, invite the wealthy and intelligent native community to begin to take the mannagement of high class education into its own hands. How this might best be attempted we shall leave for future discussion, and shall expect some assistance from such exponents of native opinion as the *Mirror*.

Meanwhile the evils connected with our present system which cannot be cured, must be endured. It cannot be denied that they exist, and as we have seen, their existence is insisted upon by the Chancellor of the University. But we are far from being convinced that they have not been magnified, and we are certain that the Government has received more than its fair share of blame. The remedy is in the hands of the native community—at least a partial remedy is—and they must begin to apply it. And they should bear in mind that even in Britain where the bulk of the people profess the same religion as the Government, Government is now adopting the principle of giving its grants-in-aid wherever a satisfactory secular education is bestowed, leaving religious and moral instruction to be cared for by the people. And those who complain, as a correspondent complained in these columns two years ago, that morality is being subverted in our Colleges by the teaching of Comptist and infidel professors, should reflect that, even though the truth of their charge be granted, Indian Colleges are not singular in that respect. In England, Scotland, and the Continent of Europe, Professors of all shades of opinion are to be found lecturing in colleges, and are listened to by multitudes of young men, many of whom are destined for service in the Church. That may be a serious evil, but it should at least be remembered that it is not an evil peculiar to this country, and if it be true that the youth of India are less capable than western students of resisting its influences, the fact is but one of many which seem to prove, not that Government should do more for high class education then it has done, but that it has established an expensive and ambitious system of high class education before it had by elementary education and the elevation of the masses, prepared the country to receive it, and profit from it.

SONGS OF TWO WORLDS.*

THE very title of this volume is a protest against materialism and atheism. As such it suggests a thought which has sometimes had expression given to it, that in poetry we ought to look for a presentation of the feminine aspects of truth—of those aspects which are for the most part seized by the feminine type of mind. If such a type had predominated, the thoughts which have moved the world would have presented themselves more in a poetic than in a philosophic guise. There would have been, with reference to the things of the unseen world, more of faith, more of the inner assurance of the reality of that world, less of reasonable conviction, manly enquiry, and reverent doubt. The great doubters and independent inquirers of the world have all been men. The inner struggles of women have been more emotional than intellectual, and have often resulted from the faith within them having developed into superstitious fears. The doubters whose doubting has never ended in conviction, the believing one whose imagination, from too intently brooding over the darker mysteries of the future, has peopled the unknown world with unreal terrors, have erred in opposite ways. The one has needed a little of the feminine disposition to recognise truth as such at its first presentation; the other has needed the masculine faculty of seeing, when seeing is possible, before believing, or of waiting for clearer insight. A well-balanced mind will pay heed to both the leading aspects of the ideas it looks upon as of momentous import. The intimations of immortality are involved in longings unsatisfied, in aspirations never realised in this life. The eagerness with which such intimations are cherished, the suggestions arising from a contemplation of the spring-time resurrection of nature to a new life, the fulness and variety of the life in the future which the mind has been accustomed to see prefigured in the varied manifestations of life in this world, the higher ministry of nature, the mystic teachings of flower and tree, of sea and mountain, the thought that the things which are seen are types of the things not yet seen,—such are the leading poetic aspects of the truths concerning the life beyond this, which the unknown writer of the "Songs of Two Worlds" has unfolded in his carefully finished and tenderly expressed poems. The stanzas headed "Evensong" will, we think, be read with interest by those who still have abiding with them memories associated with quiet grass-grown churchyards in far away England, tender memories they would not willingly let go:—

EVENSONG.

Then slowly I rose to go from my place on the long green grass,
Where so long I had lain in deep thought, and letting the moments pass.

* Song of Two Worlds. Third Series. By a New Writer; London: H. S. King

A great light was flooding all the plains of the earth and the sky,
The low church and the deep sunk vale, and the place where one day I shall lie,
The fresh graves of those we have lost, the dark yews with their reverent gloom,
And the green wave which only marks the place of the nameless tomb;

And through all the clear spaces above—oh wonder! oh glory of light!
Came forth myriads on myriads of worlds, the shining host of the night,
The vast forces and fires that know the same sun and centre as we;
The faint planets which roll in vast orbits round suns we shall never see

The rays which had sped from the first with the awful swiftness of light,
To reach only, then, it might be, the confines of mortal sight.
Oh, wonder of cosmical order! oh, Maker and Ruler of all,
Before whose Infinite greatness in silence we worship and fall!

Could I doubt that the Will which keeps this great Universe stedfast and sure
Can be less than His creatures thought, full of goodness, pitiful, pure?
Could I dream that the power which keeps those great suns circling around,
Takes no thought for the humblest life which flutters and falls to the ground?

Oh, Faith! thou art higher than all. Then I turned from the glories above
And from every casement new-lit there shone a soft radiance of love.

Young mothers were teaching their children to fold little hands in prayer;
Strong fathers were resting from toil 'mid the hush of the Sabbath air.

Peasant lovers strolled through the lanes, shy and diffident, each with each,
Yet knit by some subtle union too fine for their halting speech.

Humble lives, and to low thought, low; but linked, to the thinker's eye,
By a bond that is stronger than death, with the lights of the farthest sky.

Here as there, the great drama of life rolled on, and a jubilant voice
Thrilled through me ineffable, vast, and bade me exult and rejoice.

Exult and rejoice, Oh soul! sang my being to a mystical hymn
As I passed by the cool bright worlds, as I threaded my pine woods dim,

Rejoice and be sure! as I passed to my fair home under the hill,
Wrapt round with a happy content,—and the world and my soul were *still*

The poem "At Last" almost of itself justifies our opening remarks. We cannot resist the impulse to give a few quotations from it :—

Let me at last be laid
On that hillside I know which scans the vale,
Beneath the thick yews' shade,
For shelter when the rains and winds prevail.
It cannot be the eye
Is blinded when we die,
So that we know no more at all
The dawn's increase, the evening's fall;
Shut up within a rotting chest of wood,
Asleep, and careless of our children's good.

Shall I not feel the spring,
The yearly resurrection of the earth,
Stir through each sleeping thing
With the fair throbbings and alarms of birth;
* * * * *
Or should my children's tread
Through Sabbath twilights, when the hymns are done,
Come softly overhead,
Shall no sweet quickening through my bosom run,
Till all my soul exhale
Into the primrose pale,
And every flower which springs above
Breathes a new perfume from my love;
And I shall throb, and stir, and thrill beneath
With a pure passion stronger far than death;
* * * * *
With the last fluttering of the failing breath
The clay-cold form doth breed
A viewless essence, far too fine for death;
And ere one voice can mourn,
On upward pinions borne,
They are hidden, they are hidden, in some thin air,
Far from corruption, far from care,
Where through a veil they view their former scene,
Only a little touched by what has been.
Touched but a little; and yet,
Conscious of every change that doth befal,
By constant change beset,
The creatures of this tiny, whirling ball,
Filled with a higher being,
Dowered with a clearer seeing,
Risen to a vaster scheme of life,
To wider joys and nobler strife,
Viewing our little human hopes and fears
As we our childrens' fleeting smiles and tears.

The present volume has been preceded by two others. Though the singer of the "Songs of Two Worlds" has found many appreciative listeners, he still puts upon his title-page the modest words "By a New Writer." His new songs ought certainly to attract new admirers.

NEW FRENCH BOOKS.

(FROM OUR OWN CORRESPONDENT.)

PARIS, OCTOBER 23.

THE French admire Macaulay for his liberal convictions, and believe he found in his extensive historical studies, those influences which made him so attached to freedom. They seek for his biography solely in his works, and the place only where it can be found, for he had no private life. The forum was his house and the people his family. He was a public man in the sense that others are called domestic men. Not that he was wanting in the private virtues, but simply there was not in him two men. Lady Holland described Macaulay as a book in breeches; but M. Quesnel characterizes him as a *bibliothèque en culottes*, who could assimilate a volume in a day, without ever forgetting a date, a name or an idea. The same writer admits that Macaulay was devoured by ambition, not of that vulgar kind commonly understood, but that which consists in intellectual superiority, parliamentary honors, and political success. Then he was jealous of his mental power. His memory, for which there was no past, was not of the chronological order, abstract, dry, and registering only words. It was a second life communicating with all that he had read. Like a hero of antiquity, he promenaded in the middle of the dead and conversed with them. He has not only lived in the nineteenth century, but in all time and in all places; knowing the spirit of all societies and penetrating the inmost spirits of all great men. It is thus his works possess a peculiar charm. He does not write history as an historian, but as a clever man of the world, the contemporary of the epochs he recounts, and the actor in the events he makes re-live. He did not so much criticise books as write essays about them. M. Quesnel considers, that while Macaulay displayed later the ripened qualities of a practical politician, as an artist and *litterateur*, he has never surpassed his essay on *Milton*. As general traits, mind with him dominated over the heart, and reason over passion; his fault, whether in conversation or writing, was an excess of mental wealth. As Chèrabini observed of Mendelssohn, "he put too much cloth in his coats." He was a magician to whom "all the sepulchres of memory rendered up their dead, and who evoked all the past generations and their thoughts." He was the mouthpiece of ages, of humanity; his was the voice of right and of reason. He was an incessant talker, pouring out floods of eloquence, for one person as for a crowd. His reflections elevated and grave, were run in various moulds; sometimes a phrase marked with the grace and tenderness of Virgil, or again hard and solid as a rock. With him thought even was more elegant than language. In his estimate of Horace Walpole he pays graceful compliments to France; stating that her literature had been for England's, what Aaron had been for Moses; expressing clearly the grand truths discovered by England, proclaiming to the world the great names of Bacon, Newton and Locke, and becoming thus the interpreter between England and humanity.

A volume by the late Philarete Chasles has appeared. "The Social Psychology of new peoples." There is a little of everything in the book, and that will ever bear re-reading. It is full of ideas where the originality of the author and his talent for *rèsumé* are conspicuously displayed. Voltaire, he depicts as a monkey endowed with genius, who defied his enemies by making grimaces at them, sometimes flattering them, always amusing them; gathering the best fruit where he could find it, placing it beyond their reach. He passed his life in dying. He is poor and receives alms from the King of Prussia; he falls on his knees before Mme. de Pompadour, and kisses the hands of the Marshals of France. Afterwards he mocks them all. Becoming rich he appears as the great *seigneur*, builds a church, and sets himself in order before God and the Pope. Indefatigable acrobat still, he scatters gold to the poor, and provides husbands for orphans. He is more iniquitous and beneficent, more mordant, and more obscene, than any person. He embodies all the hates, intrigues, and charities of that delicate yet ferocious society in which he moved. Parisians gave his remains a triumph through the streets, akin to what Scipio Africanus when living received from the Romans. Only Frenchmen could honor thus the King of raillery. Descriptions of Henri IV., Napoleon I., Dumas pere, Dickens, Balzac &c are very interesting.

Sainte Beuve was one of the two or three distinguised *litterateurs*, who rallied to the Second Empire. It must not be understood by this, that he sold his pen. That he guarded his independence is proved by the fact, that he declined to write a review of the Emperor's "Life of Cæsar," considering the work to be of no more importance than an imperial toy. M. de Haussonville has just published "The Life and Works of Sainte Beuve." It is too soon to pronounce a definite judgment on the great critic, as every day reveals documents bearing on his career. The better to comprehend a man of genius, it was the method of Sainte Beuve, to probe more or less his private life. Whatever may be the value or propriety of this process, M. de Haussonville applies it to Sainte-Beuve himself. It is thus we are indebted for the information, that Sainte-Beuve wore no stockings,

and reprimanded his aged mother when she presumed to express an opinion on literary questions above her capacity. But she not the less lived with him till her death at 80. He was more changeable than Hugo or Lamartine, because there was in him not one, but several men. He made the tour of life as a sight seer, and to gain experience. He was so fickle that no philosophic or religious sect could retain him. He was by turns a disciple of Condillac, Levoux, Lamennais, and Vinet; catholic, orthodox catholic, sceptic, atheist, and finally materialist. When he entered a new camp it was not as a spy, but as a volunteer, frankly and sincerely taking service. Though a senator, he did not the less side against the court on important questions.

In the secret correspondence between Marie-Thérèse and the Comte de Mercy," there is not only the life, as already observed, of her daughter Marie Antoinette laid bare, but that of the famous Empress herself. There is no more legend after this publication around the name of Marie-Antoinette. There remains only pity for her fate. On arriving in France, she became the object of enthusiastic popularity, which after a time changed into ferocious hate. Her not having children, was the first cause of her being despised. But then it must be remembered she was seven years married before her husband cohabited with her. And Louis XVI. despite excellent qualities of head and heart, could never attract respect. He was too feeble, to be feared; too good, to be hated too embarrassed and awkward, to be loved.

He thus knew neither how to direct his wife, his court, nor France. His sole weapons against his enemies and family—who were his worst enemies, were silence and resignation, dangerous alike in marriage, as in Government. Like his wife, he was uneducated; his smithy and hunting occupied his ambition. Marie-Antoinette did not love her husband, and made him feel his imbecility. He learned to dance, to please her, to command balls, to amuse her, to buy her diamonds, to satisfy her. She detested the Comte de Provence, who hated and intrigued against her, but liked the Comte D' Artois, who compromised her. Thus both her brother-in-laws contributed to her ruin. She attended secretly, *en domino*, the public masked balls; at the race course, the winning jockey was presented to her. and when she was ill with measles, four noblemen were her nurses. In the mean time the journals and pamphlets depicted the frivolous queen as the abomination of desolation. The Empress intuitively felt certain she was lost, but many blame the mother for "over-advising" her daughter. So much had Marie Antoinette fallen, that the nobility avoided the Court, and at one of her state balls in 1777, only ten ladies appeared! She cried at this spectacle, and resolved to win back society—by gambling. Her brother Joseph II. said, Versailles had became a common gaming-house. She lied also: as, having openly labored to overthrow Turgot, the best minister France had, she wrote to her mother, "I have been a perfect stranger to his disgrace." The correspondence depicts the decomposition of a society sinking by its vices, intrigues, and frivolities; it reveals the first groanings also of that storm which broke over France and swept away the monarchy.

The death of Marie Thérèse closes the volumes; she died as she had lived, a heroine and a Christian. Her doctor told her she had only a few hours to live; she bade adieu to her family and sent them away to avoid seeing her die. Recommended to sleep, she said, "I do not want to appear in that state before my Judge; besides, I wish to see Death coming." "You suffer pain," observed the doctor; "I have health enough to die," was her reply. Ordering the mortuary tapers to be lighted, and asking the doctor to close her eyes, she expired.

Voltaire's Letters have ever been recognised as the text-book of epistolary style, and the first of sources for acquiring a knowledge of French. But so many editions have appeared, where the letters have been cut up, re-arranged, and "improved," that it is a good fortune to meet them in an authentic and faithful form. It is thus that Coustal gives us the "True Letters of Voltaire to the the Abbè Maussinot," which have been copied directly from the manuscript in the National Library. Here Voltaire speaks in a language simple, yet strong, full of gracefulness and politeness, and with all the lightness of an Athenian. In these Letters Voltaire appears full of tenderness, pity, and true friendship, he is at once the most humane of men and the most naif of children, poet and business man, hard worker and dreamer, enthusiast and chemist. They are dated from Cirey, where he lived at the Château of the Marquise de Châtelet, a hermit life, devoted to science and letters. The light and sceptical mind of Voltaire is French; his philosophy and science are English. It is by his residence in England, that the genius of Locke and Newton has been interpreted to the world. Without being deeply versed in mathematics, Voltaire knew sufficient to throughly comprehend Newton. At Cirey he devoted much time to experiments to ascertain the nature of fire. He melted twenty pounds of lead, and found they had increased by five pounds. "This is beautiful" he remarked, "but I don't believe it," for iron, similarly treated showed no increase. Voltaire's mind was evidently analytic, holding rather to abstract science than to geology, &c., He had an insurmountable aversion for systematic explanations, adhered to facts, but was rebellious over their expounding. If the impression of fish existed in the Alps, it was owing to travellers having thrown them away he said so that in time they became petrified. He regretted there were so many species of monkeys and only one of man. Voltaire had a mania for financial operations; he lent money at five per cent for current payments, and at ten, if the loan was for life. He had clients among princes, who never paid him, so he asserted their words were only songs. He was hungry and thirsty after news; the Paris journals of February only reached him in May; they now travel over the same distance in six hours. He had salaried correspondents, to whom he paid "two hundred *livres*" a year; they were only to furnish him with bare facts, no commentaries, and not to write like "cats." He loved money for its power, for what it could procure. Life is short, and with Solomon he said, "it was necessary to enjoy it." Voltaire touched the surface of everything, but fathomed nothing, and consoled himself, that in nature and human destiny all was clear. Wit took the place of unsolved doubt, and a loud laugh served to hush the numerous of the still small voice within.

M. Masperio's work on "The ancient peoples of the East" has become a popular book with students and professors. He makes Egypt live again, and the civilizations that existed in Western Asia, five thousand years ago; yet he has never visited these countries, but by his profound knowledge, has decipherd their histories from the dêbris of their monuments. We feel at home with the Egyptians in their trades, literature, and theology. As they were a mathematical people, their divinities were only the multiplication of a single being.

THE ILIAD AND ODYSSEY OF INDIA.

[*By Edwin Arnold.*]

III.

THE great poem now softens its martial music into a pathetic strain. The dead have to be burned, and the living reconciled to their new lords; while afterwards King Yudhishthira is installed in high state with "chamaras, golden umbrellas, elephants, and singing." He is enthroned towards the East, and touches rice, flowers, earth, gold, silver, and jewels, in token of owning all the products of his realm. Being thus firmly seated on his throne, with his cousins round him, the Rajah prepares to celebrate the most magnificent of ancient Hindoo rites, the *Aswamedha* or Sacrifice of the Horse. It is difficult to raise the thoughts of a modern and Western public to the solemnity, majesty and marvel of this antique Oriental rite, as viewed by Hindoos. The monarch who was powerful enough to perform it, chose a horse of pure white colour, "like the moon," with a saffron tail, and a black right ear; or the animal might be all black, without a speck of colour. This steed, wearing a gold plate on its forehead, with the royal name inscribed, was turned loose, and during a whole year the king's army was bound to follow its wanderings. Withersoever it went the ruler of the invaded territory must either pay homage to the King, and join him with his warriors, or accept battle; but whether conquered or peacefully submitting, all these Princes must follow the horse, and at the end of the year assist at the sacrifice of the consecrated animal. Moreover, during the whole year the King must restrain all passion, live a perfectly purified life, and sleep on the bare ground. The white horse could not be loosened until the night of the full moon in *Choitro*, which answers to the latter half of March and the first half of April—in fact, at Easter-time; and it may be observed here that this is not the only strange coincidence in the sacrifice. It was thus an adventure of romantic conquest mingled with deep religion and arrogant ostentation, and the entire description of the *Aswamedha* is most interesting. The horse is found, adorned with the golden plate and turned loose, wandering into distant regions, where the army of Arjuna, for it was he who led Yudhisthira's forces, goes through twelve amazing adventures. They come, for instance to a land of Amazons, all of wonderful beauty, wearing armour of pearls and gold, and equally fatal either to love or to fight with. These dazzling enemies, however, finally submit, as also the Rajah of the rich city Babhru-váhand, which possessed walls of solid silver, and

was lighted with precious jewels for lamps. The serpent people, in the same way, who live beneath the earth in the city of Vasuki, yields, after combat, to Arjuna. A hundred thousand million snakemen dwelt there, with wives of consummate loveliness, possessing in their realm gems which would restore dead men to life, as well as a fountain of perpetual youth. Finally, Arjuna's host marches back in great glory, and with a vast train of vanquished monarchs, to the city of Hastinapur, where all the subject Kings have audience of Yudhisthira, and the immense preparations begin for the sacrifice of the snow-white horse. This is a passage which, although not perhaps of equal antiquity with much of the epic, may be quoted, for its strange minuteness of ritual and old-world interest.

A golden throne was set up in a high place for Maharaja Dhritarashtra, and beneath that was another throne for Raja Yudhishthira, ; and thrones of gold and sandal-wood were arranged for all the other Rajas and chieftains according to their several qualities and dignities; and the Maharaja and all the Rajas and chieftains took their seats upon the thrones. And all the wives and other ladies of the Rajas came to the assembly and were arranged and seated on their own side, each one in the place appointed for her. And when all assembled were seated, Raja Yudhishthira and Draupadí bathed themselves; and the space of ground required for the sacrifice was duly measured out, and a golden plough was brought, and two bullocks were harnessed to the plough. Then Raja Yudhishthira rose up, and with his own hand drove the bullocks and plough that space; and Draupadí followed the Raja and carried a parcel of all the different grains which were grown in the Râj-Bharata, and sprinkled the grains as fast as the Raja ploughed. And the Brahmins sat along with the ladies, and whilst the Raja ploughed, both the Brahmins and the ladies offered up prayers in his behalf with a loud voice. The space of ground was then covered with four hundred golden bricks, and the sage Vyása, accompanied by Vasishtha and Nárada and other Rishis, seated themselves on the golden pavement. The Raja then commanded that eight pillars should be set up round that golden pavement, and a roof covered with gold was set over the pavement, and a banner was fixed on the top of each pillar. Then eight large pits were dug, in order that the *homa* of milk, curds, and clarified butter might be prepared therein, and eight large sacrificial ladles were furnished for casting the *homa* on the sacrificial fire and large cloths of skin were sown together, on which was placed a portion of every vegetable which is food for man and a portion of every medicinal herb which was produced in that Râj, and the whole was put into the *homa*, and Vyása was appointed to be President of all the Brahmins, who were to obey his orders as to the performance of the *homa*. And all the most famous Rishis were present at that sacrifice, and they selected the most distinguished persons to sit side by side at the place where the *homa* was performed. And Raja Yudhishthira sat with a deer's horn in his hand, and Vyása desired him to command that sixty-four of the principal Rajas and Rishis in the assembly should go with their wives to the banks of the Ganges, that both they and their wives should fill pitchers with the Ganges water, and bring it to the place of the sacrifice. And Krishna, and Arjuna, and Bhíma, with a great party of Rajas and Rishis, each one accompanied by his wife, proceeded to the banks of the Ganges, all with pitchers on their heads; and along with them went a company of musicians with drums and trumpets and other musical instruments, and many dancing girls likewise danced before them. And when those who had gone to the banks of the Ganges for water had filled all their pitchers, they took the pitchers on their heads and returned to the place of the sacrifice, preceded by the musicians and singers and the dancing girls. Then Raja Yudhishthira commanded that splendid dresses should be brought for all those who had carried the water, and he caused both the Rajas and their wives to be dressed therewith, and he put a chain of choice jewels on each of their necks, and put a betel nut into each of their months, and he ordered fires to be lighted in the pits that were dug for the *homa*, and the various ingredients to be presented to the fire. Then the Raja's brethren and kinsmen brought loads of gold and jewels and clothes, together with many elephants, horses, and cows, and gave to each Brahmin in such quantities that they were all fully satisfied and contented.

After this, a throne made of sandal-wood, covered with gold, was brought for Raja Yudhishthira. And the Raja sat thereon, and those around him took off his clothes, and all those persons who had brought water from the Ganges took up their pitchers and poured the water over the Raja's head. The horse was then brought, and the remainder of the water with which the Raja had been bathed was poured upon the horse's head. Then Nakula opened the mouth of the horse and said: "The horse is speaking!" and those around him cried out; "What does the horse say?" Nakula replied: "The horse says: In other yagas wherein a horse is sacrificed, he goes to Swarga, which is the heaven of Indra; but I shall go far above Swarga," Then the horse was washed, and the scimitar was brought, and Daumya put the scimitar into the hands of Bhíma, and bade him slay the horse. And Bhíma lifted up the scimitar to give the horse a blow, when Daumya said: "O Bhíma, have patience a moment while I try the horse." So Daumya took hold of the horse's ear and pressed it, when suddenly milk ran out to the astonishment of all present. Daumya then said to Bhíma: "I see that the horse is pure, and I am certain this sacrifice is acceptable and will be accepted. Now strike!" So Bhíma struck a blow and cut off the head of the horse, and no sooner was the head severed from the body than it mounted towards the sky and soared out of sight, and the body fell down upon the spot. Then Krishna and the other Rajas and the Rishis came up and opened the horse's belly. And when they divided it a light came out of it, and Krishna said: "O Raja Yudhishthira, I have never beheld so clean and pure a horse, and I am now assured that this sacrifice of yours has reached the heaven of Vishnu."

After Bhíma had opened the belly of the horse, the flesh began to smell of camphor, and Daumya took out the camphor-like flesh with the sacrificial ladles, and cast it upon the fire and made *homa* of it, and said: "Indra, take this flesh, which has become camphor." At that moment Indra, with a crowd of gods, entered the assembly. All present then paid their respects to Indra, who came up to Vyása and took the remainder of the flesh, and gave a portion of it to each of the gods, and the smoke that rose from that fire was all perfumed.

Then Krishna arose and embraced Raja Yudhishthira, and gave him joy of his sacrifice, and said, "Be the sacrifice prosperous; for no one has ever performed the like, and the fame of it will last as long as the world endures." Raja Yudhishthira replied: "All that has come to me has been entirely by your favour." Then Krishna, with all the Rajas and principal Rishis, poured pitchers of water over Yudhish thira and Draupadi, and bathed them. Then all that remained of the medicinal herbs that had been brought to make the *homa* was reduced to powder, and a ball of it was given to each of the persons present to eat; and by so doing Raja Yudhishthira gave to each one a share of the merit of that *aswamedha*, and last of all Raja Yudhishthira partook of it himself. Then all the musical instruments struck up a symphony of rejoicing for the close of the yaga; and Kunti, with all her maidens and dependents, manifested every sign of joy, and bestowed great quantities of goods in gratitude to the gods who had enabled her son to perform so great a yaga, and had accepted the sacrifice. And all the materials for the *homa* were collected into one place, and the Brahmins uttered blessings over them and threw them all at once into the fire And when the Raja had finished bestowing his largesses upon the Brahmins, he turned to the Rajas and gave to each a thousand horses of the first quality and a hundred war elephants and one crore of gold coin, and to each of the Rajas' wives he gave everything that was necessary for a bride on her wedding night including gold and precious jewels and splendid clothes. Yudhish thira then gave to each of the sons and kinsmen and friends of Krishna twice as much as he had given to the Rajas; and the next day Krishna took leave and set off for Dwaraka, and all the other Rajas took leave in like manner and set off for their respective countries.

After all these stately celebrations, it might be expected that the great poem would conclude with the established glories of the ancient dynasty. But, if the martial part of the colossal epic is "Kshatriyan," and the religious episodes "Brahmanic," the conclusion breathes the spirit of Booddhism. Yudhishthira sits grandly on the throne, but earthly greatness does not content the soul of man. nor can riches render weary hearts happy. A wonderful scene, which reads like a rebuke from the dead addressed to the living upon the madness of all war, occurs in this part of the poem. The Pandavas and the old King Dhritarashtra being together by the banks of the Ganges, the great saint Vyasa undertakes to bring back to them all the dead, slain in their fraternal conflict. The spectacle is at once terrible and tender. "They all went," says the Mahábharat.

And the day passed away so slowly that it seemed like a whole year to them, and at last the sun went down, and they all bathed in the river by command of Vyasa, and said their prayers, and Raja Yudhishthira and his brethren were on the side of Vyása, and Maharaja Dhritarashtra stood before them, and everybody else stood where places could be found. Vyása then went into

the water, and prayed and bathed ; and he then came out and stood by Dhritarashtra, and called upon the names of each of the persons who had been slain, one by one. At the moment the river began to foam and boil, and a great noise was heard rising out of the waters, as though all the slain men were once again alive, and as though they and their elephants and their horses were bursting into loud cries, and all the drums and trumpets and other instruments of music of both armies were striking up together. The whole assembly were astonished at this mighty tempest, and some were smitten with a terrible fear, when suddenly they saw Bishma and Drona in full armour seated in their chariots and ascending out of the waters, and all their armies arrayed as they were on the first day of the Maha-Bharata. Next came forth Abhimanvu, the heroic son of Arjuna, and the five sons of Draupadi, and the son of Bhima with his army of Asuras. After these came Karna, and Duryodhana, and Sakuni, and Duhsasana, and the other sons of Dhritarashtra, all in full parade seated upon their chariots, together with many other warriors and Rajas who had been slain. All appeared in great glory and splendour, and more beautiful than when they were alive, and all came with their own horses and chariots, and banners, and arms, and every one was in perfect friendship with each other, for enmity had departed from among them and each one was preceded by his bard and eulogists who sang his praises, and very many singing men and dancing girls appeared with them. Now, when these warriors had come out of the river, their widows, and orphans and kinsfolk were overjoyed, and not a trace of grief remained among them; the widows went to their husbands and the daughters to their fathers, and mothers to their sons and sisters to their brothers, and all the fifteen years of sorrow which had passed since the war of the Maha-Bharata were forgotten in the ecstacy of seeing each other again. Thus the night passed away in the fulness of joy, but when the morning had dawned all the dead mounted their chariots and horses and disappeared, and those who had gathered together to behold them prepared to depart. And Vyása, the sage, said that the widows who wished to rejoin the dead husbands might do so ; and all the widows went and bathed in the Ganges and came out of the water again, and kissed, one by one, the feet of Dhritarashtra, and then went and drowned themselves in the river ; and through the prayers of Vyasa they all went to the loved ones they wished, and obtained their several desires.

LETTERS TO THE EDITOR.

SYMBOLS IN GEOMETRY.

To the Editor of the Friend of India.

SIR,—Can you or any of your numerous readers kindly tell me whether in the F. A. Examinations of the Calcutta University, a limited use of symbolic representation in *geometrical* proof, wherein the symbols stand for words and not for operations, is allowed? I think the use of symbols is advantageous both to the examiners and the examinee, inasmuch as it facilitates the work of the former, and saves the time of the latter.

X. Y. Z.

PLAGIARISM.

To the Editor of the Friend of India.

SIR,—As you have inserted in your last issue two parallel passages to Tennyson's,

> " And from his ashes may be made,
> " The voilet of his native land,"

Perhaps you may think it worth while to add a third, which occurs in Herrick's epitaph on his servant maid :

> " From her happy spark here let
> " Spring the purple violet."

It is not necessary to impute plagiarism in the matter to any one. The conceit is one which might very possibly have suggested itself independently to several minds.

F. P. L.

CANALS vs. RAILWAYS.

To the Editor of the Friend of India.

SIR,—A short time ago your correspondent " X. Y. Z." informed the public, that the East Indian Railway was carrying grain at 3·4 pie a ton, a mile, but he was pleased to omit all information as to whether this rate paid all expenses, covered deficits, and was profitable to the company. I now beg to inform him that the Godavery canals, since the recent improvements made in them, are carrying heavy road materials at 1 pie or ½ a farthing a ton, a mile, and that the land revenue increased by 2½ lacs in one year ; the total revenue of the district is now about 55 lacs and before these works were constructed, it was 19 lacs a year. In England railways are paying on an average, 4¾ per cent, but canals there are still paying over 10 per cent. on an average, and the reasons are obvious. Canals in India, besides, save the products of all lands under them from ruin. Railways require to be paid by the community to save the wretched population from famine, and even then there is a deficit against them in the Budget.

SOCIAL DEGRADATION OF SENIOR MEDICAL OFFICERS.

To the Editor of the Friend of India.

SIR,—It has been lately intimated that the Members of the Precedence Committee assembled at Simla were about completing a scheme for regulating official rank in this country. I shall, therefore, be obliged by your allowing me to direct public attention to the Social Degradation which all Senior Surgeons-Major are subjected to by the anomalous relative Army rank which is at present conferred upon them.

In the Army List, these officers are ranked " with Lieutenant-Colonels, but junior of that rank, except for choice of quarters." The consequence is that, at every dinner party in India, all these old and experienced officers, are invariably subjected to the degradation of being superseded by the last Major promoted to Lieutenant-Colonel.

I am holding, as you will observe by my enclosed card, a responsible civil charge, and it is highly necessary that I should be on intimate and sociable terms with all classes of the community, both in the Civil and Military Departments ; as, in consequence of my experience, my professional services are sought for by not one class alone ; but, this is rendered extremely difficult in a society which allows an experienced Doctor of Medicine, who ranks before Admirals and Generals at the Court of St. James, to be superseded by every Major promoted to Lieutenant-Colonel, and even by " ranker " in the Commissariat and Telegraph Department, all of whom enjoy the rank from the date of being gazetted to the same.

In the *Home News* just received, it is stated that Lieutenant-Colonel Barton of the Marines, has been sentenced by a Court Martial to lose four years seniority for circulating false statements reflecting on the character of Colonel Richards, his commanding officer ; so it is to be presumed that all the Senior Surgeons-Major who remain in the service after 20 years service have, by so doing, committed a much graver offence, by being expected to lose seniority for double that period of time ! Under these circumstances it is the duty of Government either to allow these officers to retire from the service with some suitable compensation, or else to modify the Warrant of 10th May, 1873, so as to allow Senior Surgeons-Major to rank with Lieutenant-Colonels, but junior of that rank in all military matters. By either of these arrangements the present anomalous position of the most experienced medical officers in India would be speedily remedied.

A SENIOR SURGEON-MAJOR.

FUTURE PUNISHMENT.

To the Editor of the Friend of India.

SIR,—In some of the letters which have appeared in your Journal on the subject of Future Punishments, the writers have taken for granted that St. Paul and the early Missionaries did not preach on this awful subject ; that they only proclaimed the glad tidings of eternal life ; and that one hindrance to the success of missions in the present day, is to be traced to the teaching of eternal wrath as a punishment for sin.

I cannot think that these conclusions can be gathered from the New Testament records.

I pass over passages which may admit of a qualified meaning.

But, I ask, without the doctrine of Future Punishment in the back ground, what force can such texts as the following have ;—Luke XII, 5, " Fear Him, which after He hath killed, hath power to cast into hell ; yea, I say, fear Him ;" and Mark XII, 42, "Whosoever shall offend..... it is better for him that a millstone were hanged about his neck, and he were cast into the sea"? If there is to be no immortality for the wicked, but one only for those who receive it as the gift of Christ, then what force have these texts? And why was it better for Judas never to have been born? If there is no immortality out of Christ, he will fare no worse than less celebrated sinners.

Let us come to Paul's preaching. In Acts XVII,31, he tells the Athenians that God hath appointed a day in which He will judge the world in righteousness. Is the *result* of that judgment to be well-being for the righteous, but a cessation of being for the wicked? So at least St. Paul does *not* say in Rom. II. 5,—9. He says rather, " indignation and wrath, tribulation and anguish upon every soul of man that doeth evil ;" and in 1 Thess. II, 9, " who shall be punished with everlasting destruction from the presence of the Lord."

I have never seen a satisfactory explanation of Matt. XXV, 46, on the supposition that punishment is not eternal. If the *life* is to be *eternal*, the *punishment must* be eternal too. So argue Peter Chrysologus, Irenæus, and St. Gregory, as quoted by Pearson. I once pressed this text upon a clever barrister, but he shelved it by saying that his belief was not built upon particular texts.

Allow me one more remark. The New Testament is for the million and not merely for the learned. It is written for those who have never heard of Plato, and don't know whether he was a Greek or Roman, Hindoo or Mahomedan. Now I feel confident that the mass of Bible readers, who had never heard of

the controversy, would certainly draw the conclusion that eternal punishment will be the doom of the wicked. Now, it seems incredible to me that God would allow so momentous a doctrine, one so contrary, as they say, to His infinite mercy, and therefore so derogatory to Himself, to be naturally gathered from the Sacred Scriptures, if it were not in the Divine will to punish the wicked everlastingly.

R. R. MEADOWS.

NOTE.—The writer will see, we think, if he reflects on his letter, that this begs almost everything that is in dispute.—ED. *F. of I.*

"THE MONOPOLY GRIEVANCE."

To the Editor of the Friend of India.

SIR,—A correspondent of the *Statesman* writes to say, that there is really no Civil Service grievance, that on the contrary so far from there being a grievance, the fault is that of the Secretary of State, who annually sends out to India more civilians than are required, and thus virtually floods the country with civilianism. Now what are the facts? Every year about forty Civilians are sent out to India, while possibly the actual vacancies are only ten. It is under these circumstances a very natural sequence that until vacancies occur, these superfluous members of a service which is far too highly paid as contrasted with the Military and uncovenanted servants, who have, in those branches of the Services, men equally able as the members of the favored Service, should find promotion slow. Throughout India the highest appointments are held by the members of the Civil Service, who monopolize every thing. There is absolutely no opening for merit out of that service. It has recently been stated by a writer with much truth and with some force of satire in the *National Magazine*, that if Mr. Gladstone had in his younger days been sent out to India in the ranks of the Uncovenanted Service, as many men of undoubtedly good family connexions in India and in England are annually sent out, he would not have risen beyond a miserable salary of Rs. 800 a month as a Deputy Magistrate or Assistant Commissioner in the non-Regulation Provinces, the highest post to which an uncovenanted Civilian is allowed to rise. I would go further still. Take two gentlemen of undoubted merit and abilities at present in India, Sir R. Temple, and Sir W. Muir. If these gentlemen were in the uncovenanted Service, would they have risen to the high appointments which they now hold? Would they have been heard of? Would they not have been kept down; their merits overlooked, their abilities ridiculed, their worth disallowed, their every right to promotion as men of mark, of abilities, or promise, ignored? If there were no Civil Service, it would have been much better for India, both for its advancement in good Government and liberalism, as well as for the development of its material resources.

The few appointments created in the non-Regulation Provinces, were intended as some requital,—a poor one, for services done to the State by European officials trained in India, and who have proved themselves in every way the equals, so far as good and trustworthy work is concerned, of the more favoured members of the Indian Service, which can only be termed a huge monopoly of every appointment worth having in India, without regard to abilities, worth, or talent.

That some good has resulted from the creation of the non-Regulation Provinces, will be best seen by the progress made in the Punjab, in the Central Provinces, and in Oudh. Here the officers have been less paid and the work better done. Take the special Uncovenanted Departments, the Educational, the Telegraph, the Financial; here again the work is done as well as it can be, for less expenditure. The grievance of the Civil Service has really no foundation, and the less said about it the better.

It is said that Lord Northbrook has appointed three officers of the *Civil* Service as a Committee to report on this grievance. It would be fairer if a Military and an Uncovenanted Officer were added to see—

FAIR PLAY.

THE WEEK.

THE past few days have not been altogether unfruitful of sensations. In the beginning of the week, Reuter startled us with the intelligence that the troops in the south of Russia were ready to move, presumably towards Turkey, and that even part of the garrison of St. Petersburg had received orders to prepare for service. This looked so much like business that many people jumped to the conclusion that the long expected crisis of the Eastern question was upon us at last. Russia was about to solve the problem, *vi et armis*, in a sense as favorable to herself as disadvantageous to England, and the tone of the home press and of Mr. Disraeli's last speech left no doubt as to what the result would be. War was talked of—people would hardly talk of anything else—and even the Prince of Wales's visit lost half its interest for the moment. It was said, indeed, that his Royal Highness, who of course could not remain in India in the event of hostilities breaking out in Europe, was likely to be called upon to cut short his tour almost before it had well begun, and go home at once. Fortunately, the latest telegrams are of a more pacific character, Russia, it seems, dreams of nothing so little as of fighting; her army, whether "ready" to move or not, is to keep still; and we are in no danger of losing our royal visitor until that brief season of moderately warm weather, which Anglo-Indians have agreed to call winter, but which to Englishmen fresh from home seems wonderfully like summer, is nearly over. The fact that the visit of the Heir Apparent has so far been a wholly unqualified success, would make it all the greater pity should the occurrence of any untoward event of the kind which a few days ago seemed possible, put an untimely end to it. His manners and bearing have made a most favourable impression, and the enthusiasm displayed by all classes, from the highest to the lowest, is so remarkable that there really seems to be good ground for believing that what is, on the surface, only a pleasure trip, will have considerable political effects in the way of alleviating native dislike to British rule.

WE are preparing to welcome him to Calcutta, and mean to eclipse the Ducks if we can. Houses are being white-washed and repaired, fireworks and flags being collected, and great store of lamps and lamp-oil laid in for the illuminations which are intended to make the first city of Asia look, for a night or two at least, a real "City of Palaces." A new national Anthem "India's prayer and greeting," or "God bless our Noble Prince" has been composed for the occasion by Mr. Harraden, a gentleman who, in the days when Calcutta cultivated vocal music more than now, was the leading spirit of the old Glee Club. It is a charming composition, likely, we think, to enjoy more than a merely temporary popularity, and doubtless many loyal subjects will thank us for the information that copies are to had from Messrs. Harold &Co.,

NEXT to the chances of a war between England and Russia, the discovery of a plot amongst the Burmese at Rangoon to seize the Citadel and fire the town, has perhaps excited the most interest. In the absence of particulars, which have not yet reached us, there is little to be said upon the matter. Nobody here professes to be able to account for the conspiracy, or to guess at its instigator. It would be unfair until we hear further even to speculate upon the possibility of the Burmese court being connected with it in any way, and so we shall say nothing on that head. Some one or other of the many Burmese who have been arrested will doubtless be found willing to throw light upon the origin of the plot, and in the meanwhile Government will of course take the necessary steps to secure the safety of the British residents.

THE murder of our representative, Mr. Birch, at Perak, is to be avenged by a force of which General Ross, now commanding the Presidency District, will have the chief command. The expedition is to consist of 500 men of the Buffs, the 1st Goorkhas, numbering 400, and the 3rd Battery 5th Brigade R. A. with a mountain battery. Four steamers have been taken up for the conveyance of the troops, who will probably embark to-day.

THE report that the Duke of Buckingham, who is expected to arrive in Madras on the 22nd instant, is not coming to India with the simple view of being Governor of Madras, but is destined for the Vice-regal chair, is revived, and is said to be something more than a mere conjecture. What authority it rests upon we are not prepared to say, but there is sufficient likelihood in it to make it worthy of record. Some time ago it seemed as if the Disraeli ministry was doomed, and that the appointment of a successor to Lord Northbrook might yet fall into the hands of the Liberals. But the latest intelligence seems to indicate that there is a possibility, at least, of the ministry more than regaining its popularity in connection with the Eastern question. There is no doubt that the temper of the British nation is such that an energetic policy in almost any foreign question would be rapturously applauded, even if it resulted in a great war. There is a tide in the affairs of governments as well as of individuals, which, when taken at the flood leads on to fortune, and Mr. Disraeli, at the Lord Mayor's banquet, seemed inclined to go on the top of the flood. And if the Tory ministry live till Lord Northbrook retire, we shall probably see the Duke of Buckingham reigning in his stead. He is a good man we believe, but we begin to wonder with a sigh if India will ever be ruled by a great statesman again.

IN Calcutta itself the event of the week has been the contest for the Vice-Chairmanship. As was expected, Mr. Hogg's and Sir Richard Temple's nominee, Baboo Sreenath Ghose, was elected, although Mr. J. B. Roberts was the undoubted choice of the ratepayers. A good deal of private pressure is said to have been brought to bear on the majority of the justices to produce this result, and great and general indignation is expressed at the Lieutenant-Governor's conduct in continuing his support to a Chairman who is for so many reasons so utterly unacceptable to ninety-nine out of a hundred of the inhabitants as Mr. Hogg. If the justices are not to be allowed to choose their own Vice-Chairman, it is evident that the Calcutta Municipality is a farce, and the sooner it is either reformed or abolished the better. Some radical

change in its constitution will, we believe, be forced upon the government by the amount of public excitement caused by this last attempt to stifle inquiry into certain holes and corners of our Municipal administration which are not thought capable of bearing as much light as Mr. Roberts, if only armed with the necessary authority, might be as able as he now is willing to throw upon them.

MONEY MARKET.

FRIDAY, 19TH NOVEMBER.

THERE has been rather a larger demand for money this week but rates are quite easy, and the Bank of Bengal is not yet being called upon to assist trade:—a reduction of 17 Lakhs in the deposits represents the amount taken by the public during the week, for the changes on the other side balance each other:—Loans and credits have been paid off to the extent of nearly 12 lakhs, but Bills have been discounted to the same extent. Trade is now beginning to make itself felt in the money market, and it will be strange indeed if stiffer rates do not set in very shortly. Import business has become dull again, whereas exports are increasing in volume and value: very large quantities of Jute are going forward, and although at the moment there is less doing by shippers owing to the higher demands of balers, there will be a deal more to ship very shortly. Another considerable sale of Tea took place yesterday, and buyers operated freely, obtaining however only a slight advantage over previous prices. Rice and Wheat are coming into the market, and will be shipped to Europe. Then on the 23rd there is the first Indigo sale, and sales will go on regularly till the turn of the year. The extraordinary thing is that money has got so cheap, and has remained cheap so long, but the fact may possibly be explained in some measure by the great decadence in share and Government paper speculation which has taken place in the bazaar of late. A most remarkable phenomenon in the Money market has been the decline in Sterling Exchange which has been going on since the poojahs:—on the resumption of business, Document Bills sold at 1-10-9/16, and by yesterday afternoon they had declined to 1-10-3/16, and that in face of the large shipping business above mentioned. There must surely have been very large sums of unemployed money in the hands of bankers to lead to this result, for it would be a dangerous game to buy so freely so early in the season if funds had to be provided afterwards.

The buying having been so keen, it may possibly be that the buying power is now pretty well used up, but as yet there is not much sign of holding off:—still, there must be large sums of bills to place during the next two or three months, although so large an amount is already arranged and perhaps provided for, and a reaction from the present very low level of exchange is a most probable contingency. For to-day's mail, rates have greatly disappointed buyers, who have consequently restricted their requirements as much as possible. Bank paper opened at 1-10 3/16, with an appearance of strength which did not last; and immediately remitters came into the market, a drop to 1-10⅛ ensued: that too lasted only a short time, and when the Council Bill quotation of 1-9 9/16 came out yesterday morning, quotations became utterly disorganized, and only one of the Banks would name a selling rate at all: that was no better than 1-9 15/16 for six months sight, and a moderate amount was taken:—also some Telegraphic Transfer at 1-9 7/16. Credit Bills have been sold at from 1-10 3/16 down to 1-10 1/16, and documents bills from 1-10 5/16 down to 1-10 3/16. Although a reaction is not improbable, their cannot yet be said to be any turn in the tide, and quotations are not over firm at the undernoted rates:—

Bank Bills	1-9 15/16	6 months' sight.
Credit Bills	1-10 1/16	
Document Bills	1-10 3/16	

The rates on China became firmer towards closing of the direct steamers, and thirty days private paper went at 219½.

The most noteworthy incident of the week has been the settlement of the vexed question of the disposal of the Bank of Bengal shares belonging to Government, and the way in which the matter has been arranged, and the terms on which it has been arranged, are such as should give satisfaction to all parties.—Since the Government would not be content with merely withdrawing their money and share of reserve, which we still maintain would have been the proper mode of retiring, it was far better for the Board to meet them at once, and buy them out, especially as the terms are not onerous, though still better for Government than they would have been likely to secure by their first bright idea of supplying the open market. The Government will therefore receive back their twenty-two lakhs of rupees, with 22½ per cent. added, which will make the total sum close on twenty seven Lakhs, so that the reserve fund will have to lose about five lakhs, less what may be realised in the way of premium on the odd 200 shares which will have to be placed amongst the public to keep the Bank's Capital at the even amount of two crores. The two thousand shares, representing two Lakhs of Capital, will be cancelled.

There has been less strength in Government paper this week, but prices have receded very little:—after the large buying that had previously been going on, a pause is only natural and there is now no bazaar speculation to inflate prices. The course of the market are as follows:—

4 per cents	102.1, 2.2, 2.1, 2.2, 102, 101.15, 102.
4½ „	103.2, 103.
5½ „	107.14, 108, 8.3, 107.14, 108, 107.14.

and prices are now quoted:—

4 per cents	102	rather firm.
4½ „	103	
5½ „	108	

The only appearance of life that the share market has exhibited was an excited demand for Bank of Bengal shares, on announcement of the settlement with Government. From 1,350, the price rapidly advanced to 1,475, buyers but no sellers, but very few shares were obtained, and the highest business reported was done at 1,465. Since then the price has become weaker, and transactions have taken place down to 1,430, which is about 20 rupees higher than the shares stood at before the original proposition of Government was made public.

Spinning Mill stocks have a very firm look, and the paucity of transactions is explained by general unwillingness to sell. The approaching dividends of working concerns are being looked forward to with interest, and they may perhaps surprise those who have taken a gloomy view of the crisis through which the trade has lately passed. There is not the least improvement in Tea shares, and they have been almost a blank in the list. The week's business has included little else than the following:—

Bank of Bengal, 1,410, 30, 60, 65, 40, 35, 1,430.
National Bank, 113, 12, 10, 11, 110.
Barnagore Mills, 96.
Howrah Mills, 77, 8, 9, 8, 79.
Singell Tea, 99, 7, 6, 7, 98.
Durrung Tea, 73.
Burkola Tea, 101.
East India Tea, 83.
India General Steam, 390, 96, 400.

The English Mail of 29th October will be delivered here on Sunday morning.

THE PRINCE.

ON the evening of the 12th instant, the Governor of Bombay gave a grand dinner party to the Prince of Wales at the Elephanta Caves, at which numerous and distinguished guests were present The banquet was held within the Caves, which were brilliantly illuminated, and presented a picturesque and fairy-like appearance. On the return voyage, as the Royal barge steamed up the harbour, the whole squadron and fleet of merchant vessels were illuminated from the water to the masthead, and bouquets of rockets were fired from each frigate, making an imposing spectacle.

On Saturday the Royal party started for Poona. On arrival at the station the Prince was received by Sir Charles Staveley and suite and other high officials. A large force of Military, European and Native formed a guard-of-honor, joining the procession to Gunnesh Khind. An immense concourse of Natives assembled along the route, and gave the Prince a most loyal and enthusiastic reception. The triumphal arches, which were erected at different stages, were elegant, and there were tasteful decorations throughout the city in general.

A pyrotechnic display took place in the evening. In reply to an address presented by the inhabitants, the Prince said that it gave him great plasure to visit a city so full of historical associations and in which centred so much of the intellectual life of the Mahratta people, as Poona. He was glad to think that British rule in the Deccan enabled the students in native schools and colleges to benefit by the results of western progress, whilst still having within their reach all that is recorded in the most ancient language of the Hindoos. On Monday morning the Prince visited the Parvuttee Temple, and in the afternoon, attended by a brilliant suite, reviewed the troops in garrison. His Royal Highness arrived on the ground shortly after five, and at once passed along the whole line, and took his place at the saluting point, when the troops, consisting of two European and seven Native Infantry Regiments, besides two-and-a half Batteries of Field Artillery, marched past. During the review, Lord Beresford was thrown from his horse, but sustained no serious injury. The town was illuminated at night, and a display of fireworks took place at the Bund.

Shortly after midnight the Prince left for Bombay, where he paid a visit, on Wednesday, to the Parsee Towers of Silence. He then drove to the Walkeshwar Hindoo Temple and holy tank, from there to Government-house, Malabar Point, and to the Hindoo burning ground, Sonapore; he watched the cremations with interest. He afterwards visited the Crawford Market and European General Hospital. In the afternoon. His Royal Highness presented new colors to the 21st Native Infantry. The ceremony is described as having been most interesting and impressive. His Royal Highness passed along the whole line, and inspected the troops, who looked splendid, and performed the march past and various manœuvres with great precision, to the evident satisfaction of the Prince. There was a very large force on the ground, consisting of the Horse and Garrison Artillery, 3rd Hussars, 2nd Queen's Infantry, and three Regiments of Native Infantry, besides two Regiments of the Poona Horse. There was a large and distinguished assemblage present. In the evening a grand display of fireworks took place on the Esplanade, where there was an immense concourse of Natives and Europeans, who were highly pleased with the magnificent devices and arrangements. The affair was an unqualified success. At night a grand State Ball took place at Government House.

ON Thursday more visits were paid, and at midnight His Royal Highness left for Baroda to enjoy a few days' shooting. The Prince's visit to the Gaekwar is said to be causing some perturbation amongst the Nizam's deputation, who had hopes of seeing him at Hyderabad. That is now out of the question, but it appears just possible that some members of his suite may be sent as a special deputation to the Nizam. What will be the next stage in the Prince's tour is, while we write, uncertain. The accounts of the spread of cholera in the Southern Mahratta districts and the Madras Presidency are so alarming that the trip to the Gairsoppa Falls, and the shooting expedition from Beypore, have been given up, and no one knows what further changes may be made in the original programme.

INDIAN INTELLIGENCE.

BENGAL.

DR. STAPLES, Physician to the Lieutenant-Governor of Bengal, is going home for good, his term of service in India having expired.

SIR RICHARD TEMPLE has revived the rule that those who wish to apply to the Lieutenant-Governor in person for any appointment may send their applications to the Private Secretary.

CHOLERA is said to be spreading throughout the Dacca District. The Commissioner has deputed the District Superintendent of Police to enquire into the rate of deaths in the villages of Shologhar and Hashara on the representation of the people of that quarter.

WE regret to learn that Mr. Cecil Stephenson of the East Indian Railway has been ordered home, from the effects, we presume, of his recent accident. Mr. Roberts, it is supposed, will resume office.

The death of Mr. Latimer, who was on his way to England to recruit his health, has just been announced.

THE *East* says: "While titles are being conferred on deserving men, we have to bring to the notice of Government the public spirit and liberality of Baboo Soorjo Kant Acharji Chowdry of Mooktagacha, in Mymensing. He has lately spent more than a lakh of rupees in building a bridge in the district. He also made a donation of Rs. 10,000 for the Northbrook Hall. We hope his claims will not be overlooked by Sir Richard Temple."

IN consequence of a representation made by some of the pleaders of the Calcutta Small Cause Court to the Judges, with reference to the impracticability of shutting out entirely the brokers who have for years followed that calling, in fact from the time the Court was established, the Judges have requested the pleaders to form themselves into a committee, consisting of some six in number, for the purpose of selecting from a large number of brokers those they consider the most eligible.

THE First Judge of the Calcutta Small Cause Court has delivered judgment in the case of Howard *vs.* Carriero, dismissing the suit and certifying the case as a fit one for the attendance of counsel. Mr. Remfry having filed his points the judgment was made contingent upon the opinion of the High Court. Mr. DeSilver, for the defendant, stated that the case ought to have been certified for both counsel and attorney, as Mr. Heckle had instructed Mr. Bonnerjee. The Judge said that Mr. Heckle was not present—Mr. DeSilver said that he appeared for Mr. Heckle in the case. If the court could not certify the case, the costs might be given in the shape of compensation, as was frequently done. It was hard that the defendant should be out of pocket. The Judge said that he was not aware of the practice to give compensation when the case was certified.

NORTHERN INDIA.

MR. BURKITT, the special magistrate deputed to Saharunpore to try the Goojur adherents of the Landhoura claimant, has accomplished his mission by convicting six of them.

ADHESIVE labels are supposed by the Commissioner of Stamps, N.-W. P., to facilitate frauds which could not have been perpetrated under the old system of impressed stamps. The Lieutenant-Governor has accordingly ordered an inquiry, and Collectors of districts are called on for reports.

A SAD accident has happened at the Revd. Mr. Sell's School at Mussoorie. A boy named Bramley, the eldest son of Major Bramley, was the victim of a gun accident. It seems that a boy named O'Brien, 16 years old, had a loaded single-barrelled gun, and while in the act of capping it, the gun went off, discharging the shot into poor young Bramley's ear, and killing him. The deceased was 11 years of age. His body was followed to the cemetery by the whole of his school-follows, with whom he had been a great favourite.

SIR ANDREW CLARKE, the Minister for Public Works, recently inspected the head works of the new Sirhind Canal at Rupar. These are described as in good progress, though the floods of the year have thrown them back. The width of the canal is 200 feet at the bottom, and it is to be spanned by masonry bridges at every 3½ miles. The new Sirhind Canal Railway is the subject of a glowing eulogy in the Lahore paper. It is said to have cost but Rs. 27,000 a mile, and to run its carriages as smoothly as the S. P. and D. line, at a speed of 35 miles an hour on special occasions.

THE Lahore paper announces the death of Mr. A. R. T. Robertson, Judge of the Small Cause Court of Peshawar, and formerly the Deputy Registrar of the Chief Court. Mr. Robertson was nominated Officiating Judge of the Lahore Court of Small Causes, and having been relieved by Mr. Ryall was about to start for Lahore to take up his new post, when his death occurred, Of the uncovenanted servants of Government in the Commission, he was one of the most promising judicial officers, and throughout his career won the respect and good opinions of his superiors and of the Government that he served with such ability.

THE Palampore Fair has failed to attract any considerable number of traders from beyond the frontier, and those from our side are confined to a few from the district. Up to the 5th instant about thirty ponies, some mules, and about a dozen cattle were on the ground. The number of cattle will probably increase before the prizes are awarded; what gold dust, &c., the Yarkundis brought with them has been sold, as have also two of their ponies,—one fetching Rs. 200, the other Rs. 130. These were the best animals they had with them. The fair is still young, and may improve before, the end of the month.

A MOST commendable characteristic of the Jeypore Chief, says the *Mirror*, is his remarkable interest in English newspapers and his regard for enlightened public opinion. Every evening, after retiring from the billiard-room, he sits down quietly to hear what the Press has got to say upon current topics. Each important item of information, each editorial containing sound reflections on the great questions of the day, is translated in his hearing, and the Maharaja not only hears with patience and avidity, but takes up some of the most important subjects before him, and discusses them in all their bearings with keen and intelligent interest. Few would believe that His Highness is thus engaged till about 1 A.M. And yet this is a fact, for which we have unquestionable authority. In a native sovereign what occupation can be more rational and honorable? Can a European potentate spend his leisure hours more profitably? If the Jeypore Maharajah really seeks recreation, and finds pleasure in newspapers, he is setting a good example to those Native Chiefs whose evenings are given to frivolity and dissipation.

BOMBAY.

THERE were four deaths in Bombay harbour last week. On Monday the chaplain of H. M. S. *Raleigh* died, on Wednesday two men of H. M. S. *Narcissus* from *coup de soleil*, and on Friday a first class boy on board H. M. S. *Serapis* died from fever brought on by exposure to the sun.

THERE is a good deal of sickness in the Yerowda Jail at present. Out of fourteen hundred prisoners there are about one hundred and twenty on the sick list. A very bad malarious fever is carrying them off very rapidly; there is a defective system of drainage of the fields and flats in the immediate neighbourhood.

THE Captain and Officers of H. M. S. *Raleigh* have subscribed a handsome sum of money for the erection of a monument over the grave of thelate Rev. Ward Mellwaine. The monument is to be of stone, and although costly will be very neat and plain.

FROM the 25th of November 1874 to the 15th of June 1875, the receipts on the Wardha Valley Coal Railway were more than enough to pay the working expenses. This line, a broad gauge one, connects Hinganghat with the G. I. P. Railway, and was opened last February twelvemonth. Up to the date of the last report, all receipts were taken from local traffic, no coal having as yet been carried. Until it brings coal to the G. I. P. Railway the most important function of the line will be unfulfilled. The Chief Engineer hopes that by next April the trains will be run right up to the Warora colliery.

THE *Bombay Gazette* says: "Our special reporter at the Dockyard on the day the Prince landed mentioned the feeling of annoyance which agitated the heart of the Maharana of Oodeypore, because he had been placed beneath the Gaekwar. A contemporary yesterday supplemented our observations by stating that the Maharana was so incensed that after he was introduced to the Prince, he left the Dockyard hurriedly, and permitted the procession to take care of itself. Yesterday we intimated that the Maharana intends to leave Bombay to-day, and as it has occurred to us that the public might reasonably imagine that His Highness was quitting us thus suddenly because he was still incensed about the Dockyard incident, we think it right to state that he had made his arrangements to return to Oodeypore to-day several days before the arrival of the Prince. The reason of the Maharana's departure is a very simple one—the Viceroy intends to visit Oodeypore in the course of his trip up-country, and the Maharana has gone before in order to make the necessary preparations. If he is displeased at anything in Bombay, the Maharana does not show *it* much—he looks, on the contrary, as though he is decidedly of opinion that life is not altogether a burden, and that his visit to Bombay has not been an unpleasant one by any means."

THE *Pioneer's* correspondent says: The old prodigal hospitality, which is little more than a tradition elsewhere in India, still survives in Bombay. And certainly the ball of Wednesday was managed in grandiose style. Only in one respect was there room for criticism: the show of beauty was somewhat deficient—not up to Simla—not even perhaps to Allahabad mark. Yet there were some pretty faces, and a few, though strangely enough *only* a few, well-dressed women. The first quadrille in which the Prince took part was a good deal crowded on; of course this was *not* rudeness of curiosity, and it *was* loyalty of a fashion; but it would have been surely better to let him take his amusement simply and quietly. How well royalty can appreciate simplicity and naturalness in society, was shown by a little incident this same evening. A foreign lady of rank and title (but who is married to an Englishman, and speaks English capitally) was solicited by His Royal Highness for "the next dance." She was engaged, but most ladies, at any rate English ladies, would, under similar circumstances, have chucked over their pre-engagements with exultation. The Marchesa, however, simply said, "Oh, I am so sorry, your Royal Highness, but I am engaged." The Prince replied very nicely:—"Oh, it is I am who am sorry; but I hope you will give me the first you have disengaged." And he claimed it and had it; and his manner to his fair partner showed that he certainly bore her no malice.

MADRAS.

FEVER has broken out in Madras, and about fifty boys in the Civil Orphan Asylum are laid up. Six or more boys in the Doveton Boarding School are also laid up.

THE Commissioner of Police, Madras, has been requested to make it generally known that the use of *scarlet* liveries is improper, that colour being reserved for the servants of Royalty and of its chief representatives.

ON account of the alleged insalubrity of the climate of Trichinopoly, orders have been received for the removal of the centre of the Garrison Instruction for the southern portion of this Presidency from Trichinopoly to Coonoor.

THE collector of Coimbatore has a good many elephants for sale He has seven available, and has been authorised to sell the whole

at an upset price of Rs. 12,100. One of the elephants now in charge of the Collector is said to be worth three thousand rupees.

ONE hundred rupees have been paid to two Hindoos who saved the lives of seven others out of a batch of fifteen fishing in a raft in the Kowsila branch of the Godavery, at Gungalakurru, in Amlapoore talook. The raft in which the fifteen were fishing capsized.

DURING the absence at Bombay of H. E. Sir [illegible] nephew Mookurrrum Ood Dowlah Bahadoor, a high officer [illegible]ad to conduct affairs. On that State, will remain at Hydera[illegible]ookurrum Ood Dowlah Baha- Sir Salar's return to Hyderabad, M[illegible]ay his respects to H. H. Highness door will visit the Presidency to [illegible] the Prince of Wales at Madras.

GRAND preparations are be[illegible]ing made at the Madras Arsenal for the reception of H. R. Highness. The Armoury, which contains one of the largest collections to be fo[illegible]und anywhere of Asiatic weapons of war, most of which have been captured in battle, ancient and modern, m[illegible] All the cannon taken in war, in India, Burmah, China, and Pe[illegible]rsia, by the Madras Army, are to be exhibited is being re-arranged within the walls. The building inside and outside in the open square [illegible]nd blue-washed, and every portion of the establishment is being pu[illegible] into order for the Royal visitor.

A NATIVE [illegible] convert, rejoicing in the name of Solomon, has been of having kidnapped a young girl of the name of found guilty, who was a pupil in the school in which he was Mary Ann. The girl had been reading for some time under him. teacher, [illegible]evailed upon her to leave her mother's protection, and the pair proceeded up-country. After living together as man and wife for a few days, the man ran away, leaving the girl at Caroor, where she was eventually found by her friends. A warrant was issued for the apprehension of the teacher. He was arrested and brought down to Chingleput, where he was put upon his trial on a charge of kidnapping the girl, who was under age, for an immoral purpose, and having been found guilty both by the evidence and his own confession, he was sentenced to be rigorously imprisoned for one year and to pay a fine of Rs. 500, or in default to suffer rigorous imprisonment for a further period of six months.

AN important point has been decided by a full bench in the Madras Small Cause Court, Messrs. Fox & Co, sued the P. and O. Company for damages done to certain packages consigned to them. The P. and O. Company, amongst other defences, relied upon one of the exceptions contained in the Bill of Lading to the effect that they would not be liable for any damage caused by leakage or negligence or default of the Master, Mariners, or servants of the Company. The case was originally tried by Mr. Runganada Shartry, who held that the Bill of Lading and the exceptions contained in it had nothing to do with the case. The full Court granted a rule *nisi* for a new trial, and the matter came on for argument yesterday. Mr. Tarrant, instructed by Mr. Wilson, appearing for the plaintiffs, Messrs. Fox and Co., and Mr. Miller, instructed by Mr. Morgan, appearing for the defendants, the P. and O. Company. Mr. Tarrant argued that the Bill of Lading was not the contract between the parties, but only a receipt for the goods—that the exception relied on was an unreasonable one—and therefore should be held as bad. But their honors, including Mr. Runganada Shastry, held unanimously that the P. and O. Company were protected by the terms of the Bill of Lading—and accordingly they gave judgment reversing the judgment of the 2nd Judge, and recorded a judgment for the defendants, with costs of Attorney and Counsel.

A MOST daring and outrageous murder was committed in the lines of the 36th N. I., at Bangalore, by a scavenger attached to the regiment, on the person of a Cotwall on the morning of the 7th instant. It would appear that the scavenger was in a state of intoxication, and went to a female vegetable vendor and asked her for three pies worth of bringals. The woman complied with his request, but the man demanded the balance of eight annas, which he said he had given her. The woman remonstrated and said he had only gave her three pies, whereupon an altercation took place, and the Cotwall of the regiment was sent for to settle the dispute. On the arrival of the Cotwall, he endeavoured his utmost to prevent the scavenger from creating a disturbance, but as he found that all his persuasions were in vain he told the scavenger that he would have to take him to the guardroom. Thereupon the man in a violent fit of passion, struck the Cotwall a severe blow with a thick bludgeon that he had with him at the time, on the right side. The blow was so severe that death was instantaneous, and no information being reported to the Chief Inspector Baylis, the body was removed to the Bowring Civil Hospital, and on a *post mortem* examination being held, it was found that deceased's right lower rib was fractured, the spleen much injured, and the liver very much lacerated. The scavenger is at large, and it now depends upon the police to use their detective powers in bringing the offender to justice.

BURMAH.

A CHITTAGONG correspondent says:—"The rice crop of this district will not be a full one, I fear. One or two native zemindars are endeavouring to dissuade rice *growers* from selling direct to shippers, persuading the growers that they obtain better weight and prices by selling to *them*. This dodge is doing much injury to the trade, and will not benefit the grower eventually.

WE learn from the *Rangoon Mail* that the judgement in the case of the *Union Bank of Australia* versus the *Oriental Rice Company and W. Irvine*, in which the plaintiffs obtained a decree for over £16,000, will probably cause another change in the ownership of the mill, once known at Poozondoung as the Oriental Rice Company's, and which was worked last season by Messrs. Irvine, Leckie and Co. The mill is not at preseut working; and, in addition to the decree passed in the Recorder's Court, both the local banks are said to have claims against it.

ASIA.

THE Russian *Invalide* gives the following details of the late fighting near Marghilan, in Khokand: "Abduracham Avdobadschi had collected 10,000 men near Marghilan, with the object of again attempting resistance to the Russian troops. Kaufmann having received information of this, proceeded to the Marghilan, but Avdobadschi retreated to avoid an engagement. Colonel Scobelew went in pursuit, and on the 21st of September the Cossacks under [illegible] command overtook 5,000 men, whom they completely routed, captured three bronze guns. The retreat then became a rout, and the force fled through Ka[illegible]assu. The Cossacks continued the pursuit as far as Uscha, but returned to Marghilan, after having lost all trace of Avdobadschi, on the 25th of September. When last seen, he had but five followers with him. One hundred men of the Russian main body remained in the district, however, in case the fugitive should re-appear. Deputations of the inhabitants arrived from all parts, offering submission to the Russian authorities." General Kaufmann's aide-de-camp has left Tashkend for Livadia to make a report to the Emperor upon the campaign in Khokand.

THE following is an extract from the Ladakh Diary to 17th October:—

On the 18th instant, I returned to Ladakh, from temporary absence on duty at Srinuggur. During this interval, the season's caravan had brought down some fairly large consignments of goods from Yarkand, but all the same, I anticipated that a larger amount of merchandise would have arrived than has actually reached this. There are a considerable number of loads lying on the other side of the Kardouz Pass (which for some days, owing to heavy snow, was closed) awaiting onward transport, but even including them, I take it, there must still be a proportion of merchants. who have voluntarily or otherwise deferred their departure from Yarkand until a late date, for as yet the total importations from Turkistan are not up to the mark of those of last year. Last year, however, the caravan was very late indeed in arriving. Among the recent importations are eighteen loads of the Central Asian Trading Company, chiefly consisting of China ware, silk, and pushm. Eighty loads are reported to be following these, and should arrive here shortly.

Very heavy rain for the third time this year fell in Ladakh on the 25th and 26th of September. The fall occurred most opportunely for the harvest which was just being garnered. In the early autumn the crops promised to yield an unusually abundant harvest, but this has not been the case, the actual yield being under, though, as far as I can ascertain, not very much under, that of previous years.

The value of the business transacted in Ladakh during the past month aggregates about Rs. 30,000, the commodities concerned being chiefly silk, pushm, and charras.

Gold dust, which used to be one of the staple commodities of Yarkand export fell off to a large extent last year among the annual exports, and for this reason hardly any at all has reached here.

The traffic of the past month has comprised sixty-seven horse-loads from India, eighty-seven from Cashmere, ninety-five from Yarkand, and fifty-two from Chinese territory; while one hundred and forty-two have gone out to India, fifty-seven to Cashmere, fifty-eight to Changthan, and eighty-seven to Turkistan.

MILITARY.

LIEUTENANT TEMPLE of the 37th N.I., son of Sir Richard Temple, and Lieutenant Porter of the 28th Punjab, N. I., have been selected as Aides-de-Camp to His Honor the Lieutenant-Governor of Bengal.

COLONEL F. M. COLVILE, C. B., just now commanding the 43rd Regiment of British Light Infantry, stationed at Cannanore, proceeds to England immediately with a view of arranging for his retirement upon half pay.

LIEUTENANT SPOTTISWOODE, 43rd Light Infantry, was found dead in the jungles near Metappolium (Neilgherries) on the 5th instant. He is supposed to have committed suicide whilst in a state of temporary insanity, caused by an abscess on the brain.

HIS Excellency the Commander-in-Chief arrived at Allahabad on Sunday morning from Umballa, *en route*, it is understood for Saugor. He was accompanied by Major-General Roberts, C. B., V. C., the Quartermaster General, and by Colonel M. Dillon, C. B., C. S. I., and Lieutenant-Colonel Moore. At 1 P. M. His Excellency visited the hospitals of the British troops, and left Allahabad for Jubbulpore at 10-55 P. M.

THE strength of the Russian Caucasian Army is shown by the *Cologne Gazette* to be 116 battalions of infantry and rifles, 4 regiments of cavalry, 8 brigades of artillery, mustering 48 batteries, and 2 battalions of Sappers and Miners. The first note of war would cause from 130,000 to 136,000 men with 384 cannon to take the field without delay; to which 11 light infantry battalions and 32 regiments of Cossacks could be added without difficulty or much confusion and delay. This splendid force is armed with the newest weapons and equipments in vogue in the Russian army.

GENERAL.

AN official return of the losses occasioned by the inundations in the South of France fixes the amount at a little over 100,000,000f. (£4,000,000). The subscriptions to the Duchess of Magenta's fund reach 25,500,000f. (£1,020,000.)

IT is said that either Mr. J. D. Sim of the Madras Civil Service, or Sir H. Lumsden, will succeed Sir William Baker in the India Council. It is also rumoured that Sir H. Montgomery and Sir T. Pears are about to retire from Council.

THE Duke of Sutherland, who accompanies the Prince of Wales to India, will be obliged by important business to return to England

before the conclusion of His Royal Highness's tour, and is expected back in London early next Spring.

IT is stated that India has at last been enabled to join the Postal Convention, and that our London Letters will before long go home *via* Brindisi at a charge of six annas instead of eight as heretofore. The charge *via* Southampton will be five annas.

ACCORDING to the latest Mauritius papers, Sir A. Phayre had gone to Seychelles, and the Hon'ble Mr. Marsh, Colonial Secretary, was acting as Administrator during his absence. Sir Arthur's popularity is steadily increasing in the Island. The estimates of the sugar-crop fix the out turn at about 105,000 tons.

TWO meetings of Turkish bondholders have been held in London, one at the Cannon Street Hotel, presided over by Mr. Childers, the other at the London Tavern, convened by Messrs. Dent, Palmer, and Co., the contractors for the town. Little took place at either besides the expression of natural but futile indignation.

A CURIOSITY is on exhibition at Melbourne in the shape of a variegated boy. He is of Kaffir parentage, and of the undoubted African type, but his skin is mottled. The white portions are exactly like the skin of a European, and the dark portions are of a rich brown hue. The hair, too, is partly black and partly white, and mottling extends even to the irides of the eyes, upon each of which there is a white speck, which, however, does not in the least affect his power of vision. He is strong, well made, healthy, and intelligent. He is believed to be about 13 years old.

MR. WELD, the Governor of Tasmania, in the course of a recent "outing" paid a visit to the shot-tower, near Hobart Town, and, says a contemporary, sent an aide-de-camp to enquire whether he would be allowed to go over and inspect the works. The first reply was that no one could be admitted to the tower. A further question as to whether there was any portion of the manufactory the Governor could inspect, elicited the brusque answer. "Yes, the outside." As no further notice was vouchsafed, His Excellency had to retire, with the remark that it was the first discourtesy he had met with in the island.

THE deepest sea soundings up to September obtained by the *Challenger* were 4,450 fathoms or about 26,700 feet, namely, 5 miles and 100 yards. The lead weighed 4 cwt. The thermometers which had been sent down were smashed to atoms by the enormous pressure of the superincumbent water. Up to August last the *Challenger* had sailed 46,674 miles. Between Honolulu and Yokohama tweenty-three seperate soundings were made at an average depth of 3,000 fathoms, and the trawl was sent down twelve times. Many were the strange and beautiful forms of animal life, of fauna and vegetation, brought to the surface from depths varying from ten to three thousand fathoms.

IN France there is a great political agitation rising, in prospect of the final sitting of the House of Assembly before the general election. M. Thiers has chosen the opportunity to give a sketch of his connection with the formation of the Republic, and he is fair game for all kinds of party criticism. The monarchial party ridicule the way in which the ex-President places himself in the front; the Imperialists turn to account the issue of his endeavours; the Republicans, on the other hand, point with triumph to their form of Government as the inevitable. Attention has been somewhat diverted from M. Thiers' utterances by a skilful address from M. Rouher, who still looks hopefully to the elections to revive the Imperialists' hopes.

AT the recent Social Sicience at Brighton Dr. Richardson described in detail the construction of a model city of the future, Hygeia, wherein everything should be arranged on the most approved principles which the discoveries of modern science could suggest. Alcohol was to be banished from the list of articles which it should be legal to offer for sale, and even "the more innocent" tobacco was to find there no permanent abiding place. "The houses were of glazed brick, quite impermeable to water, perforated transversely, so that the walls were honeycombed either to admit common or heated air at will. The inner bricks were glazed of different colours. . . As a rule, the walls and ceilings of Hygeia were grey. . . . Water pipes and gas mains were within instant control on the first floor of the building."

ACCORDING to intelligence received from Bosnia, Servia, and the Herzegovina, the number of armed insurgents in the Herzegovina is now from 12,000 to 14,000 men. This number, it can be easily understood, cannot stand in open battle against the numerically superior Turkish forces. Consequently the insurgents are endeavouring to avoid all offensive movements, and to wage a guerilla war, in which they are completely successful, thanks to the mountainous locality, and also to the evident incapacity of the Turkish commanders. The position occupied by the insurgents on the mountains serves them not only as a defence from Turkish attacks, but also for keeping up their communications with the neighbouring States. Thus, the inhabitants of Western Herzegovina bore away their cattle and goods to the neighbouring Austrian provinces, whilst those of the eastern districts chose Montenegro for a similar purpose.

THE *Economist* seems to attribute the utter collapse of Turkish finance to the report of the Foreign Loans Committee, since which the placing of such loans on the market has become an impossibility:—"The Herzegovina insurrection and the disturbances in Bosnia are assumed to have precipitated the catastrophe, while the end has also been heralded by the Turkish Government having to pay 18 per cent. per annum interest for the last short advance to meet the October dividends. But Turkey has often been in worse difficulties. The Cretan insurrection, some years ago, lasted a long time, and was very costly. Frequently Turkey has had to pay for its short advances much higher rates of interest than 18 per cent. —as much as 22 and 24 per cent., if we remember rightly, having been paid in 1873 and 1874. There is reason to believe that the present annual deficit of about five millions acknowledged by the Turkish Government is no greater than the average deficit for many years, if it has not even been reduced by the strenuous efforts which followed the failure of the 1873 loan. The floating debt, if the last budget is at all to be believed, is also much lower than it has been at almost any date which could have been selected for at least five years."

THE Russian *World*, which represents the war party, writes:—"Austro-Hungary, that essentially anti-Slavonian State, cannot be our ally; she merely hinders us, and directs our policy in an improper and unpatriotic direction. We must separate ourselves from the Hapsburg monarchy as long as the Eastern question remains unsettled; all temporary diplomatic combinations must yield to the important interests which are bound up for us with the existing events in Turkey. If we give ourselves up to Turcophile illusions in the presence of current events, we shall immediately lose our authority with the Southern Slavonians, a thing which may have a very bad effect on our future. Russia must raise her voice in the Eastern question firmly, and without hesitation, in favour of those nationalities of the same race with herself which have up to the present been under the Turkish yoke, partly, perhaps, through her fault. People tell us that we are Chauvinists and partisans of war. Such reproaches are very absurd, though they are reiterated by some of the most important German papers. If our relations with Austria are embarrassing and distasteful to us, we must get rid of the alliance with the aid of which the Austrians are trying to gain their own ends."

A POLITICAL banquet was given on October 17th at Arcachon in honour of the visit of M. Thiers. In reply to the address of Deputy Fourcaud, the ex-President reverted to the conditions under which he accepted and held office up to the 24th of May last year. He said that he resigned power without regret, and that what then happened was a trial necessary to establish the Republic. After observing that the National Assembly could not restore the Monarchy, M. Thiers said the Republic of the 25th February must be made a success, and to attain that end it was necessary for France to act in a virile spirit, and for political parties to abstain from multiplying the obstacles in her path under penalty of causing irreparable disasters. "I do not think," continued M. Thiers, "that the radicals are so black as they are painted, and I believe that if they came into power they would probably follow a different course from what people suppose." M. Thiers declared that he wished to see all functionaries dismissed who did not respect the Republican form of Government, and said that this was important as a means of rendering the elections really representative. Touching on the subject of education the speaker advocated a virile and modern system. M. Thiers denied that the Republic would isolate France in Europe. "France," he said, "may count on the sympathies of Europe. She must found her hopes on a policy of non-intervention, which is the policy of the future." The speaker, in conclusion, dwelt on the advantages of peace, and pointed to the pacific feeling constantly gaining strength throughout Europe in consequence of new reforms. England, he said, had long since initiated reforms, and first endowed herself with the liberty which is the germ of all reform.

LITERARY.

A NEW Indian weekly paper is announced—"The Star of India and Rajpootana Times."

ECCLESIASTICAL.

THE Rev. Mr. Gladwin, of the Methodist Mission, Agra, has gone on leave for two months.

THE death is announced of one of the most eminent members of the University of Oxford, the Rev. William Edward Jelf, a son of the late Sir James Jelf, of Oaklands, Gloucestershire, and younger brother of the late Dr. Jelf, Principal of King's College, London, in his sixty-fifth year.

To the list of recent seceders to the Church of Rome may be added the names of the Rev. Caithness Brodie, sometimes curate of St. Stephen's, South Kensington; the Rev. George Angus, B.A., of St. Edmund Hall, Oxford; the Rev. J. C. F. Pope, and the Rev. Alfred Foukes, A.M., of Balliol College, Oxford, curate of St. Bartholomew's, Brighton.

THE Bishop of Winchester has proposed to the clergy and laity that they shall raise throughout the diocese a sum which will be sufficient to found one of the intended new missionary Indian bishoprics. The sum required will be £10,000, and the scheme would have the direct approval of the Society for the Propagation of the Gospel and the Church Missionary Society. On the day appointed for the general intercession on behalf of missions (St. Andrew's Day, November 30) offertory collections will be made in the various dioceses of England and Wales, and a considerable portion of what is then contributed will no doubt be applied to the establishment of a missionary Indian episcopate.

ADVERTISEMENTS.

Will be published on the 1st January.

POSTPONED FROM 1ST DECEMBER.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

THACKER SPINK & CO., CALCUTTA.

FRESH MISCELLANEOUS GOODS.

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

MANUFACTURERS OF
Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware,
&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office, No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

The newest and most elegant Designs. Specially intended for India, with Duplex or Single Burners.

Fancy Glassware.

Elegant Ornaments for the Drawing-Room or Boudoir.

Full Particulars in future Advertisements.

HIBBERT'S
HEALTH-GIVING SALINE,

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS, BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are quite under the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq., Savage Club, London:

"April '23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A. writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus, perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yours truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R. ROBERTS of the ship Sidney A. Jenkins."—Dundee. May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Botties, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

THE NATIONAL BANK OF INDIA LIMITED.

Agent in England.

GEORGE HOLME, Esq., PRESIDENT, DERBY CHAMBER OF COMMERCE.

Agents in Bombay.

Messrs. FORBES and Co.

Agents in Calcutta.

Messrs. FITZE and Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareho lders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only* or by barter.

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager, C. A. T. Company.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)
CABINET MAKERS, UPHOLSTERERS,
BILLIARD TABLE MANUFACTURERS,
BY APPOINTMENT
To His Excellency the Viceroy and the Governor-General of India,
AND
His Royal Highness the Duke of Edinburgh,
CALCUTTA.

THE NEW PATENT
ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificient and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far
THE HANDSOMEST AND LARGEST
ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satistied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives, that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

N. B.—A liberal reduction is made to the Trade, Messes, &c., when any quantity over six cases is taken at one time.

No extra charge is made for delivering at the Dinapore Railway Station.

DISTRICT DOG-CARTS.

(ON A NEW PRINCIPLE.)

MESSRS. NOWRAJEE & CO., COACH BUILDERS, &c., LUCKNOW, beg to intimate that they undertake to construct the above Carts, with all the latest improvements, for the trifling sum of Rupees

ONE HUNDRED ONLY

For Cash.

N. & Co. have supplied these Carts to all parts of India, *viz.*, the *N.-W. P., Punjab, Central Provinces, Bengal, Oudh,* and recently *Burmah*. Most of the Planters in *Tirhoot* and *Lower Bengal* provided themselves with these Conveyances during the Famine operations, and found them very useful; while the Officers in the Customs and Survey Departments use no other now while out on duty.

Being light and movable, they are easily forwarded to any part of the Country at a trifling cost, and can easily be drawn by Ponies or Galloways.

Harness and Lamps to suit, at Rs. 30 and 20 extra.

N. B.—Orders from Out-stations must be accompanied with a remittance.

A Consignment of Parlour and Cooking Stoves, the latter furnished with full sets of Cooking Utensils.

Plate, Bar, Angle and Tee Iron a large assortment always in Stock.

JESSOP & CO.

The Standard Life Assurance Company.

Established 1825,
WITH WHICH IS NOW UNITED
THE COLONIAL LIFE ASSURANCE COMPANY.

COLONIAL AND FOREIGN ASSURANCES.

An amalgamation having been formed between the *tandard Life Assurance Company* and the *Colonial Life Assurance Company*, the business of the united companies will henceforth be conducted under the title of

THE STANDARD LIFE ASSURANCE COMPANY.

The annual revenue of the Standard Company is now upwards of £650,000, and the accumulated funds amount to upwards £3,500,000 sterling. The new business transacted during the past year amounted to the large sum of £1,375,000 sterling, the corresponding premium amounting to £45,337 per annum.

Moderate rates charged for residence in the Colonies, India, and other places abroad.

Local Boards and *Agencies* in India and in all the British Colonies where every facility will be afforded in the transaction of business, and where premiums may be received and claims paid.

Immediate reduction of premium on return to Europe, or other temperate climate without medical certificate.

Profits divided every five years.

The new Colonial and Foreign Prospectus may be had on application at the chief offices of the Company, or to the Agents at home or abroad.

WILL. THOS. THOMSON,
Manager and Actuary.

D. CLUNIE GREGOR,

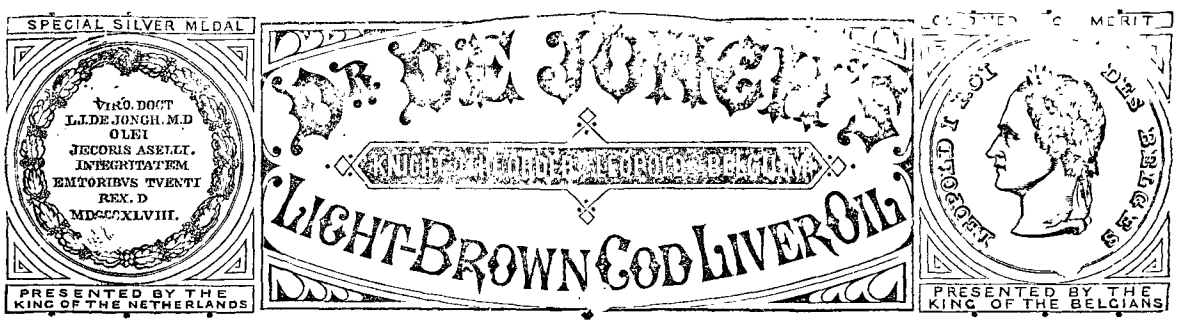
The London Asiatic and American Company, Limited.



The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D.; T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescsibed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

CALCUTTA

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.
AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of *50 per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £31,030.

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

ADMINISTRATOR-GENERAL'S OFFICE.

CONSULTING ACTUARY J. HILL WILLIAMS, ESQ. *President Institute of Actuaries, London,*
Extract from the Actuary's Report. dated 10th September 1875.

"It will be a matter of congratulation to the Directors, the Assured and the Proprietors. that the close of the first five years of the business of the Company a valuation made on the strict principles I have adopted should exhibit such satisfactory results."

Participating Policy-holders who have paid five complete premiums to end of 1874, are entitled to have their premium reduced 40 per cent. during the 5 years ending 1879. Policies of more recent date share in proportion,

INDIAN RATES of Premium charged while in India, English Rates on leaving for Europe. Assurers who do not contemplate spending a *life-time* in India or other tropical climates will find that the rates of this Company compare *favorably* with *enhanced English Rates.* They have the advantage of *consistency* as it is proved *beyond doubt* (by the various Civil and Military Funds &c.) that English life is of *less value* in India than in Europe.

ASSURANCES EFFECTED IN THE FOLLOWING FORMS:—

(1.) WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
(2.) POLICIES, FOR SHORT TERMS, for 1.3,5,7, and 10 years at low rates.
(3.) PENSIONS granted. The Rates are more *favourable* than those of any similar Fund in India.
(4.) EXCHANGE OF POLICIES by substitution of Lives.
(5.) WHOLE LIFE POLICIES with payment of premiums *ceasing at the option of the Assurred* after 5, 10, 15, or 20 years.
(6.) ENDOWMENT POLICIES payable at 50, 55, or 60 years of age, *or earlier in the event of death.*

PROMISSARY NOTES OR PAID-UP POLICIES issued under Forms 5 and 6 *for each Premium paid* if assured on the With-Profit scale, 40 per cent. or if on the Non-Profit scale, 30 per cent. of the Premium is withdrawable at three days' sight. As each Premium effects a *Complete paid-up* Assurance independent of any further payment, *the Forfeiture of a Policy is obviated,* and it also ensures a *Fixed Surrender value payable in cash at the will of holder.*

LAPSED POLICIES REVIVED WITHOUT FINE.

REDUCTION OF PREMIUM to English Rates from date of *leaving* any Port in India, Ceylon or China.

In Assurance transactions what *ought* to be sought *beyond everything else* by the Assurer is *absolute Security,* which can only be obtained by *sound* and *consistent* rates, combined with investment of Funds in securities of an *unimpeachable nature.*

The two Grand Inducements to Policy-Holders.

MUST ALWAYS BE

UNQUESTIONABLE SECURITY, AND AS LARGE PROFITS AS THE SYSTEM OF LIFE ASSURANCE ADMITS.

Assurances effected on lives of EUROPEANS, EURASIANS, HINDOOS and PARSEES.

LIVES BELOW the average Standard of Health may be assured at increased Rates in proportion to the extra risk.

For Forms of proposal, Tables of Rates, and information, apply to the Company's Agents, or to

D. LANCASTER, *Secretary*
Meerut. *Fellow, Institute of Actuaries.*

AGENTS.—The following Banks are Agents for the "INDIAN LIFE":—Agra, Agra Saving. Allahabad, Alliance. Bank of Upper India. Delhi and London Himalaya, Mussoorie, Punjab, Simla, Uncovenanted Service.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt,* by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Hondurus Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood,* and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children, CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

THE LIVERPOOL, LONDON, AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

At the Annual General Meeting of the proprietors held 24th February 1875, in the Company's Office, Liverpool, the Report of the Directors for the year 1874 was read, and it showed that:—

The Fire Premiums were	.. ..	£ 1,082,521
The Life do.	.. ..	244,607
The Annuities payable	.. ..	59,511
The Invested Funds	.. ..	4,089,747

For Tables of Rates and full particulars both for Fire and Life Insurances apply to

GILLANDERS, ARBUTHNOT & CO.

Agents, Calcutta.

Home Park, Broughty Ferry, Scotland.

Establishment for the Board and Education of Young Ladies.

CONDUCTED BY MISS HISLOP, DAUGHTER OF THE REV. A. HISLOP, AUTHOR OF "THE TWO BABYLONS," &C.

BROUGHTY FERRY is healthily and pleasantly situated at the mouth of the Tay, and is much frequented by those in pursuit of health.

It is the aim of the Principal to combine the highest possible gradual development and culture of the intellect, with the Christian training and watchfulness of a home. A large staff of Masters and English and Foreign Governesses. Reference is kindly permitted to

Rev. J. Wilson, D. D., F. R. S., Bombay.
Rev. J. Fordyce, Simla.
Rev. G. Cooper, Nagpore.
George Smith, Esq., LL. D., Edinburgh.
Rev. J. Murray Mitchell, LL. D., Edinburgh.

Full particulars and prospectuses, with further references, may be obtained at the Office of this Journal.

PRINCE OF WALES'S ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No, 10 and 11 Park Street.

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,
Calcutta, 13th May 1875. E. LAFONT, *Rector.*

OPINION OF BRADFORD LESLIE, ESQ., C. E.,
Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.
Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary
P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,
GREAT EASTERN HOTEL, NIAUDE,
Calcutta, 17th January 1874. *Secretary.*

Calcutta, 28th December 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

P. W. FLEURY & Co.,
No. 62, WELLESLEY STREET,
AND
No. 44, FREE SCHOOL STREET,
CALCUTTA.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2124.] Calcutta: Saturday, November 27, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs. 13-10 as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

EDITORIAL NOTES.

THE PRINCE of Wales, after having to all appearance heartily enjoyed the fêtes and ceremonials at Bombay, has had enjoyment of quite a different kind at Baroda. Such barbaric sport as ram-duels, and buffalo, elephant, and rhinoceros fights were part of the entertainment of His Royal Highness in the Gaekwar's capital. But probably he took more pleasure in the antelope-hunting with cheetahs, though he is said not to have acquitted himself very highly as a marksman. Snipe, duck, and quail shooting at Kaira, and pig-sticking at Dubka were also part of the week's programme. On Thursday he left Bombay in the *Serapis*, bound for Colombo.

***

CALCUTTA has rarely, if ever, been so completely at one with itself on any question of public government local or imperial, as it has been and still is, on the present state of Mun icipal administration. Our contemporaries without exception have expressed themselves strongly, and it cannot be denied that they truly represent the feelings of the community. The waste of public money, and the inexplicable state of the public accounts were bad enough, but insult has been added to injury in a series of most astounding actions by Mr. Hogg, while Sir Richard Temple supports him. When the scandalous state of the public accounts was exposed, and the abuses that had been going on under the mismanagement of the late Vice-Chairman, if Mr. Hogg had had a proper respect for the interests and good will of the citizens, or for his own character as a public man and the servant of a Government that boasts itself so pure as the Government of India, he would have put himself at the head of the reformers, and at whatever expense to his private feelings, would have been the most zealous of the zealous in redressing abuses and in making the municipality worthy of the confidence of the rate-payers. What he has done is too well known to need to be repeated or characterized. It is now to be decided whether or not the citizens of Calcutta are qualified, not for self-government, but for exercising some control over the expenditure of their own money. Are they to be robbed to enrich subordinate officials and their friends in trade, and afterwards insulted when they dare to protest and call for the appointment of a Vice-Chairman in whom they can have confidence? If they were to submit to this they would be worthy of all contempt, and the time has come to show that they will not submit to it. We had never much hope in a protest to Sir Richard Temple. Had we been all Natives of the country he might have invited the Justices to a *Rhotas* party, and in an hour or two made matters straight and himself popular. But we have more hope in the result of a public meeting and the influence of the Supreme Government. Lord Northbrook is too honorable a man to see such things done in the Capital of India without signifying his displeasure. And if he can do nothing, we are perhaps not entirely beneath the notice of the Home Government.

***

THE unanimity of the press and of public opinion on the late Municipal proceedings is complete. The *Hindoo Patriot* though mild, is unhesitating in its condenmation of Mr. Hogg's action, though it highly appreciates his adminstrative vigour. In branding Mr. Roberts' opposition as personal to himself, his accusation must be held as applying to all the independent Justices as well as to Mr. Roberts. And if the opposition of the independent Justices is thus to be disregarded, though they evidently represent the feelings of the tax-payers, what is the use of having Justices at all? "Much better that the corporation should be abolished and Mr. Hogg appointed Dictator for the town." "If the independent "Justices are to be put down with the high hand of authority, "much better that the corporation should be knocked on the "head than that this sham corporation, should be kept up. "The Municipal ball is rolling and we repeat we do not know where "it will stop. The way in which the present election has been "managed reflects the greatest discredit upon those concerned, and "who knows how far it will send on the ball?"

***

IF the chastisement of the Chiefs of Perak be all that our troops have now before them in the Malay Peninsula, the work may be one of no great difficulty. But if as a Madras paper anticipates they have before them a Malay war on an extensive scale, severe and protracted fighting may be looked for. The Malays are a fierce and treacherous people. They are said to be armed sufficiently to give us a good deal of trouble and to hate us heartily enough to make them willing to do so. The experience of the Dutch proves that they are capable of a determined resistance, and the unauthorized haste of Sir W. F. Jervois in taking over the administration of Perak, and issuing his proclamations, may lead to a result even more serious than was at first apprehended.

***

WE have elsewhere given our opinion that if the present Governor of the Straits Settlement had had the advantage of an Indian diplomatic training, he would have been a little more cautious in taking over the administration of the affairs of Perak, the unfortunate Mr. Birch might have been still alive, and the present punitive expeditiou would never have been needed. Sir William F. D. Jervois, C.B. is we believe a man of ability and high professional attainments. His skill and experience as a military engineer are admirable and extensive, but in none of the important offices that he held before the last month of April, had he any experience in diplomacy or administration. His professional services have been fairly rewarded by promotion and honors, and may have deserved to be still further rewarded, but we cannot think it good statesmanship to appoint to the government of a colony like the Straits Settlements, bordering on petty anarchical powers, with which complications might have been anticipated, a man, however distinguished, who had no diplomatic or administrative training.

***

A CEYLON paper gives some account of the antecedents of Mr. Birch, the unfortunate late Resident at Perak. He arrived at Ceylon in the latter end of 1864 with letters of introduction to Sir Colin Campbell, who was then Governor; was posted to the P. W. D., and in December of that year acted as commandant of a company of road pioneers on a salary of five rupees per day. He was six years in the P. W. D. without gaining much distinction, and in 1852, by Home influence was made a "Writer" attached to the office of the Government Agent at Jaffna. It was in 1853, as Joint Commissioner of Requests of Galle that he first earned a reputation for energy by clearing off a mass of arrears of cases. When he was magistrate at Chavacachcheri, he sentenced some persons to be flogged. The Government Agent, Mr. Dyke, was also Fiscal, and refused to carry out the sentence, and Mr. Birch desired him *as an officer of his Court* to carry out the Court's order on pain of being summarily brought before him. The official quarrel became a private one; Mr. Birch threatened to horse-whip the Government Agent, and was bound over to keep the peace. He was then sent to Trincomalee to act as Assistant Government Agent, and was soon confirmed in his appointment. He had now reached a salary of only

Rs. 4,000 a year. In 1856 he became Acting District Judge at Batticaloa, and in 1859, Assistant Government Agent. From this point he dated his success which seems to have been mainly owing to the excellent service he did in forwarding the infant irrigation scheme. He had now an opportunity of showing administrative ability, his success was rapid, and he soon rose to be Government Agent of the Eastern Province. In 1870 he was made Colonial Secretary of the Straits Settlement and ultimately as we know, found promotion and a bloody death at Perak. Our contemporary thus sums up his characteristics, and from his career and character, it will we think, be seen, that he was not admirably fitted for smoothing matters between the British Government and the chiefs of Perak. "That Mr. Birch was arbitrary, sometimes unscrupulous, and not "always just, is undeniable, but take him all in all, (from a *polity* "*cal* point of view alone), he was a distinguished instance of a man "of energy and ability, who was brought to the surface by the force "of circumstances and who forced his way upwards. It is a matter "of question whether Mr. Birch, at any period of his career, could "have passed the examination now made the sole test of ability and "fitness for promotion, but it is a matter of fact that few of our com-"petition wallahs, could compete with the late Resident of Perak "either in physical endurance or practical energy and *real* ability "of a certain description."

***

THE telegrams are still "tranquilizing," and we are as ignorant as ever as to what may be the ultimate fate of Turkey and her insurgent provinces. The *Times*, more than a week ago, advocated the occupation by Austria of Bosnia and Herzegovina, but the views of the *Times* are said to be opposed by the Austrian press. Reuter has informed us that indifference was charracteristic of the state of public feeling in England. Had Turkey continued, and appeared likely to continne, to pay fully and regularly, the British public would have agitated for her, and perhaps have fought for her, but no sooner has the repudiation policy been adopted than John Bull shrugs his shoulders and expresses himself indifferent as to how soon the "sick man," may die, or who may benefit by his dismemberment. In the first disappointment at the pecuniary loss, the British public cannot be aroused to tremble for the safety of our right of way through Egypt to India. England seems to be stolidly waiting to see the action of the three Powers, and trusting to Fate or the chapter of accidents to suggest a course for herself to adopt. In all European affairs she shrinks from taking the initiative. But she may forget her place in the councils of Europe too long.

***

THE intelligence of a plot to seize the arsenal at Rangoon and fire the town, and of the capture of some the conspirators, coming immediately after the serious news from Perak was calculated to excite some sensation. The mystery has not yet been cleared up but it is said that the affair is not considered of any political importance. But it appears that the plot must have been a pretty extensive one. Upwards of forty men have been arrested including a Chinaman and a Suratee. The ringleader, says the telegram, is a Burman named Thaik Moung Bwah. Some of the prisoners have made important confessions and the evidence against them is strong. Conjecture as to the origin and ultimate object of the plot, is, in the absence of fuller information, useless.

***

PUBLIC opinion is steadily strengthening on the side of Sir Salar Jung, as was inevitable after the publication of portions of the recent correspondent between him and the Resident. The Bombay *Statesman* says:—"But one impression can be formed from the "correspondence—that the pressure put upon the Nizam's advisers "went far boyond the bounds of the privileges of Political officers "at Native Courts; that it was dictatorial and undignified; and "utterly unworthy of the British Government, and whether Mr. "Saunders was acting upon his own judgment, or simply obeying "instructions the conclusion must be the same." "The *English-*"*man* says there is something not only foreign, but actually "repulsive,to English ideas of propriety, in a Prince being "compelled, like a school boy or a servant, to support a plea of "sickness by a medical certificate . . . . Sir Salar Jung was "required by the Government of India to produce a medical cer-"tificate as proof of facts to which he was fully competent to "testify, and of which his word as a gentleman ought to have "been sufficient evidence. In other words, he was treated as though "he was not a gentleman, while his position was that he dared "not resent the insult." The local *Statesman* thinks, "it is "difficult to exaggerate the mischief that this incident is likely t "work. To apologize, is too late; and if we are not to lose our "hold on native sympathies altogether, the Home Government will "have to mark the course that has been followed by the expres-"sion of its heavy displeasure." Other of our contemporaries speak little less strongly. Even the *Pioneer*, is compelled to disapprove. The *Pall Mall Gazette* has taken up the matter at home, and the final judgment on the policy of the Indian Government must be severe; it has equally forgotten both good manners and good policy and altogether ignored the high character of the distinguishe Native Statesman who has been so unworthily treated.

***

THE *Indian Mirror* acknowledges the extensive importance of mass education, but fears that Government will only extend to the masses the same system of Godless education which our contemporary thinks is, through the influence of our colleges, demoralising the people. Without admitting all that is here asserted, we grant it true, that Government will simply extend secular education to the masses. It cannot, and does not profess to provide a complete education. Its feet are fetterd and it cannot enter the domain of religious belief. It cannot therefore teach morality under the highest sanctions, without which no moral teaching can have its true vital power. The matter contained in its class-books, and the character and professions of the majority of its teachers, show that morality is not untaught, but it is frankly acknowledged that it is taught in a maimed and ineffectual manner. The true position, therefore, of Government with respect to education, is, as we have urged, to take its stand as soon as possible on a pure system of grants-in-aid. Government can test the value of the secular education given, and will pay for that, in whole or in part. Individuals, communities, and societies must undertake the responsiblity of moral teaching based on religion. There is strong reason for Government retiring from the sole charge of education; there is no reason why it should not continue to support and assist education. If, in religious Scotland, Government cannot teach religious morality, but confines itself to examining, and paying for, the secular branches, how can it be expected to do more in India? But it has been left for Indian reformers to argue that if it cannot provide a complete education, or even the most essential part of one, it should altogether cease to assist education.

***

SIR WILLIAM MUIR, recently delivered an important speech at the Mahomedan Anglo-Oriental College, Allyghur, in which he very clearly defines the only position which the State can consistently take up towards education in India. While believing that religion is the true basis of education, and that as the Roman Philosopher says,

> "Altius precepta descendunt, quæ teneris imprimunturs aetatibus,"

he points out the impracticability of the State supporting religious education in India. But he believes, as we have insisted on the same subject, that an education in literature and science ought to improve the mind and morals. He likens the gradual attainment of knowledge to an ascent of the Himalayan hills, from narrowness and obscurity to far, seeing and unbounded expansiveness. "Even such is the effect of the higher education and pursuit of liberal studies. We justly expect that they will tend to expand the views and enlarge the sympathies of the youth here educated; fit them to be happier and more useful in life; and as we may trust draw them into closer bonds by a similarity of taste and knowledge with ourselves; in short impart humanity in the best and highest sense."

But while the State cannot teach religion and while Christian cannot support the teaching of the Hindoo or Mussulman creeds, Sir William Muir sees no objection to contributing to the support of secular teaching in institutions where these religions also are taught. In contributing to the funds of the Allygurh College he simply asks that the amount should be appropriated strictly to the furtherance of secular studies, and of European science and literature. This is the relation which the Government must ultimately assume towards all our educational institutions. Let the authorities of each institution teach their own faith, and let Government contribute to the support of the secular instruction, and the solution of the problem we have for some time been discussing, will have been found.

***

BY whom, and in what manner, religious instruction in schools should be imparted, is one of the vexed questions in connection with education at present, and is discussed with warmth from furthest East to furthest West. We have recognized the expediency

of Governments limiting their action to the inspection and support of secular education, but we cannot see our way to approve of a system that is purely secular. It is true that religious instruction can be effectually given elsewhere than in schools, but the divorce of secular and religious instruction is good, we think, for neither. Yet it is evident that there is a growing tendency towards this, as the only solution of the difficulty, in many quarters, and we think it worth noting from the *New York Herald* that the Chicago Board of Education has been compelled by the dissensions of the different religious parties—Jews, Romanists, and German secularlists—to decide that the singing, scripture-reading, and recitation of the Lord's prayer, with which the schools were opened, must hence*forth be omitted.*

***

THE alteration in the postal rates between India and Great Britain cannot taka place immediately. The principle is quite settled, but the Postal Congress must meet, and will probably spend a month in arranging details, before India can be formally admitted into the Union.

***

THE Duke of Buckingham and Chandos arrived in Bombay per Steamer *Sultan* on Tuesday, and was duly sworn in as Governor. The official Aden news report infoms us that he landed at Aden to visit the town, and spent several hours there. His Grace received the customary honors both on landing and re-embarking.

***

THE *Patriot* has an article in praise of Sir Richard Temple. His careful study of public opinion, and deference to it, are highly eulogised, with reference, chiefly to his Resolution on the last Bengal Police Report. "Never before did a Lieutenant-Governor lay such broad stress on the opinion of the people in the administration of the country." There is no irony, that we can detect, mixed with the *Patriot's* panegyric, and Sir Richard must rejoice to see that his self-denying efforts to win popularity with the native gentry by Belvidere gatherings and *Rhetas* parties, are not unappreciated. But there are spots in the sun, and the *Patriot* is compelled to add "While we commend Sir Richard Temple's desire to walk in the light of public opinion in the administration of the country, we regret that he should show so little disposition to follow it in the government of the capital of the empire. Calcutta is the chief seat of public opinion, and it ill beseems him to shun that light which shines the brightest." If Sir Richard were a little less eager for the applause of Zemindars and the British Indian Association, and a little more hostile to empiricism, favouritism, and malversation, his fame as a ruler would rest on a sounder and more lasting basis.

***

THE *Pall Mall* recalls an incident that occurred to Baron von Richthofen on the Yunnan frontier in 1872, in which there figures a General Li who is apparently the man we have heard so much of in connection with Mr. Margary's death, under the name of Lee See Tahee. An attack made on the Baron's followers by the coolies and soldiers of General Li, compelled him to give up his intention of entering Yunnan. His interpreter and servants met on a high mountain road a band of coolies carrying a coffin and escorted by soldiers. The coffin was said to contain the remains of Li's wife. The coolies made an unprovoked attack on the travellers, but the interpreter made use of his revolver, and, the Baron similarly armed coming upon the scene, the coolies were made prisoners. They were taken to the nearest town and the head coolies were punished, though the officers who commanded the escort was allowed to go free. The Baron resolved to discontinue his journey into Yunnan, for he knew that the road for thirty days at least would lead through a region where great numbers of "Yung ping" *i.e.*, hired soldiers, were stationed, and these he prudently reasoned would have been eager to revenge his accusation of their brother-in-arms. The *Pall Mall*, adds, that had he gone forwards he would probably have met the same fate at the hands of Lee See Tahee as the unfortunate Margary.

***

THE irrigation operations in Lower Bengal during September were not so extensive as in the previous year. The area thus protected during the four months ending the 30th September, was 64,216 acres against 84,180 in 1874. The decrease was due of course to the abundant rainfall in the Lower Provinces, which enabled the people to dispense with canal water. The report of the same period in the North-Western Provinces is very satisfactory. The area irrigated was 400,000 acres against 345,000 in the previous year, showing an increase of 54,000 acres, the rainfall having been somewhat below the average of the ten previous years.

***

SIR SAMUEL BAKER has written a letter of some interest on Egypt and the Khedive, for the purpose of allaying the panic which the Turkish repudiation excited among Egyptian bondholders. Sir Samuel's knowledge of the Khedive's character and of the industrial and financial prospects of the country are probably unequalled in any other Englishman, and his opinion must carry great weight. He praises the Khedive as a liberal, enlightened and energetic ruler who is striving untiringly to raise Egypt from the rank of an Oriental power to the status of an enlightened and prosperous European State. The great industrial improvements, and vast engineering works that he has instituted have been costly, but Sir Samuel is of opinion that remunerative returns are certain, and that, as the Khedive is keenly sensitive to his financial reputation, and will be more so than ever after the failure of Turkey, Egyptian bondholders have no true cause for anxiety.

***

THE future position of Egypt among the European powers, with which she aspires to rank, is a question of considerable interest at the present moment. While some are speculating on a British occupation of that country as not improbable in view of Russian aggression upon the Turk, others predict that the time is not far distant when the complete autonomy of Egypt under what may now almost be called the reigning dynasty, will be an accomplished fact. It is certainly improbable that the "sick man" can long keep his grasp on Egypt, and Egyptian independence or British supremacy is evidently approaching. Some importance is attached to the investiture by the Prince of Wales of the Khedive's heir with the Order of the Star of India. It is a recognition on the part of England of the Khedive's family as hereditary in Egypt, and is thus perhaps something more than a mere ceremonial.

***

NOTWITHSTANDING the Porte's repudiation of its debt, there is still a prospect that the interest on the loans of 1854 and 1871 will continue to be paid in full. These loans are secured, not on any part of the Turkish revenue, but on the Egyptian tribute, and there is a distinct engagement, which the Khedive has so far faithfully kept, that this money shall be paid into the Bank of England instead of being remitted to Constantinople. The Turkish Government may of course endeavour to lay its hands upon it. But the Khedive has a strong interest in opposing a measure which would ruin his credit on European stock exchanges; his refusal if he made one to break faith with the bondholders would be supported by European public opinion and by the diplomatic action of at least England and France; and the Porte has certainly too much work already on its hands to think of compelling obedience by force. Holders of these particular loans may therefore very possibly escape the fate of their less fortunate brethren who have no better security than Turkish honesty to depend upon. They are to be congratulated upon their good fortune.

***

THE spread of Cholera in Bangalore, has been checked, according to the *Bangalore Spectator*, by a very simple expedient. At the suggestion of the editor of that paper, the dry earth system of conservancy was applied in about fifty houses in the infected quarters; the disease the next day stayed, and the death-roll has since gradually diminished. The town is now, says the *Spectator* "quite healthy enough" for the Prince of Wales to visit it. Whether or not it was to the use of this method of sanitation that the cessation of the epidemic was really due, is a point on which we must, of course, trust our contemporary's judgment. We presume that he has good grounds for his opinion. But the evidence in favour of the dry earth system is certainly accumulating rapidly, and it seems a pity that a preventive everywhere so easy of application, and so certain, apparently, in its results, is not more extensively adopted during outbreaks of cholera. The highest Medical authorities have given their opinions in its favour; it is the simplest remedy known; the cheapest, requiring no outlay worth speaking of, and would appear to be the most natural. Yet it is hardly ever had recourse to. How is this?

***

FOR once we are bound to agree with the *Pioneer*. We cannot believe that any unworthy feeling on the part of Lord Northbrook

is the cause that the Mayo statue has been left so long unheeded on the Jetty. But if no site could be at once chosen, surely some one in authority might have had the good sense to remove it to some place where it might have been kept without any appearance of an indignity being offered to the late Viceroy. For it has the appearance of an indignity, however unintentional it may have been.

***

THE visit of Emperor William to Milan has attracted much attention and occasioned some speculation. Is anything more meant than simple friendship and alliance between the two powers that have lately been engaged in kindred struggles for national unity and against Ultramontanism? Nothing more is of course professed on the surface, but it is thought by some, that Prince Bismarck has some important military, and political advantages in view, and that the visit bodes no good to France or Austria. We take from the *Englishman's* correspondent a remarkable quotation from a letter written by Mazzini in 1868 to a friend in Florence.

"The force of things is driving Bismarck into Mazzinianism. He will, when I die, be obliged to take up my running. In 1866, he only half did his work. Austria is a Catholic power, and therefore a natural enemy to Teutonic unity under Prussia. She is a material bar to the moral renovation of Germany, and of the Christian States of Turkey, which I hope will form, before this century draws to its close, an Eastern Switzerland. This barrier is to be torn down by armed force. The Pope is also to be subjugated, and the Tyrol the Trentin and Trieste have yet to revert to Italy. Prussia seems to me the power best adapted and disposed to crush the Papacy, and the Ultramontanist princes supporting it, because it is the corner-stone of despotism. Bismarck aspires to create a united Germany. His work will never be solid, unless he break down utterly those powers opposed to the right with which God has endowed peoples to work out their own salvation. At the head of them we find Louis Napoleon, whose advocacy of the principle of nationality is impudent hypocrisy. We next find the Emperor of Austria, then the Grand Turk, and as far as Poland and some Asiatic States go, the Czar. To be brief, it seems to me that Bismarck is susceptible of being turned into a material engine for abolishing the Papacy, and the despotisms deriving from it the semblance of a moral sanction. A moral agent I shall never believe him. But we are not dealing with moral forces. We are contending with physical obstacles."

***

THEY seem to understand railway management in Ceylon. Notwithstanding the failure of the pearl fishery, the revenue of the island for the first nine months of the present year was Rs. 10,849,066, as against Rs. 9,885,805 for the same period of last year, thus showing an improvement of Rs. 963,260. The advance appears to have been chiefly due to the larger returns yielded by the railway, now one of the principal sources of the revenue, which has brought in an increased income of about five and a half lakhs. Thus, while in India the Government has to subsidise the railways, in Ceylon it is the railway that largely helps the Government. The difference seems to us worth noting, and we therefore call attention to it, even at the risk of making the Indian tax-payer more sceptical as to the merits of his own able Public Works Department than he already is.

A CORRESPONDENT at Hyderabad writes to the *Delhi Gazette*:—"On Sunday last information was brought to the native Government that the retainers to the number of 500 of an Arab Chief, Goolab Jung, intended making a rise, and with the help of a few hundred of other discontented Mahomedans, throwing off the yoke of the Moguls. The Government at once gave orders to have a little army ready to pounce upon them so soon as they should shew life. The Resident was informed of it, and it was arranged that troops were to be sent down from Secunderabad on a given signal. The rebels hearing of this, and not liking the idea of exposing themselves to the steel blades and the bullets of the *gora logues*, dispersed, and nothing has transpired as yet. The affair was kept very close, and we were not informed of it till yesterday." If this information is correct, as, from the well known character of a large part of the population of the Nizam's dominions, is not unlikely, we have within the last few days had the narrowest possible escape from a civil war in the Deccan. It is perhaps fortunate that the would-be rebels' courage failed them at the prospect of having to encounter British troops, for the elements of disorder in the south of India are still powerful enough to give trouble, the European garrison is not large, and no one can say how far the flame of rebellion might have spread, had it once been allowed to kindle. Both the British and the native authorities appear to have acted with commendable promptitude in the matter.

***

FULLER intelligence has now been received regarding the death of Commodore Goodenough at the Santa Cruz Islands, and the *Spectator* remarks on it as of the highest interest, showing the simple trust and faith in which he died and his great tenderness for his officers and men. "On Thursday afternoon," says the narrative of his last hours, "thinking that the end was near, he had all the officers summoned to his bedside, when in loving words he spoke of the infinite goodness of God, and his perfect willingness to go." He often quoted the words that speak of the Deity as without "variableness or shadow of turning," and said they were as a window that God had opened to him in heaven. He regretted that he was so long in dying "as it gave such trouble to those attending him." The *Spectator* remarks: "There is unfortunately something unique about such a death as this. The modern layman is too shy for unreserve even at the very moment of death, and, however noble, is apt to die with stoical composure. Many more deaths like Commodore Goodenough's would make life itself in England a much more religious affair.

Punch suggests a simple compromise on the Burials question. Recognising argument with reverend gentlemen as uselesss, our contemporary asks who would be the worse if a portion of every churchyard were set apart for the interment of Dissenters, and this portion deconscerated, as the Incumbent or Bishop could do if he thought proper. Nobody would be the worse, certainly, but if, as appears from the Guibord case, an act of deconsecration is held equivalent to an act of cursing, the Christian charity of the clergymen will make them hesitate to accept so simple a compromise. But we may ask, who would be the worse if a Dissenter were interred in consecrated ground? The Dissenters are not so bigoted, it seems, as to think that the person interred would suffer injury. Would the churchyard be the worse? The plot in which the Dissenter is laid might be desecrated, but the evil influence could hardly penetrate to the other graves. We fear the church which boasts the highest culture still harbours a good deal of superstition in its bosom. We have already expressed our opinion that compromise is at present impracticable, and that the question must come up for another trial of strength in Parliament.

***

THE impossibility of compromise on the Burials question is evident when we compare the views expressed at the Oxford Diocesan conference with those of the speakers at the meetings of the Congregational Union in London, last month. Dr. Kennedy stated that they objected to getting rid of the difficulty by providing cemeteries for nonconformists, that they objected to silence at the grave, and, further, they would not be tied down to any prescribed form of service. They would have no compromise, based on the assumption that the churchyards belong to the Church of England. "We do insist upon it that there shall be the most perfect liberty for all parties to bury their dead in the churchyard of the parish, according to their own perceptions of what is right and proper." From the position thus indicated, we do not believe that the nonconformists will recede, and we are equally convinced that the Church party will never meet them there unless compelled by an Act of the legislature.

THERE always seems to be something wrong with the Henry-Martini rifle. When first issued, it kicked like a horse or a nine-pounder, and as the men's shoulders were not made of iron the fault had to be remedied by a reduction in the strength of the charge which left it in point of range with little practical superiority over the Snider. Then it was discovered that the presence of the merest particle of dust or dirt in the lock was sufficient to convert it into a hair-trigger, dangerous to the bearer and all about him, and ready to go off as if of itself at the slightest shake. Now we are told that the "strikers" are too weak and that in the Guards and other corps, ten per cent. of them have broken. We almost fear that the War Office has made a mistake in selecting the Martini-Henry as the arm of the future for the British army. A weapon which has revealed so many defects under the necessarily imperfect tests to which alone it can be subjected in time of peace, must, manifestly, be unfit to bear the far greater strain to which it will be subjected in time of war. The rifle may have its good points, and it is possible that all its defects may yet be rectified,

but, in its present state, it certainly does not seem calculated to inspire our soldiers with much confidence in its powers, or likely to be regarded with an excessive amount of respect by the enemy.

***

MR. GLADSTONE'S love of retirement seems to be growing upon him. The London correspondent of the *Leeds Mercury* says that the ex-Premier, in a private letter, has expressed in the plainest terms his resolve to remain apart from public affairs, and to consider himself, for the future, as "a mere spectator of passing events." If this is a *final* determination, the liberal party will be hard put to it to agree upon a successor to Lord Hartington, should they decide upon discarding that languid nobleman next session. But Mr. Gladstone *may perhaps change his mind.*

***

TRUE to its protectionist policy, the Government of Victoria has laid a heavy import duty on the products of Indian jute mills. Wool-packs are to pay three shillings per dozen, corn-sacks one shilling, and small bags six pence. It is strange that a young colony which has it in its power to gain so much by carrying out the principles of free trade in their integrity, should still adhere to futile and antiquated doctrines which long since have been abandoned in every other part of the Empire. Some day it will find out that protection does not pay, and the fact that a serious deficit is announced in its finances gives us ground for hoping that the time is not far off when experience will have taught it so much wisdom. Signs of a coming change in public opinion are, in fact, already visible. Complaints are made that the adoption of a protectionist tariff has arrested the progress of the colony, and the leading paper strongly advocates a return to free trade.

***

WE see it stated that the Mormons of the Salt Lake are getting wearied of their residence in Utah, owing to their continued quarrels with the United States authorities. This, we should think, is exceedingly likely, and it can surprise no one to hear that they are thinking of removing to some place where they can get perfect liberty to live according to their own peculiar habits and inclinations. But we were not prepared to hear that they were meditating an occupation of the Holy Land. Some distinguished pilgrims have visited Palestine, and seem favourable to a new residence in the valley of the Jordan. The Pasha is said to be favourable, and if Brigham Young would assist the Sultan with a supply of money, there would probably be no great difficulty in that quarter. But we should think there must be many more eligible spots than the one spoken of and where they would be less liable to external control, and unless some fanatical whim of their prophet in connection with the Holy Land over-rule their prudence, we do not expect to hear of any attempt to carry out the project. What would the *Israel Identification Society* say to a usurpation by the Mormons of the place of the lost tribes?

***

WE are glad to learn from the *Indian Daily News* that Sir Richard Temple having appointed Dr. French Health Officer of "this port, Dr. French has drawn out two forms for ascertaining "the state of health on board ships entering and leaving port, "one of arrival, and one of departure. The arrival one will be filled "in and sent on the arrival of the ship in harbour. From it will "be got a medical history of the ship while at sea, her strength, "sickness, &c., on coming into port, and this information will "at once show whether she is healthy or the reverse, and whether "it will be necessary to keep her, during her stay, under close "observation or pass her over with a simple inspection, &c. After "some time we shall be able to arrive at a conclusion as to the "diseases from which our sailors suffer while in tropical seas— "a question which as yet has never been fully inquired into. "This form will clearly show what ship ought at once to be in- "spected and examined. The departure one is the most important "of the two, because from it will be got full information concern- "ing the health of our sailors while in the port of Calcutta, and "the chief diseases from which they suffer while in our harbour. "This information will lead to the next question of cause and "prevention. In cargo or ordinary vessels the commander will "fill in the form; in passenger, pilgrim, or emigrant ships, the form "will be filled in by the medical officer. If the masters and "surgeons of vessels cheerfully respond to the requisition of the "Port Surgeon, and work in harmony, the results cannot but end "in the safety and health of both us and our sailors."

FROM a supplement to the *Punjab Gazette* we learn that the explorations at the Mound Shahji-ka-Dheri near Peshawur have not resulted in any important discovery. General Cunningham supposed that this might be the site of the Shupa of King Kanishka, but from the scanty discoveries that have been made, this is no longer considered probable. Something like an old well, some remains of walls of *kucha* brick-work, a flight of steps, slabs that seem to have been used for the sides of water-troughs, small copper coins, fragments of sculpture of blue slate, and such odds and ends as a die, a ring of alloy, a copper needle &c., are nearly all the results of the excavation, which has accordingly been discontinued.

The exploring party then transferred their labours, to Takkál, also near Peshawur. Near the villiage of Takkál Bála are three mounds, respectively seventy feet, forty feet and fifteen feet above the plain. Between the mounds were indications of the previous existence of buildings, and the excavators have laid bare the foundations of what is conjectured to have been a monastery. Valuable results have been obtained in one of the mounds from which previous explorers are said to have removed some statues. A part of a very massive building has now been laid bare, with walls of *pucca* masonry, and there is little doubt that this is a discovery of Booddhist ruins. The work had to be suspended when the sepoys were required to suppress the fire in Peshawur, but it is to be resumed this cold season, and will doubtless be carried on with energy and expedition.

PERAK.

WE invite earnest attention to the policy that has resulted in the despatch of forces to Perak. Some have doubtless been astonished at the marvellous promptitude with which Government has acted in dealing with the recent outrage there. But a fortnight ago, many of us had scarcely heard the name of this little State on the west of the Malay Peninsula, when a telegram reports that the British Resident has been shot, and that British troops are proceeding to the spot. When we think of Mr. Margary and the Burmese and Chinese negociations, in which certainly no remarkable celerity or vigour were exhibited, it would be a natural question to ask, what new and formidable power is this, which our magnanimous Government, though in the midst of festivities such as India has never before witnessed, speeds in hot-haste to punish and *subdue*? Why was *not* Sir Douglas Forsyth, with or without his boots, sent to arrange this new and bloody business, and avert a war? We are not so cynical as to answer, that we were afraid of China but have no fear of Sultan Abdoolah or his rival Ismail. It is sufficient, we suppose, to say that Perak is a State which has recently come under British adminstration, and the murder being one that may thus be said to have been committed in our own house, we must avenge it speedily and take prompt measures to prevent further outrages. But how has Perak come under British sway; and how does it happen that the first evidence of its attachment to the paramount power, has been the murder of the Resident? Have the transactions been well and wisely managed that led to this result?

The conviction has been forced upon us, and we must not withhold it from our readers, that the Governor of the Straits Settlements is much to blame, for hasty and inconsiderate, and unauthorized action in taking over the Government of Perak, and that the late murder and the little war that promises to flow from it, are but the issues that might have been foreseen. It may be necessary briefly to recapitulate the events that have led to our taking over the administration of Perak, as these events are related in the Governor's statement in the Legislative Council at Singapore, and in the local papers. More than two years ago, there occurred certain disturbances among the Chinese workmen at the Laroot mines, and at the same time a disputed succession to the Perak Sultanate, and these twin troubles in the words of the Governor "hinged mutually the one upon the other." British interference was considered necessary. Sir Andrew Clarke, then Governor of the Straits Settlements, after seeing the Laroot disturbances settled, supported the claims of the Sultan Abdoolah to the throne in preference to those of his rival Ismail. What is called the the Pangkore engagement was entered into; Mr. Birch was appointed British Resident at Perak; and Sultan Abdoolah

who had for a time ceased to smoke opium and promised to behave himself, agreed to receive, and act upon, the advice of the Resident in all matters that did not directly affect the religion and customs of the Malays. The advice of the Resident was to regulate the collection and control of the revenue, and Abdoolah agreed to abstain from all irregular methods of raising money, and to content himself with a fixed income.

However sound the reasons for preferring Abdoolah to Ismail may have seemed to Sir Andrew Clarke, it soon became evident that as a ruler he was at once incapable and dishonest. He smoked opium, neglected business, borrowed money, and squeezed his subjects, in defiance of the Pangkore engagement. And when Mr. Birch presented to him a complete scheme of taxation, he professed his approval but excused himself from signing it. Instances of his violation of the treaty, and disregard of the Resident's advice were abundant, and his conduct was doubtless very reprehensible. But it strikes us that the self-appointed paramount power was perhaps even at this time driving the Sultan and his chiefs a little too fast. Imagine these wild Malay chiefs and their opium-smoking, helpless ruler, saddled suddenly and against their secret will with a British Dictator as Resident among them, with a complete scheme of taxation, not after *their* hearts, but framed and imposed upon them from without. Was it wonderful that there should be some kicking against the pricks? It is true that Abdoolah had promised implicit obedience, but his habits of indulgence had made him imbecile, and it may be taken for granted that he had advisers among the Rajahs whose councils were hostile to the terms of the Pangkore engagement. The Resident was an able and energetic official, but does not appear to have been very scrupulous or delicate in his action, while it plainly needed much tact and delicacy to bring the Sultan and his chiefs, each of whom had been accustomed to levy taxes and raise money in his own district, to accept at once, and honestly carry out, a cut and dried new scheme of taxation furnished by the Resident. We can see neither wisdom nor justice, in the course that was pursued. We enter a foreign state which happens to lie in proximity to our settlement; we assume the right of the powerful to settle a disputed succession. We set on the throne an incapable ruler against whom there exists a strong faction headed by his rival; we require him to enter into a treaty to accept a Resident whose advice he must follow, and to adopt and carry out a revenue scheme on principles, we may presume, hitherto unheard of in Perak. The puppet we have set up, does not move in obedience to the springs: the imbecile Sultan cannot or will not carry out our scheme of taxation; the Resident complains that he is silly, frivolous, childish and worse, and in short, the Residental system is a failure.

It would have been marvellous had it succeeded. But the most serious part of the tale remains to be told. The new Governor of the Settlements—Lieutenant-Col. Sir William Jervois—on receiving the repeated complaints of the Resident, determined to visit Perak in person. He had been informed, we have not heard by whom—that *some* of the chiefs had expressed a wish that we should undertake the government of the State. He met a few of the leading men. One was a great opium-smoker, and his opinion on the state of affairs is not recorded. Another was active and energetic, and desired the British to take over the government of the State. The Governor next met the deposed Sultan Ismail, who also favoured British supremacy *on condition that he should himself become Sultan.* Such a proposition could not be entertained. "We had deposed Ismail" says the Governor "and put up Abdoolah, and it would be absurd now to depose Abdoolah and put up Ismail." It is not very clear how many more—if any more—of the chiefs, really expressed a desire to live under British rule: but we find the Governor at once proposing to Abdoolah to relieve him of the troubles of government. It was not, as we heard at first, the Sultan that asked the British to take over the management of affairs, but in the words of the Governor, "I proposed to him that British officers should undertake the "government of the country, and that he and other chiefs en-"titled to payment by the State, should receive allowances from "the revenues of Perak, and he promised to consider this sug-"gestion." And the Governor is as prompt with a ready-made scheme of government, as the Resident had been with a brannew revenue system. British officers called Queen's Commissioners are to govern the country in the name of the Sultan, assisted by a council of Malay Chiefs of the blood-royal of Perak. The blessings of good government are at once to take the place of anarchy and oppression: the resources of the country will be rapidly developed, and the Malays will rejoice and be thankful under the beneficent shadow of British protection and Government. Perhaps, if Sir W. F. Jervois had had a little Indian experience before he became Governor he would have been less sanguine. But, however that may be, it is certain that he acted with extreme and inexcusable rashness in proceeding, on such slender grounds, to take over the government of a foreign State *without even waiting for the authority of the Secretary of State.* He was aware, he states, that he had "incurred a responsibility of "a very grave nature in taking the steps which I have adopted "without instructions or authority to do so. It appeared to me, "however, that the situation was one in which the longer action "was postponed the more difficult it would be to deal with, and "the desire expressed by *some* Chiefs to hand over the Govern-"ment of the State to us, presented a very favourable opportu-"nity for a settlement. I considered moreover that it was more "difficult to show why the case should be deferred than that "action should be forthwith taken."

That the Governor acted with the best intentions may be granted, but his action seems to us, and probably now to himself, rash and unjustifiable; and the result has shewn how mistaken were his expectations. It does not appear that the condition of Perak was much, if at all, worse than it had been for years before. Then why this headlong haste? Because the imbecile ruler *we* had set up, was unable to rule or to keep his engagements; because *some* chiefs, when asked, expressed themselves favourable to British supremacy; and because the Governor honestly believed in the benign efficacy of British rule, he proceeded to take over the government of a foreign State, without so much as sending a telegram to ask the opinion and authority of the Home Government. His whole course of proceeding seems to ourselves to have been hasty and ill considered. Success could hardly have justified it; while as we know, the result has been the murder of the Resident: and when and how the trouble and bloodshed will end, we cannot foresee. That we shall be able to crush the rajahs and settle the State with a high hand is perhaps, not doubtful, but the wisdom of this occupation of Perak, will not be easily set forth by even the staunchest advocates of such a policy. With what face can we abuse Russia for her Central Asian aggressions? Have we not a beam to take from our own eye, before we point to that in the eye of our neighbour?

THE TURK.

THE opinion of most Anglo-Indians on the Eastern Question is very fairly summarised in Mr. Disraeli's statement, that England has in the east important interests which she means to protect. The words have a sound somewhat oracular, but their purport is very well understood. England's interest in Asia refers to our Indian empire, and the protection to which allusion is made is that of Turkey. We find the Sultan a convenient buffer between us and the Czar.

> The feather bed 'twixt castle wall
> And heavy brunt of cannon ball.

And as he is of use we mean to keep him in existence as long as we can. We prefer a campaign on the Danube, or in the Crimea, to one on the Indus, or near Delhi. It is an old maxim of policy to carry the war into the enemy's country, to attack him at home, and keep him at a distance. This principle has always been most readily accepted by the more courageous nations, and has become in England so much an acknowledged truth that no one dreams of questioning it. It is our boast that we have fought everywhere but at home. An Athenian once uttered the taunt, that piles of Spartans born were to be found round his native city, and the Spartan happily

replied that in Lacædemonia there were no Athenian bones. In the same spirit we may fairly say that our enemies should study their own maps rather than ours.

These arguments are excellent among ourselves, but they have this disadvantage, that they are not appreciated by foreigners. They resemble the light wines of northern France, which will not bear exportation. At St. Petersburg it is of no use to urge, that the power of the Sultan being advantageous to England, it ought to be preserved, just as in London it would be vain to contend that his dominion ought to be destroyed because it is prejudicial to Russia. Foreigners are apt to call such views narrow, and selfish. And we ourselves must acknowledge that, although good as far as they go, they are not exhaustive. It is quite right that we should look on the Grand Turk from an English and an Indian stand point, for if we do not who will? At the same time we must own that he does not exist merely for our benefit, and that his position as it affects his own subjects, is a fair subject for discussion. This is particularly the case now that Russia, Prussia, and Austria have adopted a joint policy on the Eastern Question. In dealing with such a coalition, it is not enough to say that we have interests which we mean to defend: the allies may reply, so have we.

The position of the Turks in their European possessions, is certainly peculiar. As compared with the Christians they are in a minority. This is our own case in India, and has been that of many other conquering races; but, unfortunately for the Turks, their inferiority in numbers is not compensated by any superiority in civilization. When, four-hundred years ago, they took Constantinople by storm, and proceeded to overrun the other provinces of the Byzantine empire, they were a mere horde of barbarians, on a level with the Affghans or Tartars of the present day. Since that time it would seem that they have not improved. They are still a simple, illiterate people, ready enough to fight, and just now armed with good and expensive weapons, which they have managed to buy with borrowed money, but are still quite uncivilized. The subject Christians, on the other hand, were when first conquered the most refined people in Europe. Where emancipated from foreign rule, as in Greece and in the Danubian principalities, they have shown that they can contend successfully in modern arts with the nations of the west. No resident in Calcutta will, for a moment, compare the Greeks with whom he is acquainted with the Turks; they carry on their foreheads the stamp of a superior race. Now this subjection of the civilized many to the barbarian few, is an anomaly. It is what mechanists call a case of unstable equilibrium, suggestive of a sudden fall. It is maintained only because the Turks in Europe are supported by the Turks in Asia, a much more numerous body, embarrassed by no Christian opposition. If at any time the subject Sclaves or Greeks were to meet with equal sympathy and aid from their compatriots, the Turkish empire would topple over.

This was the unsatisfactory condition of Turkey last summer. It had existed for a century, and though it had in the past resulted in the breaking off of huge fragments from the Ottoman empire, such as the Crimea, conquered by Catherine, Greece, and the Danubian principalities, it had not very recently caused any complications. The Sultan was not so much the sick man, to whom he has been compared, as the man of a bad constitution, the man with a disease of the heart, which may kill him at any moment, but which has not troubled him lately, and may never take a fatal form. Within the last three months, the position has been entirely changed. In the first place Turkey has committed an act of bankruptcy, and that not, as far as we can see, from malice, but from sheer inability to pay her way. She borrowed at eighteen per cent. to pay the last instalment of her debt. She can now raise, on any terms, only half the interest due, and so she must pay the other half in paper. The necessity which excuses the act in a moral sense, adds to its political significance. The rascal who can pay, and will not, may be very well able to defend his interests when they are attacked; but the honest defaulter is always weak. Turkey can at present defend herself only by buying ships, cannon, rifles, and torpedoes, to say nothing of the services of skilled officers, from the manufacturing nations. Left to her own resources, her matchlocks and scimitars, she falls to the rank of China and Japan, whose whole power is not sufficient to carry to a successful conclusion the siege of a fort defended by a hundred Englishmen. Now, Turkey cannot suddenly provide the money for purchasing expensive arms on a large scale except by borrowing. Credit is therefore everything to her, and with it she has lost the power of resisting aggression. Any of her neighbours, Russia, Austria, or Italy, might now subdue her. In the second place, her position has been complicated by the outbreak of civil war. This would be of little moment, if she had shewn that she could at once crush resistance. If her troubles had been limited to the trial of a Mr. Cowan for blowing rebels from guns without authority, they would not have been a matter of European concern. But when a nation supposed to hold in readiness a quarter of a million bayonets, takes weeks to subdue a handful of insurgents the case becomes serious. It gives a fair, or at least a plausible, occasion for reconsidering the position. And lastly we have the fact that Russia, Prussia, and Austria have adopted a joint policy of intervention. They recommend reforms and concessions. Now reforms and concessions made voluntarily, after rebels have been scattered and their ringleaders shot, such measures as we took when the mutiny was stamped out, may or may not strengthen a Government. When made while rebels are in the field in obedience to foreign and hostile dictation they destroy the prestige of a Government, and invite resistance Turkey cannot resist the demand of her three great neighbours without exposing herself to an attack, which even with English assistance she cannot repel. If she yield, her prestige in the eyes of her subjects is destroyed.

At this distance from the centre of information, it would be foolish in us to recommend any particular policy to England. We can only say that the question is more complicated than is ordinarily supposed. At present we are trying only to give stability to the Turkish empire. It may be that the time will come even for us to consider what policy we should adopt if, in spite of our aid, it should fall to pieces. If, as Mr. Disraeli says, we are to protect our interests, we must be prepared to act as the exigency of the moment indicates. Egypt is the only land-link in the chain between India and England; and it must never fall into hostile hands.

THE INDIAN ARMY.

Past, Present and Future.

SIFTING all that has been written on the subject, it will be found that two great evils of our Indian Military Organisation are, first, insufficiency of English officers for regimental duties, and secondly a lack of cheerfulness, tone, or let us say *esprit de corps*, in the Indian army at large. The latter may be considered by unprofessional men a very trifling evil but soldiers know better than this, and will say that a battalion or a division, without the animating spirit of what is termed *esprit de corps*, is shorn of half its strength; and it is most certainly a fact that an officer can never be a good officer so long as he has not a professional pride in his duties. Now, as regards the paucity of officers in the first place, it is evident that this evil can never be rectified so long as regimental officers are permitted to leave their corps for civil, political, or non military employment. It will be vain for Lord Salisbury to send out direct cadets to India to increase the number of regimental officers, so long as the more attractive career of a civilian is permitted to tempt a military man away from his proper duties. No plan of providing more officers for the Indian Army is in short worth any thing, which does not deal with this great and glaring abuse, as the very origin of the evil complained of. It is impossible, at this distance of time, to say decisively who that man may have been, who first perpetrated the egregious blunder of turning regimental officers into temporary civilians, but whoever he was, we doubt not that he was personally interested in the folly, for we refuse to give any one credit for the want of sense which characterised the arrangement. Regiments in this manner were denuded of officers; the officers on civil employ forgot their military duties; and when at last, in time of war, they were remanded to their regiments, their ignorance of the men

and of their duties were so shameless as to be the bye-word and the scorn of the other officers. But this was not all, they carried discontent into the mess, and by continual groaning over the handsome incomes they had lost, and revilings of regiments and regimental pay, sapped the very foundations of all *esprit de corps*, by destroying the youngster's pride in his profession. The same evil flourishes still though in a lesser degree than of old. Police officers, politicals, and others in civil employ, are often remanded to regimental duty, either because it suits their views to go there, or because they have been dismissed civil employment for incompetency or misconduct. What a commentary on our military organisation is here? The Native army turned into a penal establishment for officers whose first duty it is to shew a cheerful and willing spirit of duty to the mere mercenaries they command! Now, considering the constitution of our Native army, and the absolute necessity there is of making it a well contented loyal service, all possible means should be used to elevate its tone, demoralised by this practice of making civil service the reward of military intelligence and application. We would abolish civil employment for military men from a certain date altogether. It is not denied that the Native army has produced many able men for civil work, but we must remember that if it has done so, it has been at the expense of the army. Neither is it denied that the present practice has its conveniencies. It is convenient to the young staff corps officer, with an influential uncle in the civil service. It is convenient to mammas and papas and all sorts of people; but it is *not* convenient for the interests of the army, and it is military interests that are primarily to be considered in the matter. No one will say that the army is improved in any respect by taking away its officers for civil employ, but unless somebody can argue this point, enough has been said to condemn the practice as a military evil of the first moment.

The want of professional spirit, of all animation in the military service—is mainly due to this senseless practice of permitting military men to become civilians by favor or interest. The Indian army was never a well paid service, but it is worse paid now than ever. The rise in prices of late years, has taken a heavy percentage off the pay of every officer and sepoy in the Native army, so that the desire and craving always experienced by officers to enter a better paid service, are now intensified. And in proportion to the desire for civil employ comes disgust with regimental life—an evil too conspicuous surely to pass unnoticed. The grumblings of Indian officers are proverbial. They have been heard every where, even in the House of Commons, but does any one reflect, while contemptuously shrugging his shoulders over such things, on the immoral effect of such discontent on the sepoys, men who lay every word and gesture of their officers to heart. It is only rational to suppose that the discontent of the officers has found its way to the ranks, and any dissatisfaction in a mercenary army is a danger. For our own part, we think the Government has been unwise to pay so little heed to the grievances of its Indian officers. It would have been cheaper, in a political light, to have bought out every grumbler from the beginning, than have paid him for years to swell the disatisfaction of a service full of grievances. We go upon the broad principle that if the Native army is worth maintaining at all, it is worth the utmost consideration its employers can give it. We do not believe in half measures with such a dangerous toy as a hundred thousand armed men. An army is an army, of whatever material it is composed; and but a little neglect will throw the machine out of gear. Now there has been an indifference displayed towards the Native army of late years that every one has felt. It may be thought that with sixty thousand British soldiers in India, we can afford to make light of Native troops, but a crisis may teach us the folly of this confidence. It would be better policy to render the Native army as thoroughly effective as is possible, even if we had to reduce it in numbers to pay for the cost of its improvement. As to the means of restoring its tone, and of rendering it what it ought to be,—an army fit to go any where—the first steps would be to abolish civil employmen for its English officers, to increase their numbers by young cadets fresh from an Indian military college in England, and to raise their pay both in consideration of deprivation of civil employ, and of the rise in prices everywhere felt in India to-day. The Indian military service has become an unpopular service and all efforts ought be made to render it one that would attract young men of adventurous spirit, of liberal education, and of talent. Men of this stamp will not willingly bury themselves in jungle stations to be commanded by ancients who can hardly sit their horses on a peaceable parade. They will not be satisfied that their warlike aspirations resolve themselves into the snarlings and the snappings of three or four old gentlemen and their wives. It is no wonder if the young staff corps officer fresh from a British mess, flees from such a life as this to the happy independence of a civilian's career, or that the Native army full as it is of senility, and deficient in officers, should be looked upon distastefully by even a sub-Lieutenant on British pay. The Indian army must be made more attractive if we are to have any *elan* in it, and it appears to us, that it is now, as it has ever been, too much sacrificed to the gratification of the civil service. The pecuniary distinction between the two services is too marked. The one service is certainly as good as the other from a social point of view, while the dangers and duties imposed upon both are about equal in time of peace, yet the civilian is paid many times better than the military man, though his duties, since the Indian army has been Prussianized, are scarcely more onerous, certainly not more monotonous. It has been the curse of the Native army, that this so called boon of civil employment, has effectually stopped the amelioration of its prospects in a professional and a pecuniary sense ever since the abuse was inaugurated. For the authorities with great plausibility, say. "What—increase the pay of the Native "army, when its members can become highly paid civilians "if they please! Pooh! it is only the idle and depraved who "remain with their regiments, and what is the use of improving "the condition of men who cannot or will not improve "it for themselves!" So runs the tacit argument, but nothing is said of the claims of "*interest*" being paramount in the matter. In fact, without some interest to secure his advance, an Outram or a Lawrence in these days might never hope for an opening to that more remunerative employment which is popularly supposed to be at the disposal of every industrious regimental officer. The Native army will never receive fair play so long as it is mixed up with the civil service, and the sooner the two are separated and permitted to go their ways apart, the better it will be—for the army at any rate. Before the events of 1857, this practice of taking away the cream of the army for civil employ was in full swing, and what came of it ?. The officers who remained, had no influence over their men, for we believe that most of them spent their time in either intriguing for civil employ, or in groaning over the misfortune that kept them out of it. In short it is a senseless system altogether, and until it is swept away, the Indian army can never have justice done it. In another paper, we propose to treat of the proportion of English officers, to sepoys in a Native regiment, as well as the right source from which to draw, perhaps the most important element in the constitution of our large and loosely organised Native army.

PORTRAIT PAINTING.

PORTRAITS and the painting of them, make up a subject of curious interest.—On the one hand we can all remember wandering through the glowing rooms where the Royal Academy displays its annual treasures, and (unless they were our personal friends or some celebrity in whom we were interested) avoiding portraits with a particular care and a feeling that our precious time, and more preciously hoarded energies of enjoyment, were not to be frittered away on portraits "of a lady," or "of a gentleman"—however good the painting, or however great the artist. How different are our feelings on the subject, if instead of portraits of "common," or let us say *living* individuals we are in a gallery of ancestral pictures, or still more, amongst the portraits of those whose names are great among the greatest past times, and in whose lineaments we seek with interest for the stamp of character made known to us by the records of their deeds, and by our own feelings of attraction or repulsion.

Among the earliest painted likenesses (for those in stone, metal, and marble were reliable at a very early date), we can believe in and admire, are those by Holbein. We can test them by descriptions not likely to be at fault, by our own convictions that they and no other were the actors in the scenes associated with their names. Who can have a doubt about the likeness of Henry VIII. with his broad open English face, that should have been so honest, and was so kingly, its inner character too well written in the small, dark, cruel eyes which, even in painted resemblance we would fain avoid. We can quite realize the impression which that large, well built frame would make on the multitude, decked in the splendid costume of the day, and poised in the perfection of strength, activity, and princely carriage, in every game and *feat* to enhance such display. We can equally believe in Queen Elizabeth's likeness to her pictures: the complexion in youth so brilliant, the more quickly fading and the more susceptible of wrinkles; the cunning eyes like her father's, the aquiline haughty nose and clever brow, and those thin flexile cruel lips, so easy to school to falsehood, so incapable of weakness.—

We might enumerate many portraits of this period equally characterstic; for none but the wealthy and noble could be taken in those days, and these were mostly of note, well-known to fame,—or 'infame,' by their deeds. Take only one noble gallery as an example, that of the Suffolks of *Charlton* House, and in these you may read a history from the human faces on the wall: a history not merely of family and race, but of the great and noble of the land through several ages.

Real portrait painting as a picturesque and beautiful art, did not truly begin until Vandyke appeared, to shew not only the features and the dress, but the life and soul looking out of the windows of the face, as in the mournful countenance of Charles the first, impressed with all his peculiar idiosyncracies:—his exquisite refinement and breeding, his melancholy, his personal purity, and the brow which, not wanting in talent, was wanting, absolutely, in power, and that sensitive unhappy mouth which the moustache and the fashion of his beard not only did not hide, but lent additional expression to.

To sit for a portrait in those days was a serious thing, undertaken in a serious way. We can sympathise with Mr. Pepys in his anxieties on the subject of Mrs. Pepys' nose. That nose was to descend as a success or failure to posterity. Hales, the painter, felt it a great responsibility, took much time over it, and in order that his efforts might be appreciated, told Mr. Pepys that whole portraits had taken him less time and cost him less trouble than that one nose. Hales painted a companion likeness of Mr. Pepys himself. Of his sufferings under the ordeal—vain and anxious under the subject as he was—he thus complains:—"To Hales; and do almost break my neck looking "over my shoulder to make the posture for him to work by." Evelyn demands of us a great reverence and gratitude in many ways, but, among them, in that he was a collector of prints, portrait engravings of the great and celebrated of his own and other times; and he it was who incited Mr. Pepys to follow the like fancy and to make similar collections. However dry and uninteresting an overplus of portraits in our annual exhibitions may be, there are few of us who can take up a portfolio of printed or rather engraved likenesses of men and women of a bye-gone age, without an intense interest and delight—a curiosity too, to see how far our mental draughts of those remarkable faces have approached the truth.—We have all fancied what the brave and good Lady Russell must be like; we have glanced a scornful glance at Queen Anne; we have imagined handsome, unsentimental, and unromantic Lady Suffolk; we have seen in our mind's eye plain little snuffy Charlotte, a mass of covetously beloved diamonds; and we have portrayed to our imagination, and perhaps really seen engraved, the lovely image of Marie Antoniette, as we have read of her from Madame Vigée Lebrun, a head taller than her ladies, like Calypso with her nymphs, bright-eyed, exquisite of complexion, stately of gait as she walked the long gallery of Versailles every inch a queen, the most beautiful in the world. We have also fancied her, a very woman as she was, or rather half a child, flinging by that stately garb though not her swan like gait, and flitting through the Trianon gardens alas, for her too gaily! We have fancied her, too, a sorrowful widowed mother mending worn garments with faded hair and a wan face, and writing on the door of her prison from the pages of Thomas à Kempis:—"That glory is short which is given and received from men. Sorrow always accompanies the world's glory. The glory of the good is in their consciences, and not in the tongues of men. The gladness of the just is of God, and in God; and their joy is of the truth." Who could prove these truths better?

To close our few remarks on this endless and interesting subject, we may express our surprise that no first rate English Portrait painter has ever made his appearance in India. Things will be changed now in all likelihood after the royal visit of to-day. We can hardly imagine a pleasanter errand for a really good English painter, than to come to India for a cold weather tour, and paint. There are names amongst our countrymen which will make true portraits of their owners valuable: there are names and estates among the native chiefs and nobles which would render their portraits valuable; and amongst the many whom fame perhaps may never blazen abroad, there are fair women and brave men, who would be glad to sit, in the heyday of youth and vigour, to a painter from home, at a time when money if not less valuable is more available than in England. For the painter himself, never could artist imagine a more delightful tour, or a more hospitable reception. Let some one so gifted think of it, we say,

THE GIPSIES.

IN a recent issue of the *Saturday Review*, there is a notice of what is styled the first purely literary work which has appeared in the Rommany dialect. It is styled *English Gipsy Songs*, in Rommany, with metrical translations; by Charles G. Leland, Prof. E. H. Palmer, and Janet Tuckey. In the notices, parts of some of the songs are quoted, and we think from the few specimens given, that there can be no difficulty in identifying the Gipsies with some of the wandering tribes of India, the Nats, Bazigars, Bangalis, Aranpopos, or Sirkibans. We think that a parallel may be drawn between the Gipsy dialect and that of the *khansamas* of Calcutta, which Sir George Campbell tried to dignify into a language, or rather the language of Hindoostan. In both there is a marked absence of inflectional forms—in both there is a considerable admixture of foreign words. These peculiarities are caused by isolation which, as in the case of the Americans and East Indians, prevents the changes which are going on at home.

Let us see if the extracts in the *Saturday Review* afford any internal evidence. We shall first quote the extracts and allude to them afterwards as the first, the second &c.

Kai sos tu, rínkens chávo, kai?
Apré at ye well-góro, pals;
An' I hóckered a gry,
An' I chŏred a rye,
An' sár for ye kám o' ye Rommany chals!

Oh, where have you been, my bonny lad?
Oh, I have been up at the fair, my boys,
With a pack to sell,
And I cheated a swell,
And all for the love of the Gipsy boys!

"And I never will be such a fool as to go *chorin kooh* (stealing wood), out of any man's hedge by daylight again—never no more."

Sí míri chumya shan kúshti tohá
Tu násti hatch zóckalo, déare, aja!

If kisses of mine were good to eat
You shouldn't go hungry long, my sweet."

First, as to their name for themselves, the Rommany. Has this any thing to do with what Mr. James Binnie called the Lenguy Toscawny in Bocky Romawny? We are of opinion that it has—that it points to a long residence, almost a settlement, in Romanesque countries. It will be seen that the conjunction in the third extract, is the *si* of the Romance languages, and the assimilation of a particle must have been the work of ages. They have been known in England for several centuries, and we see they have adopted the English connective 'and' and the pronoun 'I'—see first extract. The word *kai*, where, in the first extract is undoubtedly Eastern. In all the Oriental languages *k* is the unvarying element of the relative adverb: compare the Persian *kuja*, the Urdoo *Kahan*, the Bengali *kotha*, and the Punjabee *kithe*.

Kai sos tu is very like the Persian *kuja husti* and the Punjabee *kithe si tu*, one meaning *where were you?* and the other where are you? *An' I* in the third line are plainly English, and perhaps *hockered has some relation with huckster*. In this word and in *chored*, the reader will remark the English preterite form. Can *gry* have any thing to do with *ghori* which is the animal universally used by the natives of India for equestrian exercises? There is no doubt as to the word *chor*, and the Anglicised *chorin'* In the second extract. *Rye* is the Gipsy word for man and men—they call themselves, as is well known, the Rommany Rye. Has the word any thing to do with the Hindi vocative particle *re ri*?

Sar is of course *sàrà*, all, and *kam* the Hindi name of Cupid and he word for love.

Miri chumya is very good Hindoostanee for my kisses! *Tu* is the Urdoo *tu*, the Persian *to*, and the Punjabee *tun*. *Nasti hatch* is the Persian *hech nest* there is nothing; in this we see a confusion of tenses as in *khansama* Urdoo. There is no difficulty in recognising *bhuka raho* in *bochalo* which is very much like what many English men would pronounce it. *Deari* is of course our *deary*. *Aja* may be the Punjabee and perhaps Hindi *aje*, as yet, up to this time.

The presence of so many Indian words at such a distance from India, is we think conclusive as to the origin of the Gipsies. With regard to the eating of the dead pig, it is well known, that the Indian Gipsies, represented by the tribes we have named, eat carrion. The word *mullo* is of course *mara*. The incarnation of the evil spirit in the pig theory, may we think be put aside as a far-fetched attempt at explaining a long established custom. Palmistry, which is practised by the *Araropos*, whose women, by the way, are arrant thieving baggage, and the custom of not living in houses, are common to both Indian and English gipsies, and taking every thing into consideration, we repeat that there seems to be very little doubt that they are one and the same.

THE ILIAD AND ODYSSEY OF INDIA.

[*By Edwin Arnold.*]

IV.

BUT this revealing of the invisible world deepens the discontent of the Princes, and when the sage Vyása tells them that their prosperity is at an end, they determine to leave their kingdom to younger Princes, and to set out with their faces towards Mount Meru, where is Indra's Heaven. If, haply, they may reach it living, there will be an end of this world's joys and sorrows, and and "union with the Infinite" will he obtained. We shall imitate, in our last quotations, the shloke or *anushtup* verse of sixteen syllables, in which the original "Mahábhárata" is mainly composed—

With Draupadí and the Princes the King went from the city gate,
The high-souled sons of Pandu and the famous Princess following them.
For life eternal longing, and worldly things all abandoning.
To many lands they wandered, and hill and wilderness traversed they.
In the front walked Yudhishthira, and next him masterful Bhima came.
After Bhima the mild Arjuna, and Nakula and Sahadeva then,
And sixth came sweetest Draupadí, dark browed and with loveliest lotus-eyes,
And last came Yudhishthira's dog.

Far they travel together, till in the distance is seen rising immense Himavat, and the highest peak of this range, Mount Meru itself, where god Indra dwells. But at this point Draupadí sinks exhausted. She had been faultless in love, but too much attached to things of earth, and her soul accordingly failed in its final task. Then Sahadeva and Nakula fall dying, and Arjuna also; the poet relating at each calamity what earthly imperfections caused thus their want of power to reach the holy mount. Bhima dies last, guilty of want of tenderness towards his enemies, and none of the princely company now survives but Yudhishthira, the king. He followed by the dog, strides on towards the abode of the gods, not looking behind him; but, with sad eyes and declining strength, ever pressing towards the place of rest. And here occurs one of the noblest religious apologues not only of this great epic, but, we venture to think, of any creed—a beautiful fable of faithful love, which may be contrasted, to the advantage of the Hindoo teaching, with any scriptural representation of death, and of love, "which stronger is than Death." There is always something selfish in the anxiety of orthodox people to save their own souls, and our best religious language is not free from this taint of pious egotism. The parva of the Mahábhárata which contains Yudhishthira's approach to Indra's paradise teaches, on the contrary, that deeper and better lesson—

The gate of heaven opens to none alone.
Save thou one soul, and it shall save thine own.

The good Pandava King has passed all dangers safely, and stands secure, but alone, upon the summit of the holy hill Suddenly a strain of celestial melody rings through the golden air, and Indra appears in his chariot. "Ascend," the god cries; "my Heaven awaits thee;" but the King replies:

Oh, mighty Indra! yonder there lie joyless all my brothers true;
I cannot enter Heaven and leave those dear lives fallen away from me,
And Draupadí, the sweet-faced one, a king's child, fair and virtuous,
If I go she must enter too. Oh, Indra, have pity on those I loved.

INDRA.

In Heaven, Monarch, thou wilt find thy brothers; they all have safely come;
They all are there, with Draupadí; tarry not, then, thou son of Bharat.
Arrived thy kinsmen are and Queen; but so as the dead come have entered they.
Their soiled and fleshly garments doffed; but thou shalt enter living, oh King!

YUDHISHTHIRA.

And this dog too, O Indra, here! 'tis a true beast that has followed me.
All the long journey, faithfully; indeed, Lord! I have compassion on it.

INDRA.

Eternity and friedship with the holy gods and fellcity
In my high Heaven hast thou this day attained; leave, therefore, the brute to die.

YUDHISHTHIRA.

The best men do some evil, but the worst love that which loveth them.
If thy Heaven doth cost so dear a price as my dog's pain, let it lack me.

INDRA.

On earth, wherever a dog shall come, unholy are purest sacrifices.
Leave what is low and base to die; Heaven now will be *enough* for thee.
Thou cam'st here, leaving Draupadí—thy brethren all thou cam'st leaving too.
Stay'st thou, then, at Heaven's door, for a hound? Nay, Monarch, mount and ride quickly.

YUDHISHTHIRA.

When on yon earth our dead die, neither love nor hate again they feel.
Neither can ever help them there, else never there had I quitted them.
Worst of the four great crimes of life is treason done to faithful love.
This brute hath faithfully followed me; I will to hell if he goeth, Lord!

But the dog was all the while Yama, the God of Death, disguised; and that grim Deity, as he resumes his proper form, praises the gentle-hearted King, and leads the way into Paradise. Yet another trial, however, awaits his perfect virtue, for on entering the jewelled gate of Indra's abode, Yudhishthira beholds the Kauravas, but not his own kinsmen, there; and believing himself deceived, turns away and strides downwards to the gate of Narak, the Brahmin hill. Outside its dismal portals he is assailed by noisome odours and horrible sights, but he hears the voice of Draupadí inside, and beats fiercely for entrance. As the ghastly porch opens, the foul and murky air suddenly clears, the evil noises turn to exquisite music, hell becomes a dissolving vision—*maya*—an illusion, which gives place to the real and glorious Heaven of the high gods; and Yudhshthira, thrice-tried and found perfect, obtains immortal bliss for himself and for all those dear to him.

Such is the barest outline of this mighty and ancient poem, which has had far more rapt listeners than ever the "Iliad" or "Odyssey" could boast—which may claim a grander scheme and higher aims than either, and which in many a beautiful and sonorous passage does not yield in music or invention or majesty to the flow of Homer's own Greek. Outside the main story and its many episodes, the gigantic work contains, as an ocean embraces islands, the separate compositions of the Bhagavad-Gita, with the legends of Krishna and the three famous stories of Nala and Damayanti, Devayani and Vayati, and—though, this was interpolated—Chandrahasna and Bikya. The Mahábhárata is in truth, an ocean of poetry, whose coast-line we have merely indicated, yet we have accomplished our purpose in praising the industry which has summarised it in Mr. Talboys Wheeler's admirable first volume; the spirit which has aided him in Messrs. Trübner's well-known interest in Oriental learning; and the devotion above all, of that nameless scholar whose toil has sounded for us the depths of this almost boundless sea. We have dipped but a cup or two from its musical wavelets of love alternating with mighty rolling billows of tempestuous passion, and sinking back again into ripples of

restful peace and the calm of the dark waters at night. It was our desire, while doing justice to a recent notable work, to convey some slight idea to the English public of this vast antique epic, which to the present hour feeds with by-gone but immortal melody the hearts of all the Indian people. If we have effected this, our purpose is accomplished. In another paper, and on a future occassion, we hope to notice the remarkable translation which Mr. Ralph Griffith, of the Benares College, has achieved from the Sanskrit of that sister-poem of the Mahábhárata—the voluminous Rámáyana.

HOLY SCRIPTURE.

Its Inspiration and Historical Truth.

[By the late Bishop Cotton.]

I.

BEFORE asking the attention of our readers to some imperfect hints on this great subject, we cannot but express our regret that we are compelled to treat it as a matter for argument and intellectual discussion at all. If we wish to discover the real power of that word, we shall seek it, not in the schools of Oxford, but in the lonely chamber of the afflicted, or by the deathbed in hospital, or among the peasant converts of Chota Nagpore. Those who have watched the power of Scripture to comfort the mourner, and cheer the dying with the hope of immortality, must loathe the dry husks of critical discussion, and turn with repugnance from theories of inspiration. The Gospel has been transmitted to us through human agents in a historical form. Hence criticism of its contents is inevitable, and becomes a duty incumbent on those whom education has qualified for the task.

First then we remark, that we must not form a theory of the manner in which we fancy that Scripture should have been written, but must endeavour, by observing facts, to ascertain in what manner it has been written. It is not ours to say beforehand what God ought to have done, or to decide on the form of His revelation from *a priori* conceptions. We must rest our convictions on evidence, and on evidence alone. Now there are two views on the subject, directly opposed to each other, which, as we venture to think, are contradicted by facts. The first is that which represents every word "and syllable of the Bible as actually dictated by the Holy Spirit, "just as if high heaven were open, and we heard God speaking to us "with human voice." The other is that which sees no difference between the inspiration of the writers of Scripture, and of other great men who by their piety or genius have moved the world. The former is the view which many Christians desire to take, because at first sight it seems to do honor to God's Word; to humble the pride of man's intellect; to save us from unspiritual discussions; and to rebuke an age of unbelief; so that some actually fail to see any halting place between this opinion and atheism. The other has been arrogantly asserted to be the only view possible to a man whose "mind is properly enlightened by education." The former involves us too often in untenable explanations of Scriptural difficulties: the latter leads to the denial of all supernatural revelation. Let us test both these opinions by the criterion of evidence, remembering that if they will not stand this test, then the defenders of both seem alike rationalistic in their principles, since they base their views of God's revelation, not on His words and the facts of His Providence, but on their own predilections and preconceived theories.

It is hard to describe the former of these two views, by any one convenient expression. It is sometimes called *verbal inspiration*, but the phrase is open to objection, because words are the appointed channels of ideas and sentiments, and there are passages, (such as the opening of St. John's Gospel,) in which the exact words form the necessary foundation of Christian doctrine. But if it is difficult to compress the theory into one short formula, it is easy to quote statements which make its nature clear. Thus a preacher told the University of Oxford that "every book of the Bible, every chapter of it, "every verse of it, every word of it, every syllable of it (where are we "to stop?) every letter of it, is the direct utterance of the Most High." And a foreign divine, forgetting that men are not irrational animals, nor inanimate hands, nor forces of nature, but beings gifted with reason and free will, compares their share in the composition of Scripture to the rebuke uttered by the dumb ass, to the warning written on the walls of Belshazzar's palace, and even to the agency of heat, humidity, air, and light, in producing vegetation. Thus the individual characters of the writers become unimportant: and it is pronounced of little consequence whether a prophet is holy as Moses, wise as Daniel, an enemy to God as Caiaphas, ignorant of the language in which he speaks as the prophets of Corinth, or polluted as Balaam* These views are sometimes supported by untenable interpretations, as when *anothen* is translated *from on high* in the beginning of St. Luke's Gospel, (*it seemed good to me also, having had perfect understanding of all things* from on high *to write unto thee,*) † or when the inspiration of the very letters of Scripture is inferred from our Lord's assurance that, *one jot, one tittle, shall not pass away from the law;* ‡ and sometimes by unreasonable assumptions, as that the twelve apostles fixed the canon, § which is a mere hypothesis resting on no evidence. We in India shall be slow to consider these opinions necessary for a reverential acceptance of God's written word, when we find among those who are censured as impugners of its plenary inspiration the honoured name of Bishop Daniel Wilson, chiefly on account of a sentence which seems to express an obvious truth: "it does not belong to man to say where nature ends and inspiration begins." ‖ It is true that there are in M. Gaussen's book on *Theopneustia* many remarks of great value, and some which appear inconsistent with such statements as we have quoted. But when he asserts that the Holy Spirit dictated the Bible to its human writers, just as Newton dictated the *Principia* to his amanuensis, ¶ we cannot regard him as a trustworthy guide, because facts do not bear out such an assertion. There are three with which it is irreconcileable: the existence of various readings; the differences between parallel records of the same transaction or discourse; and the manner in which the Old Testament is quoted in the New. Let us briefly notice each of these points.

The objection arising from the uncertainty of the sacred text is so obvious, that its force can be averted only by the assertion that "all the various readings, with scarcely an exception, leave untouched the essential meaning of a sentence, and relate merely to . . . the insertion or omission of an article or conjunction, the position of an adjective before or after its substantive, and the accuracy, more or less important, of a grammatical construction,"** We doubt indeed whether even this concession is consistent with the theory of dictation, for if every "jot and tittle" of the text is equally divine, the distinction of important and unimportant is scarcely admissible. But so small a concession will not satisfy the facts The uncertainty as to the eunuch's profession of faith in Acts viii. 37,†† the insertion of the three heavenly Witnesses in 1 John. v. 7, and many other variations between MSS., are not mere questions of articles and conjunctions. We thankfully admit that Christian doctrine does not depend on doubtful passages, and that our Creeds are proved to be true, not only by separate texts about which there is no dispute, but also by the whole tenor of Scripture. We accept this fact as a sign of God's care over His written word. Nor can we deny that the existence of various readings has been a help to the Church, and that by observing and comparing them we are gradually obtaining, not a more doubtful, but a more certain text. But these variations, and this slow approximation to correctness, exemplify that combination of a Divine and human element in Scripture, which is equally manifest in its original composition and subsequent preservation. We see that for many centuries God has considered that a text, imperfect in its details, is sufficient both for the internal piety and external growth of His Church, and that the benefit of an actual transcript of His words, which some regard as essential to our confidence in the truth of Scripture, could in no case have been enjoyed by more than a single generation.

The theory of dictation is also inconsistent with the fact that in different narratives of the same transaction, various points comparatively unimportant, words spoken and actions done, are differently recorded. Confining ourselves now to the Gospels only,—if we take the four accounts of the feeding of the five thousand we shall scarcely doubt that all rest on the evidence of eye-witnesses, but that each narrator has given his own impressions of the scene, and left for our instruction a sketch of what he himself specially observed. So again the words on the Cross are recorded differently in each Gospel. Though there is a far closer agreement among the first three Evangelists in quoting our Lord's words than in other parts of their histories, yet there are often slight variations in these most precious of all records. There is even a difference as to His exact words in that awful moment when He applied to Himself on the Cross the language of the twenty-second psalm. For while St. Mark represents Him as quoting the whole passage in Aramaic, St. Matthew gives the first three words in Hebrew

* Theopneustia. p. 224. † ib. p. 407 ‡ p. 426. § p. 405.
‖ ib. pp. 27, 45 &c. The sentence is quoted from Bishop Wilson's *Evidences of Christianity*. We venture however to think that there is too much of a tendency to theorize on the subject of inspiration in the Bishop's thirteenth Lecture, pp. 351 ff. (4th Edition). ¶ *Theopneustia*. p. 31.
** ib. p. 91.
†† The whole of verse 37 rests on such very questionable authority that it is entirely omitted by Alford and Tischendorf. See also Ellicott in *Aids to faith*, 422.p.

Such variations do not for a moment affect our faith in the Bible, but they cannot be reconciled with the opinion that every letter in it is the actual utterance of God. For as the Omniscient undoubtedly knew the exact words used by our Lord on each occasion, and the exact order of each succession of events, we cannot account for any discrepancy whatever, if we believe that the Gospels were framed from the dictation of the Most High, and not from the observation and memory of trustworthy witnesses, divinely raised up and guided for this purpose.

A third fact inconsistent with the view of dictation is this. There are in the New Testament many quotations from the Old, but these are commonly made, not from the Hebrew, but with more or less exactness from the LXX version. Sometimes they agree with it almost *verbatim*, sometimes they differ from it slightly, as if quoted *memoriter*; a very few follow the Hebrew more closely than the Greek; and some are intentionally changed and adapted to the enunciation of Christian truths, either by way of paraphrase, or to bring out the spiritual sense of the passage quoted and to give an inspired commentary upon it; so that "the words of the Old Testament receive a new meaning, and also retain their original power and sacredness."* These authoritative expositions of the Old Testament are chiefly Messianic applications of its prophecies and histories, and teach us that the Lord Jesus Christ is preached under the law as well as under the Gospel, though often in words which their human authors could not fully understand, because he had not yet come to reveal those things which prophets and righteous men had vainly desired to see. But besides such passages as these, with which our present argument is not concerned, there are many in which the Greek Bible seems to be quoted, even when it differs from the Hebrew, merely because it was to Christ and the Apostles their ordinary manual of Scripture, just as the English Bible is to us. There can be no spiritual or Messianic meaning in the substitution of *he worshipped, leaning on the top of his staff*, for the original words *he bowed himself on the bed's head*, and yet we find the former rather than the latter in the epistle to the Hebrews, as the familiar form of the passage. So too the prophecy of our Lord's atonement, *Sacrifice and offering Thou didst not desire, but mine ears hast Thou opened*, is cited in the form, *Sacrifice and burnt offering Thou wouldest not, but a body hast Thou prepared me.*

Doubtless, both metaphors express Christ's perfect obedience, the one by comparing Him to a bondsman whose ear is bored according to the Mosaic law, the other by representing His body as trained for God's service. And thus such freedom of quotation does not affect our faith or practice, but neither does it accord with the opinion that every "jot and tittle" of the Hebrew original is of divine authority. The positive arguments for this theory are very weak. These are partly of an *a priori* character, partly founded on Scripture itself. It is said that inspiration must equally pervade every word of the Bible, because there cannot be degrees in what is divine. But can there not? Are not grace and goodness divine, and yet may we not pray to grow in grace, and to become daily better and better? The law and the Gospel are both divine, and yet *because that first covenant was not faultless, therefore a place was sought for the second*, and we recognize in Jesus *the Mediator of a* better *covenant, established on* better *promises*. Nay, our blessed Lord Himself, speaking of His willing subordination to the Father, has said, *My Father is greater than I.* †

The texts usually cited on this subject, though conclusive as to the divine origin of Scripture, do not warrant the inference which has been deduced from them. The one on which the greatest stress is laid is the famous passage in the second epistle to Timothy, *pasa graphe theopneustos* [*kai*] *ophelimos eis didaskalian*, of which the meaning has been disputed with needless vehemence, for in whatever way it is translated, its bearing on the present controversy is the same. If we translate with our version, *all Scripture is given by inspiration of God, and is profitable*, we state a proposition as to the origin of the Bible which few of our readers will gainsay. If we prefer the rival rendering, *all God-inspired Scripture is also profitable*, we still attribute inspiration to the Bible; for had St. Paul meant that only inspired Scripture was profitable, but that there existed another so-called Scripture which was not inspired, he would have given Timothy some rule or canon by which the one could be distinguished from the other. With regard indeed to these two versions, the arguments of Bishop Ellicott seem decisive in favour of the second, and we therefore understand St. Paul to say, according to Origen's paraphrase, *pasa graphe, theopneustos ousa, ophelimos estin.* But the one explanation is not more favourable than the other to the mechanical view, since there is no proof that the Greek *theopneustos*, any more than the English *inspired*, means "entirely dictated by God." The substantive *theopneustia*, carelessly asserted by some * and imagined by others to be used by St. Paul, had no existence, as far as we know, till it was invented, with other eccentric barbarisms, by Coleridge.

*Jowett on St. Paul, i. p. 405.

†. Wordsworth, *on inspiration*, p. p. 89,99. Cf. Chrétien, *The Letter and the Spirit*, p. 168.

‡ Tom. xi. p. 168. (Hom. xx.) Cf. the versions of Tyndale and Cranmer. "All Scripture, given by inspiration of God, is profitable." So also Wiclif and Coverdale, following the Vulg. *Omnis Scriptura, divinitus inspirata, utilis est ad docendum.* There is a doubt as to the reading, for some Mss. omit *kai*. But this is of no consequence. If *kai* is genuine, we translate "is *also* profitable."

SCIENCE NOTES.

LIEUTENANT Payer, of the Austro-Hungarian Arctic Expedition, has read a paper before the Geographical Society of Vienna," On the Influence of Arctic Cold." On March 14th 1874, he started on a sledge to explore hitherto untrodden snow fields. The cold on that day was 400 (Réaumur *i.e.* 122 deg: *F.* below freezing point) below zero. After a time the spirit ration became as thick as oil, and had lost its stimulant properties. It was impossible to smoke; cigars and tobacco being turned into ice. Great cerebral disturbance took place, and there was intense thirst, difficult to assuage. The senses of smell and taste, were entirely in abeyance. Touching any metal had just the same effect as touching red-hot iron; and mercury could be made into balls. The secretions were increased, whilst perspiration entirely ceased. Sounds were transmitted to a great distance.

***

THE death of Sir Charles Wheatstone is announced in the papers. Sir Charles was formerly professor of Experimental Philosophy at King's College London, and was born at Gloucester in 1802. To Sir Charles Wheatstone and Mr. Cooke, undoubtedly belong the credit of having first constructed a line of telegraph for general purposes. In June 1837, they patented a fire needle instrument, which was shortly afterwards used on the Great Western Railway. They employed under-ground insulated wires. In the same year (July), Steinheil, introduced his system at Munich, using wires stretched from house to house. He telegraphed by the deflection of a needle, by two bells, and by a printing machine In October of the same year, Prof. Morse, introduced his printing machine. [Cooke and Wheatstone patented the first step by step telegraph in 1840. Cooke is said to have derived his ideas from a lecture of Prof. Munke's at Heidelburg, in which Baron Von Schilling's horizontal needle telegraph, said to have been constructed in 1832-33 was described. In 1820, Ampére had suggested the use of galavanometre, line of wire, and a battery as a means of telegraphing. Dr. Fergusson, says that this suggestion was first carried out by Gauss and Weber in 1833 at Göttingen, when with a view to aid their magnetic observations, they connected the Observatory and the Physical Cabinet, which were one mile apart, by two wires—They used the flash galvanometre, which Sir W. Thomson has recently introduced with such perfection of detail in the working of Submarine Telegraphs.

***

UNFORTUNATELY, the *Pandora* has failed in her Arctic enterprise, and has returned to Portsmouth without bringing any relics of Franklin, or discovering anything about the North-West passage The *Pandora* brings despatches from the Carey Isles, which had been left by the *Alert* and *Discovery*. Capt. Young inspected "Northumberland House," Beechy Island, in Lancaster Sound, which was built in 1850 by the *North Star* (Capt. Saunders.) It had been broken into by bears, and many of the stores destroyed. Those preserved in barrels had not been much injured. The yacht *Mary* and two life-boats left by Sir John Ross, were in such good condition, that only a few repairs were needed to make them seaworthy. After putting the stores in order, experiencing difficulties from the uselessness of the compasses so near to the magnetic pole, and finding the channel barred by an impenetrable pack of ice, Capt. Young prudently determined to return home on September the 13th, and to renew his search early next year. The *Alert* and *Discovery*, arrived at the Carey Islands on July 27th. "The season is a very open one, and we have every prospect of obtaining a high latitude. All are well on board each ship." Thus the last news of the expedition is entirely favorable.

* Even by so careful and learned a writer as Dr. Lee, who actually says, *Inspiration of Holy Scripture* p. 80, "Inspiration, or *as St. Paul terms it,—theopneustia*. As however he gives a reference to 2 Tim. iii. 16, he provides a remedy for his own mistake.

THE *Medical Press and Circular*, gives the following scale of diet, adopted for each man attached to the Arctic expedition :— 1lb., of biscuit every third day, and 1lb., of flour for bread, on each of the two intervening days. Every other day 1lb., of corned beef or corned pork alternately, and on the intervening days ¾lb., of preserved meat and ½lb., of salt meat. Every fourth day 1lb., of compressed vegetables and on the others ½lb., of preserved potatoes ; ½lb., of preserved soup every fourth day, ¾lb., of flour, suet, and raisins every fourth day, ½lb., of split peas every fourth day, with ½oz., of celery seed to every 8lb., of peas. 1oz., of lime juice, which every man is called upon deck to drink, each afternoon. 1oz., of sugar for lime juice, 1oz., of pickles, and ½ gill of rum daily, ½oz., of mustard, ½oz., of pepper per week, 2oz., of preserved fruit, and ¾oz., of sugar for fruit twice a week, and oatmeal, vinegar, and salt as necessary. It is further intended to add ½lb., of preserved meat on salt meat days, as the salt meat is hard and enters, if anything, too largely into the scale of dietary.

LETTERS TO THE EDITOR.

RAILWAYS *vs.* CANALS.

To the Editor of the Friend of India.

SIR,—In the *Saturday Review* of the 9th October last, it is incidentally mentioned, in a review of the proceedings of the Royal Colonial Institute, that while India, with a population of more than one hundred and ninety millions, had, in 1872, a trade with England of only £107,319,000 or about 11*s* a head, Australia, with a population of two and half millions, had a trade of £67,993,000 or more than £28 a head ; that is, Australia, with one eighty-fifth of the population, was doing fifty-six times as much business with England as India. This one fact is perhaps about the most significant which could be produced to show on what utterly wrong economical principles we are proceeding in establishing the most expensive means of transport in a country whose industry is in the deplorable condition these figures show it to be ; but this is by no means all, for we actually expect that its finances will be improved by a reckless expenditure in Railways before the country has the means of producing anything to be carried by them, notwithstanding the fact that for more than twenty years there has been a deficit in the Budget, on account of these works, of between three and four millions a year. England, with a population of twenty-two millions, has a trade of about seven hundred millions sterling a year with all the world, or about £32 a head, with her industry more developed than any other country, yet Railways pay only 4¾ per cent. on an average in these most favorable circumstances. In the United States and in Canada these works do not pay at all, yet we really imagine that India, with its trade of 11*s* a head, requires railways for the industry of its population, which has been bed-ridden by Brahminism and most barbarous tyranny for more than two thousand years ! In bad nervous cases, when there is great prostration and debility present, the water cure is not a bad one, and as this has been proved to be very beneficial in some parts of India, when properly applied and managed, it would be as well perhaps to prescribe the same treatment in other parts, and have it carried out on sound economical principles, and not merely on the data of empirical hydraulic formula, levels correct to three or four places of decimals, or the experience gained from the most ignorant periods of the country's history.

A. B.

THE TRUE GOSPEL.

To the Editor of the Friend of India.

SIR,—Granting in full, as many of your correspondents maintain, that the Bible does contain the doctrine of "Eternal Punishments," I would enquire if it does not equally forbid us to judge who shall be saved and who lost? In Matt ix, 10-13, when the Pharisees objected to our Lord eating with sinners, He told them, "Go ye and learn what that meaneth, "*I will have mercy*, and not sacrifice, for I came not to call the righteous, but sinners to repentance ;" and in the parable of the marriage feast, Matt xxii, 10, we read that both *good and bad* were brought in to the wedding, but it was the king who found there "a man which had not on a wedding garment." We are not told what he was deficient in, but it is abundantly clear that the final judgment must be God's, and has any Church any right or authority to pretend even to declare how this judgment shall be for eternity? Our Lord and His Apostles taught far otherwise. He expressly forbids us to judge "that ye be not judged," and He warns us what to expect if we should presume, in Luke xii, 5. 'But I will forewarn you whom ye shall fear : Fear Him, which after he hath killed, hath power to cast into Hell ; *yea, I say unto you, Fear Him.*' This is the only fear our Lord ever taught. In His greatest agony and sufferings, He could say to His disciples "Let not your heart be troubled ; ye believe in God, believe also in Me."—"Let not your heart be troubled, neither let it be afraid." Would it then not be better to teach and preach this fear of God, instead of taking upon ourselves to judge our fellow-creatures? In 1 Peter ii. 23, we are told that Christ "committed himself to him that judgeth righteously," and St. Paul tells the Thessalonians 2, ch. iii, v. 15, "not to count a man as an enemy, but admonish him as a brother if he obeyed not the word ;" and in his own case, after all his persecutions and sufferings at the hands of the Jews, his own countrymen, he says in Acts xxviii, 19, "not that I had aught to accuse my nation of." And when he wished to show the Corinthians "a more excellent way," he does not return to the subject of chapter V, but plunges at once into that sublime doctrine contained in I Cor. xiii. After more than a quarter of a century of strife and Christian warfare, St. Paul writes to the Philippians "not as though I had already attained either were already perfect," and he finishes the discourse by declaring himself to be the chief of sinners. St. John tells us "that if *we* say we have no sin, we deceive ourselves and the truth is not in us," and St. James declares "we shall have judgment without mercy, if we have shewed no mercy ; and mercy rejoiceth against judgment." How much mercy are we shewing to the natives of India, or to those who do not belong to our Churches, by proclaiming their eternal damnation in consequence? Hooker says in reference to the penitent thief "that God respecteth not so much what time is spent, as what truth is shewed in repentance" ; and he declares in reference to men's condemning or judging one another, "Another sort of men, injurious unto the God of heaven for want of understanding how towards them God is righteous, are they who abridge His mercy towards sinners penitent, *tormenting their minds* with a fearful expectation of *future* anguish, tribulation and woe ; as if, how merciful soever God be in remitting, pardoning, forgiving *all* their transgressions, nevertheless so unappeasable is the rigour of his corrective justice, that till transgressors have endured, either in this world or another, vexation proportionable unto the pleasure which they have taken in doing evil, there is no possible rest for their souls, upon which opinion because much dependeth, I will first endeavour to lay before you, how the favourers and defenders thereof, do ground it upon a *supposed* exigence in the justice of God, and secondly, make manifest unto you how weakly and unguardedly they have erected it. *Now the nature of divine justice doth not and cannot require it*, but is by it *plainly oppugned, denied utterly and overthrown.*"

So much for the paramount importance of our judgments as to the eternal condition of our fellow-creatures. For himself Hooker was content to say, quoting the great Apostle, "God made "Him which knew no sin, to be sin for us ; that we might "be made the righteousness of God in Him." "Such we are in "the sight of God the Father, as is the very Son of God Himself. "Let it be counted folly, or phrensy, or fury, or whatsoever. It is our "wisdom and comfort ; *we care for no knowledge in the world but this*, "that man hath sinned, and God hath suffered ; that God hath made "himself the sin of men, and that men are made the righteousness "of God." If this knowledge and doctrine satisfied so great and good a man as Hooker, why should we not proclaim the same to the natives of India, as the glorious Gospel of our Lord and Saviour Jesus Christ, instead of tormenting their minds with future events of which we can know nothing, for as the Scripture says to the first of the Prophets, "The Lord seeth not as man seeth ; for man looketh on the outward appearance, but the Lord looketh on the heart," 1. Sam. xvi, 7 ; and this appears to be the real doctrine of the Church of England, according to her greatest divine.

THE ILIAD AND ODYSSEY OF INDIA.

To the Editor of the Friend of India.

SIR,—While subscribing to every word said by Mr. Edwin Arnold in his paper on "the Iliad and Odyssey of India" with reference to the general accuracy of Mr. Griffith's translation of the Ramayana, I desire to point out that some of his statements regarding Mr. Wheeler's extracts from the Máhabhárata are not correct. Soon after the publication of Mr. Wheeler's work, I had occasion to report on the MS. from which his extracts had been made, and on referring to that report, published in the proceedings of the Asiatic Society for January 1868, you will find.

1st. That the MS. in question did not belong to the "Calcutta Library," but to the Library of the Asiatic Society of Bengal.

2nd. That the whole of it is comprised in one folio of moderate size, and not "in nine thick volumes."

3rd. That there is no reason to believe that it was the work of the late Professor H. H. Wilson, but every thing to show that it emanated from the pen of Mr. N. B. Halhed, the author of the Gentoo Code.

4th. That the work is not "an accurate and almost complete translation" of the Sanskrit Máhabhárata, but made up of loose abstracts of fragments of a Persian version of the original.

5th. That the deficiencies of the text have not been supplied by Mr. Wheeler from the Aryan text.

To give an idea of the nature of the work, I quote the following from my report.

The work is avowedly made up of "abstracts and translations," principally from what is called "the great folio." meaning Vasant Rae's Persian version, and occasionally from a MS. which is indicated by the words "Library copy." Neither of these originals is now accessible to me, and in their absence, it is impossible to determine what portions of the MS. are abstracts, and what are translations from those works. I have compared different parts of the translation with Abul Fazl's Persian version, of which the Society possesses a good MS. in two volumes, but I can trace no correspondence. But whether abstract or translation, certain it is that no portion of the work is a translation or even a fair paraphrase of the Sanscrit original. The skeletons of the different stories and episodes are no doubt given, but they are mere skeletons artificially articulated, and no more. Of the muscles and integuments which make up the figures and the spirit which vivifies them—of the details and descriptions which fix the character of the stories—they have none. To convey an idea of the extent to which the process of abridgement or condensation has been carried I may mention that the story of Sakuntalá, *i. e.* of the birth of Bharata, which is the first extract quoted in Mr. Wheeler's book, as given by Vyása occupies 13 quarto pages of closely printed Sanskrit in the Society's edition of the Máhabhárata, and extends to 320 stanzas. In Mons. Hippolyte Fauche's French translation, this subject takes up about 33 octavo pages (pp. 297—330) and in Abul Fazl's Persian version 13 demi folio pages (pp. 47 b to 53 b), but in Mr. Wheeler's book it extends to only one page and two and a half lines. All the other extracts are equally condensed and contracted, and as this abridgment was effected once by an uncritical Hindoo translator who prepared his Persian version for the entertainment of Mohammedan readers, without the shadow of an idea as to what are the requirements of true history, and then by the Englishman who abstracted as much as he thought proper from the Persian without consulting the original Sanskrit, the result is such as to be utterly untrustworthy for critical analysis of the ages of the different portions of the Máhabhárata. In short, Mr. Wheeler's texts are abridged translations of abridged translations, which, owing to that gentleman's want of familiarity with the Sanskrit, have not been so compared with the original as to render them reliable data for history. I am sorry to be obliged to make this remark with reference to a book which has been well received by the reading public, and which is unquestionably very interesting, but for the sake of truth I cannot help it.

I beg to add that I have moreover noticed several instances in which words, phrases, and even entire sentences have been introduced in Mr. Wheeler's extracts which do not occur in the original Sanskrit, nor in Mr. Halhed's translation; but some of which may in the Bengalee versions of Kasirama Dasa prepared about three hundred years ago. For two such instances I beg to refer you to my Antiquities of Orissa (Vol. I pp. 19 and 20) and others may be easily pointed out if required. As Mr. Wheeler does not read Sanskrit, I suspect he has been imposed upon by his Pundit who has read out to him scraps from the Bengalee version, and somehow convinced him of their being extracts in the original Sanskrit. Any how the extracts are incorrect and utterly untrustworthy, and to draw historical deductions from them would be somewhat more mischievous than relying solely on imagination for facts.

RAJENDRALALA MITRA.

THE RETTING OF JUTE.

To the Editor of the Friend of India.

SIR,—If you will kindly ventilate and agitate this important subject—the retting of jute—in your widely circulating paper, you will confer the greatest boon on the plague-stricken inhabitants of the district of Hooghly and adjacent places. Perhaps, just now, when the Prince is going through the country, many may take up the papers who otherwise never would take the trouble, and the subject may thus take hold of their minds to some purpose, and much information may thus be elicited. I trust it may lead to the authorities making stringent laws, and passing them before next May or June, to prevent the ryots planting jute indiscriminately everywhere, and from August to October retting it in the nearest pond or *khal*. The nearer their house the better they like it, for it saves them the trouble of watching that it is not stolen, and they have not to walk far for the washing operations it must undergo before it is fit for market. The ryots, though perfectly reckless as to their own or their neighbours health, are ever careful of their pice, so every pond and *khal* is first dragged of fish, shrimps &c., because all animal life must die during the putrifying process. They do not care if the air, water, and soil, thus become impregnated with tons and tons of deadly, poisonous, putrid, vegetable matter, and yet the Doctors, sent into these districts, to relieve dying humanity with medicines, never reveal the true state of things, but are astonished there should be deadly fevers with their accompanying maladies, cholera, dysentry &c. &c. Though Doctors truly may be said never to agree, yet on this topic, perhaps to prove the truth of the old adage "the exception proves the rule," all with one consent cry out, it is all owing to stagnant adulterated water. Now what is it that for the past fifteen years or so, has so adulterated our water? The cause must be some new thing that did not exist formerly, yet no one has been heard to say it is the jute so largely and extensively retted every rainy season. Thanks to Mr. Plimsoll's untiring exertions, there will be a greater demand for jute than ever the world has known; therefore jute-retting must be on the increase, for how else are ships to be provided with gunny bags for grain cargoes, instead of carrying grain in bulk as formerly, and toppling many a fine ship over in the first storm, not leaving a soul to tell the sad tale? It is quite time to open our eyes to the calamity now for many years staring us in the face, and by which millions have died, many more have suffered, and even now thousands are suffering and dying. Now all those ponds, tanks and *khals* are connected with one another from the interior to the river, in some places for miles. During the latter rains, not only is the country nearly under water, but the flood tides also are very high, so that a great rush of water is sent to the remotest corners, and all the rotten and rotting malarious vegetation from the jute is well stirred up; in a few hours the ebb sets in, and the water charged with malarious poison flows back to the river. Now if it is remembered that it is when the ebb is flowing that all drinking water is carried home, what need is there for wonder that people living on the banks of the river are attacked with the same fever &c? Surely some plan might be devised for retting the jute in vats, and selling the putrid refuse, for manuring fields, or for planting and retting jute on the low lying lands near the Sandheads, where the putrid water would flow into the Bay and so harm no one. The corrupt noxious vapours emitted during the retting process, are in themselves enough to send a plague through any land, and for that alone should not be allowed in populated districts. Because people on the banks of the river are suffering, there are some who would fondly have us believe that it is a mysterious calamity that has befallen us. Rather it is, that densely populated and well cultivated districts have been artificially turned into a Terai brim-full of malaria and death.

The Penn Monthly, October, 1875.

THE *Bengal Magazine* opens with a well-written, well argued, clever, and ironical paper on the *Pioneer's* proposal to have two different scales of salaries, one for European civilians, and another for Native civilians. The paper is well worth reading by all who wish to see the arguments for perfect equality of emoluments between European and Native civilians in all their strength. We fear it will be long before Europeans will learn to look upon themselves and their position in India through the eyes of the Editor of the *Bengal Magazine*, or of the writer of this lively and uncompromising article, but the candid reader will admit that some truths—not all of them flattering to Europeans—are here expressed in excellent and forcible English. Here is how the writer meets the argument from the inferior style of living of the Native:—

"Our style of living is inferior to that of Europeans in India. But should it always remain so? Are we not at liberty, does not the genius of the age call upon us imperiously and peremptorily to alter our habits of life, and raise our style of living? European gentlemen who come into the country do raise their style of living. Middle class men live as noblemen in all but illimitable affluence, ordinary clergymen live as bishops and archbishops; and women, who in their own country would have earned their livelihood as sempstresses, have money enough to tempt them to ape the stateliness and blazonery of the fashionable Parisian belle of the first water. Indeed, every foreigner in this country is making money and raising himself socially and politically with all his might. In the midst of this universal scramble for money and honor, are the natives alone to remain stationary. While everything around them is moving forward, are they to continue fixed and immoveable, as if suddenly converted into so many pillars of salt by curse divine?"

The Nautical Magazine for October reproduces Mr. Cavendish Bentinck's remarks on the Merchant Shipping Legislation at Whitehaven, and improves the occasion by remarking that the cause of truth is the only cause that has been lost sight of in what has been not inaptly termed the "Plimsoll Craze," and that the statements in behalf of humanity and the poor Sailor that usually appear in the public press are mere "Plimsolecisms—seven-eights of fiction and one-eight of fact.

SHIPPING.

ARRIVALS.

November 18th.—Str. Ethiopia from Singapore, Mahabuleshwar from Liverpool. 19th.—Maculiamore from Liverpool, Hippolyta from Liverpool. 20th.—Royal Alfred from Liverpool. 22nd.—Dunloe from Liverpool. 23rd.—Cape Race from Liverpool, John Kerr from Liverpool, and Str. Malda from Bombay.

DEPARTURES.

November 18th.—Str. Hindostan for China. 19th.—Str. Argyll for China. 20th.—Tennyson for Dundee, Victory for London, Str. Poonah for London Str. Socotra for Coast. 21st.—Str. Arabia for Coast. 22nd.—Str. Queen Victoria for London. 23rd.—Str. Penang and Str. Madras for Coast. 24th.—Str. Tiire for Galle, Str. Abyssinia for Penang, and Cesarewitch for Penang.

LIST OF PASSENGERS.

ARRIVALS.

THE P. and O. Co.'s S. S. *Thiet*, Commander Eastley, arrived at Bombay on Thursday the 18th Instant, with the following passengers:—

From Southampton.—Mr. and Mrs Sladen, infant and European female servant, Mr. and Mrs. D. Gardner, M. W. Smith, Miss Roemle, Mrs. H. Daniell, Mr. F. S. Hewson, Mr. E. R. Marriott, Mr. F. W. Marshall, Mr. R. G. Evans, Col. H. F. Waddington, Miss H. Brindle, and Mr. T. H. Moon.

From Venice.—Mr. J. G. Charles, *Mr. and Lady N. Daniell, Mr. and* Mrs. Falcon, infant and ayah, *Captain A. E. Downning, Col and Mrs. C.* F. Packe, Miss Wood, Col. A. Fraser, *Mr. J. Druitt, Col. C. J. McHair,* Mr. and Mrs. C. Robertson, Mr. M. *Melvill, Mrs. Pottinger and sister,* Major T P. Bartholomew, *Major E. F. Thackeray, Mr and Mrs. J. H.* Latham, Mr C. Beard, *Mr. O. Weylandt. Mr. R. Hughes, Mr. J. West-*lake, Major E. F. Berkeley, Colonel H. Forbes, Mr. R. H. Chetham, Mr. H. Will, Mr. E. Cordeaux, and Mr. S. Worgan.

From Brindisi.—Mr. J. B. Beatty, Captain H. M. Pratt, Mr. S. H. Philipotts, Mr. J. McCampbell, Mr. and Mrs. Cleveland, Miss Lester, Mr. J. Pouty, Mr. G. Couper, Mr. S. N. Vigors, Mr. A. H. James, Major Luard, Mr. H. M. Walker, Mr. H. A. Laird, Mrs. E Lawford, Mr. W. P. Butler, Mr. E. Broom, Mr. G. T. Marston, Dr. C. Palmer. Dr. Barry, Mr. B. Leggart, and Mr. Jones.

From Suez.—Mr. Burgalat, and Mr. A. Woerkof.

From Gibraltar.—Mr. Xavier Hennquis.

From Aden.—11 Natives, Deck.

VIA THE SUEZ CANAL.

The following is the list of passengers who left Bombay on Monday last by the P. and Company's S. S. *Pekin*:—

For Southampton.—Mrs. Sargent, child and infant, Miss Howell, Mrs. Hercules G. Ross, 2 children and infant, The Rev. E. N. Dickenson Lieut Luby, Mr. Richard Williams, Mr. Harry Rivers, Mr. D. C. Lindsay. Mr. and Mrs. Hurst, Mr. Nelson Gerlside, Mrs. A. D. McGregor, Mrs. E. C. Campbell, and Capt. F. T. Goad.

For Brindisi.—Lt.-Col. and Mrs G. Battye, Mrs. E. E. Seward, Mrs. Hutchinson, Dr. Wyndowe, Mr. H. McMaster, Mr. C. E. G. Crawford, Captain W. Marshall, and Mr. S. C. Davidson.

For Venice.—Mr. Alfred King, Mr. Cunningham, Mr. R. White, Mr. E Bradshaw, and Mr. Thomas Winterbrom.

For Aden.—Surgeon General Johnson.

THE WEEK.

THE news from home this week is decidedly pacific, and all apprehension of war has died away, at least for the present. Russia, apparently, does not yet feel equal to the solution of the Eastern question single handed, and neither Austria nor Germany, so far as we can learn, shows the slightest disposition to join her in an open attack upon Turkey. The alliance between these three powers cannot be anything like so close as it looks upon the surface, or as they would have the world believe, or they would long ere this have agreed upon a common line of action towards the sick man whose self-appointed physicians they are, and whose executors or heirs they hope to be. Their distrust of each other is the safety of the Turk, and, we fear, really the best guarantee of the peace of Europe.

THE Prince of Wales has visited Baroda and been received with great state by the Gaekwar. His Royal Highness should by this time be getting accustomed to elephants, but the sight of a row of eighteen of these animals, all gorgeously caparisoned and "painted in striking colours" by way of improving their beauty must have given him a new sensation. The most soul-stirring incident of the trip appears to have been a row, if we may use so undignified a word, between Sir Bartle Frere and the "specials," whom some official oversight had excluded from an entertainment at which the Prince was present, and to which they had heen invited by the Gaekwar's minister. Great was their wrath in consquence. No one knows what might have happened had not the *amende honorable* been speedily made by Sir Bartle, who on this critical occasion displayed his statesmanship by concluding a formal treaty of peace with the malcontents by which the harmony so desirable in the Prince's following was restored, and all has since gone merry as a marriage bell.

TURNING to a less agreeable subject than the Royal visit, we are sorry to say that things are still looking bad in Behar. Whether there will be an eight anna or only a four anna crop is more than can be predicted with certainty just yet, but the general opinion of those on the spot appears to point to the latter, and if this unfavourable judgment should unfortunately turn out correct we may look for a repetition, on a smaller scale, of the famine of last year. Of course the people must not now, any more than then, be allowed to starve. Measures, if necessary, will be taken to supply them with rice, and with recent experience to guide us there should be no deaths from actual want of food. *Unnecessary* expenditure, we hope, will be avoided. The tax-payer should be left as little reason as possible for grumbling when called upon to pay the bill.

SIR RICHARD TEMPLE, we begin to fear, will find his "loyalty" to Mr. Hogg the crowning blunder of a not too brilliant term of administration. The present Lieutenant-Governor of Bengal used to be reputed a rather clever kind of man, with plenty of that useful sort of intelligence which keeps the eyes of its possessor wide open to the signs of the times and so saves him from half the mistakes less alert people fall into from sheer inadvertence. But the dull, blind obstinacy with which, in spite of all warning, he continues to extend his protection to the well-connected gentleman whose father was once the Chairman of the old East India Company, but whose fitness either to manage the Municipal finances or to preside over an assembly of gentlemen is not apparent to the inhabitants of Calcutta generally, seems to show that His Honor has somehow suffered himself to fall behind the age. He appears to fancy that India is still what it was in those pre-historic times before the mutiny—a land where every covenanted civilian was like Robinson Crusoe in his island, monarch of all he surveyed, and able to do practically what he liked "from the centre all round to the sea." Never was there a greater mistake. Mr. Hogg does not suit Calcutta—he will have to go—and we have not the slightest hesitation in predicting an ignominious defeat for the no longer all-powerful Lord of Belvedere if he attempts to stop him. The public opinion of the town is now thoroughly roused, and, supported by a for once perfectly unanimous press, is quite strong enough to fight the Bengal Government as it would be even if the latter had the Government of India at its back, which it has *not*.

WHEN this little matter has been settled, and an efficient Chairman who understands accounts and can keep his temper appointed, the Justices and the public will have leisure to decide on the future constitution of the Municipality. It is agreed on all hands that the present system can never be made to work, and several schemes of reform have been broached. We believe the best of them have these two points in common,—The Municipality must be elective, and the offices of Chairman of the Justices and Commissioner of Police must be separate.

ON Tuesday next the Scotchmen of Calcutta intend to hold their annual festival in honor of their patron saint and their native land. The gathering, we hear, promises to be a good one, and it will be graced by the presence of Sir Henry Norman, Sir Richard Garth, and other distinguished guests.

SINCE our last, Calcutta society has sustained a serious loss in the person of Mr. Cecil Stephenson, late the Agent of the East India Railway. The sad event took place at sea—Mr. Stephenson, whose health had broken down from overwork, having been ordered home—and was announced by telegram from Madras on Wednesday. The news will be read with sorrow by a larger circle of friends than it usually falls to one man's lot to have, for the deceased gentleman was widely known, and his genial manners had made him popular with all with whom be came in contact.

WE hear that a new department called the "Political" department has been created in the Calcutta Police. The duties of its officers seem chiefly to be to scrutinise as closely as they can the features of every new arrival by railway from the far up-country stations and the frontier, or beyond it. Nobody seems able to assign any reason for this mysterious watchfulness. What does it mean?

THE most successful theatrical hit of the season has undoubtedly been "Struck Oil" at Lewis's. The critics and the general public are at one as to the rare merits of this performance, which draws enthusiastic audiences night after night. The playing of Mr. J. C. Williamson and Miss Maggie Moore, who sustain the principal parts, is of a higher order than we often witness in Calcutta, and will, we think, make them popular favourites during the period of their stay.

WEDNESDAY'S issue of the *Calcutta Gazette* contains a notice to the effect that unless the equestrian statue of the late Lord Mayo, now lying on the jetties, is removed within two months from date, it will be sold under Section so—and—so of Act so—and so, to defray expenses. The Port Commissioners are responsible for this piece of absurdity and bad taste, which certainly should not have been allowed to appear in their name. But it will at least have one good effect—that of calling the attention of the public, and we hope of the Government, to the fact that the statue of the late Viceroy, which has now been several weeks landed, is still lying on the wharf uncared for by those whose duty it is to see to its removal. Had it been only a bale of piece goods it would have met with very different treatment.

MONEY MARKET.

FRIDAY, 26TH NOVEMBER.

A BETTER demand for money is gradually coming about, and the public have again taken from the Bank, this time to the extent of 12 lakhs:—there is however no change in rates, either at the Bank or outside, and money is quite abundant enough to stand a considerably enlarged demand without becoming at all tight. The Bank's Cash balances have declined 20 lakhs this week, the Government balances being lower also.

Sterling Exchange has again been a puzzle, it having again dipped from the low level at which it closed last mail. At first there was a better feeling, but it did not last, and after business at 1-10 buyers had to accept 1-9 15/16 to 1-9⅞ for six months' sight Bank Bills. At three months' sight 1-9¾ to 1-9 11/16 has been the rate, and for Telegraphic Transfer I-9 9/16 to 1-9½, but the latter rates were not available after Saturday and Monday. Commercial paper has been fetching fine rates, although increasing in quantity, shippers being tempted to sell forward by the very favorable terms open to them. Credit Bills and Open Paper have been placed at 1-10 1/16 and I-10, and choice Bank credits at 1-9 15/16. Document Bills for this mail went at first at 1-10 3/16, but buyers accepted 1-10⅛ later on, and most of the business has been arranged on the basis of that price for the six months currency:—Forward business, however, would not be easy to do below 1-10 3/16. The closing rates for the mail are as under.—

Bank Bills	1-9⅞	Six months' sight.
Credit Bills	1-10	
Document Bills	1-10⅛	

Business generally is very inactive, but the export of produce is showing something of the life that generally characterizes this season. Large quantities of Tea and Jute are being taken away, although there has been no fresh sale of the former this week, and the latter is quieter than it was. There have been two sales of the

new Indigo; about 450 chests in all, and the prices, about 50 or 60 rupees under last season, have proved low enough to attract English firms into the market, although the usual German buyers are holding off. Looking at the growing condition of the export trade, the total want of silver imports, the reduced scale of Council Bills, the slack state of import trade, and the probable requirements for bullion to go to Burmah, if not further East, the only reason to doubt of a reaction in exchange very shortly seems to be the possibility of a falling silver market at home, a contingency which the present appearance of the market does not indicate.

The tone of Government paper has been very dull, and there are no large buyers in the market. Political matters may have had a little to do with this, but, independently of such causes, it has been a marked thing for months, ever since the last Loan was introduced, that the premium on all Loans is working to a lower level. The prospects of further Loans, year after year, for reproductive works, indicated in last Budget, have no doubt had their effect, and perhaps the gradual absorption of paper by capitalists has not being going on so rapidly as supplies have been coming to market out of hands of speculators and of Government :—at all events, it has been the case this year, in an easy money market, that paper has not had nearly so strong a position as it has assumed under anything like similar surroundings for some years back. This week's business has moved as under.—

4 per cents. 102, 1.14, 1.15, 2, 1.15, 2, 1.14, 1.15, 102.
4½ per cents. 103, nothing else but small amounts.
5½ per cents, only small amounts.

and quotations are

4 per cents. 101-14 to 102
4½ per cents. 102-14 to 103 } dull.
5½ per cents. 107-14 to 108

Nothing good can be said of the share market, its depression becoming if possible more and more intense. All feeling of speculation appears to have died out, and dealers seem content to sit with folded hands. There is nothing like distrust, much less panic, amongst the holders of shares, and it is very rare to find shares offering much below quotations, but it is generally thought that little or nothing is to be made out of shares at present, and therefore they are let alone. When the dividends come out generally, there may be a little revival, especially if the Spinning Mills show decently, as they are expected to do. Generally speaking, that description of stock is firmly held, but Barnagores have gone down since declaration of their dividend. Bank of Bengal shares are again lower, and now stand just where they did before the recent collapse and subsequent excitement. Nationals are being run upon, but speculators are giving a tone of irregularity to the Market. Tea Stocks are quite inanimate, and show no sign of returning life. The chief sales of the week are given below :—

Bank of Bengal, 1,425, 15,20, 10, 15, 1,410.
National Bank, 111½, 12, 12½, 13, 12, 112.
India General Steam, 400, 5, 10, 15, 20.
Barnagore Mills, *ex div* : 91, 88, 7, 8, 87.
Howrah Mills, 78, 7, 77.
Seebpore Mills, 72.
Punkabaree Tea, 100.
Singell Tea, 98.

The English Mail of 5th November will be delivered to-morrow (Saturday) morning.

THE PRINCE.

THE Prince of Wales arrived at Baroda by special train at eight o'clock on the morning of the 19th instant. Drawn up in line at the station were eighteen elephants variously caparisoned, and all painted in striking colors. An elephant of approved steadiness was honored with the duty of carrying the Prince and the Maharajah, although there were two or three elephants several inches taller in the stud. But he was himself a giant, being apparently some fourteen feet high. Anklets of solid gold encircled his legs, and his shortened tusks carried ornaments of the same precious metal. His *howdah* was gorgeous to a degree. Plates of gold elaborately wrought covered every inch of it, and silk and cloth of gold helped to make it resplendent. It was divided into two compartments—the first destined for the Gaekwar and his royal visitor, and the one behind for Sir T. Madhava Row. The elephant's hide was stained yellow, and his head covered with a many colored arabesque. The next elephant in the line—destined for the Governor-General's Agent—had a silver *howdah*, and was colored a light grey. His anklets and tusklets were of solid silver. Then came others of a deep brown, some speckled black and white; there was not one whose natural tint was not carefully improved out of sight. Opposite the elephants in the little field at the other side of the road was a detachment of the Gaekwar's Artillerymen. Then there was a company of the Gaekwar's Infantry. Further on were thirty men of the 3rd Hussars. The royal train came slowly up to the station, exploding twenty-one fog-signals by way of a royal salute as it entered. The guard presented arms, and the guns outside fired a royal salute. When it drew up the Prince of Wales stepped out, and was received by the Governor-General's Agent, the little Maharajah, and Sir T. Madhava Row. His Royal Highness took the little Prince by the hand and led him to the chairs of State, where they sat down together, while the elephants were being got to kneel outside. When all was ready the Prince and the Maharajah left the station, and His Royal Highness mounted the kneeling elephant by means of a ladder covered with plates of silver. He is said to have been much amused and interested by the novelty of the scene, especially by the fantastic magnificence of the line of painted elephants. The little Maharajah mounted briskly after the Prince and sat down, having His Royal Highness on his right hand. Sir T. Madhava Row took his seat in the compartment behind, and the huge animal rose and proceeded on its way. The Governor-General's Agent, Captain Jackson, Sir Bartle Frere, the Duke of Sutherland, General Probyn, Dr. Russell, and the rest of the Prince's suite—the Royal party consisted in all of fifteen persons—then got on elephants and the procession started for the Residency.

To get a good view of it as a whole those who knew the country drove by a short cut to a point near the Residency and adjacent to the bungalow of the 9th Mess. The 9th and 22nd Regiments and a detachment of the 1st Lancers were drawn up on the *maidan* in front, and to the left was a body of Gaekwaree Irregulars, to which banners and red umbrellas lent an imposing appearance. Elephants and camels, with kettle-drums, occupied stations along the road.

The procession, as it came along towards the part of the *maidan* where the troops were under arms, was headed, or rather preceded, by a party of very Irregular Horse—sirdars and gentlemen of Baroda mounted on little neighing steeds. Then came a body of men carrying lances with red shafts, with shafts covered with sheep skins, and with silver shafts. At their heels followed close the thirty men of the 3rd Hussars. The Gaekwar's brass band, arrayed in uniform of European cut and wearing trousers of Scottish tartan, came next, playing a march in very excellent time. And then came the imposing line of elephants. The Prince and the Maharajah of course came first. In front of the hedge surrounding the mess compound were the ladies of the station, whom the Prince graciously saluted.

When the Prince alighted at the Residency a durbar was held, at which the Gaekwar was received by His Royal Highness, who expressed the pleasure a visit to Baroda had already given him. The Gaekwar left for Motee Bagh in a few minutes. In the afternoon the Prince returned his visit, and afterwards drove through the native city to the old Palace, where he witnessed some exciting scenes in the arena, consisting of wrestling, and elephant, rhinoceros, buffalo, and ram fighting. A large concourse of natives assembled along the route, quite undemonstrative. Every precaution was taken, the streets were lined with troops, and order was undisturbed. There were illuminations in the city and cantonments at night.

On the 20th the Prince and party attended a good hunt of deer with cheetahs. The Prince, who thoroughly enjoyed the sport, remained out from early morn till noon. The cheetahs killed several deer. The Royal party then shot their way back to Muckinpoora Palace, where breakfast was served. The 22nd was spent in quail shooting near Kaira, and on the 23rd the Prince was out the whole day pig-sticking. The sport was good. At night His Royal Highness left for Bombay, which he reached with his party on the morning of the 24th.

On the 25th the Prince took a farewell lunch with Sir Philip Wodehouse at Parell. After luncheon Mr. Souter, the Superintendent of the Bombay Police, was knighted. His Royal Highness with his suite left Parell for the Dockyard about half-past three, and the Dockyard for the *Serapis* at half-past four. There was no great crowd in the street to see the *cortege* pass, but it was respectfull and well conducted. Royal salutes were fired from the ships and the saluting battery. Half an hour afterwards the *Serapis*, *Osborne*, *Raleigh*, and *Undaunted* were under way. The men of the *Daphne*, *Briton*, and *Malabar* manned the yards and hurrahed the *Serapis* when she passed. They go direct to Goa, thence to Beypore, and then to Colombo, which the *Serapis* is expected to reach on the 4th. His Royal Highness will probably leave Ceylon for Madras on the 10th.

INDIAN INTELLIGENCE.

BENGAL.

IN the course of the last few weeks some of the most efficient European fitters belonging to the Jumalpore workshops have sent in their resignations, and others are said to be only waiting for a convenient opportunity to do so.

THE *Bengal Times* says that Miss Carpenter, during her visit to Dacca, will be entertained by Mr. J. G. N. Pogose, and will not be relegated to the tender mercies of the Dâk Bungalow *Khansamah* and series of "sudden deaths."

IT is stated that a suitable and permanent lock-hospital has been for some time felt necessary by the officers interested in the suppression of contagious diseases in *Calcutta, the present temporary* sheds, which are stated to be in a very dilapidated condition, *ill* answering the wants of the institution. Accordingly a plan for a permanent building on the same site as the present sheds, estimated to cost Rs. 15,000, has been submitted by the Commissioner of Police for the approval and sanction of the Lieutenant-Governor.

A SERIOUS accident occurred at the St. Xavier's College on Saturday last. Four bricklayers, who were engaged in building up a portion of the college, were suddenly precipitated from a height of about thirty feet owing to the scaffolding having given way under them. The injuries the men received from the fall were severe, and the accident brought the Jesuit Fathers to the scene, who did all that was possible, temporarily to alleviate their sufferings. The men were then immediately conveyed to the hospital, where one of them, we believe, is now lying in a precarious state, while there are hopes entertained for the recovery of the others.

AN extraordinary case of homicide has occurred in the Eastern districts. Somewhere near Brahmunbaria, in Tipperah, an old woman accidentally fell into the river in the evening, and was struggling desperately for her life, when some people in an adjoining boat took fright, and taking her for a tiger repeatedly struck the poor woman with bamboos till they succeeded in beating her to death. Among the perpetrators of the deed was a young man, a professed Brahmo, who after discovering the fatal mistake, went to the local police in a state of deep contrition, and confessed the whole thing. A small fine of twenty-five rupees has been imposed upon him by the Deputy Magistrate.

WE understand that a somewhat serious case of ryot and affray is before the subdivisional officer of Jumooe, in the Monghyr district. The ringleaders are old offenders, one Ali Kabeer and Ali Nazeer, and both have absconded. The Police are on their track it is hoped, and the District Superintendent, Captain Waller, is engaged in the investigation. If found guilty, the men should be dealt with severely; *Mr. Newberry, the Joint Magistrate, in a previous case against them, having noticed* the record of several cases against the same men, as being voluminous enough to load a cooly. The men are zemindars, it seems, of the *lattial* school, and need a lesson taught them.

THE practice of registration in Lower Bengal would appear from the latest report to be gaining ground, and becoming popular in the districts. Forty-eight rural offices were opened during the year, making in all one hundred and twenty at the close of the year 1874-75, to which number twenty-three have since been added. There were 423,873 documents registered, representing a value of about one and a quarter *million* sterling, against 324,352 in the previous year, of a value of one million only. There was therefore an increase of about 100,000 documents over that of the previous year. Of this number fifty per cent. fall under the category of compulsory registrations affecting immovable *property*: 2,000 under optional, and 30,000 affect movable property. Leases of land, which own considerably over one-third of the documents registered under compulsion, are a source of some anxiety. The system of sub-infeudation which of late years has attracted so much notice, though largely confined to Eastern Bengal, received a great impetus during the year. It would appear that the actual cultivators seldom obtain the leases, and that they are generally granted to middlemen with the object of obtaining an enhancement of the rent. The evil is obvious, but the remedy far from being so.

AT the Calcutta Small Cause Court the other day, before the full Bench (consisting of the First and Third Judges) the new trial granted in the case of Nicol Fleming & Co., *vs.* Captain Barnet came on for hearing. The point raised in the suit was of considerable importance to the mercantile community, the question being whether the master of a ship was liable for short weight when the bill of lading provided that the goods, which were in this instance coal, should be weighed in certain quantities. The plaintiffs, who were the consignees of the coal, were not in a position to supply the required scales, and had the coal weighed in smaller scales than those provided in the bill of lading. After delivery was taken there was a deficiency, for the value of which a demand was made upon the defendant. The latter declined to pay it on the ground that the plaintiffs not having weighed the coal in the manner provided in the bill of lading, he was not liable for the short weight. The case was originally heard by the Third Judge, who gave the plaintiffs a verdict in their favor on the authority of an English case, in which it was held that the proprietors of a Steam Packet Company were liable for the value of a passenger's luggage, though on the back of the ticket the company had stated that they were not responsible for the loss of the luggage. In the present case the condition was not entered on the back of the bill of lading, but it was in writing, apart from the printed conditions, and the Court thought that the same might have escaped the attention of the owner of the goods. Mr. Gasper for the defendant cited several decisions, showing that the consignees were bound by the condition in question. The new trial was not gone into, as the pleader for the plaintiffs was so convinced of the correctness of the view taken by the bench that he elected a nonsuit, upon which the Court ordered the plaintiffs to pay Rs. 16 as compensation to the defendant.

NORTHERN INDIA.

THE uncle of the Maharana of Oodeypore has been transported to Benares, where he will spend his days as a State prisoner.

THE Mahomedan community of Lucknow has lost one of its ornaments. The poet, Mir Nawab, well known as Takhallers, died suddenly last week.

SIR JOHN STRACHEY will probably give an entertainment at Allahabad during the Prince's brief visit,—one which will gratify a larger number of the residents than could be possibly received at a dinner.

HIS ROYAL HIGHNESS the Prince of Wales has accepted the entertainment which has been offered to him by Punjab society during his stay at Lahore. *On dit* that the Prince has declined the entertainment proposed for him by the Freemasons of the province, but has consented to receive an address.

DRIVER MacQuade, of the Oudh and Rohilhund Railway, has been maimed for life. On the arrival of the up-mixed train at Fyzabad a few days ago, MacQuade was standing on the platform with a hand lamp in his hand. As soon as the Engine reached the station, and before it came to a stand, MacQuade laid hold of the hand rail, to step on to the foot plate, his foot slipped, and he fell down between the engine and platform. Three wagons next the engine ran over his arm, and crushed it fearfully.

A GENERAL Meeting has has been held at Umballa to organise a Volunteer Rifle Company in connection with the 1st Punjab Rifle Volunteers. Major General Sir James Brind, K. C. B., commanding the Sirhind Division, presided, and delivered an able address on the advantages of the Volunteer movement. As a result of the meeting about *thirty* gentlemen enrolled their names as members of the company. Several other gentlemen intend to join the company, and a detachment is to be formed at Phillour.

NOT long ago a murder was perpetrated just under the walls of Fort Shubkuddur, Peshawur. One Hubeeboolah Khan, the so-called Nawab or chief man of Shubkuddur, was shot by a sowar of the 6th B. C., who belonged to the same village, and was residing there on leave. The crime was committed about a hundred yards from the gate of the fort, at the cross roads leading towards Peshawur, Michni, and Abazia. Immediately after having fired the shot, but too truly directed at his unfortunate victim, the murderer jumped on his horse, and made off to the hills. He was closely pursued by some sowars of the 12th B. C. but he succeeded in escaping over the border, where he doubtless boasted of the deed he had committed.

TWO peons of the Customs Department in the Jhansie Division went, some three and a half years ago, on leave. As they did not return within time, their names were, of course, struck off. After the lapse of a year, the then Collector of Customs at Jhansie, Mr. T. Martin, was instructed to apprehend them on the charge of murdering and robbing a *bunia* in the Saugor District. He reported they had not returned. A circular, with a descriptive roll of each man, was issued throughout the department, but they could not be traced. One of them, Sheikh Kurramuth by name, ventured into Agra, and, unfortunately for himself, came across Mr. Martin the other morning. He was immediately handed over to the Magistrate. He has, we understand, volunteered to disclose the whereabouts of Elahibux, the other accused, who is, it seems, the illegitimate son of a Nawab.

A QUESTION of considerable importance, as involving the *status* of the so-called Independent Chiefs of the Punjab, came before a Full Bench of the Chief Court on the 13th instant, in the case of Phumman Lall *vs.* the Rajah of Nahun. From the evidence it appeared that the plaintiff in the case had been employed in the year 1868 to carry on a trading business established by the Rajah in the cantonment of Umballa. Disputes having subsequently arisen, the plaintiff was dismissed by the Rajah, and he brought this suit in the Umballa Court to recover some Rs. 2,000, for work and services rendered, and balance due to him on his account. The defendant pleaded, among other things, that he was an independent Sovereign, and as such, not subject to the jurisdiction of the British Courts, and this question of the Rajah's sovereignty or independence was the subject of a long and learned debate before the Chief Court, the plaintiff's Counsel maintaining that, under the *Sunnads* granted to the Rajah's predecessors, not a shadow of sovereignty or independence had been granted such as could exclude them or him from the process of the British Court—while for the defendant it was insisted that he had been recognised as independent, and stood in this respect in the same position as every other Native Chief in India. Another very important subsidiary question was also *mooted, viz,* whether the fact of the Rajah having opened out places of trade in Umballa did not bar him from raising the plea of sovereignty, in answer to a suit brought against him in respect of matters arising out of this trade, and the decision of Sir Robert Phillimore in the case of the Viceroy of Egypt was strongly pressed for the plaintiff on this point. In the end judgement was reserved.

BOMBAY.

DURING the quarter ending 30th September last, one hundred and thirty-six books were published in the Bombay Presidency.

THE speech delivered by one of the inmates of the "Strangers" Home" on the occasion of the recent dinner, has been the means of securing employment to a few of the unfortunate men of the "Home"

THE cotton shipped from ports in Sind, in the Bombay Presidency, to foreign or external ports, during the month of October 1875, amounted to 434 bales or 1,71,696 lbs. or 268 candies and 176 lbs., equal in value to Rs. 41,950.

THE newly-appointed Director of Public Instruction in Berar, the Rao Saheb Narayen Bhai Dandekar, holds this highly salaried post on a year's probation. He is described as a gentleman of prepossessing appearance, very intelligent and affable. Mr. F. A. H. Elliot, his predecessor, has, it is stated, obtained two month's privilege leave from the 15th instant.

MR. MUNCHERJEE BOMANJEE PUNTHAKEE, the Bombay agent of His Highness the Nizam, has been presented by Sir Salar Jung with a superb diamond ring and diamond necklace. The Nawab also presented a diamond *surpeich* to each of Mr. Muncherjee's sons, Mr. Bomanjee and Mr. Dinshaw, and a diamond necklace to two of Mr. Muncherjee's sons-in-law. The presents were of the estimated value of from Rs. 40,000 to Rs. 50,000.

THE Victoria gardens were effectively illuminated on Monday night. Crowds of men, women, and children were attracted to the Gardens from an early hour; and the long line of carriages along the public road showed that some of the visitors had come from a distance. His Highness Syajeerao Gaekwar, Sir T. Madhavarao, and others, were among the early visitors. The Raja of Kholapore's band played at short intervals during the evening.

ALL the presents which have been made to His Royal Highness the Prince of Wales by the various Native Princes who met at Bombay to receive him have been packed in separate cases, and properly designated. These packages have been placed in the custody of Messrs. King, King and Co., in whose charge they will remain until His Royal Highness' return here after his Indian tour, when they will be transferred on board the *Serapis*.

THE Chief of Vinchoor, who, at the time of the visit to this country in 1870 of His Royal Highness the Duke of Edinburgh, erected a clock on one of the towers of the Boohwar Wada in Poona, has now asked the Bombay Government's permission to establish an English School in his own territory at his own cost in commemoration of the Prince of Wales' visit, the institution to be named after His Royal Highness. English education will be given to his subjects free of charge in the school which the Chief proposes to establish.

THE *Bombay Gazette* says:—"We understand that when the Prince of Wales visited the sheds known as the European General Hospital, he expressed a most decided opinion against the place. His Royal Highness said that he had authorized Sir Bartle Frere to write a strong letter to Lord Northbrook against the Hospital, but now that he had seen the miserable place personally, he would write to Lord Northbrook himself. It is well known that recently a Duke, who is well known for the interest he takes in his countrymen, mentioned to a distinguished friend that he had been visiting the European General Hospital and the Jail, and of the two places he would prefer to live in the Jail!"

A SUMMONS has been granted by Mr. Dosabhoy Framjee, the Second Magistrate of Police, charging the Reverend J. Hinkson, head-master of the Diocesan High School, with having assaulted Police Inspector Burrett while engaged in the execution of his duty. The assault took place on the occasion of the arrival of H. R. H. the Prince of Wales in Bombay on the 8th instant. The reverend gentleman attempted to take his trap along the road contrary to the rules laid down by the Commissioner of Police, and when stopped by Mr. Burrett severely assaulted him. Mr. Burrett "was narrowly rescued from being trampled down in his attempt to stop the horse; but he did his duty; and exercised extreme forbearance towards his assailant, who was allowed to pass away."

MADRAS.

THE Acting Agent of the South Indian Railway is now at Madura, making arrangements for the reception and entertainment of the Prince.

THERE are upwards of 52 banks in the Mysore Province with capital varying from 10,000 to 700,000 rupees. The whole amounts to 3,265,000 rupees.

A CODE of "Rules for the better prevention and extinction of fires in the town and suburbs of Madras" has lately been issued by the Madras Government.

THE Masonic ceremonials in Madras on the occasion of the laying of the foundation stone of the Harbour by the Prince of Wales are to be dispensed with.

THE Viceroy has conferred upon Raja Ram Chandra Deo, of Jeypore, in the Vizagapatam District, the title of "Maharaja" as a personal distinction.

A FEW days ago a portion of the left aisle of the Church of St John in Davidson's Street, Madras, came down with a crash. The heavy rain experienced appears to have injured the building, which had previously been slightly cracked. The Church was built fully forty years ago.

IN recognition of the valuable services rendered to Government by Moonshee Ameer Ali, Khan Bahadoor, at present Member of the Commission appointed under the Nawab Nazim's Debts Act, the Viceroy has conferred upon him the title of 'Nawab' as personal distinction.

The important auction of highly bred cattle, the surplus stock of the Anirut Mahal establishment for the year, took place at "Hoonsoor" on the 11th and 12th, when a splendid collection of bulls, cows, and calves and bullocks in pairs were knocked down at good prices, to a highly appreciative company of buyers, principally Europeans.

A COCHIN paper says that a citation has gone forth to the Rev. Justus Joseph, the Revivalist ranter, who was until lately in charge of the C. M. S. Church at Kunneet, calling upon him to present himself at Cottayam, to answer the charges of heresy brought against him, when His Lordship the Bishop of Madras visits that place.

AMONGST the special precautions that are being taken to provide as far as human foresight can, against accident to the train in which H. R. H. the Prince of Wales will travel upon the Madras Railway, one is that a specially selected pilot engine will invariably run over the road ten minutes in advance of the royal train, timing its stoppages, &c, to correspond with those of the latter.

THE condition of the crops in some parts of the Madras Presidency is causing some anxiety to the growers. In parts of the Chingleput district the crops are reported to be withering, and if the rains now steadly holding off altogether fail, the condition of the ryot class will be by no means what it has been in past seasons. From the southern districts the reports are not very encouraging.

TWO Madras Government House servants are reported in Coimbatore to have died of cholera in the Annamally camps. There have been five or six cases of cholera in Coimbatore. An East Indian subordinate in the Forest Department came in suffering from the disease, and died lately in Coimbatore Fort. Coolies are most unwilling to go to the Annamally camps or into the district notwithstanding offers of double pay.

THE officiating Secretary to the Chief Commissioner of Mysore has published an order respecting the reported scarcity in the Chitturldroog district. Measures are to be taken at once to prevent distress, and Majors Campbell and Christie have been requested to make proper enquiries and suggest such steps as may improve the condition of the people. Relief works will have to be taken in hand, and where they are necessary they may be undertaken at once in anticipation of sanction.

THE Mysore Government has just received a packet of silkworm eggs from China. The consignment comprises two kinds, six cartoons of each, Shonghue and Tuhong. The former is the description used in most of the Tsatlee districts, the worms hatched from which pass through three stages, and produce white cocoons. The worms from the latter kind pass through four stages, and also produce white cocoons, but the color of these will sometimes be found to have rather a greener tint than those produced from the Shonghue.

SHORTLY before midnight on Saturday week last, a most remarkable phenomenon was observed in Madras during a thunder storm. A few seconds previous to a peal of thunder that startled many people of the town, a ball of lightning, apparently about 2 or 3 feet in diameter, shot from the heavens and pursued, in a zig-zag direction with lightning rapidity, its course towards the sea. It was made up of four or five different tints, bluish-violet predominating; before disappearing it split into irregular fragments, and finally vanished. The most curious part of this phenomenon was, that each colour became a separate body when it divided. The colours of these fragments seemed to change like those of a Roman candle. Several natives who saw this were apparently paralyzed.

ALL Indian Municipalities appear to be of a feather. The correspondent of a Bangalore paper says:—

"Should it be determined, and should it, eventually turn out, that His Royal Highness will not visit Mysore, certain members of the Mysore Municipality will not regret it. For all the indifference, carelessness, and laziness I ever saw, I never saw such as is manifested by certain members of the Mysore Municipal Board. Of course we are willing to acknowledge some reason for this, which is owing to the corporal construction of some of their constitutions. One of them is actually so (well, there is no other word for it) fat, that it is with difficulty he can walk about. As for energy and activity they are things that have separated themselves from his existence years and years ago. Another of the enlightened is so ignorant in everything that pertains to municipal improvements that he scarcely knows a V shaped drain from the gable end of a house. Major Hill is the only active member amongst the lot, and he has, as if disgusted with the way the works are being attended to, gone from Mysore into the District on circuit.

M. TRILLARD, the newly-appointed Governor of Pondicherry, received quite an ovation from the people of that town on the 7th instant when he assumed the reins of Government of the French possessions in India. On the Governor landing, the Mayor delivered an address of welcome on behalf of the people of Pondicherry, to which His Excellency made a suitable reply. He then proceeded to Government House, where he was received by the Commissaire de la Marine, the Ordonnateur, and all the judicial, civil, and military authorities. The troops were then reviewed. On the same day, Mgr. Louenan, Bishop of Pondicherry, and the members of the Roman Catholic mission, paid their respects to the Governor and a little later the Native and European members of the Chamber of Commerce presented him with an address, the gist of which was the advisability of constructing a railway line connecting Pondicherry with the railway system of India, the revival of the filature industry, and the establishment of a French Bank. On behalf of the native community, a deputation waited upon the

Governor headed by Saderapullie, and all the members of the Colonial and Local Councils also waited upon the Governor.

BURMAH.

A CURIOUS FACT IS RECORDED IN THE Administration Report of the Hill Tracts, Northern Aracan. The tribes will not grow rice because the birds deprive them of the greater portion of the crop. The cultivation being only in patches in the midst of dense jungle, the birds congregate on it in dense swarms.

COLONEL NELSON DAVIES, the Deputy Commissioner of Akyab, has been treating, with great success, the foot and mouth disease in Burmah. His plan is to destroy the parasitic animalculæ which are the cause of the mischief. The cure is very simple, and acts so quickly that if it is applied at an early stage, the disease may be thoroughly rooted out within a few days.

ASIA.

A CHINA paper mentions that the efforts to raise the Steamship *Sunda* have been crowned with success. The vessel is now snugly beached further in on Station Island, where she will undergo some temporary repairs prior to being docked either at Hongkong or Amoy.

THE following is an extract from the diary of the Joint Commissioner of Ladakh to 24th October :—

About fifty Lamas from the leading monasteries of this district, with some of the chief Bots of Ladak, have been ordered down to Jammu by the Maharaja to be present at the festivities which are to be given to celebrate the visit of His Royal Highness the Prince of Wales to that city, when it may come off. The Lamas will probably go through a performance of their own, having taken down for the purpose a large number of dresses and paraphernalia of sorts. It is the custom in Thibet for every monastery to have once a year a commemoration festival during which all the Lamas attached to it go through a performance which rather oddly combines the most seriously religious worship with great theatrical display, and even a certain amount of comic acting. On these occasions the Lamas wear a series of costly costumes, usually rich Chinese silks, curiously and handsomely embroidered, which they continually change as the performance progresses. They also disguise themselves in masks to represent the heads of various animals.

The value of the business transactions of the past week aggregated about Rs. 5,000. All the same, trade is by no means brisk here, and several merchants who came up here in the summer with large consignments of goods from India have complained to me that they find much difficulty in getting their things taken off their hands.

Mr. Morris reached this yesterday from his survey of the Shyok river, in carrying out which he appears to have undergone no slight hardship : the weather having been very inclement when he got to the worst part of his journey on the high plateau of the table-land where the Shyok has its source, and where at all seasons of the year the cold is most intense. The result of the survey will no doubt be thought most satisfactory, for it appears quite certain that an excellent road can be made up the river at a moderate cost ; considering that the work, if carried out, would do more to connect India with Turkistan than any thing of its kind ever yet attempted, it is to be trusted that means may be found to put it in hand.

The traffic of the week has consisted of 13 horse-loads from India, 38 from Kashmir, 47 from Chinese Territory, and 35 from Yarkand ; while 37 have gone out to India, 91 to Kashmir, 28 to Chinese Territory, and 10 to Turkistan.

MILITARY.

A TROOP SERGEANT MAJOR of the 11th Hussars has committed suicide by blowing out his brains. He has left a wife and child.

ON a representation made by the Madras Government regarding the paucity of officers for Military duty, and for an authoritative ruling for withdrawing them from Civil employment whenever necessary, the Government of India have intimated that the Governor in Council has unquestionable authority to recall to Military duty all Commissioned Officers under his direct orders.

THE thanks of the North-West Government have been conveyed to the troops stationed at Allahabad for their services in connection with the recent floods. A general order publishes the official despatches, which contain compliments from the Provincial Government and extracts from reports by the Commissioner and Magistrates of Allahabad, warmly commending the conduct of the men employed on the embankments.

WHEN the new scheme for the retirement of officers of the army comes out, it is probable, says the *Morning Post*, that its principal points will be found to be as follows :—

No retirement until an officer has completed seven years' service.

On completion of seven years' service, an officer, if allowed to retire, to be granted a lump sum according to scale in proportion to home and foreign service.

A captain, on completion of twenty years' service if not promoted, to be compulsorily retired on 200*l.* a year ; commutation, 2,648*l.*

A major, if allowed to retire before completing twenty-three years' service, to be granted a lump sum equal to the *maximum* voluntary retirement granted to captains.

A major, if retiring after twenty-three years' service, and before completing seven years' service in the rank, to be granted a pension of 250*l* ; commutation, 3,186*l.*

A major completing seven years' service as substantive major, and not less than twenty years' total service, to be compulsorily retired from the regiment with the choice of (*1st*) 300*l*, a year, and a step of honorary rank—commutation, 3,644*l.* ; or (2nd) unattached promotion, with a chance of employment other than regimental, and the half-pay of Lieutenant-Colonel, namely, 200*l.*

Lieutenant- colonels, if allowed to retire within five years of the date of their promotion to that rank to be granted (1st) a pension of 300*l.* and a step of honorary rank ; or (2nd) half-pay with a chance of employment other than regimental ; or (3rd) of completing thirty years total service to present full pay retirement, namely, 1*l.* a day.

Brevet colonels, on completion of five years' service as lieut.-colonels with their regiments or on the staff, to be offered (1st) half-pay, with chance staff employ and succession to the establishment of general officers ; or (2nd) a pension of 420*l.* and honorary rank of major-general on retirement from the army.

Officers who obtained present regimental rank before the abolition of purchase shall not, while in that rank, be subjected to any new rules with regard to age or compulsory retirement. Officers who have been promoted to higher regimental rank since the abolition of purchase cannot claim exemption from any new rule.

Captains who obtained that rank before the abolition of purchase shall be ineligible for regimental promotion after completing twenty-five years' service ; that such a number, say, fifty yearly, be allowed to retire after twenty years' service, with unattached majorities saleable at 3,200*l.* that sum being 800*l.* in excess of present prices.

Majors who obtained that rank before the abolition of purchase to be ineligible for promotion after thirty years, but to be allowed to retire after completing twenty-seven years, with unattached lieutenant-colonelcies saleable at the price now offered by the Army Retirement Act, *plus* 800*l.*

These unattached promotions to be offered to captains and majors in accordance with their total full pay service in the army. No captain or major who has been passed over for having completed twenty-five or thirty years' service to be entitled to any such promotion. No vacancies thus created to be filled from the half-pay list ; regimental lieutenant-colonels on full pay, who had obtained that rank before the abolition of purchase, on reaching the age of fifty-five to be offered retirement from the army on 600*l.* a year, with a step of honorary rank ; commutation, 6,050*l.* ; value given by purchase commission, 7,000*l.* All colonels at present on half-pay who are qualified to succeed to the fixed establishment of general officers to be permitted at fifty-five to retire on 420*l.* a year, with a step of honorary rank.

GENERAL.

THE alteration in the postal rates to England is quite settled in principle, but the Postal Congress will have to meet before India can be formally admitted into the Union, and even then a month will probably be spent in the settlement of details.

THIS year's vintage (says the Vienna correspondent of the *Economist*) will reckon amongst the first of this century in the quantity it promises to yield, and the quality will be second to very few years, and that both for Austria and Germany.

INFORMATION has been received that the rate of exchange for Money Orders with Germany has, from the 1st instant, been changed to 20 Mark 40 Pfennig for the pound sterling. Intending remitters should understand that the rate of conversion is fixed and varied at the sole discretion of the country drawn on, and that a different rate of exchange may possibly be in force when their orders are paid.

THE ladies who have so persistently aspired to practice Medicine at Birmingham have again been doomed to disappointment. At a conference of the Medical Staffs of the General and Queen's Hospitals, and of the Professors and tutors of Queen's College, Birmingham, it was decided by thirteen to nine, that the Professors "are not prepared to undertake the Medical and Surgical Education of Women." The Council of Queen's College has now no alternative but to decline to receive lady students.

AMONG recent surgical discoveries which lighten suffering, next to chloroform will probably stand the carbolic spray. It is true it makes a mess in the operating room, and it necessitates that the surgeon should have an attendant, but we believe experiments in the use of it in the London hospitals prove that it is wonderfully efficacious in preventing unhealthy symptoms where the lance has been, hastening healing in an astonishing manner. Two patients, in similar conditions of health, underwent the amputation of a leg the other day in a London hospital, and as an experiment in the one case the carbolic spray was played over the part while the operation went on, and the stump was dressed in linen saturated with the fluid. In the other case the treatment was ordinary. The recovery of the patient treated with the carbolic spray was amazing in contrast with the other. All tendency to fester or to proud flesh is prevented. If such results can be relied upon, the inconvenience of operating while the spray is falling will be thought little of.

Le Temps says :—In consequence of a conference with Count Andrassy, the Committee of the Hungarian Delegation intrusted with the preparation of the report on foreign affairs has modified the text of its report as regards the Eastern Question. In this modified document we notice how clearly it is asserted that 'the Austro-Hungarian monarchy has no interest in any change being made in the territorial state of the neighbouring country.' Before this declaration was made, Herr Wolfurm, one of the delegates, had formally expressed to Count Andrassy a fear that the policy of the Government was inspired by desire for territorial aggrandisement, and he mentioned the rumours that Austro-Hungary intended to annex Bosnia and Herzegovina. Count Andrassy at once gave these rumours a plain contradiction. It is, therefore, not only the Hungarian Delegation but the Government that repel

all thought of annexation. In order that the territorial *status quo* may be maintained, it is important that the causes of the insurrection should disappear. Therefore the Delegation approves of the negotiation which has been opened with the Porte; but insists that the rights of the Porte must be respected, and that there must be no derogation from the principle of non-intervention. In short, the report of the Hungarian Delegation, as well as the language of Count Andrassy has a peaceful tendency; it rejects any annexation, proclaims the interest of Austro-Hungary in the maintenance of the territorial *status quo*, and objects to any interference with the affairs of Turkey, except so far as is necessary for the lasting pacification of the frontier countries.

QUITE a pretty little romance in real life is thus narrated in the *Court Journal*—An officer in the army who was going out to India to join his regiment recently made all his purchases at one of the famed West-End establishments, where the boast is—and truthfully—that everything can be had there cheap and of the best, The customer was such a large buyer that the worthy proprietor. contrary to usage, stepped forward to thank and to express a hope that the officer was perfectly satisfied, and had been able to find everything that he required. The Captain thanked the proprietor, and answered "Nearly all." "Not all?" was the quick query of the proprietor, "Not all? I hoped, Sir, we could find you everything." "Why, it is a little out of your line," Mr.———." "Out of our line? Not at all, Sir." "Oh, you are quite sure of that, are you Mr.——?" "Quite certain, sir." "Well then," continued the Captain, laughingly, "I want a wife." "Step this way, sir," and the astonished military man followed. He went through strange labyrinths, and up and down stairs innumerable. *En route* the proprietor communicated these facts. About three or four months prior a beautiful, highly-educated girl, of an excellent family, who had lost her parents, and with them all resources, applied to him for employment. He had, after listening to her story, though she was a novice to business, been touched by her friendless situation, and employed her. He had not been disappointed. He had found her a worthy and exemplary girl. The Captain was piqued. He saw and admired. He bought of her, and introduced himself. He came often, bought more, and upon inquiry, found all particulars to have been truthfully stated. On her side his manners and appearance pleased the girl, and when he told her the story of how his last want had been mentioned to the proprietor of the establishment, and been promptly met, it ended in a hearty laugh on both sides—but after the laugh within three days they were married, and she is on her way to India.

THE German Emperor arrived at Milan on October 8th, at 4-30 P. M. He was received at the railway-station by the King, the Royal Princes, the Ministers, the Prefect and Syndic of Milan, and the heads of the civil and the military authorities. On alighting from the train His Majesty embraced the King, and was greeted with enthusiastic cheers by an immense crowd of spectators, who were assembled in the station and square outside. The Emperor, accompanied by King Victor Emmanuel, entered the first royal carriage, while the Royal Princes, Field-Marshal Count von Moltke, General Cialdini, Herr von Bülow, and the other members of the suite, occupied the other twelve State carriages. They drove to the Palace, where they arrived at a quarter-past five o'clock, having been greeted on their passage by the waving of flags and handkerchiefs, and the most enthusiastic cheering from the immense crowd that lined the streets. Many stands had been erected along the route to afford a view of the procession, and the reception throughout was a great success. The city was gaily decorated with the Italian and German colours. On his arrival at the Palace the Emperor was received by the Princess Margherita, the Duchess of Genoa, and their maids of honour. In response to the calls of the crowd outside, the King and the Emperor showed themselves repeatedly on the balcony, and were loudly cheered. A grand reception of the Ministers, the Court dignitaries, and the Presidents of the Senate and Chamber of Deputies, was afterwards held.

The German Emperor and King of Italy reviewed 18,000 men of all arms in the Piazza d'Armi at 11 on October 19. The review was brilliant and successful; 20,000 men took part in it, and the manœuvres lasted about two hours. The Emperor, King Victor Emmanuel, and the Italian Princes, attended by their suites, inspected the troops, and afterwards witnessed the march past before the Arena, where the Princess Margherita, the Duchess of Genoa, the Ministers, and Deputies, the Prefect, Mayor, and other authorities were assembled. The troops marched with great precision and smartness, and were cheered by the people. The Emperor expressed his commendation of their soldier-like bearing, which was also eulogised by Field-Marshal Count Moltke in conversation with the Minister of War. An immense crowd filled the approaches to the Piazza delle Armi, and warmly cheered the Sovereigns, the Princes Margherita, and the Princes. At the banquet, King Victor Emmanuel proposed the following toast: "The health of the German Emperor, my brother, my dear guest and friend, the health of the Empress, and the whole Imperial and Royal family of Prussia." His Majesty added: "Permit me, sire, on this auspicious occasion, to become the interpreter of the wishes which the Italians join with me in forming for the happiness of your Majesty, the prosperity of Germany, and the constant friendship of the two nations. The Emperor William replied: "I thank your Majesty for the courteous expressions you have been good enough to address to me. I am very much pleased at having at last been able to return the friendly visit your Majesty paid me two years ago, and which I had for a long time past intended to return. I am deeply moved by the reception I have met with on the part of your Majesty, and in this beautiful country. I know that the sympathy existing between Germany and Italy, and the personal relations of friendship so happily subsisting between us, will continue to be a guarantee for the preservation of the peace of Europe. I feel a pleasure in hoping that these relations will always remain the same, and it is with this wish I drink the health of your Majesty."

LITERARY.

THE Reverend W. Scarborough, Wesleyan Missionary of Hankow, has published "A Collection of Chinese Proverbs," with an Introduction, and a translation of the Chinese text.

MOST of the MSS. of the works of the late Danish poet, Hans Christian Andersen, have been distributed among his nearest personal friends. It is said that the original MS., entirely written in the hand of the late poet, of his work, "The Tale of my Life," as well as of four of his fairy tales, has been sent to London. One of Andersen's manuscripts is on exhibition at the exhibition of Danish Pictures in Bond Street.

THE *Athenæum* states that the new psychological and philosophical quarterly, to be called *Mind*, announced some time ago, will begin to appear in January next. Among those who have engaged to contribute to the first number are Mr. Herbert Spencer, Mr. G. H. Lewes, Mr. H. Sedgwick, Rev. John Vend, Mr. S. H. Hodgson, Mr. James Sully, Prof. Flint, of St. Andrew's, Dr. M'Kendrick of Edinburgh, and Prof. Lindsay, of the Free Church College, Glasgow. The Rector of Lincoln will write on the state of philosophical study at Oxford. Prof. Bain will have an article on the early life of James Mill, based on new and special inquiries.

LATEST INTELLIGENCE.

London, 19th November.

AN article appears in this morning's *Times* recommending the occupation of the provinces of Bosnia and Herzegovina by Austria.

The reply of the Spanish Government to President Grant's note, dated the 2nd instant, in which the settlement of the Cuban question was urged, concedes all legal privileges to American citizens in Cuba, and amicably settles the Hispano American difficulty.

London, 20th November.

SIR NEVILLE B. Chamberlain G. C. B., has been appointed Commander of the Madras Army in succession to General Haines.

Thirty thousand mill-workers at Dundee have struck in consequence of a notice from the masters of a reduction of wages.

London, 22nd November.

THE *Iron Duke* narrowly escaped foundering in the Channel on Saturday. The sluice valve was accidentally left open, flooding the engine-room.

Obituary.—ex-Duke of Modena.

London, 23rd November.

An official desptch, dated Singapore, 21st, announces that Major-General Colborne, with 300 men and 11 officers, left for Perak on the 18th instant. According to advices received up to the 15th, the Residency troops had captured four stockades erected by Passir Sala.

Obituary.—Henry Wilson, Vice-President United States.

London, 24th November.

THE Russian Press, while discussing the Eastern Question, publishes articles of a pacific nature. The reign of anarchy prevails in the Khokand, revolts being of frequent occurrence. The Kiptschak tribes have risen against the neighbouring Russians, 3,800 of the former were killed in a recent unsuccessful attempt to hold the fortress of Mamangham.

Mr. Ferry has been elected Vice-President of the United States,

London 24th November.

THE sum of £100,000 was withdrawn from the Bank of England to-day.

The rate of discount ruling in the open market is 2½ per cent., (½ per cent. below Bank of England rate).

London, 25th November.

THE latest advices state that 6,000 Montenegrins, with 12 guns, are encamped on the plains of Grahavo, on the Herzegovinian frontier.

Obituary.—Cardinal Rauscher, Archbishop of Vienna.

Vienna, 23rd November.

WITH reference to the article which appeared in the *Times* of the 19th instant, recommending the occupation of the Provinces of Bosnia and Herzegovina by Austria, the Austrian press entirely opposes the views enunciated by the *Times*.

Galle, 24th November.

ADVICES from Perak to 16th.

A combined naval and military attack under Captain Sterling and Whethler (*sic*) was made on the 15th against the stockades. After two hours' bombardment the Artillery effected a breach, when the Malays fled carrying away their wounded and dead. Six pieces of cannon were captured, and Birch's books and papers were recovered. Our troops burnt every house along the line of march. The loss of the Malays is unknown; on our side three wounded. The troops returned to the Residency the same night.

Rangoon, 19th November.

FULL particulars respecting the recent plot have not transpired. Several Burmese have been arrested, charged with the intention to set fire to buildings in Rangoon. The guards at the arsenal have been doubled to prevent accidents.

Rangoon, 20th November.

MORE than twenty prisoners, charged with being concerned in the recent plot, were examined to-day and remanded.

The proceedings were conducted in secret, and the result has not been made known.

Rangoon, 22nd November.

THE Police have obtained a fresh remand of seven days in a case against them. About thirty Burmese, a Chinaman, and a Suratee trader were charged with a conspiracy to set Rangoon on fire, to seize the arsenal, and to subvert the English rule. The bail offered was twenty thousand rupees for the Chinaman, but the Magistrate has refused any bail at present.

Rangoon, 22nd November.

THE total number of arrests of persons charged with being concerned in the recent plot is upwards of forty, including one Suratee and one Chinaman.

The ringleader is a Burman, named Thaik Moung Bwah. It is reported that some of the prisoners have made confessions, and that the evidence against them is strong.

DEATH.

SHAH.—At Gorakhpur. November 22nd, Ahmad Ali Shah, *alias* Meah Sahib, aged 76.

THE ORIGINAL HARDWARE ESTABLISHMENT OF INDIA.

"ROYAL TOURIST."

PUBLISHED FOR SIX MONTHS ONLY,

FROM 1ST NOVEMBER,

At 3, Chowringhee Road, Calcutta.

An issue of 500 *Copies already guaranteed. Subscription, Rs.* 25 *only, in advance.*

SINCE the ensuing season will inevitably be a most brilliant one, and as the appliances for producing magnificent Illustrations and splendid Letter-press in the Office of the ROYAL TOURIST will be unequalled in Asia, the Proprietors of that Journal will also publish every evening a paper entitled the

"ENTRE-ACTE."

This expensive and novel production will be devoted to illustrated descriptions of, and *critiques* upon, the Theatrical and Operatic World in the Metropolis of India during the season 1875-76. An issue of

2,000 Copies is Guaranteed.

The Subscription to the *Entre-Acte* will be only Rs. 10 for six months. Twice a week Portraits will be given in CHROMO, while the daily illustrations will be produced by means of Wood-engraving and Lithography.

All Cheques, Money-orders, and Cash remittances of every kind to be sent to MESSRS. NICHOLLS & CO., Financial Agents, 8, Old Court House Street, Calcutta.

Communications of a business nature and letters relating to the Editorial Department should be addressed to

WALTER RODWAY,
3, *Chowringhee*, CALCUTTA.

W. NEWMAN AND CO.'S NEW ADVERTISEMENT.

FREQUENTERS OF THE OPERA, THEATRE, AND RACE FIELD.

W. NEWMAN & CO,

CASH PRICES.

The Telescopic or long-sight Binocular

Admirably suited for very distant objects. Of the most superior construction, covered with Morocco leather, and containing Five Lenses on each side, Ten Lenses in all. Diameter of Object-glass. 1 inch; diameter of Eye-glass, ⅝ inch. Length when closed, 8⅛ inches; opening to 11¼ inches, with 4 inches,

Price, Rs. 100.

The New Elliptic Binocular Glass

In this form of construction the Eye-pieces and the Object-glasses are Elliptical or Oval in shape, thus offering an increased width of field. They are of the best quality, and are most carefully finished :—

No.

1. Fifteen lines. Black Japanned and covered with Morocco leather. Height when closed, 2¼ inches... Rs. 22
2. Fifteen lines. Black Japanned and covered with Calf leather, with neat gilt beaded rims ... ... „ 24
3. Fifteen lines. Best African Ivory, with gilt rims ... ... „ 32
4. Seventeen lin s Black Japanned and covered with Morocco leather. Height when closed, 2½ inches ... „ 24
5. Twenty-one lines. Black Japanned and covered with Morocco leather. Height when closed, 3⅛ inches ... „ 34
6. Twenty-one lines Black Japanned and covered with Morocco leather, with gilt rims, Sunshades, and curved Bar, oval Eye-pieces, and round Object-glasses. Height when closed, 4¼ inches. A very superior glass ... ... „ 36

The Field Binocular.

A very useful and portable Field Glass. The size is 13 lines. The casing is Black Japanned and covered with calf leather. The outer leather case is furnished with strap and swivels. Height when closed, 2⅝ inches Rs. 22
Ditto, larger size ... ... „ 32

The "Cyclops" Field Glass.

This novel Field Glass is convenient and portable. It consists of a single Object-glass tube, Morocco covered, with gilt rims, to which is fitted two Eye-pieces, for both of which, by an ingenious arrangement, the single Object-glass is made to do service. Height when closed, 4¼ inches:—
In Morocco outer case, Velvet lined, with shoulder strap ... ... Rs. 36

Aluminium Binoculars.

These choice Binoculars are very light and portable, and are admirably adapted for a lady's use. A more elegant present for a lady can hardly be desired :—
Height when closed, 2⅝ inches.
Covered with Russia leather ... ... Rs. 52

Single Opera Glass.

A neat small Glass for one eye. Very portable and convenient for the pocket. In Black Japanned casing. Height when closed, 1⅝ inch. In neat leather bag for the pocket. Rs. 8

The "Duchesse" Opera Glass.

Particular attention is directed to this Binocular, which is of the best quality, and is made in variety of styles adapted for presentation :—

1. Eleven lines. In Morrocco, with gilt beaded lines and mounts ... Rs. 15
   Or, in Ivory, with gilt mounts ... „ 16
2. Fifteen Lines. In Morocco, with gilt beaded lines and mounts ... „ 18
   Or, in Fancy Morocco, or Russia leather ... ... „ 18

The New "Conical" Pattern Binocular.

Covered Morocco, in Morocco case.
A beautiful Glass of great power ... Rs. 20
Ditto ditto. in Mother-o-Pearl, with gilt mounts in Morocco case ... ... „ 36

Presentation Opera Glasses.

1. Dark-blue Ground, with Pearls Inlaid, Black Metal Mountings, in Morocco case.

   Reduced to cash, Rs. 50

2. Beautifully Enamelled, with Pearl Beads and Bouquets and Wreaths of Flowers, Pearl Beads, and Gilt Mountings; in Morocco case.

   Reduced to, cash Rs. 75-0

3. Enamelled Body with Figures and Groups, beautifully Painted by Hand, Pearl and Gilt Mounts, in Morocco Case, (*a perfect gem.*)

   Reduced to cash, Rs. 100-0

The Emperor's Binocular.

Each Sight-glass consists of Three Lenses, and each Object-glass of Three Lenses also, consequently there are Twelve Lenses contained in each Binocular, by which the *greatest possible power, and the largest field of vision* are obtained. The Emperor's Binocular is admirably adapted for use at night.

The casing is of Metal, covered with Russia Leather, and each Binocular is fitted in a strong leather case, with Shoulder-strap and Buckle complete, the whole being contained within a very small space.
Small size ... ... Rs. 40

The Universal Binocular.

THE "UNIVERSAL" BINOCULAR, with three transposing Lenses. Suitable for the Theatre, the Field, and the Marine, covered, with Morocco leather. Complete, in case, with strap and sling.

JESSOP & CO.

100 *Guineas.*

The Prince of Wales's Visit to India.

THE CROWN PERFUMERY COMPANY, of London, OFFERS a REWARD of One Hundred Guineas premium for the three best PRIZE POEMS, by English or Hindoo Authors on the subject of that visit.

1st prize, 50 guineas; 2*d* prize, 30 guineas; 3*d* prize, 20 guineas.

Should there be a large number of meritorious poems of the second rank, the second and third prizes will together be divided amongst a limited number of the most successful authors.

Each poem should not be less than fifty nor more than two hundred lines in length.

Poems in the various Indian vernaculars should be written both in the parent and in the Romanised character, and clear translations in English prose should be attached to each.

The premiums will be adjudged by a coterie of distinguished literati, and awarded solely with reference to intrinsic merit and public interest.

It is suggested that the Prince of Wales's visit to India should be treated with reference to the contrasts of ancient and modern civilisation, or the æsthetics of modern life.

The peoms of writers in England must be sent in before the 20th December, 1875, and those from India must arrive before the 5th of January, 1876, all addressed to

THE PROPRIETOR,

Messrs. FORBES and Co.

Agents in Calcutta.

Messrs. FITZE and Co.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. *All transactions will take place at the* warehouses for cash *only* or by barter.

Further particulars may be obtained from *Mr. T. Russell at Murree, who will be happy to afford any information.*

Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

T. RUSSELL,
Manager, C. A. T. Company.

Murree, September 1875.

AS SUPPLIED through the WAR OFFICE for the USE of the TROOPS employed in the EXPEDITION to ASHANTEE, on the WEST COAST of AFRICA, and highly recommended by the Medical Profession as a Valuable FEBRIFUGE, and for its REFRIGERANT PROPERTIES.

BEING very agreeable in taste, it is taken readily by the most fastidious. A DRAUGHT of the SALINE exhilarates and invigorates the system in a marked degree.

HIBBERT'S HEALTH-GIVING SALINE is acknowledged by all to be the most approved remedy for DISORDERED DIGESTION so often accompanied by SICK HEAD-ACHE, HEARTBURN, FLATULENCY, INDISPOSITION FOR BUSINESS, and other distressing symptoms.

LIVER COMPLAINTS, BILIOUSNESS, &c., so productive of LASSITUDE, MENTAL DEPRESSION, and NERVOUS DISORDERS, are *quite under* the control of this efficient medicine.

LETTER from EDMUND LEATHES, Esq.. Savage Club, London:

"April '23rd, 1874.—Gentlemen,—Having suffered very much from Acidity and a tendency to Congestion of the Liver, a friend strongly advised me to try your Health-giving Saline. I am happy to say that I have derived great benefit from taking it. I shall always consider it a valuable household remedy, and will lose no opportunity of recommending the Saline to my friends and others, as a remedy in similar cases.—Yours truly, ED. LEATHES."

Captain GRAHAM, of Fowey, Cornwall, suffered greatly from Irritation of the Liver, which prevented sleep, and racked him with pain. After taking one bottle the pain was nearly removed, and he was able to sleep well at night, and, on taking a second bottle, expressed it as his opinion that it would complete the cure so well begun.

HIBBERT'S HEALTH-GIVING SALINE, as a Therapeutic Agent, and as a Cooling and Refreshing Drink in SCARLET, TYPHUS, and GASTRIC FEVERS, is unsurpassed—frequent experience has proved this.

Testimonials from Medical Men.

W. E. GREEN, ESQ., N.R.C.S., and L.S.A., Lond; speaks very favourably of the Saline as an efficient, aperient, as active as Friedrichshall Water, and decidedly more agreeable to the palate, and generally recommended for this purpose.

R. W. THOMAS, Esq., M.R.C.S., and L.S.A., London, remarks that he has found the Saline of considerable efficacy in febrile attacks as an efficient aperient and refrigerant, and very useful in attacks of bilious vomiting.

ALBERT B. REES, Esq., M.R.C.S., and L.S.A. writes—"I have taken your Saline personally, and have given it to members of my family and to patients. I am thoroughly satisfied with its effects, and can strongly recommend it as a safe family medicine. I have found it of special efficacy in the diseases of childhood and during the period of teething."

BY restoring lost Saline matter to the BLOOD it invigorates and enriches that fluid, enabling it to throw out all impure and effete matter, and thus, perform the functions of an EFFICIENT BLOOD PURIFIER.

HIBBERT'S HEALTH-GIVING SALINE, for the above reasons, removes BLOTCHES and ERUPTIONS on the SKIN, whether arising from disorder, digestion or from some taint in the constitution.

A daughter of Mr. GEORGE WEBB, of Glyn-Neath, aged fifteen years, was troubled with a Scrofulous Eruption on her limbs, accompanied with such weakness that she was unable to walk, and had to be lifted in and out of bed. After a course of the Saline, less than three weeks in duration, her father reported her as quite cured.

DIARRHŒA, ENGLISH CHOLERA, and DYSENTERY, so prevalent during the summer and autumn months, will be warded off by a judicious use of the Saline or will be quickly cut short by its prompt administration.

"Bedford, Nov. 20th, 1873.—Having tried your Health-giving Saline I am satisfied that it is a very valuable preparation in cases of fever, rheumatism, &c.; it is, in fact, a remedy that should be found in every household, since by its salutary influences (if taken at the first indications of fever, diarrhœa, and other complaints) many a tedious illness may be averted, I shall do my best to recommend it wherever I go. In the meantime wishing you every success, &c., &c., I am, gentlemen, yours truly, W. H. PHILLIPS, B.A., Oxon.

HIBBERT'S HEALTH-GIVING SALINE is invaluable to RESIDENTS and TRAVELLERS in INDIA, CHINA, AFRICA, &c., since it is peculiarly adapted for the cure of those Complaints prevalent in Hot Climates, such as Fevers, Dysentery, &c., &c.

Extract from a letter received from Captain R, ROBERTS of the ship Sidney A. Jenkins."—Dundee. May 28th, 1874—I have just received the case containing the 10s. 6d. bottles of Saline. Since taking the bottle I purchased of you before last voyage, I have enjoyed better health than I have previously had for five years. It is the best thing of the kind I have yet met with. I shall strongly recommend it to my brother captains."

SOLD in Bottles, 2s. 6d. each; Double Size, 4s. 6d.; in Bottles containing Five of the 2s. 6d. size at 10s. 6d.

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.
20 „ Soluble } Guano Phosphate.
4 „ Insoluble }
Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.
Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 payable at Death.

CALCUTTA

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit*."—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT
SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.
AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fall of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

Available Funds	...	**£ 1,012,185**	**16 8**
Annual Income	...	**£ 172,151**	**18 11**

Claims promptly adjusted on proof of Death.

Total of Claims paid since 1834, ... **£ 2,142,045 14 9**

Copies of the last Report, Proposal Papers, &c., on application to the Society's Sub-Agents in the principal Mofussil Stations, or to

Will be published on the 1st January.

POSTPONED FROM 1ST DECEMBER.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

ADMINISTRATOR-GENERAL'S OFFICE.

THE undermentioned Estates having come under charge of this office, all persons having claims upon, being indebted to, or holding property belonging to the said Estates, are requested to place themselves in immediate communication with the undersigned :—

Robert Gordon LOCH, a Captain in the Bengal Staff Corps, died at Erinpoorah on the 6th August 1875.

James GRAHAM, a British Subject residing at Agra, in the N.-W. Provinces of India, died at Agra on the 14th June 1875.

George Cæsar COOKE, of Nursingpore, in the Central Provinces of India, Civil Engineer holding the appointment of Executive-Engineer Sagor Road Division, died at Nursingpore, on the 25th January 1875.

Francis Tague REILLY, an Honarary Lieutenant and Assistant Engineer in the Public Works Department, died at *Dharmsala on the 13th July* 1875.

Neil McInnes MACKAY, a Colonel in the Royal Artillery, died at Meerut on the 20th August 1875.

Louis HICKLING, Deputy Manager of the Oriental Gas Company (Limited) of Sealdah in the Suburbs of Calcutta, died at Malta on the 18th April 1875.

Michael George MICHAEL, of No. 51 Dhurrumtolla Street, Calcutta, an Armenian inhabitant, died at Calcutta on the 19th October 1875.

Achille FLEURY a Violinist of the Orchestra of the Corinthian Theatre Calcutta, died at Calcutta on the 31st October 1875.

Alexandra RUSSELL of No. 35 Thistle Grove Brompton in the county of Middlesex in England, Esquire, died in England on the 4th August 1867.

Duncan McLEAN, Commander of the Steamer "Celt," died at Calcutta, in November 1875.

Charles William D'RUSSETT, of Simla in the Punjab a Photographer, died at Simla on the 5th August 1875.

John Mothoora Mohun HAZRA, a Native Christian Inhabitant of Amherst Street in the Town of Calcutta, died at Calcutta on the 30th October 1875.

NOTICE.

ADMITTED Claims against the undermentioned Estates are payable on Tuesday and Friday as usual.

ESTATES.	Claim or Dividend.	Rate of Dividend per rupee.	Remarks.

ST. PAUL'S COLLEGE provides a Public School Education on the principles of the Church of England.

The *inclusive* charge for Board and Instruction is Sixty Guineas a year. Washing, Medical Attendance, Stationary, and all necessary expenses are included in this sum.

The College is divided into Three Departments—

1. In the Junior Department little boys from 8 to 12 are grounded in the essentials of general knowledge.
2. In the Modern Department, boys are prepared for the Civil Service and other competitive examinations.
3. In the Classical Department boys are prepared for the Universities and learned professions.

Arrangements are being made for the accommodation of one hundred additional students.

The Celebrated Futtehgarh Tents.

ANY order for Tents required for next cold season, Durbar, Mess Native Princes, and Kutcherry will be furnished on application. For particulars, and detailed very reasonable Price List, apply to

MESSRS. BULDEO PERSHAD & Co.,
General Merchants and Tent Manufacturers,—Futtehgarh.

JAS. T. GILMORE,

CIVIL ENGINEER AND ARCHITECTURAL SURVEYOR

Agent for Engineering Stores & Materials,

UNDERTAKES AT A MODERATE CHARGE THE SUPERVISION OF

New Works & Repairs during progress.

HOUSE Proprietors executing renovations or improvements by giving out in petty contracts, or employing their own workmen, may obtain sound professional assistance, and provide an intelligent check against unnecessary, or exorbitant outlay, whereby *their* interests will be ensured.

PROFESSIONAL DUTIES and SCALE OF CHARGES may be ascertained on application at the Office, No. 20, BRITISH INDIAN STREET CALCUTTA.

100 *Guineas.*

The Prince of Wales's Visit to India.

THE CROWN PERFUMERY COMPANY of London, OFFERS a REWARD of One Hundred Guineas premium for the three best PRIZE POEMS, by English or Hindoo Authors on the subject of that visit.

1st prize, 50 guineas; 2*d* prize, 30 guineas; 3*d* prize, 20 guineas.

Should there be a large number of meritorious poems of the second rank, the second and third prizes will together be divided amongst a limited number of the most successful authors.

Each poem should not be less than fifty nor more than two hundred lines in length.

Poems in the various Indian vernaculars should be written both in the parent and in the Romanised character, and clear translations in English prose should be attached to each.

The premiums will be adjudged by a coterie of distinguished literati, and awarded solely with reference to intrinsic merit and public interest.

It is suggested that the Prince of Wales's visit to India should be treated with reference to the contrasts of ancient and modern civilisation, or the æsthetics of modern life.

The poems of writers in England must be sent in before the 20th December, 1875, and those from India must arrive before the 5th of January, 1876, all addressed to

THE PROPRIETOR,
CROWN PERFUMERY COMPANY,
40, *Strand, London.*

ELECTRO-SILVER PLATED WARE, GLASS WARE, STONE, CHINA AND PORCELAIN WARE, CUTLERY, &C. &C.

Manager, *Friend of India.*

Calcutta, 25th September 1875.

EDITORIAL NOTES.

DR. WILSON of Bombay is dead. The great and good old man passed away about 5 o'clock on the afternoon of Wednesday last. He was one of the leading men in the Free Church of Scotland and his church has delighted to do him honor; but pious, ardent and powerful as he was in his sacred calling, he was far more than a distinguished Free Church minister. He was a representative Scotchman, with all the best characteristics of the best men of his nation, but the profound regret caused by the tidings of his death will not be confined to his nation any more than to his church. His philanthropy and Christianity were of the loftiest and most liberal kind. His fine mental culture and solid learning, and his great services to India extending over a period of so many years, have long marked him out as one of the most valuable men in the country. He had the respect and veneration of all who knew him by his works, and they were all who, either as Christians or scholars, looked with an eye of interest on our Indian empire. The many who had the privilege of knowing him personally, had the sentiments of respect and veneration deepened and warmed into admiration, attachment, love. High and low of all classes and nationalities were of one heart and one mind in love and honor to Dr. Wilson, and while none was too high, too learned, or too sagacious, whether as scholar, statesman or divine, not to benefit by his wisdom, experience, and learning, none was too poor, obscure, or worthless, not to share in his benevolence, wise counsel, and substantial charity. His house was daily frequented by those who sought the Doctor's aid for a vast variety of needs both of body and mind, and few, indeed, went empty away. Many eyes will now turn towards that house with infinite yearning and regret; and not a few of them will be moist with not unselfish tears. The hospitable gentleman, the accomplished scholar, the fine old Christian missionary, has gone to his well-earned rest. His life has been long, laborious, brave, and unselfish, and fruitful of noble results. He has fought the good fight, he has finished his course, he has kept the faith, and Dr. Wilson's will be a brightly jewelled crown. We can at present express but the feelings that lie on the surface. We shall have more to say in a future issue of his life and the value of his life-work.

***

WE are glad to see that the Lieutenant-Governor is fully alive to the state of matters in Behar, and, although there will be some scarcity, we may be quite sure there will be a minimum of suffering. When Sir Richard Temple becomes fully alive to the necessity for vigorous action, he is generally both able and energetic in the course he pursues. We are greatly pleased to hear that Mr. J. C. Geddes and Mr. A. P. Macdonnell have been temporarily deputed to Behar on special duty, and it is believed they are to enquire into the necessity for relief works.

***

THE English Government has at a very opportune moment become proprietor of the majority of the shares in the Suez Canal. The present purchase from the Khedive is to the extent of 177,000 shares for £4,000,000, and, as about fifty of the remaining shares were previously in British hands, Britain can now command a considerable majority of votes in the management of the Canal, the whole number of shares being 400,000. We are not surprised to hear that this exploit has caused a good deal of sensation in financial and political circles. It is a guarantee for the future vigorous action of our Government for the preservation of our right of way through Egypt, and will enable us to view with more equanimity the progress of the "sick man's" malady, and the action of his self-interested physicians. Come what may, and in whatever manner the Turkish territories may be in future appropriated, we can now with confidence abide the evolution of events. A Government that has just become chief-proprietor of the Canal, has necessarily made up its mind to allow nothing to be done that will injure or seriously menace our right-of-way through Egypt. When all the terms of the recent purchase become known to us, we shall probably find that we have not invested so largely in the Canal without securing our right to fortify and defend our position there. And when sooner or later the Khedive cuts, as he must do, the link that fastens his allegiance to the Grand Turk, it is plain that English influence must be really and professedly supreme in Egypt. Mr. Disraeli's Government has done nothing like this before, and will be able to meet Parliament triumphantly in spite of recent blunders. Not only has the Government gained popularity and praise at home by this sagacious and decisive action, but the continental journals join the chorus of approbation. The telegram informs us that the French press, while regretting the check to French influence in Egypt, admire the clever action of the British Government, and the German and Austrian press also approve it.

***

WE read that the Government of India has ruled that Government dues may for the future be paid in currency notes of any issue, irrespective of Presidency or circle. This concession will be appreciated by the public, particularly by travellers, whom it will relieve of a great deal of inconvenience. But why does not Government go a step further, and make currency notes a legal tender in every part of India?

***

OUR mode of dealing with petty barbarous tribes located in the neighbourhood of our colonies, or with whom we come into contact in our noble position "as policeman of the high seas", is not one on which we can look with unalloyed self-complacency. One noticeable feature in it, is the promptitude and rigour of our punitive measures. Savage islanders in the Pacific, wild tribes on the Congo, tribes on our Indian frontier, petty states like Perak, soon feel our heavy hand when they venture to commit an outrage on British ships or British citizens. But when a formidable power—even such a power as China—is in the case, we deliberate, arbitrate, and negotiate, and prove that we have laid to heart the old Ephesian maxim, "Do nothing rashly." There are indications that the present ministry are inclined to adopt a more vigorous foreign policy than has been fashionable of late years, and to shew that there is no foundation for the reproach of weakness or cowardice. And as to our relations with petty tribes, we confess it is difficult to see how we can help exercising a good deal of occasional severity. To tamely submit to an unprovoked outrage would only encourage a repetition of it. And if we must punish at all, the punishment to be effectual as a preventive of future outrages, must be severe. But the worst feature of it is that it is not only severe but too often indiscriminate. To punish the pirates of the Congo river, seven of Her Majesty's ships sailed to a place near the scene of the outrage, and bombarded and burnt to the ground some sixty or seventy villages, cutting down and demolishing crops and fruit-trees, and apparently committing an indiscriminate massacre of the natives. Such vengeance was, we cannot but think, altogether disproportionate to the offence—was far too severe, and the multitude of the sufferers were in all likelihood not only innocent but ignorant of the perpetration of the outrage. A similar course of proceedings has been recommended at Perak, and before instructions arrived from home that nothing further should be attempted than the punishment of Mr. Birch's murderers

a considerable number of the inhabitants who had no connection with the murder had already suffered for it.

***

THE Hon'ble Dr. Little of the Singapore Council is apparently one of those thorough-going men whom it is always a pleasure to know and to hear speak, but who are nevertheless dangerous counsellors in times of commotion, being a little too eager to call down fire from heaven on all and sundry who are ignorant and wicked. Dr. Little—not in an after-dinner speech, but in the Council Chamber—gave his opinion with some force as to the best way of getting rid of the Chiefs of Perak, He was not quite sure if hanging them or pensioning them, would be the best policy, but he thought he was rather in favor of suspension than of pension. "The best way of getting rid of the refractory chiefs was hanging them or pensioning them—perhaps hanging was the best." Admirable Doctor! But it was too grim a joke for the Council Chamber. One man in the Singapore Council spoke on what we think the right side of the question, and from his position and experience as Colonial Secretary his words ought to carry weight,—more perhaps, than even the opinions of the Governor. He stated that he had always been of opinion that the Residential system would fail, and was furthermore opposed to the annexation policy. We predict that the calm judgment of the not distant future will coincide with the opinion of the Colonial Secretary.

***

THE death-rate of many of the large towns of the Punjab seems to be alarmingly high. For the week ending on the 30th October, we find that the mortality of Bhiwani was 70 per thousand of the population per annum; of Lahore, 72; of Delhi, 82; and of Umritsur, 115. We take these figures from the *Punjab Gazette*, but with some doubts of their accuracy, at least as regards Umritsur. The town is not a healthy one, but it is not, we suppose, suffering from any epidemic just now, or the Sanitary Commissioner would say so, and we can hardly believe that its population is dying off at a rate which would leave it without a single living inhabitant in less than nine years. There is some miscalculation here, we suspect. Our suspicions as to the value of Mr. De Renzy's figures are strengthened by what he tells us of another town, that of Tanda and Urwar, where "the deaths registered during the week give an annual death-rate of 360 per thousand of the population." This is more than we can credit, although Mr. De Renzy, apparently, sees nothing in it to call for any special remark. We should be glad to know whether he has any explanation of the alleged rate of mortality at Tanda and Urwar to offer. In the absence of one, it is impossible to put any faith in his statistics.

***

A WRITER in the last number of the *Madras Journal of Education* gives some curious instances of the working of the system of "payment by results" in the schools of the Madras Presidency. He mentions cases in which "not only were the pupils of a school taught without the payment of any fees, but their parents actually demanded from the teacher a portion of the result grant, which, as they asserted, their children had earned for him. Other cases have come to light, in which men have taken up the profession of school managers as a means of livelihood, their plan being to establish several schools, engage inefficient and inadequately-paid teachers, and then themselves take the proceeds of the result grant." It has in consequence, been suggested that in future all middle-class schools should be placed on the salary system, and that the result grant system should be confined to lower-class schools. But why not place both on the salary system. Are "lower-class" parents less likely to expect to be paid for allowing their children to be educated than "middle-class" parents? As money is of the most importance to the poorest, we should have thought the probability lay the other way.

***

WE need not lay too much stress on the telegram which a few days ago brought a rumour of danger to Messrs. Grosvenor and Baber. But it harmonises too easily with the suspicion we could not but feel from the first, not to have some effect on the mind. "A traveller from Yunnan," says the telegram from Hongkong, "reports having met the expedition under Messrs. Grosvenor and Baber, and warned them that large bodies of troops were ready to resist the proposed investigation of Mr. Margary's murder." The Yunnan difficulty is not ended. It is problematic how powerful he influence of Pekin is on that border, and we are not even certain that the Chinese Government is sincerely anxious to forward the investigation. We have all along doubted if it has either the will or the power to do so, and Mr. Wade should not have been knighted till the Grosvenor expedition had been successfully completed. It is true he staved off war with China, but if the only result of that proves to be that we shall have to demand reparation for two outrages instead of one, the value of his diplomacy will be seriously called in question. In seeking to open up the trade route through Yunnan we have undertaken a very difficult task without the courage to use adequate means. We either have no right to go there at all or we ought to send a force sufficient to secure the safety of our messengers.

***

THE *Pioneer's Rangoon correspondent* laughs at the alarm of the Foreign Office and the Home Authorities, occasioned by the discovery of the recent insane plot to seize the arsenal and fire and pillage the town. Any one may join in the laugh now that the conspirators are in safe durance, but from his account of their intentions and organization it is evident that a considerable danger has been fortunately averted. It appears that an attack was planned for the night of the 12th November. The intention was to attack the arsenal, massacre the European inhabitants, and hold possession of the town. The leader of the conspiracy, who doubtless expected to win sovereign powers, was Moung Bwah, a political refugee from Upper Burmah. He had secured the co-operation of several thousands of his countrymen. The villages adjoining the town were to send in contingents, and the different points of attack were pre-arranged. There is no doubt as to their nefarious intentions and they were far from being despicable in numbers. But fortunately they were without arms, and the desperate character of the ringleaders is evident from the plan they had formed to supply the want. A *kyoung* was to be fired near the cantonment, and it was expected that the Sikhs would rush out of the barracks to extinguish the fire, when the conspirators were to rush in and arm themselves. The plans were complete, but for some unknown reasons their execution appears to have been postponed. Meanwhile information was obtained by the town magistrate, Mr. McIver, and by Mr. Fforde, the police superintendent, and they lost no time in arresting the leaders of the villainous plot, Since the affair has collapsed and Rangoon is saved, we may if we choose treat the plot as ridiculous. But the warning is a serious one. Rangoon was very nearly made the scene of pillage and bloodshed. There are many thousands of discontented and turbulent spirits who would rise against the British at any moment if they had the means, and there are neighbours at hand who would look on with delight if they did not render assistance. Perhaps it is well that we have been reminded of the slumbering embers beneath and around us, and doubtless the authorities in Rangoon, while congratulating themselves on the discovery of the plot, will take double precautions to prevent the success of any future conspiracy.

HOW difficult it is to see two sides to a question when our own interest—especially if it be a money interest—lies wholly on one side is continually illustrated by the agitation and arguments of the Lancashire manufacturers against the Indian import duties. These men are quite unable to see that an import duty can be any thing but a protective duty. No matter how patiently it be explained to them that the Indian import duties are kept in existence only because they are a source of revenue for which no desirable substitute has yet been found. It has no effect on their minds to know, as they must know, that Lord Northbrook is an earnest advocate of free trade principles, and would gladly abolish the duties if he saw it practicable. Our Manchester friends are alive to nothing but the conviction they have, that the Lancashire cotton trade is injuriously affected. Let the Indian Government become bankrupt, or increase the pressure of taxes on the people, or do anything it pleases, only let it remember that all the cotton markets in the world belong by natural right to the men of Manchester and that such a trifling consideration as how the government of the Empire can be carried on without funds, is of no importance in comparison with the consideration that *their* profits are a little less than they wish them to be.

The proceedings at the last meeting of the Chamber of Commerce show that they mean to keep up the agitation. Public meetings were to be held, and more pressure was to brought to bear on the Secretary of State for India. We suppose it is to their pressure that we owe the visit of Sir Louis Mallet. They are determined to give the Secretary of the State no peace till they gain their object and no one has the courage to answer them as they deserve.

THE *Pioneer* notes that the oldest officer in the Bengal Cavalry, and nearly the oldest in either H. M.'s British or Indian forces has just died at Dehra Doon. General Alexander Dick was a native of Scotland. He entered the service in 1804 and has just died at the age of 90, having never once revisited his native country. He was with Lord Lake in 1805, and with the Java expedition in 1811, being present at the storm and capture of Fort Cornelis. He became Captain in 1818 and General in 1866.

RECENT events in the east of Europe have again directed public attention at home to the state of the army, which by all accounts is not so well prepared for a possible war as could be wished. Colonel Lloyd Lindsay, a distinguished Crimean officer, recently asserted that our whole available military force did not equal one French or *German corps ; that the so-called* Reserve did not exist ; and that the new recruiting system had turned out an absolute failure. This is strong language, but not stronger than is being used by the press. The best informed journals are beginning to admit that the depôt system inaugurated by Lord Cardwell was a mistake, and will have to be abandoned in favour of something better adapted to our special needs than that feeble copy of Prussian "localisation". The *Times*, which has long upheld the present organization of the army as all but perfect, now speaks of it as disparagingly as the *Pall Mall Gazette*. In a late article it thus points the moral of the unexpected break-down of the French forces in 1870 :—"The guilt was national, and it has had a national expiation. So it must ever be when so vast and complicated a machine as the army of a great Power breaks in a variety of places, like this of France. A more useful employment than recrimination or over-curious inquiry is to consider what have been the causes of the French collapse, and to ask ourselves whether our own military and naval strength *may not at this moment be affected by similar disorders*. In this country we are free from some of the defects of the Second Empire ; our political and professional chiefs are above suspicion, and we are not afraid to criticize ourselves. Official people are really anxious to do their best, and there are others always ready with advice as to what the best is. But, after all, every thinking man must feel how very little is known of the details of the two services outside a small professional class, and that the nation which reposes in confidence that it has the most complete army, the best ships and guns that are to be obtained for money, may awake some day to the discovery that some flaw in the system has destoyed the efficiency of the whole."

The *Times* has, as usual, veered round rather suddenly. Its present views are, it appears, diametrically the opposite of those to which it gave expression while the last autumn manœuvres where going on. But they have the advantage of agreeing much better with the facts of the case, and it is only matter for rejoicing that the truth has at last dawned on the leading journal. Let us hope that it will now apply itself, with its wonted ability, to the task of preparing the public mind for that searching reform of our military system which it evidently sees is needed.

***

THE *Sarawak Gazette* pleads eloquently in behalf of the good character of the Dyaks, who mainly compose the population of the little kingdom. They are divided into two classes called respectively the Land Dyaks and the Sea Dyaks. The latter especially have been looked upon as an incorrigible race, warlike and troublesome. The *Gazette* confesses that they still retain a weakness for taking heads, but thinks it will soon be eradicated. They never go out now-a-days in quest of these trophies, except when called out by Government, so that their little weakness is annoying only to the enemies of the State. Some of the tribes have not gone out on a promiscuous search for heads for the last fifteen or twenty years, though they still love to talk of the good old days when they used to put to sea, two hundred boats strong, and deprive every "salt-water drinker" of his head. Nevertheless the *Gazette* affirms that they are gentle, well-mannered, and intelligent to a degree, clever traders, and as sharp at a bargain as any Chinaman ; and predicts that when the coal-mining operations are opened at Lingga they will prove far superior to the Chinese as workmen, and will soon prefer the rewards of industry to the ghastly trophies of war.

***

SOME interesting information about the Jats is given by Mr. La Touche in his Settlement Report of the Ajmere and Mhairwarra Districts. They are the most numerous of the fifty-six or more Hindoo castes, and with the Goojurs are the original cultivators of the soil. They possess nearly all the Ramsar Pergunnah and are settled in Tekree and the best villages of the Ajmere and Rajghur Pergunnahs. They have shown great energy in making wells and improving the land, and, having monopolized the best villages, they contribute a large proportion of the revenue. Marriage among the Jats takes place generally later in life then in Upper India, and the following are the ceremonies observed. A cocoa-nut and a rupee, emblems of fertility and wealth, are sent to the house of the bride, and, the brotherhood having collected, the contract is concluded by throwing the cocoanut and the rupee into her lap. Her parents having fixed the wedding-day, the *Barat* consisting of twenty-five to thirty men reaches the village in the evening. The bridegroom arrives, attired in red, with a sword in his hand, with which before entering, he strikes a *toran*, or wooden frame that has been put over the door by the village carpenter. This custom is probably a relic of marriage by conquest. The officiating Brahmin then causes the bride and bridegroom to go round a fire lit in the centre of the room and the marriage is completed. Next day there is a feast, and the party disperses. The bride's father takes Rs. 84 and the bridegroom's father spends about Rs. 200. The father of the bride must also spend a like sum and give presents to his son-in-law's relatives to the amount of about Rs. 150 more. The Jats do not prevent their widows from marrying, and indeed they seem to make money out of them, for it appears that the deceased husband's relatives often dispose of a widow to the highest bidder. Colonel Hall has recorded that while he was complaining that women were sold like sheep, the women themselves rather seemed to like it, and were proud of a high price being offered for them. This second marriage is called *Natha*, Among the Jats the chief waste of money is on the occasion of a feast to the brotherhood after the death of a relation, which usually takes place on the twelfth day after the death. They eat thrice a day. They all smoke tobacco and present it to strangers, and he who consumes most is considered the best man.

***

OUR readers must have been tickled, if not edified by the singular correspondence to which a serious incident in the late Municipal farce has given birth. Every Englishman felt that the national character was deeply wronged by Mr. Hogg, when he made the famous statement, regarding the relations that had subsisted between Mr. Roberts and Dr. Lynch, and had neither the honor nor the politeness to withdraw it, when it was corrected on the spot by Dr. Lynch himself. But if Mr. Hogg's conduct was calculated to rouse indignation, Sir Richard Temple's account of it is worthy of heavy censure. We decline to accept His Honor's ingenious improvements of our straight-forward English tongue. An incorrect statement, neither retracted nor modified when a direct denial has been given to it by the best authority, is not to be distinguished by unsophisticated Englishmen from a direct falsehood, and though we do not think that Mr. Blacker took the best course in tendering his resignation as a Justice, we cannot but sympathise with the feeling that actuated him, and we prefer his English to that of Sir Richard Temple. And we are sorry that Dr. Lynch whose action at the meeting of Justices was universally approved, should have been persuaded to imitate the Lieutenant-Governor by drawing nice distinctions between our English synonyms. From his letter it appears that Mr. Blacker and the public in general were quite mistaken in supposing that he gave a flat denial to Mr. Hogg's incorrect statement. He merely objected to that gentleman's choice of words. What Mr. Hogg meant to assert was, it appears, true enough, and there was no intentional misrepresentation. Had he used the term "irritating", or "offensive" instead of the ugly word "insulting," no contradiction would have been needed. The whole affair resolves itself into a difference of temperament between Mr. Hogg and Dr. Lynch. Mr. Hogg thinks that irritating and offensive conduct persisted in towards a gentleman is insulting, and Dr. Lynch does not think so. As to the difference between these two gentlemen we feel inclined to sympathise with the former. If he had Dr. Lynch's authority to say that Mr. Roberts' conduct was "offensive" we hardly see that he made a very serious slip when he used the word to which Dr. Lynch objected. If, as a contemporary thinks, Dr. Lynch's letter has entirely exonerated Mr. Hogg, it certainly leaves Dr. Lynch's behaviour at the meeting utterly incomprehensiable.

***

THE *Bombay Gazette* at the risk of seeming ill-natured has canvassed somewhat severely the claims of Mr. Souter, the Bombay Commissioner of police, to the honor of Knighthood. Had a shower of such honors fallen on Bombay, nobody would have said that Mr. Souter was not worthy of a share. But a singular honor seems to point to singular services, and the *Gazette* very reasonably regrets that these were not specified. His unpopularity with the natives can hardly have been his recommendation ; and his services to Bombay had already been sufficiently rewarded by the distinction

of C. S, I. He has shown no special talent in his administration of the Police of Bombay, and if the part he took in dethroning the ex-Gaekwar has won him this reward, why did not the Prince and the Government say so? Did the Prince take a personal fancy to Mr. Souter who has the reputaton of being a king of good fellows? Or is it intended to knight the Commissioners of Police and nobody else in all the large towns, as "a startling commentary on the real character of British rule in India"?

***

SCOTCH patriotism is less in need of a safety valve than it was a number of years ago, and the St Andrew's Dinner is perhaps scarcely so free and spontaneous in its transcendental national glorification and fraternal hilarity as it was in the olden days when Scotchmen were fewer, more cut off from the land of their birth, and less cosmopolitan in their sentiments than they are now. Perhaps there was some occasion for the criticism and suggestions of our contemporary the *Statesman*, which will doubtless be received, as they were given, in goodwill, and candid friendliness, even by those who saw the celebration with more partial eyes than did our contemporary. In these days, when the love of one's own nation is perhaps too much diluted with that very thin and weak sentiment called cosmopolitanism, which, whatever be its merits, is far more friendly to intense selfishness than was old fashioned patriotism, we are inclined to applaud every attempt to keep alive the elder and, we think, the more genuine, virtue. The late Scotch celebration may not have been perfect in its way but we believe the Scotchmen and their distinguished guests enjoyed themselves with a great measure of heartiness, and the good old custom is far from being ready to die out. The speeches were of course of the usual type. There is not much variety possible, but there is more than is usually taken advantage. Next year we hope to see a little less apparent effort, and a little more spontaneous enthusiasm. The old Scotch *perfervidum* is not dull and dead for ever.

***

THE Turkish Government is about to issue bonds to the amount of £35,000,000 for the payment of that half of the coupon, which it lately signified its intention of not paying in cash. These securities will bear interest at the rate of 5 per cent., and profess to be redeemable at par by means of a sinking fund at 1 per cent. per annum, commencing from the 31st of January 1887. The arrangement looks well on paper, but it cannot hide the fact that the Porte is practically bankrupt, and unable to pay the interest due on its debt. What is the good, then, of its incurring this fresh liability of £35,000,000? We fail to see how it can expect to better either its own position, or that of its creditors, by such a useless measure. Besides, if present appearances are not very deceptive, the Turkish Empire, at least in its present form, will have ceased to exist long before 1887.

***

THE relations between the German Government and that of Italy have evidently been drawn closer. The visit of the Emperor William to Victor Emanuel has been followed by an announcement that the two sovereigns have determined on raising their respective Legations to the rank of Embassies, as a demonstration of the importance they attach to the friendship of the two countries. This is a pretty strong proof that their interview, though ostensibly one of courtesy only, had, or is expected to have, greater political significance than is apparent on the surface. The declaration of the German Emperor, made immediately after his return, that peace had not been so well assured for the last twenty years, goes to support this theory. It may not improbably mean that Italy has pledged herself not to enter into an alliance with France, and Germany can have no apprehension of attack from any other quarter.

***

MR. E. J. REED, M.P. who has lately visited Nicolaieff, the head quarters of the Russian navy in the Black Sea, gives the following account of the new circular iron-clads which are attracting so much attention. "The *Novgorod* is 101 feet in diameter and of 2,491 tons; the *Admiral Popoff* is 120 feet in diameter and of 3,550 tons. The armour of the *Novgorod* is about equivalent to 13-inch plating that of the *Admiral Popoff* to about eighteen inches. The horse power of the former vessel is 480 nominal, and of the latter 640. Each has six screw propellers, but in the latter vessel two of them are of much larger diameter than the others, and have their shafts situated lower down, so that in deep water these screws will sweep through the water much below the bottom of the vessel, while in shallow water they will be kept at rest in a position which keeps them above the keels. The deck is on each ship plated with 2¾-inch armour and has great curvature, so that although the nominal freeboard is in each case not more than about eighteen inches to the top of the side armour, the actual surplus buoyancy is far greater than this would indicate. This is the first armour-plated ship afloat carrying armour of eighteen inches, and intended for guns of 40 tons (more exactly, of 41½ tons). Mr. Reed saw the *Novgorod* under steam and says her speed "was very fair," and her handiness that of "the smallest gunboat." It must be remembered, however, that this was in smooth water; he had no opportunity of observing her behaviour in a seaway. It is possible that her performances would not have been quite so satisfactory in the midst of a gale in the Atlantic. That experiment has not yet been tried, and so long as the owners of the new iron-clads who presumably know the exact limits of their powers, dare not expose them to such a test, we need not fear that any number of these craft can ever affect our command of the sea. As movable forts, they may be of value for the defence of harbours or river mouths, and there would perhaps be no harm in our building a few of them for the protection of such places as Calcutta, Madras, and Bombay.

***

THERE is some danger of complications arising between the United States and Spain on account of the anarchical state of things in Cuba. President Grant, we are told, looks upon the longer continuance of the insurrection as insupportable, and desires the elevation of Cuba into an independent Republic. A note expressing his views in apparently rather strong language, but of which the exact terms are withheld, has been presented to the Spanish Government by Mr. Caleb Cushing the American Minister at Madrid. The delay of the Spanish Cabinet in replying to it, has caused some restlessness at Washington, and the Americans are strengthening their navy by getting several sloops of war and iron-clads ready for sea. Spain, on the other hand, is about to largely reinforce her fleet on the Cuban station, and weakened as she is by her home troubles seems determined not to part with the Queen of the Antilles without a struggle. Her pluck may perhaps save her her last valuable colony. If war is declared, the issue, of course, cannot be doubtful, considering the comparative strength of the two combatants. But it is quite possible that the Americans may prefer not going to that extreme. They doubtless find Cuba, in its present state of confusion, a very undesirable neighbour, and would be glad to see the island independent and at peace with itself. But there appears to be no strong popular demand for forcible interference between Spain and her revolted subjects. Without such a demand, President Grant's influence over Congress in the last year of his term of office, would hardly be sufficient to involve the country in unnecessary hostilities.

SIR RICHARD TEMPLE AND THE MUNICIPALITY.

IN the remarkable series of events that have recently occurred in the Calcutta Municipality, Sir Richard Temple has till a few days ago, refrained from ostensible interference. We need not conceal our conviction, which indeed, we have already freely expressed, that he was not only responsible for the actions of the Chairman, but was in secret encouraging and supporting them. And had not the voice of public opinion been raised with an emphasis and unanimity such as no Englishman, however arbitrary or however indifferent, can long dare to disregard, he would have quietly sat by and seen, not without a secret satisfaction, his self-willed subordinate ride rough-shod over the wounded honour of the independent Justices, and the civic rights and interests of the inhabitants of Calcutta. The adroitness of his latest movement, the dexterity with which he has vaulted into the chair of the reformer, and the really able and sagacious policy on which he now seems disposed to act, must not surprise us into unqualified admiration and gratitude. The benefit to the city may be no less than if he had conferred it freely, but his own credit must he measured, not entirely by the value of his gift, but partly, if not wholly, by the spirit in which he confers it. And there is no evidence to show that he was sincerely and disinterestedly anxious to see the abuses that disgraced the Municipality and made it a by-word throughout India repressed and made impossible for the future. Had such been his temper he would certainly have interfered before the scandalous violation

by the Chairman of the principles that lie at the basis of English public life, had culminated in the miserable farce in which a respectable native gentleman of unblemished character but with no special qualifications for the post, was forced upon the Municipality as its Vice-Chairman. It is no excuse for a ruler to say that he was too much occupied with other matters to give attention to the diseases that were festering in the capital of the province. While exploring the passes of Sikkim and sketching romantic Himalayan scenes, he may have done some incidental good in the interests of trade and civilization, and his conference with the Chaplain of Darjeeling will, we hope, lead to something being done for the poor and unemployed sufferers in the plains; but meanwhile the rate-payers of Calcutta were being oppressed and insulted in the most unblushing and tyrannous manner, and the Lieutenant-Governor cared for none of these things. We are bound to believe that he was fully acquainted with all that had transpired before the interval caused by the holidays, and that he was also aware of the course which Mr. Hogg intended to pursue, and when he suffered him to take that course and persist in it in spite of public opinion, till the election which made the Municipality ridiculous was compassed, we cannot avoid the conclusion that he was—not an indifferent, but a pleased, spectator. While the farce was being enacted amid the hisses of an indignant public, the man who ought to have interposed to prevent the dishonour, and save the interests, of the Municipality and the city, was quietly keeping behind the scenes. Not only is there no defence for the self-willed imperious action of Mr. Hogg, but there is no defence that has even a colour of reason to make it tolerable, for the protracted passivity of Sir Richard Temple.

There is one defence that may be set up for him, and we are inclined to think it is the defence which he would like to see employed, but it is so unreal that the greater the air of sincerity with which it may be stated, the more bitterly ironical will it appear. It must be admitted, for it cannot be otherwise, that he has seen and suffered Mr. Hogg's insolent treatment of the Justices. But it may be said that he abstained from interference in order to wait for some unmistakeable expression of public opinion; that he was from the first, ready, and even desirous to reform the constitution of the Municipality; but felt, to use his own words, that "constitutional reforms of this sort were matters on which the public opinion of the city, should be consulted," and that it would be highly impolitic to anticipate public opinion. Taking this view of his position, we must suppose that Sir Richard Temple, like a wise ruler, permitted the action of Mr. Hogg while he did not approve it, in the hope that it would goad the public into a protest, and lead to such an indisputable utterance of the public sentiment by representative men, as would justify him in initiating reforms, and be a guarantee that the new rights he was anxious to confer on the citizens of Calcutta would be duly appreciated and wisely exercised. And accordingly when the fulness of the time has come, and both the need of reform, and the fitness of the citizens to exercise the rights of freemen, have been proved, the closed lips of the wise ruler are opened, and the hurt of the people is healed by words spoken in season. We must parenthetically remind our readers that we have at present but the promise of reform, and while the promise sounds well, there is danger that it may be spoiled in the course of fulfilment. Now if any intelligent observer can regard this as a satisfactory account of Sir Richard's position towards the Calcutta Municipality, we commend his charity but cannot share it.

There is a another explanation of his attitude which is more likely to be true than the former, but, if true, is not greatly to His Honor's credit, though it may win the sympathy of many who look through official eye-glasses. It is that he was at no time unwilling to concede considerable reforms in the constitution of the Municipality, but so fully sympathised with Mr. Hogg in his opposition to the people's tribune, J. B. Roberts, that he determined through good report and evil report to support Mr. Hogg, until Mr. Roberts' defeat was accomplished. This is at least quite comprehensible. At no time is the stern redresser of wrongs, the man who persistently and boldly drags abuses into the light of day, the merciless exposer of official peccadilloes, other than a thorn in the sides of the office-holders whom he attacks, and an offence to the eyes of their *laissez-faire* superiors. It is not more difficult to understand Sir Richard Temple's support of Mr. Hogg, than Mr. Hogg's opposition to Mr. Roberts. Both are easily accounted for by the dislike of officials to all who stir up the mud under the still waters of officialism, and the feeling is strengthened by haughty civilian impatience of plebeian interference and correction. We are not unwilling to admit this explanation of Sir Richard's action, if his admirers think that it will do him honor. Not that he loved the Municipality less, but that he hated the candidate for the Vice-Chairmanship more, was, possibly, sufficient reason to Sir Richard Temple for delaying all action till the man who was the choice of the citizens was finally—we are sorry we cannot say fairly, defeated.

Here we may not unfitly digress for a little to give expression to the strong and general sense of gratitude that the community of Calcutta bears to Mr. Roberts. It is unnecessary to repeat what has been said so often in praise of his long and faithful public services. With all that has been publicly said and written to his credit since the late contest began, we cordially agree, and now that he has been defeated, or, we may more accurately say, now that the independent section of the community has been defeated in his person, and that out of this defeat, victory greater than was at first anticipated promises to arise, we think it both a just and a graceful act to pay public tribute to his worth.

We return to Sir Richard Temple. Our own opinion is that in all this discreditable business he has been to an unworthy extent in the hands of Mr. Hogg. Mr. Hogg acted, and Sir Richard approved, and would, we believe, have gone on to approve still further, had not the storm of public indignation alarmed him, and swept him out of his indifferentism into a course of reform. He cannot bear to be unpopular, and in this respect the Lieutenant-Governor appears to us a smaller man than the Chairman of the Justices. Whatever credit is due to unflinching resolution in a course of action and fearlessness of public contumely, we freely concede to Mr. Hogg. But when it became evident that the public indignation was sweeping past the Chairman of the Justices, and menacing the walls of Belvidere, Sir Richard shrank back and yielded all that was demanded. And, furthermore, his favorite "association of native gentlemen" whom he delights to honor, petitioned for reform, and this aided him in his dilemma, by giving him an opportunity of seeming to yield with grace and benignity. And there is, we think, reason to suppose, though we cannot authoritatively assert, that the Supreme Government stimulated him to action. It is certain that the Viceroy was watching events from afar, and it is impossible to believe that he did not disapprove of much that has recently been done with the cognizance of the Lieutenant-Governor. And of this Sir Richard must have been perfectly aware, although no direct communication may have been made. To have delayed action longer, and have waited for the indignant protest of the inhabitants of Calcutta assembled in public conclave, would have been an act of folly, and, whatever he may be, Sir Richard Temple is not thus unwise. Having given our opinions regarding him with sufficient plainness of speech, we need not hesitate to say that he has displayed both sagacity and dexterity in his sketch of proposed reform and in the manner in which he has brought it forward. He has contrived to make his proposal with an air of spontaneity. He has assumed a virtue if he has it not, and to judge from his recent speech in the Legislative Council, we should say that it gives him real joy to have found an opportunity of offering a reformed constitution to the Municipality of Calcutta. We shall not at this stage criticise his proposals. Were we to say anything concerning them, we should speak with almost unqualified approval. He has put before us the outline of a scheme, which, wisely filled up and with details skilfully adjusted, promises to meet the wants of the community and to be a boon to Calcutta and we hope that he may not keep the word of promise to the ear and allow his scheme to be moulded and shaped

by injudicious hands. In its progress to legal enactment we trust our legislators will act in no narrow or imperious spirit, but will give the most careful consideration to all intelligent suggestions that may reach them from representatives of public opinion in Calcutta.

It may seem ungraceful in us, while approving so fully of the proposed reform to express ourselves so unfavorably of the Reformer. We could not help it. And now that we have relieved our conscience by expressing disapproval of Sir Richard's past policy we shall be prepared to support him cordially in carrying forward his proposed scheme for a new constitution. And should his future policy excite within us the belief that we have misjudged him, it will be to us a sincere, though we own it will be an unexpected, pleasure to confess it.

THE INDIAN ARMY.

II.

THE first Englishmen who had anything to do with the organisation or command of native soldiers, went to work with their material in a very different manner from that which obtains at present. The great object of Clive, Wellesley, and other sepoy generals, was to make the native soldiers in British pay understand that they were well-nigh invincible. The loss of a battle in those times might have lost us India; perhaps it might even do so under certain circumstances now. To give the sepoy confidence, our earliest generals clothed him according to the European fashion, and brigaded him along with the white troops. Our wonderful military successes did the rest—successes unparalleled in the history of any other country. But there is reason to believe that the Sepoys would have gained no great name for themselves in those stirring times, if it had not been for the gallantry and the numbers of their English officers. In the assaults and sieges of the old Indian wars, we always read that there was a succession of English officers to lead the sepoys on to the breach or storm, and no sooner had one Company officer fallen, than another was ready to take his place. In the war with Hyder Ali, a native regiment was often commanded by a captain with a dozen or so of subalterns under him, and it seems that the sepoy of that time followed equally well the officers of other regiments as his own, or, in short, any Englishman who happened to show him the way for the time being. Of course, in the hurry and mortality of a great war, there was not the same necessity for acquaintance with the language or customs of natives which would be required of officers in time of peace, but even admitting that the call for English officers was so urgent that any one would do for work to-day wherein he would probably be killed to-morrow, it is still extraordinary to think of the readiness with which the proper officers were found in those times to lead the sepoys in and out of action. Naturally, we hear of gallant deeds performed by native officers and sepoys on the field of battle. No one doubts the courage of either, but the instances are few indeed, in which we read of a native officer doing anything brilliant on his own responsibility, though occasions must often have arisen in those stirring wars when a native military genius, if there was one in our ranks, might have notably distinguished himself. In fact, we doubt if the native officer, or at least the class from which we recruit him, has any military genius, for, from the beginning of our occupation of India to the present day, his capacity for undivided responsibility has been distrusted. The present organisation of the Indian Native Army *appears* to place more confidence in the intelligence and discretion of native officers than ever Clive or the great Duke did, but in honest truth, such confidence is in reality almost absent, as is seen from the complaint all over India that there is an insufficiency of English officers with native regiments.

It is a question we hardly think worth arguing; but it is a question nevertheless, whether we could dispense with the services of English officers to any extent by putting native officers of a higher rank and of greater social influence in their places. The idea of giving Her Majesty's commission to young native nobles and gentlemen, is theoretically very well, but we fear it would most lamentably fail in practice. The native, whether highborn, or lowborn, has little inclination to discipline. What has been the first cause of the success of the British armies everywhere, Discipline. It is the aptitude of the Englishman to enforce, and to submit to, discipline, which has in a great measure made him the best officer as well as the best soldier in the world; but the native though he can submit to discipline, can rarely if ever enforce it, and it is to help him where he fails, that English officers are so sadly wanted in what is called the new organisation. Give a native regiment over wholly to native officers, and it will speedily resemble a corps of Turkish Bashi Bazouks, Discipline, as we understand it, will disappear, and when a regiment degenerates into an armed rabble, it does not much signify whether it is officered by princes or pariahs. Again, it is a vain thing to make the native army a convenience for political purposes as we have already made it for political officers. An army is not to be played with in that fashion, or we shall regret it. It would be a bad day for us, on which we came to consider the native army as primarily a school for young, and possibly intriguing, native noblemen. Besides, no self deception can cause us to credit the presumption that a native officer, would command men as well as an Englishman. The latter is acknowledged as the first officer in the world. Why then, for a purely political idea, change him for a worse one? The native officer as he is, is about as good a native officer as we can get. He will fight well, and do all things well, under English authority and supervision, but he is no more fitted to command than to fly, and it is an error of the first magnitude to suppose that we could depend upon him with any certainty to manœuvre his regiment, or even to command its confidence in action, when the handful of English officers with the corps were *hors de combat*. If the native army is ever to be made a truly formidable engine of war, it must have an English captain and an English subaltern to every company of men. The company need not be of the small strength of seventy or eighty men. For the native army, the strength of a company might be made two hundred, but it should have an English captain, and an English subaltern to take the place of the latter, on occasion. Of course, *this is to say, if that army is to* fight. If it is intended merely to act as a militia or police for the preservation of the ordinary peace of India, its present organisation is not to be hastily condemned; in fact, we think it good enough, on the whole, for the purpose. But no one can say that the time may not come when some great demand may be made upon India for native soldiers to fight England's battles. The demand might come from Egypt, China, anywhere, and what is more, it might come any day. And if it came we should have to adopt one of Mr. Gladstone's proverbial three courses, and either risk the native corps as they would be after a brief experience of war, under their own native officers, or draft young English sub-lieutenants into them from the line, or look for English officers elsewhere. In all probability, the authorities would adopt the second course, but at the best it is a bad one. Clive or Wellesley, in the days of our early *prestige*, could afford to take a sergeant, or even a private, out of his English battalion and place him in command of native auxiliaries, but we cannot afford to do this now, and what is wanted above all things in the native army is officers with a thorough knowledge of the people and their languages. It appears to us nothing short of ridiculous that the Army curriculum for officers of the British service, with all its Prussian profundities and garrison classes, should be deemed a fitting education for the officer who is to make the native army his home. What is called for there, is not the science of the schools, but the art of winning and keeping the confidence of men. It is not every man that has that art, but the least we can do is to give a certain number the advantage of studying it with regard to Orientals as far as in them lies; and how can we effect this better than by reviving a new Addiscombe, bereft of the old college's glaring faults, for the special education and training of the Indian Officers of the future? Passing young men from the line to the native army is a farce so far as our purpose here with it is concerned. The young fellows are crammed by an hated moonshee, for a farcical

examination; pass it in a year or six months, and forget Hindostanee ever afterwards. Why take thought of the sepoys or their profession, when their minds are wholly directed towards civil employment? The great book of native life lies unstudied before them, and it is a melancholy reflection how few care to open it now-a-days.

We are sanguine that an Indian military college would arouse that professional interest in men and things here, which seems to have long slumbered from amalgamations and what not in the Indian service. If anything can revive it, this would. There would be a vast difference between the young officers trained specially for a special service, and the youth who enters one at hap-hazard, and it is this difference we want—the difference which made the officers and the sepoys of old so proud of one another. There are plenty of gallant young men in the British Army who would lead sepoys into action-but there are very few who can understand them, for that is a matter of experience and of education. We think this is hardly enough considered in the schemes and suggestions offered for the improvement of the Indian Army. It is for, gotten, or lost sight of in the familiarity of the error, that we now-a-days pay little or no attention to the special qualifications of an officer for Indian Service. If he is sufficiently crammed according to the competitive system with Prussian tactics, and has a very indifferent colloquial knowledge of the vernacular, it is thought he will do sufficiently well in the school in which Lawrence and Outram won renown. Nothing is thought of the broad distinctions between the British and the Native armies. But we shall touch upon this topic in another paper.

THE MYSTERIES OF THEOLOGY AND SCIENCE.

IN a recent article, the assertion was made that "both in the ranks of men of science and amongst the teachers of the Christian Church there are many who will not admit that science land religion are opposed." The book then under review—"The Unseen Universe,"—was spoken of as an evidence that amongst the leading scientific men of the day there were some by whom the unity of science of religion was eagerly acknowledged. The book was one which could not have been the outcome of a mind not familiar with the most advanced mathematical and physical researches of the day. The rumour which then ascribed it to two foremost professors of science in the Universities of Glasgow and Edinburgh has since been announced as one of undoubted correctness; and Sir William Thomson and Professor Tait are now looked upon as the joint authors of the remarkable book. Amongst recent contributions to literature from "teachers of the Christian Church, Mr. Baring Gould's "Lectures on some Modern Difficulties" * is one which can be pointed to in proof of the assertion that bold teachers of the unity of science and religion are to be found amongst the clergy. The fact that most of the lectures were delivered in the Trophy Room of St. Paul's Cathedral, and that the clerical listeners were interested in them and desired that they should be published, may be taken as an indication that Mr. Baring Gould's attitude is not one which he has to maintain in isolation from his brethren, And yet to many his attitude may seem a very bold one. In his preface he adopts a phrase which had been uttered somewhat scornfully by a preaching Bishop—the phrase "the Gospel of Science." He adopts it far otherwise than with scorn. He asserts that "it is necessary for the Bishops, as well as our inferior clergy, to learn that the Gospel of Science is as Divine as any historical Gospel of Christ; that one is as much revelation as are the others, that rightly understood there can be no antagonism between them." In his first lecture on "The aspect of modern thought," he dwells upon the same idea. He recognises in the present age an enthusiasm for truth, which he considers the clergy should be the last to ignore or misinterpret. He sees in all the investigations going on in every realm, physical, spiritual, humane, and in every artistic creation, evidences of the aspirations of the human soul towards truth. The old question—Truth, what is it?—is, in his estimation one to which the answer is ever being granted to all earnest enquirers. Truth he says, is a light which invades the soul of the seeker after it, and brings it the sense of certainty. "The truths which men see are indeed partial, but they are the irradiations of the sovereign all-embracing Truth." The passion for truth amongst men establishes a filiation of the human soul with God who is the fulness of truth. "The instinct of truth is the appeal of man to God through reason, just as love is the appeal of man to God through the heart." Human science even though hasty in its conclusions—for the very impetuosity of the soul in the pursuit of truth at times obscures its judgments, leads it to make premature generalisations, and to forget the complexity of truths and their mutual control of one another,—human science, even though thus hasty, is in reality the search after God. Modern science, and modern Biblical criticism too, are not anti-Christian; eminently religious and Christian are they rather, since the main spring of their activity is the passion for truth in the human soul.

In his lecture on "Mysteries," Mr. Baring-Gould considers the question often asked—Why should religion be so fraught with Mystery? He answers this by showing how in every department of enquiry we have to admit the presence of that which cannot be explained or solved. We hedge it round with a definition as well as we can, and think that by so doing we have added it to the list of things we know all about. He might have instanced the definition of the mass of a body. The mass of a body, so the definition informs us, is the amount of matter the body contains; but this does not really help us to have a clearer conception of what we define, of which all we know is that it is something which does not change, even though the body's weight may change, as when it is taken to the summit of a lofty mountain. Wherever we turn we encounter mystery. The inner life of our bodies, and all the operations which go on so noiselessly within us, are mysteries. "Mysteries surround us, are above us, are in us, are everywhere. We must expect therefore to find them in religion." But it should be noted that what is mysterious to one is not so to another. A mystery is rolled back whenever a truth is discerned; and men are not alike in their power of discernment of truth. As in a man, knowledge increases, things which were mysterious to him cease to be so. All that lies beyond the boundary of the known is mystery, There must necessarily be mystery wherever knowledge is partials and as the knowledge of private minds cannot be other than partial, there will ever be mystery beyond the horizon of man's mental vision. Mystery is also necessary for human happiness. It gives zest to the pursuit of every art and science. Science maintains its hold upon the attention of man by reason of its inexhaustible variety. Art, too, attracts because there is no limit to the working of the artist's imagination. As we necessarily possess a sense of the infinite so we necessarily are ever conscious of being surrounded by mystery; and it is the all-surrounding mystery that calls forth and sustains the soul's endeavours and aspirations. As, then, mystery springs into existence through the contact of the finite with the infinite, as its existence is a necessary consequence of the limited nature of man's knowledge, its presence in Christianity is no argument, against the truth of Christianity. "If religion did not contain mysteries, if it did not touch the infinite, it could not be Divine, it could not be true."

The lecture on "The Mystery of Creation," is one of great suggestiveness. Mr. Baring Gould upholds a view which he asserts is one to be found in the writings of Dionysius, the great christian philosopher of Alexandria, and in the Jewish cabalistic writings contained in the book "Zohar," a collection of maxims, the contributions of various writers from the first to the seventh century. According to this view the world is a manifestation of the thoughts of God—it is the embodiment, the Divine ideal. Mr. Baring Gould contrasts this view with the Theistic idea of the world as created by a Diety who stands apart from His creation, and with the Pantheistic idea of all things being "born" by a process of evolution—a process proceeding from the impulse of an incomprehensible and omnipresent world-soul. He asserts, that what is true in both these ideas exists in harmony in the view he himself adopts. "The glorious vision of the universe rose up before the mind of God, and He converted the wondrous possiblity into an actuality." This translation of idea into fact, of possibility into actuality is creation. What in eternity is ideal becomes in time phenomenal. Becoming phenomenal it necessarily becomes subject to the conditions of time, and so traverses all the stages from cause to effect "The idea of a plant or of an animal must needs travel through the periods of development from the first sporule to the last term." So that the world was at once created and born. It had a beginning when it passed by creation from the realm of idea into the region of actuality, and from the moment that the Divine idea clothed itself with matter it passed through all the stages of natural evolution.

* "Some Modern Difficulties." By the Rev. S. Baring Gould, M. A., Author of "the Origin and Developement of Religious Belief" London: W. Skeppington.

In the lecture on "The Mystery of Man" an attempt is made to answer the question, "Why was the world called into being?" Starting with the conclusion of the previous lecture that the world is the visible manifestation of the ideas of God—that Nature is a mighty book inscribed within and without with Divine conceptions, Mr. Baring Gould asks, "To whom is the manifestation made? Who is to read the book? Who is to spell out this created speech, and comprehend its significance?" The answer must be given in the lecturer's own words:—"Not the being simply material, the minerals, the vegetable, the animal; they are the alphabet of the great scroll, not the readers thereof. They live only in the material world; their notions move and circulate only in a created medium. The readers, the interpreters, must live in another world as well—in the world of ideas. Ideas exist and move in spiritual spheres. Those who are to catch and understand the ideas of God must have a spiritual nature capable of perceiving transcendental truths. If God desired to manifest His thoughts to purely spiritual beings, He would not have created. For pure spirits receive ideas immediately, without material media acting as vehicles for their transmission. . . . . Therefore he who is to read creation must be neither mere spirit nor mere body, but must have a spiritual nature combined with a corporal nature, so that through the things revealed to the mind by the bodily senses the thoughts of God may be perceived. And who is this, but man?" Man who is possessed of the twofold nature, spiritual and material, can and does read the thoughts of God through the works of God. The only motive conceivable for God thus revealing His thoughts to man is love—love existing first of all potentially, in idea. "Man is the explanation of creation. Looking backward the world is inexplicable without God; looking forward it is an enigma without man."

In the lecture on "Primeval Man," the question is asked—"What is man"? The answer given is one not inconsistent with the Darwinian theory, and at the same time one which is, the lecturer maintains, in accordance with revelation. "Man is that animal highest in the scale of mammals, in whom the sense of the infinite first arises. In other words, man is that animal in whose breast the spark of soul is first elicited." The Adam of the Mosaic record is the first man with a living soul, the first man with the faculty in him of looking beyond the bounds imposed by matter, and of seeing God—the first in whom the image of God was reflected. The Bible itself speaks of "daughters of men," and in such a way as to suggest that they were of an inferior race to the children of Adam. The "sons of God" spoken of in connection with them, Mr. Baring Gould looks upon as the sons of Adam, who was in an especial sense the son of God. He thinks that the Bible narrative is confirmatory of the theory that there were men before Adam—men of human type, with instinct budding into intelligence, but not with souls, nor with the power of perceiving what was beyond the limits of the senses.

The two lectures on "Biblical Inspiration," are worthy of close attention. In the first one, the lecturer traces the history of the formation of the theory of Biblical infallibility, chiefly with reference to the old Testament. In the second one, he sketches the formation of the canon of the New Testament, and then endeavours to unfold a satisfactory theory of inspiration and revelation. Revelation he defines as the manifestation by God to man of truths man cannot discover by the aid of reason. The acceptance of this definition requires assent to the assertion that whatever man can discover by reason's aid, will not be found in the list of truths revealed. God, by revealing such a truth, would be arresting the action of the reason with which he has endowed His creatures,—He would be undoing His own work. The existence of God is itself a truth revealed to man. The incarnation is another such truth. Both are undemonstrable verities. Inspiration is involved in revelation. Revelation of a truth being the manifestation of that which reason would never disclose, must be made to a man. The man who is chosen to communicate the truth to the world is inspired. But he is inspired only as to the truth revealed to him. His inspiration as to such truths will not prevent him from falling into error upon matters to which revelation does not apply. Still, inasmuch as certain truths necessary for man to know—such as the Incarnation—are historical facts, subject to observation, and subject therefore also to inaccurate observation, inspiration extends to the record of such facts, though we have no certainty that it applies to the minor particulars to the same extent as it does to the main facts.

Readers of these suggestive lectures will be especially grateful to Mr. Baring Gould for the one on "The Mystery of Evil." In answering the question, "What is evil?" he first of all states what it is not. It is not a hostile power in conflict with God. It is not inherent in matter, and opposed to spirit. It is not a creation of God. It has no positive existence. Yet it is not simply the defect of good. It is the absence of good. Evil is a possibility by reason of the possession by man of free will. Evil in man is a wilful declension from the ideal. It is evil because it is not what it might be. Good is the striving of man to reach his ideal, or, to quote the words of an Apostle, to reach the measure of the stature of the fulness of Christ. Aspiration after an ideal, striving amid every hindrance, to reach the full glory of perfection,—this constitutes the law of human life. To neglect this law, to have no aspiration after an ideal, to abandon the struggle towards perfection, this is evil, moral evil. Even when advance towards the ideal is hindered by surrounding adverse circumstances, there is evil, though it is not moral evil. But where the adverse circumstances are not insuperable, and where opportunities are always present, then, if the work of striving to live up to an ideal be neglected or abandoned, *there is moral evil.*

The closing lecture of the series is on "The Incarnation." It is well worth attentive perusal and we will briefly note down its leading points? If love was the motive for the creation of the world—the world which reveals to man God's thoughts as expressed in natural laws,—is it not likely that He who created out of love would also in His love reveal the moral laws, which affect man's personal well-being? Such a revelation, Christianity declares was made in Christ Jesus. As creation is the manifestation of God, so is social life a manifestation of God; so also is the Incarnation a manifestation of God. Creation is a revelation of the laws that govern matter. History and social science reveal the laws that govern communities. The Incarnation unfolds the laws that govern individuality. It is the revelation of ideal perfection in man as an individual; and so it is the establishment of the law which is to govern his conscience. The revelation of the ideal of human individual perfection is in Jesus Christ, the Man, the manifestation to the world of the archetypal man as he existed in the mind of God before the creation of the world. Mr. Baring Gould furthermore asserts that, though all men are manifestations of a Divine idea, that idea constituting their individuality, yet no one of the individuals who constitute the human family expresses more than a partial and imperfect union of the Divine and human natures. But all point beyond themselves to a union of God and man which shall be perfect and complete. "As the fulness of all creative ideas is in the Father, so the fulness of all humanity is in the son. He entered into immediate relation with humanity, not merely as the idea of humanity in the abstract, but as the idea of perfect human individuality, to be the exemplar of all mankind, and to be the point of union through which they may return to their source."

Mr. Baring Gould's views upon the Incarnation are thus seen to be in thorough harmony with the doctrine of the Divine Humanity as it is now finding utterance on the lips of the foremost Christian teachers in England—with the doctrine that in the union of the Divine with the Human in the person of Jesus Christ, is foreshadowed the future union of a redeemed Humanity with the Divine; that in the accomplished union men are to read the assurance of the union which, though unaccomplished, is being slowly brought about, as individual members of the human family enter upon the life which is hidden with Christ in God.

The lectures will be read with deep interest by all who are taking thoughtful note of the signs which tell of the coming recognition of the harmony of science and religion. Theological enquirers will find their attention called to the confirmation which revealed truth receives from the patient and reverent investigations of scientific men. Students of science will find what is not always presented to them in the writings of orthodox defenders of the Christian faith. They will find an exposition of the leading facts of revelation of marvellous coherency, and a brotherly recognition of themselves as seekers after Divine truth, as enquirers into the Divine mysteries of creation, which are slowly but surely disclosed to the earnest and faithful toiler.

THE ROMAN CATHOLIC CHURCH IN FRANCE. *

THE Abbè Michaud's book on the present condition of the Roman Catholic Church in France is one which has fallen under the censure of the French Government. It is not allowed to be published or sold in France. It is too outspoken. It too boldly exposes the plans of the Ultramontane party. It is too vigorous a protest against the endeavour to inaugurate an era of devoteeism and of subjection to Papal authority. The Abbè was once one of the priests of the Madeleine; but having manifested a decided sympathy with

* De l'Etat Present de l'Eglise Catholique Romaine en France Par M. l'Abbè E Michaud. Bruxelles.

Père Hyacinthe he, was dispossessed by the Archbishop of Paris. No wonder therefore that he dips his pen into the ink of revolt. He, in his preface, maintains that "modern Roman Catholicism is the greatest enemy of France, because it is utterly opposed to true Catholicism, that is, to universal and perfect Christianity." He further asserts that it "simply serves to promote fanaticism, ignorance, superstition, and hypocrisy," that it is "hostile to science and civilisation, and is sapping the foundations of the liberties necessary for nations and governments in modern times."

The Abbè notes with regret the gradual disappearance of Gallicanism from amongst the ecclesiastics of France. He says, that from the humblest priest to the highest dignitaries, all the clergy are more or less pledged partisans of Ultramontanism, and have given up all idea of the Church in France having freedom in ritual and liberty of development in harmony with the unfettered tendencies of the national genius. Even Dr. Newman speaks of Gallicanism as but a passing phase in the Church's life. In France, the priests would *like to regard it as* past and gone without recall. Not so with the laity. Amongst them there is a great deal of practical Gallicanism, though of an unavowed or unorganised character. They exert an influence, but in a quiet unobtrusive way. The Ultramontanes, with their societies and pilgrimages, draw to themselves a large amount of attention. Asserting their existence so demonstratively as they do, they produce upon the public mind an impression that their numbers are greater than they really are. It is but necessary to travel through France and mingle with its people, and to read its more thoughtful religious literature, to be assured, that amongst the Roman Catholics of the country, there are many who keep aloof from the devotional extravagances and the spasmodic frenzy of the resorters to pilgrimages, and who do not think it the highest religious virtue to renounce the freedom of thought and action so necessary for the proper development of individuality of character. That there are Frenchmen whose revolt from the demands made upon the intellect by the Ultramontane clergy, has drawn them into utter indifference, scarcely needs to be mentioned. Even in the neighbourhood of shrines which attract the largest crowds of pilgrims, may be heard the scoff and jeer when the subject of pilgrimages or of the alleged miracles at the shrines is mentioned. The Ultramontane party, though an influential one, is by no means so large as the stir it causes leads many to suppose.

As an instance of the action of the Jesuits in giving rise to a spirit of fanaticism the dispossessed Abbè speaks of the devotion to the Sacred Heart—the devotion which, from the time it received the encouragement of Père Columbière, the Jesuit confessor of Marguerite Marie Alacoque, (and who was the very one to introduce the devotion into England) has been taken under their especial protection. Many Roman Catholics maintain that this devotion is the most beautiful and tender of all the phases of worship in their Church. There is much truth in what they say. Beneath all the exaggerations of their system there are genuine truths and aspirations which by many devout souls are not lost sight of, and that is the wisest Protestantism which recognises beneath the false developments the underlying truths. Protestants themselves often think and speak of the Sacred Heart of our Lord. But they do not spoil the great beauty of the thoughts which the phrase suggests, by associating that loving heart with the mere heart of flesh, by wearing as an ornament its representation, by considering that the most acceptable way of symbolising devotion to that heart of love, is by presenting to various altars hearts of gold. Surely the developments of a devotion the influence of which causes the body of our Lord to be anatomised, and to be deified piece by piece, are of a most unhealthy and repulsive character; and although involved with these revolting developments, there are many thoughts precious alike to Protestants and to Roman Catholics, the pen that deals with them should not be sparing in its condemnation. The pilgrimages which have of late years been so frequent to the shrine of Marguerite-Marie at Paray le-Monial have helped much to popularise this devotion, and to kindle a spirit of fanaticism with regard to it, and with regard to all extreme Ultramontane notions. Of pilgrimages generally it is not easy to speak with absolute disapproval. They frequently serve as a very pleasant holiday to people who rarely get to a great distance from their homes. The pilgrims are invariably well-behaved. The religious excitement of the time diverts their thoughts from all mischievous channels. The curés too who accompany them in such numbers, have not as a rule the means to enable them to travel far. Their stipends are miserably low. In the highest of the three grades into which they are divided the salary is only £48 a year; in the second grade it is but £36; in the third £34. They have generally to be most perseveringly economical. The necessity for their being so, must introduce a monotony into their lives which at times must be very irksome. A pilgrimage breaks in upon that monotony in a very pleasant manner. The curés generally act as leaders of the pilgrimage. They set an example of uncontrolled enthusiasm. They give themselves up to the enjoyment of the day with the utmost abandonment. They are the life and soul of every processional ceremony. They set agoing all the singing. The pilgrims catch from them their enthusiastic spirit, and are borne along by the excess of their zeal into extravagant manifestations of their devotion. All this helps to render the sights of a pilgrimage very attractive; but its result is to train the people to be unreasoning devotees, who think themselves bound to accept with blind wonder all that may be uttered by those who speak to them in the name of Holy Church. Of teaching of a high order they receive none. Their minds are not guided into that reasonable contemplation of the mysteries of the Christian faith without which all true growth in Divine knowledge is impossible. They become pure zealots. They become fanatics, ever ready to manifest their enthusiasm for the outward symbol though of the ideas symbolised they can give but a blundering account.

So successfully have the Jesuits spread the devotion to the Sacred Heart, that by its means they have brought to an end the differences which formerly existed between themselves and other religious orders. The Dominicans have become fervent supporters of the new worship, and have at the same time ceased their old opposition to the Jesuits. By means of the convents, in which their ideas have at length prevailed, the Jesuits exercise great control over the religious life of France. The number of the order now in France cannot be told with accuracy, but in 1864, according to statistics then published, there were 2,364. Their numbers have however since largely increased, especially since the recent expulsion of the members of the order from Germany. They are quite on the alert as to extending their influence in every possible way. The Archbishops of Paris and Bordeaux give them every support. The Bishop of Marseilles, once inclined to place hindrances in their path, has lately found it advisable to allow them full liberty of action. All the bishops are indeed more or less favourable to them. One way in which they secure a hold upon the regular clergy is by instituting "retreats" for pious meditation, for the special purpose of enkindling the devotion of young men on the eve of being ordained. At this time they naturally are very susceptible to influences of a devotional kind, and the effect produced upon their minds by the Jesuit leaders of the retreats, men skilled in the art of producing devotional zeal, is one which is likely to prolong itself throughout their ecclesiastical career.

The Jesuits, too, are securing a firm footing in the educational sphere. Nearly a thousand are now engaged in teaching. The convents of the Sacred Heart are all under their control. To these convents, it is quite the fashion amongst the wealthier classes for the daughters to be sent to be educated. The Colleges in the hands of the Jesuits also bring the young men of the higher families of France very much under their influence. In many cases they secure the friendly attachment of young men by obtaining good positions for them on their leaving college. The primary instruction of the country is also largely under their control. Statistics prove, so the abbè asserts, that one-half of the children now under instruction, are in the schools of which the Christian Brethren or nuns are the teachers. The instruction given by the Brethren is "insufficient and superficial," and they are moreover the allies of the Jesuits. M. Michaud as to this says,—"The Jesuits and their friends are the real directors of the Brethren, and, consequently, of the schools conducted by them. Brother Philip, who was General Superior of the Brethren from 1834 to 1874, was himself a tool of the Jesuits. In 1838 only 2,300 monks belonged to this institution, and now there are nearly 10,000, and the number of their pupils is 380,000." The Ultramontanes are very actively engaged just now in founding communal schools, over which they try to get Brethren appointed as teachers. School-masters whose tendencies are not in the Ultramontane direction are watched very keenly by the curè. If he sees any thing that seems to him amiss, he reports the matter to the bishop; the bishop complains to the inspector; and the unfortunate master is degraded, or else dismissed from school work altogether. The extent to which secondary education is under Jesuit control, may be gathered from the fact that, in 1868, the number of pupils in their colleges was 58,000, very nearly equal to the number in the lyceums and colleges in secular hands, which is given as 62,000. The great activity of the Jesuits since that year has most likely brought a still larger number of pupils under their care.

Encouraged by their recent success, the Jesuits are now on the point of endeavouring to obtain what has hitherto been monopolised by the Government—the power of conferring degrees. Their ultimate aim is avowedly to so occupy the whole of the educational ground as to render it a great difficulty for mental discipline not in accord with their own, to be obtained by the youth of France. The attitude which they adopt towards those whose views are not in perfect accordance with those which they deem can rightly find a shelter under the shadow of the Roman Church, is plainly described in the words of one of the Jesuit fathers, Peré Merquigny, written only a year ago. He says, "We shall treat the liberal press as an enemy, we shall no longer see the children of the Church receiving tracts and reading books in which truth is insulted and faith outraged. We desire and we claim perfect freedom of instruction—perfect for the Church, which has a Divine Mission, but not perfect for freethinkers. Freedom is the guarantee of our rights; but error and falsehood have no rights."

In every manner, Ultramontanes and Jesuits are stretching forth their hands and laying them upon the heart and the intellect of the country; encouraging devotions which turn the thoughts of the people from all conscientious pondering over the mysteries of life and death, of sin and redemption, into the channel of blind wonderment; and so taking under their own control the education of the country, that the youth will start in life with a decided bias against all culture on which the Roman Church has not put its seal and sanction. The Abbè Michaud, now allied with the old Catholics in their brave effort to initiate a work of reform in the church, thinks he is performing a serious duty in calling attention, in his carefully written book, to the efforts of ecclesisastics in France to bring their country into what he calls a "state of servitude and imbecility," in which men are so deluded as to think that the only light which can divinely illumine the human soul is that which twinkles within the Vatican at Rome.

OUR DINNERS.

AN instructive, not to say didactic, contemporary has lately given us very seasonable dinners—we beg his pardon, we mean seasonable advice as to how we should prepare dinners. He goes in for sweet simplicity, and as few other sweets as possible, for fewer courses and a little more regard to the course of time, and he does not believe that it is the height of human wisdom to toil one half of the day, and dine and do nothing for the other half. On all these points we shake hands with him, and would gladly join with him in a crusade against the folly and cruelty of the present system of dining. And we fear it is little better than cowardice that prevents us. We have been counting the cost, the expenditure of effort, the inevitable unpopularity, and the all too probable failure, and we confess we shrink from the dangers, difficulties, and the result, of such a campaign. In all such holy crusades, self-denial is of paramount necessity, and it is of no avail to march abroad against the enemy until he is first expelled from our own borders. The first step then, must be the polite but firm refusal of all invitations to any but reformed dinners. And the first invitation we have to deal with is from Hon'ble Harry Hotspur, great in council, if not in arms—we mean of course from the H. H. H.'s excellent and hospitable spouse, but it is not in this instance the lady we fear to offend, but the gentleman. He is a man of considerable influence, and is always overflowing with information, no less useful to us than to himself, and we must pay for the use of his influence and his information by dining with him always when invited. For with all respect to the sage councillor, his notions of politeness are stiff as his native icicles, and if you run tilt against them they are certain not to bend, and there will probably be a smash and a cold shower of splintered icicles about your head and shoulders. His invitation must he accepted of course. Let us see the next on the table. Ah, now it is Mrs. Charitable Speech who will be delighted with the pleasure of our company, and though her dinners are not unpleasant at the time, the consequences are apt to be so, for it always happens, we could never ascertain how, that after a dinner at the house of Mrs. Charitable Speech, one or more of the guests who were on good terms with us up to that time, have invariably cut us dead. Certainly we gave no cause of offence, and who could impute blame to the sweet lips of Mrs. C. S.? The adverse fates wait upon us there. Let us decline this invitation then, for no better opportunity could be offered of commencing the campaign. But opposition meets us where least expected. The darling wife, who does so love a quiet evening at home, and goes out reluctantly to all dinner parties, and to those especially at the house of Mrs. C. S., shakes her head with an expression of sad sagacity and demonstrates in the most irrefragable manner that if those suffer who attend Mrs. C. S.'s dinner-parties, those who decline that lady's invitation pay a still heavier penalty. How the adverse fates display their pique in these cases we shall not say, for the matter is so notorious that we fear a libel. Enough that it is so, and our wife, who is the best of wives if uncontradicted, is willing to be contradicted on any occasion but this. So we shall go, and the sweet lips of Mrs. C. S. shall enchain us once again.

Let us try the next. Well of course the next is a literary affair entirely. All the guests are men of talent; and, not to mention the loss, in various other respects, we should incur by absence, there is the Revd. Mr. Combative, whom we meet almost nowhere else, but who is sure to be there, and we must seize this opportunity of convincing him that his interpretation of the *bull of Pope Paulus* about appeals to the civil authority is erroneous. We can't begin the campaign this time yet. Two fresh invitations have just come in, for as the meteorological manual declares "it never rains but it pours." The first of these we can see by the handwriting and the *mem-sahib's* countenance as she reads it, is from her dearest delectable friend Mrs. Voluble, and we shan't risk our ears by a proposal to decline. And the latest is from a certain exalted personage, and is moreover the first from that quarter since we lost the light of his countenance through a few words imprudently spoken. Enough!

Now it is plain that these accepted, and the dinners eaten (be they digested or not), return invitations must be given to some of them, and we cannot begin the campaign for two months at least. If we were bold enough to do so, the consequences would be such as we have not the courage to face. Not only should we suffer in isolated cases, but were it once generally known that we had adopted so *outrè* a course, our popularity would go to the ground among the ladies first, and of course among their husbands afterwards, we should be compelled to send the *mem-sahib* home and betake ourselves to a *chummery*, with perhaps too small an abridgement of the staff of life to support us. The proposal that a few influential citizens, who are wise enough to object to the present etiquette of dining, should call a public meeting in the Town-Hall, is we fear a chimerical project, if indeed it has ever got so far as to be a project. The undertaking of such a crusade is utterly hopeless until public feeling turn in that direction, and we see little reason to expect that, for—to say one serious word before we close—the eti quette of dining among us is but one of the symptoms which mark a stage of civilisation from which there is no return except in the form of spray *from* the verge of Nigara

DR. MAGEE ON THE MOTIVE OF RITUALISM.

(From the *Spectator*.)

THE Bishop of Peterborough delivered on Tuesday at Northampton a very interesting commentary on the motive of the recent Ritualistic movement. He ascribed it, and without doubt with a good deal of truth, to the antagonism which the extreme materialistic philosophy of the day has excited in men whose life and duties, if they are to mean anything, should mean a personal testimony to the supernatural truths for which, in their own belief, they are witnesses. Now, no doubt, nothing could be in one sense a more open and defiant encounter with materialism on its own ground than the parade of the symbols of a high sacramental teaching in opposition to it. That men who accept such doctrines as true should feel that they far more truly represent "the Church militant" when they flaunt them in the face of an unbelieving world, and meet the irreverent and rebellious atoms of the physicists with the elaborate worship of the consecrated elements and the mystery which that worship implies, is intelligible enough. And as Dr. Magee justly says, there is something to excite our sympathy in this bold encounter with materialism on its own chosen ground, this valiant attack on the foolishness of atheism by the foolishness of superstition,—though those who hold it, of course, believe the latter to be *not* superstition, but the "foolishness of the Cross." But then, as Dr. Magee very justly observes, there may be much to excite our sympathy in a cause which is, nevertheless, a mistaken and dangerous one. When outworks are built round a fort, they may either lend, observes Dr. Magee, additional strength to the defenders, or they may be like the buildings which spring up round it in time of peace, and which in time of war lend cover to the assailants, instead of diminishing the difficulties of the garrison. The whole question is whether or not this high sacramental doctrine be what Dr. Newman, in his essay on "Development," called a "preservative addition" to

the essential teaching of Christianity, or rather one which, instead of preserving and tending to illustrate the teaching of Christ, undermines and obscures it. Dr. Magee holds with us, that it is the latter, not the former; that it tends to make the symbol independent of the reality symbolised, and so presents to the assailants of the Christian faith a very weak point, which they may seize without difficulty and make the basis of new attacks. And he holds, moreover, that though it is the excesses of naturalism which have chiefly produced these excesses of supernaturalism as the rejoinder to them, and not the excesses of supernaturalism which gave rise to the excesses of naturalism,—yet excess on either side has a tendency to foster excess on the other, so that a great deal more distrust and disbelief of Christian principles will be caused by the extravagances in which they appear to result, than of new interest and conviction. In this the Bishop of Peterborough is certainly in the right. Indeed, as not uncommonly happens in these cases, it appears to us that the extreme view on one side is, in some respects, nearer to the extreme view on the other side which it professes to combat than to the view which stands between them. The theory which entrenches itself in consecrated matter as the best and only stronghold for resisting the encroachments of materialism, contains in itself a tendency,—to which the Ritualists personally, not unfrequently, lend a sanction,—to give up to the world, as if it properly belonged to the world, and not to God, the whole earthly sphere, except so far as this has come under the wayward blessing of the priest. The difference between the sacramental principle as it seems to us that it is found in Christ's teaching, and the sacramental principle as it is found in Ritualistic teaching, is this,—that in the teaching of Christ, the sacraments are typical and representative acts, teaching us by example that divine influence is latent in all common things, which common things they declare to be consecrated, even though we may fully realise it only when we fix our minds upon the divine origin of that consecration; while, in the teaching of the Ritualists, the sacraments teach us, not by example, but by contrast,—not by the divine life which they discern in ordinary acts, but rather by the deadness which they spread over everything that is not in the technical sense sacramental, and by the monopoly of that life which they claim for the minute circle of ceremonial devotion. The Christian view of sacraments makes them important because it makes them representative of earthly life at its best,—because it makes them expressly honor food and labor as full of Divine strength. The Ritualistic view makes them important because it makes them the single and exceptional points of *contact between Earth* and *Heaven*,—*the points at which man may escape* from the conditions of his ordinary life to those of a better existence, from which, for the most part, he is otherwise excluded. In the teaching of the former, sacramental acts only declare what all similar acts might be and may one day become; in the teaching of the latter, sacramental acts differ in *kind* from all others, and cannot raise other acts up to their level except by invoking over them the same ceremonial formula of technical consecration. Now, it is surely easy enough to see that, as the Bishop of Peterborough says you are not likely to vanquish unbelief by exaggerating the maraculous elements in your belief. The Roman Church has tried that and failed. The "additions" were found not to be "preservative" but endangering to that which went before them. Extremes will meet. It is much easier to pass to unbelief from the belief that very few and minute regions of life are lighted up by supernatural agencies, than it is to pass to it from the belief that all our life is accessible to such influences as in the few moments of conscious consecration we recognise and admit. If the oasis can never encroach upon the desert, it is by no means difficult for the desert to encroach upon the oasis,—and that is what will happen when an artificial and even exclusive ceremonial sacredness is regarded as the main refuge from a selfish and vulgar world. What Ritualists appear virtually to admit, concerning all that is not crowned with ceremonial blessings, by the very undue emphasis which they lay on ceremonial blessings, the world maintains of the whole of life, and it is much easier therefore to pass from a Ritualist into an unbeliever, than from one who recognises the Divine grace in common things into an unbeliever.

The Bishop of Peterborough thus believes that Ritualism stimulates unbelief just as unbelief has stimulated Ritualism, and he expresses himself therefore "not very sanguine of the immediate future of the Church":—"If she were to be saved from her present perils of unbelief, her deliverance would not come from vestments, lights, and incense, nor from the erroneous doctrines these were sometimes made to symbolise; for they would never conquer materialism in philosophy by importing it into theology. Their deliverance would come by the uprising of some great school of Christian apologists, who should silence for a time the adversaries of the supernatural, and give its friends breathing-space in which to grow calm, and wise, and moderate again. Just now there seemed no very immediate prospect of this." In this we are so far disposed to agree, that we believe both Ritualism and Scepticism to be different manifestations of the same deep spiritual unrest, and no more to be curable by each other, than the cold and hot fits of an ague are curable by each other. But whether the unrest which causes both alike is due to any source which a new school of "Christian apologists," however profound, could remove, is, we imagine, very doubtful indeed. Not that we entertain the least doubt that intellectual causes are very grave elements in the prevalent uneasiness. It is at least as common to find people eager and unable to believe, as it is to find people simply indifferent about religious matters. But according to our view, this "inability" is not nearly so much of a purely intellectual as of a spiritual origin. The power to enter into the heart of Christian teaching has for some reason ebbed in our day, and left the bare external questions of "evidences" and "authenticity" in much greater prominence than, according to ordinary principles of human nature, they ought to be. It is not so much a great school of Christian apologists,—though they, too, may be useful,—as the restoration of sympathy with the Christian attitude of mind and thought which will restore the tranquillity for which Dr. Magee looks. "Power" is gone out of the Church of late years,—in a great measure into purely intellectual topics like scientific discovery, and in a great measure also into the mere distractions of a more exciting social life. What the poet says of the East, in relation to the new bustle which Roman conquests introduced, is in no sense as yet true of the West under the vibration of other intellectual and moral excitements:—

> "The East bowed low before the blast,
> In patient, deep disdain;
> She heard the legions thunder past,
> Then plunged in thought again."

But that is not the case with us. We are all of us vibrating with the undulations of petty interests which keep us from truly understanding the deeper life to which Christian teaching appeals. Nothing can illustrate this better than the fact that even a thoughtful and able Bishop's charge should be much more occupied with the discussion of the minutiæ of the Public Worship Regulation Act than with the far deeper theme which he introduces at the close of his charge. The true charm, the fascination, the magical touch of Christianity on the soul, was probably hardly ever felt so little as in the present day. And till that is felt again, even the ablest school of "Christian apologists" will do little to vanquish specticism, and make us feel the oppressive burdensomeness of superstition.

EGYPT FOR THE ENGLISH.

(*From the Pall Mall Gazette.*)

SOMETHING has happened in England within the last fortnight to fix the attention of every Court and Cabinet in Europe. To St. Petersburgh, Vienna, Berlin, Paris, Constantinople, Cairo, certain sounds have been carried from these shores which will at once be fitted with a meaning as yet not fully comprehended by ourselves. This may seem strange, but it is at least explicable. For while it has long been our habit to look forward no further than to-morrow in the future of European affairs, contenting ourselves with the business of to-day (the natural and common habit of people satisfied with what they are and what they have got), a far different temper has never ceased to prevail amongst statesmen who are *not* satisfied with their share of the world or sufficiently secure in it. That being their situation, they, of course, are for ever on the look out; every rational calculation of the future—of the chances that lie here or lie there, of what may be grasped and what must be resigned—they are familiar with; and we may be sure that they are alert to catch every sign of action or resolve that may make movement on their own part desirable. To these, then, we cannot doubt, certain sudden little bursts of reference—now blundering in one newspaper, now in another—to Egypt as a possible English dependency of some sort has struck home. But not as a surprise. There is no satesman in Europe who has not long looked upon the future of Egypt as intimately and necessarily bound up with the future of the British Empire. If dulness or indifference to the prospect existed anywhere, it existed in England itself; where, till only the other day, any talk suggestive of the annexation of Egypt would have been assorted with the politics of the moon. No doubt our own statesmen have diverted their minds with the subject from time to time; but that has been of little avail fo

practical purposes, for the reason that while even in foreign affairs English Ministers now stoop for a policy to "popular opinion," popular opinion is studiously led away from the contemplation of every circumstance, every contingency, of a disquieting character. We shall allow ourselves to remark, parenthetically, that that is a system which cannot work to advantage. If popular opinion is to control foreign policy or to shelter Foreign Ministers, it is necessary to adopt the Bismarckian manner—that is to say, to make the country a confidant in policies which it may otherwise baffle through ignorance, and acquainted with facts that may come crushing in upon "opinion" too late. That is a danger now, in more than one direction. To return to Egypt. While our hold upon that country —(an exclusive hold, in the last resort)—is an almost desperate necessity, and though events of late years have been bringing it nearer to view with astonishing rapidity, not a whisper of it descended from high places; and amidst all the speculation with which a free press and free speech are exercised, it never appeared. Perhaps because it was thought wicked to dream of annexation of any kind—the doctrine of a school of politicians which, though it is disgraced, cannot carry into retirement all the error it has preached; perhaps because it seemed "Quixotic," and had something to do with Russophobia; or because it wasn't polite to Prince Gortschakoff; or because it seemed to imply going to war; or because the mass of Englishmen actually did not perceive that the occupation of Constantinople by any great foreign Power or Powers *meant* English occupation of Egypt or the downfall of the Empire. Whatever may have been the reason or reasons, this wonderful dulness, this miraculous reserve, must have astonished foreign observers, and we can easily imagine them listening for the first sound of awakened consciousness. This they now hear, and they know it marks a period in the game before them.

The way in which the first note was struck was curious, but perfectly characteristic of our country and our time. It was not brought out by the startling complication of disasters and signs of disaster that lately revealed the fast approach of dissolution to the Turkish Empire. That ought to have done it, rather than the more speculative matter that did move our imagination and open our eyes and mouths at last. It came to pass that the Prince of Wales made a pleasure trip to India. He tarried at Alexandria on the way, and there was magnificently entertained by the Viceroy of the country; and on taking up his route he decorated the Viceroy's eldest son with the Star of India—on the Queen's behalf of course. This was precisely the sort of incident to kindle British fancy; it took fire accordingly: no doubt being largely fed from the too visible conflagration of the Grand Turk's finances. The Star of India guided the newspaper press, club room debaters, and above all, a vast body of interested bondholders, to the fact that Egypt must be nobody's to take, nobody's to hold, if not by ourselves. And not only so, but that it must be kept free at any cost, war or no war, till the break-up of the Ottoman Empire, which cannot now be far off. And more—that, in all likelihood, it will then be no matter of choice to hold the country safe for ourselves, in no less dubious fashion than Gibraltar is held. We do not say that the whole inevitable necessity has yet been brought home to people generally, or has been anywhere fully expressed. But in cases like these, when perception once begins it rapidly spreads on to the envelopment of the whole subject; and before long the English at Alexandria will be as familiar a subject of discussion as the Russians at Constantinople.

And why should it not be? Stated plainly as it is here, we have no doubt that even now it startles many a mind as something too improper for speculation. We shall permit ourselves to assume that those who take that oblique view of the subject are generally the kind of men who permit themselves to think nothing except upon safe and respectable authority. To these, then, may be told the otherwise inconsiderable fact that what is here set before them is a part of the material with which Mr. Grant Duff is now engaged in recasting his opinions. After that, it will be perceived that there is nothing at any rate "improper" in making the English at Alexandria as open a subject of discussion as the Russians at Constantinople. Nor, on the face of the question, is there any reason why it should not occupy the same ground in discussion as it does as a matter of fact. To be sure, we have been taught for a long time that it is impolitic to debate in public such matters as are likely to excite suspicion and distrust in other nations; and it may be objected that this is clearly one of those matters. The general doctrine was entirely fallacious; and its main result was to impose a bugbear upon the discussion of events and probabilities affecting the very existence of the empire. And what is true in the general is certainly true of this particular question. Of course if it had never occurred to the statesmen of other countries—if the momentous importance of Egypt to England had all along been a Foreign Office secret—there might be some sense in the cry of indiscretion. But who cherishes that preposterous supposition? The necessity of which we speak is as plain upon the face of the time as India is upon the map of the world. It is one of the few things that have to be taken as certainties by those who employ themselves in forecasting and dealing with the changes that must follow upon the disruption of the Ottoman Empire:—an employment which has now lasted so long that Egypt for the English must be as familiar in Continental Cabinets as Poland for everybody but the Poles. If England had turned a willing ear to the Emperor Nicholas when he proposed to dispart the Sick Man's territory, the words would have been first seriously uttered by foreign lips; and when the time comes for listening again, it is exceedingly probable that in some shape or other our enormous interest in Egypt will be acknowledged and provided for at the first suggestion. Let us not be afraid, then, to keep this matter openly and clearly before ourselves and all the world. We may rely upon it that nobody will be surprised, nobody irritated. It has long been familiarly contemplated in every Continental Cabinet, and in Turky and Egypt too. To various minds at various times, no doubt, it has seemed to belong to a more or less distant order of events. But granted that certain other changes have happened which all the world agrees must happen one of these days, the substantial possession of Egypt by England (or rather, perhaps, the effectual safeguard of the country against occupation or surprise by other Powers) is seen to follow as a matter of sheer necessity for her. Why it would be so is too plain to need discussion. The Turks on the Bosphorus are one thing; any other Power or Powers that are likely to succeed them, quite another.

It may perhaps be necessary to guard ourselves from misconception by saying that when we speak of annexation, possession, and so forth, we use the best words that lie to hand to express the total exclusion of other Powers, and instant means of defending the country (when the new time comes) from surprise. Territorial possession as Ireland is possessed is not necessarily implied by any means. But no more are "guarantees;" if by that is meant mutual promises and vows like the Treaty of Paris, though signed by every European Sovereign in full uniform. Whatever may be the arrangement ultimately arrived at, it must be guaranteed by nothing less than positions where force can be always maintained, and whence it can speedily be exerted. Nor do we intend to suggest that this is a matter of immediate importance. It may be very far off; but also it may be as near to us as the fall of Paris was to France when the battle of Sadowa was fought. The death of a single man might bring it close upon us at this moment. Wherefore it is time to think of it boldly, and all that appertains thereto.

LONDON LETTER.

LONDON, 29TH OCTOBER, 1875.

THE papers have been surprising the public with copious extracts from the correspondence between Mr. Saunders and the Resident at Hyderabad and Sir Salar Jung on the subject of the Nizam meeting the Prince of Wales at Bombay or elsewhere. As an old resident in India and one who has devoted much time and attention to the study of Indian civilians in high position there is nothing in this correspondence to surprise me. I know that a civilian in high position is almost invariably the spirit incarnate of arrogance and petty tyranny. But the public, or rather the papers, have not yet arrived at this knowledge. They retain that fond belief in their administrative ability which I must do civilianism the justice to say that it does and always has done its best, to uproot and destroy. And consequently the agreeable combination of discourtesy, bullying, and timidity, which even the letters of Mr. Saunders contain, is to them, a very startling revelation indeed. The points which come out clearly in this correspondence and what the telegraph has reported since, are, (1) that Mr. Saunders bluntly accused Sir Salar Jung of giving in a false report of the state of the Nizam's health, which subsequently he has been compelled to acknowledge was true; (2) that we in this matter, have been trying to make a catspaw of Sir Salar Jung, just as we tried to make a catspaw of the native members of the Baroda commission. We appointed them to depose the Gaekwar in order to disencumber ourselves of the odium of doing so; and now by means of threats and bullying we try to drive Sir Salar Jung into sending the Nizam to Bombay, in order to avoid the responsibility of giving ourselves an order to that effect. (3) With this end in view we allow an English Resident to treat with marked disrespect the most dis

tinguished of living Indian Statesman—and then we wonder that English rule is hated by high and low alike. What the English press wonders at, not less than at the astounding rudeness, and clumsy bludgering of the Hyderabad Resident, is the extreme stress laid upon the presence of this weakly little child at Bombay or any where else. They do not understand that worship of "the infinitely little" which is the grand principle of Indian state-craft. Indian statemanship can go calmly on its way undisturbed by a famishing population of indigent Europeans, by the spectacle of the agricultural classes becoming the serfs of absentee zemindars and flinty hearted money-lenders. It sees no reason in these facts to disturb the even tenor of its way, but a child of eight years old refusing to meet the Prince of Wales on the plea of sickness! No, the Majesty of the Indian Empire will not calmly submit to such an insult as this. Rather than do that, it will put forth to the utmost those powers of bullying which lie stored up for us upon grand emergencies like this, in the bosom of Indian civilians in high position. I know of course the reasons which attempt to invest the absence of the Nizam from Bombay with political importance. They seem to me mere rubbish. Sir Salar Jung is far too clear-headed and enlightened a man to do such a foolish thing as attempt to insult the British Government; and when he handed in the certificates of the medical men attending upon the Nizam, the dignified and truly princely policy would have been to have accepted them frankly and courteously, to have expressed our regret at the absence of the Nizam, and so to have put and end to the matter. What have we gained by bringing "pressure" to bear upon the Hyderabad Minister? We have simply put ourselves utterly in the wrong.

I have in former letters expressed my opinion clearly enough of the Indian Civil Service. I am convinced that until these functionaries are shorn of a great deal of their power, affairs in India can only pass from bad to worse. We are attempting to govern India by means of a multitude of Prefects, precisely as the late Emperor of the French attempted to govern France, and the results in India as in France, are a bitter and increasing hatred of the constituted authorities. Indian Civilians are not in general remarkable for ability. It is hard to conceive of a country worse governed than India is and has been. Take for example the question of land tenures and land assessments. There is hardly a conceivable method of holding land or assessing land which has not been tried by Civilians in one part or another of India, and see what has been the uniform result of all these experiments. Our land laws are not merely a sore and heavy burden on the people, but by means of rejections, compulsory sales, and the like, they are working results which we contemplate with dismay. It is Indian civilianism which has brought matters to this pass; and now it can simply stare, moonstruck, at the evil it has done. Remedies it has none to propose. The preservation of order in India is not due to civilianism at all, but to the reputation of invincibility acquired by British troops, and this order would have been preserved equally though civilians had mismanaged the civil administration more grievously than they have. But worse even than its want of ability is and has been civilianism's want of manner, of ordinary sauvity and courtesy. It is this side of its character which comes out with such disagreeable conspicuousness in Mr. Saunder's letters; and it so happens, that the readers of the *Friend* are at this moment peculiarly fitted to understand the exasperating effect of this peculiarity. Mr. Stuart Hogg has at last roused them to fury, but do they think that the intolerable annoyance of that blundering official is a unique quality which he alone possesses? They are very much mistaken if they do. Mr. Stuart Hogg has been put in a position where his arrogance is felt by people who have both the will and the means to proclaim aloud their dissatisfaction, but precisely similar qualities are in full operation all over the country only endured by wretched creatures who have no resource but to brood in silence over their wrongs, and hope for a day of emancipation. The Civilians are not so much to blame as might appear at first sight. Irresponsible power is apt to intoxicate the strongest brains; and the brains of civilianism are in general any thing rather than strong; while the homage they receive is quite oriental—even Persian in its utter prostration. To behold this homage in perfection it is necessary to go "up-country." Calcutta is full of irreverent spirits—barristers and others who maintain a chronic feud with civilianism. Up-country there are no such discordant elements; or if there be, they are so few that they must bow their heads in the temple of Rimmon just as other people. The *Pioneer* in its uniform enthusiasm for officialism exactly represents the state of the "up-country" mind. I remember to have passed some months at Nynee Tal during one hot weather. Sir John Strachey occupied Government House, but had it been the temple of the great Egyptian god Isis, the entire community could not have regarded it and its occupant with profounder reverence. Hardly less was the awe which encircled the Secretary of the North-west Provinces. He was the high priest of the god; or to speak more correctly a minor divinity, and the interpreter of his will to the crowds of submissive subjects who thronged the borders of the Lake; he had power over the god and could make him propitious or otherwise to his petitioners. And so the sacrifices offered up to the Secretary were scarcely less than those to Isis himself. This is the meat on which civilianism feeds and grows so great. And it is the vanity bred out of this ridiculous adulation which makes it callous to almost every thing except its own personal importance. And the remedy? The remedy lies in the power of the non-official community I have touched upon it in previous letters, and need not repeat it here. A well-sustained and searching fire of criticism from a newspaper office in London, would at this moment do more to rectify the abuses of Indian Administration, and diminish such officials as Mr. Stuart Hogg to their natural dimensions than any thing that could be devised.

Here in England, political life is sleeping the sleep of the just, tempered only by some drowsy speeches delivered by M. Ps to their constituents which I find it quite impossible to read, and I have met no one who could accomplish the difficulty. The conservatives are resolved to do nothing which they can avoid doing, and consequently their speeches are mainly devoted to setting forth the glory and the joy of this torpid existence. The liberals without a leader, and without cohesion among themselves have no policy to propose, and their speeches are, in consequence only a repetition of the criticisms on conservative measures which they made in the course of the session. Occasionally a liberal, hungering for action or for office, utters a wail entreating Mr. Gladstone to resume his abdicated functions; but that gentleman makes no response, and seems to have settled down fairly for the rest of his life into a writer for Church Magazines. If Mr. Disraeli followed his example, I suppose the administration of the Empire would come to an abrupt termination. Any way, the coming session of Parliament promises to be a more sleepy business than even the past one. Neither liberal nor conservative so much as suggest any thing on which they desire legislation, and the House, so far as appears at present, will have to devote itself entirely and exclusively to "breaches of privilege" and "personal explanations." I must shelter myself under this general stagnation if your readers find my letters dull of late. A correspondent cannot invent exciting events in these days of the telegraph when he is certain to have been contradicted before he had spoken. Dead though the political world be in England, in France it is far otherwise. The Assembly re-opens on Thursday next; and men's minds are feverishly anxious as to what lies in the future. It is the misfortune of France that under her present administration, every advance she makes in unanimity of political conviction, increases the danger of the situation. I have spoken in previous letters of the secret designs of Marshal MacMahon and his minister, M. Buffet. These can no longer be called "secret." As the Republican sentiment grows and spreads through France, they gravitate more openly in the direction of Imperialism. The latest French papers contain the particulars of an incident which serves to illustrate their policy. During the Franco-German war, the city of Dijon distinguished itself by the resistance it offered to the Germans. Here the Prussians were on one occasion thoroughly defeated by General Garibaldi, and were worsted in many partial encounters. The people of the town had subscribed to a monument over those who had fallen in these encounters. On the pedestal were inscribed the names of the dead; and above it rose a female figure, symbolising the French Republic a broken sword in her right hand and the national colors in her left. The statue was completed, placed on its pedestal and would have been unveiled in a few days; but the Legitimists, the Clericals, and the Bonapartists, addressed an appeal to the Prefect of Dijon stating that their "susceptibilities" were outraged by this statue. It is hardly credible but not the less true. On this appeal being transmitted to him, M. Buffet sent orders to pull down the statue, as the "susceptibilities" of the petitioners were not to be injured in order to please the Republicans. Thereupon the statue was not lowered but simply flung down from its pedestal, and broken in the fall. This is as if the English Republicans should object to the erection of a statue to the Queen, as running counter to their "susceptibilities," and the Prime Minister should accept the objection as a valid one. This single act shows abundantly that in becoming President of the French Republic Marshal Macmahon never intended to fulfil honestly the conditions of the contract. The Marshal is stupid. No one can accuse me of not having admitted his stupidity in the most unconditional manner, but there are limits even to that quality. And however

events turn out in France, the conduct of the Marshal must be reprobated by every honest and straight-forward man. The doubtful question however at the present moment is—to what extent will he carry his manifest hostility to the Constitution he has pledged himself to support? There is no doubt that a *coup d'etat* would be for the moment at least, successful. The Prefects are nearly all Imperialist; the general officers of the Army are, many of them, Imperialist, and the habit of obedience would probably enable them to carry along with them, a considerable portion of the rank and file. But on the other hand the immense majority of the French people, are—not exactly Republican, perhaps—but constitutional, and a *coup d'etat* would be successful only for a very short time. The doubtful point is whether the stupidity of the Marshal is or is not too dense to permit him to see this. The future of France depends upon this alternative. The telegraph will in all probability have informed you of the issue, before this letter is printed. The French Government, it is easy to perceive, are uneasy and very uncertain how to act. Some time ago M. Buffet announced that immediately on the Assembly being opened the Electoral Law would be taken into consideration, and the ministry were prepared to stand or fall by the *scrutin d'arrondissment*. The object of this declaration was to throw division among the ranks of the department. Two members of the Ministry, M. Leon Say and M. Dufaure, belong to the left centre, and it was hoped that this declaration would cause a secession of some of the members of this party, and to enable the Government to command a majority. The attempt failed. The Left held together as firmly as ever, and merely signified their intention to accept the challenge of the Minister of the Interior. The truth is that M. Buffet has ruined his own plans by the folly of his policy. There are many members of the Left who prefer the *scrutin d'arrondissment* to the *scrutin de liste* and under ordinary circumstances would vote for the former. But M. Buffet's home policy makes it so manifest that he desires the *scrutim d'arrondissment* merely because it supplies him with the most effective lever to overthrow the constitution, that they are driven to vote not against the principle, but against him. It is the return of the empire they have to vote against, not a method of voting.

The unshaken unity of the left, has cast dismay into the ranks of the supporters of Government, and they are looking about for pleas on which to base a postponement of the dissolution. M. Buffet's personal organ has the effrontery to say that the dissolution ought to be put off for another six months because the conservatives *i.e.*, Legitimists and Imperialists—will not have completed their electioneering arrangements before that time, whereas the Radicals are perfectly prepared to go to the country at any time. The upshot we shall soon know. This at least is certain that the sole danger at present in France arises from the determination of the Government to drive the vessel of State on the rocks rather than on a course in harmony with the wishes of the nation. M. Gambetta, I am glad to see, thinks hopefully of the future. The morning papers give us the Telegraphic Summary of a kind of Political Manifesto he has just put forward. Anything more moderate, judicious, and practical, than his survey and forecast is, would be hard to imagine. I append the summary of this document as given in the *Daily News*. It affords one more proof that in M. Gambetta a real statesman has at last arisen in France.

A banquet of 200 Republicans, among whom were the Deputies Leroyer, Ordinaire, Millaud, and Guyot, took place yesterday at Lyons. The Committee sent a very pressing invitation to M. Gambetta to meet on this occasion the Lyons Democrats, who complained that he had somewhat neglected them. M. Gambetta, not finding it convenient to leave Paris, made by letter, which was read at the dinner, the manifesto which has been looked for throughout the long vacation.

He begins by regretting that the imminence of the opening of the last session of the Assembly prevents him from paying personal homage to that Lyons democracy which for five years has been maligned, provoked, and persecuted, whose firmness, coolness, and discipline has stood all trials, and finally triumphed over its worst detractors. He promises a visit before the dissolution. Meanwhile, not to be altogether absent from the fraternal meeting, he desires to send in writing some observations on the situation.

"The Constitution of Feb. 25, now the fundamental law of the State, was (says M. Gambetta) torn from the impotence of the vanquished Monarchists, some of whom, in a moment of patriotism for which history will give them credit, preferred the salvation of France to their passions, prejudices, and personal theories. The Bonapartists are making a final effort which the feeling of national honor will suffice to frustrate, in default of an administration sufficiently firm to enforce the laws against sedition. It is of transcendant importance that the coming appeal to France should be made by the *scrutin de liste*, which may be briefly described as a contest of opinions, instead of a contest between persons. Only by the *scrutin de liste* can an electoral alliance be formed between all the factions of the sincerely constitutional party. That precious and salutary alliance, begun in the Chamber by such men as M. Thiers, M. Casimir Perier, M. Lavergne, &c., must be continued by universal suffrage. The *scrutin d'arrondissement*, by exciting personal competition, breaking the unity between one arrondissement and another excludes all moderation in choice, and transforms what should be the grand consultation of universal suffrage into a multitude of petty parochial wars with no political signification. I say in all sincerity that the recently converted Republicans, not from love but reason, have more need than any of the *scrutin de liste*. My personal information enables me to declare that they have everything to lose by the *scrutin d'arrondissement*. In any case be not uneasy as to the final result. The elections both for Senate and Chamber will be a triumph for Republican Democracy. The nation is disgusted with saviours who have lost her, and rhetoricians who have deceived her, and it spurns fanatics who would bring her back to a past, the very name of which is insupportable."

M. Gambetta thinks it expedient to trace already the leading features of the task of the future representatives. They must follow a policy of liberty, repealing the exceptional laws respecting the Press, and reserving repression only for crimes and misdemeanours, attacks on the Republican principle and on public and other meetings. The municipal Universal Suffrage, Electoral liberty, most be assured by free, public, and other meetings, the municipal franchises be restored to the Communes, and at the head of affairs there should be men of enlarged ideas, confident in Democracy, and capable of governing it without fear or tyranny. He thinks the programme of legislation should be restricted within certain measured limits. Politics are not an exact science like geometry. Allowance must be made for the passions, prejudices, and interests of men with whom politicians have to deal, and the welfare of a people should never be risked for the sake of a theory which there is no hope of realising. Three great points are material: the credit of France, her physical well-being, and her intellectual development. The object of the election should be to make France rich, powerful, and enlightened. For the first object he advocates financial reform, of which an income tax, taking money legitimately where it is, and reducing the taxes on consumption, should be the basis. Secondly, military service should be made really personal and universal. *Finally*, and above all, there must be a complete reform of national education, restoring the proper functions of the State and developing the marvellous intelligence of Frenchmen. This programme would be quite extensive enough for the coming Legislature. It would be for a subsequent Assembly to consider what ameliorations might be made in the fundamental pact which is the basis of present Constitution. M. Gambetta anticipates a pacific and legal struggle between the Conservative and the Progressist parties, the Whigs and Tories of the Republic disputing the suffrages of public opinion, and succeeding regularly to power. He hopes to see the new social strata resulting from the great Revolution reconciled with the élite of old French society. "Europe," says M. Gambetta in conclusion, "seeing France stable, strong, and prudent, will be sympathetic and recognise her legitimate rank; and then, when order as well as liberty shall be patent, a great act of clemency must efface the recollection of our odious civil discords; and it is not from the man occupying the first and inviolable magistracy in the State, and whose firmness is well known, that objections can proceed to a measure as politic as humane. With a heart full of confidence in the future, I send you my fraternal salutations."

NOTICE TO CORRESPONDENTS.

2. TIM. III. 16. 17.—Your communication received and laid to heart. It would not benefit our readers.

OUR LIBRARY TABLE.

WE have before us a work of great value,—"The Regulations of the Bengal Code," by C. D. Field, M. A. LL. D., just published by Messrs. Thacker, Spink and Co., Dr. Field has reduced to order the vast chaotic mass of Regulations applicable to this Presidency and the worth of his volume as a book of reference, especially to judicial officers and barristers must be very great. Of the 675 Regulations passed from 1793 to 1834 inclusive, only 78 applicable to Bengal

are now wholly or partly in force. The unrepealed text of the Regulations with valuable notes, forms the third part of the volume. The first part is a Chronological Table showing how far each Regulation has been repealed, amended, or altered, the titles of those that have been entirely repealed being printed in italics. The second part is of great importance, for, under the title of an *Introduction* to the Regulations, it furnishes us with a vast amount of valuable information which might otherwise have lain hid from students in the limbo of the repealed Regulations. "The old Regulations," says Dr. Field, "more especially the preambles of many of them, contained a large amount of valuable information as to the constitutional history and progress of the country under the Native Governments, and during the early period of British rule." He rightly supposed that in these days of high pressure, when our attention is so completely occupied with what is actually in force, the Regulations that have been repealed and removed from the Statute Book are not likely to be much studied. Hence his *Introduction* which is not the least valuable part of the volume, and to which we may refer again when we have had time to examine it more minutely. A comprehensive *Index* affords ready means of reference to the contents.

WE have also to acknowledge with thanks, receipt of the fifth edition of "The Code of Criminal Procedure" by Mr. Prinsep of the Bengal Civil Service. The object of the work as stated in the Preface is "to present in a convenient form all the Laws and Rules of Practice relating to Procedure in the Criminal Courts of British India, which have emanated from the legislature, the highest Courts of Justice, or the Executive Governments, that the student, the judicial officer, and the legal practitioner may readily ascertain and follow the law during the course of trial in a Criminal Court." The author points out alterations that have been made in the law, he has introduced in their proper places the several sections of Act XI. 1874, and has prefixed a comparative statement which shows the corresponding sections under the new and repealed Codes. Such judicial rulings as, though rendered obsolete by changes in the law, have still an important bearing on the present law, are reproduced in the notes.

IT is gratifying to learn from the Report on Vaccine Operations in the Punjab that less difficulty was encountered last year than had formerly been the case. In most districts the more influential people gave their help more readily than formerly. In the Loodiana district the people in general are still opposed to vaccination but considerable success was obtained this year; 329 Hindoos were vaccinated against only 54 in the previous year. Small-pox had been prevalent at Umballa during the year, and for the first time vaccinators were paid by the Municipalities. Only one Member of Committee, Làla Bansi Làl, gave important assistance and only 517 vaccinations were done. Though the work was well done in Roopar "Sheo Parshàd" would not assist nor come near the Superintendent-General while he was there. The Kalsia Sirdar ordered the Native Superintendent, who was sent with a letter, to leave his village at once and took no notice of the letter. Contrary to the experience of former years little trouble was experienced in the Delhi District. In the city of Delhi, though the Civil Surgeon was almost giving up the work from the opposition he met with at first, and the vaccinators were at one time assaulted, great success was in the end achieved. In Umritsur the Masters of Schools, Government and others, invariably opposed the work, but most of the Municipal Committees gave effective aid. In Lahore work was done in a more satisfactory manner than formerly, and in Mooltan not a single person objected to vaccination. Altogether very satisfactory progress has been reported. The grand total of all operations in the Punjab was 511,425, and the percentage of successful cases 94·57. A list is given of the names of Native gentleman who gave valuable assistance. The Superintendent-General thinks that "if, instead of a commendatory *purwana*, some higher reward were given, such as a dress or *talwar*, it would have an encouraging effect."

THE WEEK.

THE topic about which men are talking most just now undoubtedly is the purchase by the Home Government of the Khedive's Suez Canal shares. We are not surprised to hear that the step has caused, as the telegram says, "great political and financial agitation" in Europe. Its meaning is unmistakeable. England has at last fully woke up to the fact that she has interests in Egypt which whatever may happen to Turkey, she must be prepared to guard and the Ministry has in a lucky moment hit upon a measure which, exactly expresses the national determination that the highway to India shall, at any cost, be kept open to our shipping. In the field of foreign affairs it is long since an English Government has shewn so much statesmanship. Since Palmerston's time the peace party has been paramount in our councils, and our influence abroad has declined year by year until of late we seemed to be almost excluded from the deliberations of the other great powers. To judge by the way in which the continental press has received the news of the purchase of the Khedive's shares, Mr. Disraeli's ministry has at one stroke brought us back to our true position amongst the first states of Europe, and it ought now to be easy to keep it. The mere magnitude of our resources must always command respect so long as there is the faintest show of vigour in our policy.

TURNING to more purely Indian topics, it is well worth noting just now that the force to be assembled at the Camp of Exercise at Delhi will far surpass in numbers any body of troops we have ever before brought together in this country in time of peace, and will, in fact, rival all but the largest of the armies with which we have taken the field in time of war. It is to consist of fourteen European and twenty-five Native Regiments of infantry and cavalry—thirty-nine in all, and twelve batteries of artillery, all well equipped and ready for active service. Their review by the Prince of Wales will be certainly the most splendid military spectacle yet witnessed in Asia, and should attract many visitors. The delay in sending off to Perak the Buffs and the Goorkhas, who, by the way, were quite as eager to embark as their European comrades, though Goorkhas had never before volunteered to serve beyond sea, has been so great that the fighting may not improbably be over by the time they arrive at the scene of action. This would seem to show that there is still too much red tape somewhere or other in the administration of the Indian Army. The military authorities, we hear, repudiate all responsibility, and lay the blame on certain heads of departments who could not be made to see that the occasion was one to justify a departure from the regular routine.

WE hope it is not Lord Northbrooke's fault that the statue of our late Governor-General still lies neglected on the jetty. The Port Commissioners have not withdrawn the notice to which we drew attention last week—they are counting the days, we suppose, to the time when, under the proper section of the proper Act, they can lawfully dispose of Lord Mayo's effigy as old iron. The Memorial Committee met on Tuesday, but, after hours spent in anxious deliberation, again separated without having found a site. This, however, is no fault of theirs. They have already selected several sites, but the perverse ingenuity of the Government has found so many objections to urge against each of them that they have all had to be given up, one after the other. It begins to look as if every site that can be thought of *will* be objected to, and the Committee are at their wit's ends where next to propose to place the statue. It is hard to account for this apparently wanton and purposeless obstructiveness of the powers that be. We should be loth to suppose that any unworthy motive lay at the bottom of it, but what is the motive?

MR. HOGG'S famous comparison of Sir Richard Temple to the Duke of Wellington was almost justified, on the morning of our last issue, by the skill with which the Lieutenant-Governor executed the military operation known as a "change of front" at the expense of Mr. Hogg himself. Sir Richard has at last been made to see that a Bench of Justices consisting entirely of his own nominees is not a satisfactory governing body for a city like Calcutta, and the Municipality, in its present form, is doomed. Our local affairs are now, if His Honor's project becomes law, to be administered by Municipal Commissioners, of whom two-thirds will be elected by the rate-payers, and only one-third appointed by himself. This is a reform which of course will soon lead to other reforms—it will make any amount of improvement possible—and by and bye we shall doubtless see the finances of the town well managed by a Chairman and officers conversant with accounts, and of the inhabitants' own choosing. When that happy time arrives, no one, we are sure, will grudge Mr. Hogg promotion to a higher and if possible, a calmer sphere, nor feel inclined to lay any unfriendly stress on what knotty arithmetical puzzles he may have left behind him.

A PUBLIC meeting of the inhabitants of Calcutta will be held in the Town Hall at half-past three on the 11th instant for the purpose of taking the present state of the Municipal Administration into consideration. It has been convened by the Sheriff in compliance with a requisition signed by upwards of a thousand influential firms and residents, and will doubtless be very largely attended. The resolutions passed are likely to be anything but agreeable to those in authority. Public feeling is more strongly excited on the subject of Municipal mismanagement

than we ever remember it to have been about any local matter, and the fact that the Lieutenant-Governor has announced his intention of withdrawing from his former untenable position will hardly, we fear, suffice to prevent the utterance of some exceedingly uncourtier-like sentiments by the various speakers.

THE St. Andrew's dinner on Tuesday, though perhaps not so decided a success as this festival has sometimes been, seems to have gone off very well. The arrangements were not in all respects perfect, and the upper part of the Town Hall was unfortunately not available. But the gathering was numerous, the wines were first rate, the speeches were as eloquent and patriotically Scotch as usual, and the warmest good fellowship prevailed throughout the evening. Amongst those present were Sir Richard Temple, Sir Richard Garth, Sir Henry Norman, the Hon'ble Bullen Smith, and other guests of distinction.

MONEY MARKET.

FRIDAY, 3RD DECEMBER.

THIS week there has been a check in the reviving demand for money that set in three weeks ago, and supplies are accumulating in excess of the wants of trade, although export trade is now tolerably active. Money has rarely been cheaper and more abundant here than it is now, the open market value being barely 3 per cent, and the Bank's business slipping away, even under the low minimum of 4 per cent. The private deposits in the Bank of Bengal now stand at over 3 crores of rupees, against barely 2½ crores of money lent to the trade of India in shape of Loans, Credits, and Discounts; the cash balances amount to upwards of 3½ crores, and the Government balances have been worked down to nearly 2½ crores, so that, looking at the position altogether, there is very little chance of greatly enhanced rates this cold weather, even should considerable shipments of silver be required for the rice ports.

European Exchange is suffering severely from the large quantity of unemployed money that is abroad, and its basis, Silver, in the absence of buyers at home, has again been weakening:—it begins to look as if this season is to do little to arrest the fall in value of silver as compared with gold, for the trade of Calcutta, at least at the present moment, *ought* to give some support to the rupee, but it *doesn't* do so. The Piece Goods trade is very quiet, and adding only moderately to the resources of the Exchange bankers, whilst the scale of export business is such as to require large sums to finance. It is difficult to believe that Exchange is intrinsically weak at present level, but it certainly looks far from strong at present, and all that can be said in its favor is that its natural course should be upwards for the next two or three months. This Mail's business has not been a large one, and rates have been much the same as for the previous Mail. Bank Bills mostly at 1-9 15/16, but some also at 1-9 7/8, for six months sight, 1-9 ¾ to 1-9 11-16 for three months, and 1-9⅝ to 1-9½ for demand. Credit and Private Bills mostly at 1-10, but exceptional business also at 1-9 15-16, and 1-10 1-16 and Documents at 1-10⅛. Most buyers have been less willing to work towards the close. The rate at which the Secretary of State's drafts were issued in London on Wednesday did not reach here until to-day, and consequently rates of exchange here were not affected by it up to close of business yesterday, at which time the quotations remained.—

Bank Bills	1-9⅝ to 15-16	Six months' sight.
Credit Bills	1-10 to 1-16	
Document Bills	1-10⅛ to 3-16	

The markets generally are dull, shares especially, in which business is extremely difficult to carry through. The Government Paper market has become a little harder, in sympathy with the position of money, but prices have not advanced, and the amount of business has been important. At the same time, there are no large amounts offering, and should any buying demand arise, a temporary improvement might be seen. The course of transactions for the past week has been as under.—

4 per cents. 101-14, 15, 102, 101-15, 102. 101-14, 15, 102, 101-15, 102.
4½ per cents. 102-14, 102-15.
5½ per cents, nothing.

and the closing prices are

4 per cents. 101-15 to 102.
4½ per cents. 102-14 to 102-15.
5½ per cents. 107-12 to 107-14.

In shares there has been a demand for Bengal Bank, and the price has risen about 30 rupees. Nationals are being gradually absorbed by good buyers, but their price is still a little unsteady from speculation. New Beerbhoom Coal shares have come into very active enquiry the last day or two, and shares are worth about 10 rupees more than they were a week ago. Spinning Mill shares are looking a little weaker, and a further fall has taken place in Barnagores, most of the other stocks just maintaining their previous position. Tea stocks are no worse than they were, and in some quarters there is a little enquiry springing up; the transactions of the week have been more numerous perhaps than of late, but nothing like a revival of business. The following sales were the leading ones of the week.—

Bank of Bengal 1,410, 15, 20, 25.
National Bank 112½.
India General Steam 415.
Barnagore Jute 86, 83.
Calcutta Jute 100, 98, 9, 100.
Budge Budge Jute—par,
Howrah Jute 76.
Bowreah Cotton 84, 4, 84.
Bengal Coal 1,400.
Beerbhoom Coal 97, 8, 100, 6, 107.
East India Tea 83.
Singell Tea 100, 1, 100, 1, 99, 100.
Gowhatty Tea 85.
Upper Assam Tea 29, 29.
Central Cachar Tea 128.
Durrung Tea 71.

The English Mail of 12th November will be delivered here to-morrow (Saturday) morning.

THE PRINCE.

ON the night of the 26th ultimo the *Serapis* arrived off Aguada Fort, Goa, where a Royal salute was fired. At eight o'clock next morning the Prince embarked in the *May Frere* and proceeded to the Governor's Palace, which abuts on the estuary. The Governor-General, Tavares D'Almeida, went in his State barge to receive the Prince, who landed at the Pier under a royal salute. A large crowd of Portuguese officials was in attendance, and crowds of people thronged the windows of the houses overlooking the Pier After being conducted to the Palace, where a short interview was held with the General, the Prince proceeded to Old Goa in a steam launch. He is said to have been much pleased with the lovely scenery in the estuary.

The Prince reached Old Goa at ten, and proceeded to inspect the old Cathedrals, the See of St. Peter's, and the Church of Bom Jesus, which contains the silver sarcophagus of Saint Francis Xavier and other curious relics of the Portuguese power and religion. The Prince was deeply interested in what has aptly been called the City of the Dead. The Viceroy dined with the Prince in the evening, and Goa was greatly excited.

At daybreak the *Serapis* started for Colombo, where she arrived shortly before noon on the 1st and was welcomed with the usual salute from the squadron and shore batteries. His Royal Highness was brilliantly received on landing at the Jetty by the Governor and chief officials, Civil and Military; the Cingalese in their quaint costumes being most conspicuous. Addresses from the Municipality and the Legislative Council were presented in an elaborately jewelled ivory casket. The Prince briefly replied.

The Prince drove through the town and back to the jetty, re-embarking in the *Serapis*, where he spent the night. There was a large concourse of people along the route, who received him with every mark of cordiality and respect. Decorations and arches were numerous, though unfinished, owing, doubtless, to the change in the date of arrival.

At 10 A. M., on the 2nd, the Prince again landed, and proceeded to the Railway Station *en route* to Kandy.

All the stations along the line were tastefully decorated. At Rambukana, the Prince and Duke of Sutherland took their places on the engine to ascend the pass.

On arriving at Kandy, His Royal Highness was met at the station by a large assembly of Europeans and natives, besides Native Chiefs in their gorgeous costumes, together with headmen. The Prince, on alighting from the train, was presented with an address from the Municipality, to which he gave an extempore answer, stating how pleased he was with his hearty reception at Ceylon. The route from the station to the Governor's residence was most tastefully decorated with triumphal arches, greatly adding to the natural picturesque beauty of the town.

All the roads through which the Prince passed were thronged by large crowds of all classes, who are said to have eclipsed their brethren in Bombay and other places which the Prince has visited in India, by their enthusiastic and vociferous cheering.

Kandy was very full of visitors from the districts, and not a bed was to be had.

The Governor of Ceylon was created Knight of Saint Michael and Saint George before the Prince left Colombo.

It is believed the Prince will not touch at Trincomalee. The inhabitants there have however forwarded a loyal address, earnestly entreating the visit, and promising a hearty reception.

THE following official programme of His Royal Highness' tour in Ceylon has been published:—

"His Royal Highness lands on the 2nd December and proceeds direct to Kandy. On the 3rd he will visit the Botanical Gardens at Peradeniya. In the evening he will be present at Perahera or the procession of the sacred tooth.

On the 4th will be the Ruanwelle elephant kraal and shooting.

On the 6th the Prince will go to Ratnapoora, the chief town of Saffragam.

On the 7th he visits the gem pits, and will sleep at Hagwella.

On the 8th H. R. H. will hold the Colombo levee and the Agri-Horticultural Show.

A State dinner will be given on the 9th. The Prince visits the coffee stores in the morning; in the afternoon lays the foundation-stone of the Breakwater."

The State ball preparations are well advanced, and likely to prove a success.

There is fair prospect of sport, and the island is healthy.

It is said that the Prince's tour is likely to be shortened by a fortnight, and some places he was expected to visit will thus inevitably be left out of the programme. According to present arrangements His Royal Highness will reach Madras on the 11th, and leave there for Calcutta about the 18th.

W Anderson; Mr. and Mrs. T. Murray, Miss W. F. Greenfield, Mr. A. C. Maitland, Mr. C. Warwick, Mrs. Coates, Miss Smeaton and sister, Miss A. W. Hill, Mrs. Lane; Miss Betts, Mrs. Glover, Miss Wingate, Mr. and Mrs, G. Ouseley and infant, Mr. J. J. McCabe, Mr. L. Argenti, Mr. W. Johnson, Mr. H. Holmes, Mrs. McDonald and child, Miss Phayre, Mrs. and Miss Allen, Mr. R. H. Adams, Mr Holroyd, Mr. M. Betagh, Mr. W. Aspden, Mr. W. G. Taplin, Mr. B. Urwick, Mr. W. Knowles, Conductor. M. Carew, Mr. C. Peach, Mr. J. Lightly, Mr. and Mrs. Bowack and two infants, Mr. and Mrs. Bayford.

FROM VENICE—Mrs. C. Ollivant, Mrs. A. Ollivant, Mr. and Mrs. J. Matheson, Mr. J. Bird, Mr. Cargill, Mr. Thompson, Mr. G. Teske, Mr. G. Gois, Mr. E. Renaud, Mr. De Courcy, Mr. P. F. Campbell Johnson, Mr J. G. Burn, Mr. J. Sutherland, Dr. Hue, Mrs. Lamb, Mr. and Mrs. Brandenburg

FROM BRINDISI.—Dr. R. T. Scott, Mr. S. L. Macnaghten, Mr. C. E. Lawson Captain S. W. Tucker, Surgeon-Major Haslett, Mr. T. Young, Major H. Blair, Mr. D. R. Lyall, Mr. J. Whitefield, Mr. E. S. Hunt, Mr. W. C. Capper, Col. H. Fraser, Mr. C. Tweedie, Capt. C. E. Hunter, Mr. Beardsmore, Mr. G. Hart, Mr. R. B. Rust, Mr. G. Gregory, Mr. C. Gregory, Mr. Conners, and Mr. Thuey.

FROM ADEN.—16 Natives.

DEPARTURES.

THE following passengers left Bombay on Monday last by the P. & O. Company's S. S. *Travancore*.—

FOR SOUTHAMPTON.—Mr. J. F. Muir and Mr. Harry Macleod.

FOR BRINDISI.—Mr. R. Branson, child and infant. Mr. and Mrs. R. V. Morgan, Mr. G. B. Petter, Lieut.-Col. A. F. Williams, Mr. W. J. Roberts, Mr. Lennox, Col. C. L. Brown, and Mr. A. Parker.

FOR VENICE.—Col. and Mrs. Farrington child and infant, Mr. and Mrs. Lawrence and two children, Mr. J. W. Watson, Mr. C. Krichauff, Mrs. Cookson and infant, and Mr C. L. Weber.

FOR ADEN.—Capt. E. Wigton, R. A. Mrs. Wigton, and Capt. Morgan.

The Governor of Bombay has written a letter to the Municipal Corporation, expressing in the Prince's name a warm acknowledgement of the very gratifying reception accorded him by the citizens of Bombay.

The Prince has been much impressed with the loyal and orderly demeanour of the populace and their enthusiasm towards himself, and it will be a pleasing duty for him to convey to the Queen the assurances, founded on personal experience, of the peaceful and industrious character of her subjects inhabiting this ancient appanage of the Crown, and of their attachment to her throne and person.

The Prince thanks the Corporation, the Reception Committee, and the officers of Government and all who have contributed, by their taste and skill, to the grace and beauty of the public demonstrations of welcome, or have helped to maintain order and regularity. Their loyal zeal is commended, and they are congratulated on the entire success which has crowned their efforts.

The letter concludes with an intimation that the Prince has left a cheque for ten thousand rupees, to be applied by the Corporation to purposes of charity for the benefit of the poor Europeans and Natives of Bombay.

INDIAN INTELLIGENCE.

BENGAL.

We hear that Mr. Charles Matthews, who comes to join Mrs. English's Company, has arrived in Bombay, and may be expected in Calcutta at an early date.

A Caboolee constable in the Dacca Police, on being reprimanded by his official superior for some trivial fault lately, determined to shoot him. On conviction before the Magistrate he was sentenced to two year's rigorous imprisonment for criminal intimidation.

Sir Richard Temple proposes to hold a Famine Durbar at Bankipore, at which all those who were distinguished by notice in His Honor's minute will receive the further honor of presentation to His Royal Highness the Prince of Wales. A grand breakfast is to follow the durbar.

Another good servant of the East Indian Railway Company—one of its oldest, for he was engaged in the survey of the Burdwan section of the line more than twenty years ago—is dead. Mr. C. I. Spencer, District Engineer of the Jubbulpore Line, died on Saturday last, and was buried at Sutna on Sunday evening, a number of friends and brother officials of the Company having gone down by special train to attend his funeral.

NORTHERN INDIA.

The preparations ordered by the Maharajah of Cashmere in honor of the Prince's visit to Jummoo appear to be assuming fabulous proportions. A Punjab correspondent of the Allahabad paper talks of 50 lakhs to be laid out on entertainments that can only cover two days.

A German Professor sent out by Germany, under the shelter of our Foreign Office, is now in Sind. The scheme for him is a vast one,—to determine the sites or discover the ruins of lost cities here and in Persia; to investigate the relative ages of languages; and to gather material as to such cities and languages for others in their chambers in Europe to work on.

The Lahore paper says that on Mr. Thornton's vacating the Punjab Secretariat to take over charge of the Foreign Office portfolio from Mr. C. U. Aitchison, Mr. Lepel Griffin will be translated from Kuppurthulla to the Punjab Secretaryship, his place as Superintendent of Kuppurthulla being taken by Mr. C. M. Rivaz, who will be again succeeded as Under-Secretary by Mr. C. L. Tupper, whose *special duty* will in all probability by that time have been completed, and place him at the disposal of His Honor for any suitable appointment which may then be vacant.

The Punjab Government have just notified the amended rules under the Land Improvement Act XXVI. of 1871, which are substituted for those published in July last, from which it appears that on an application for an advance having been duly enquired into and approved, and the necessary conditions fulfilled, the Deputy Commissioner, if sufficient funds have been placed at his disposal is empowered to grant an advance of Rs. 500. The Financial, Commissioner may, subject to the same conditions, grant advances not exceeding Rs. 5,000. For sums exceeding Rs. 5,000, but not exceeding Rs. 10,000, the sanction of the local Government must be obtained; and if the advance required exceeds Rs. 10,000, the sanction of the Governor-General in Council will be necessary.

The poisonous snakes destroyed in the Punjab between the months of April and August last amount to the surprising number of 19,848, for which rewards at the rate of two annas a head have been paid by the local Government. Five hundred non-venomous snakes, for whose destruction no reward was paid, were also brought in to the police; altogether 20,000 snakes destroyed in four months is not so bad. Of these, 19,000 were either *Bangarus Carubus* (Karait), or varieties of the same species, and only thirty-six specimens of the *Echis carniata*. Colored clay models of these two species have been supplied to the police, as well as drawings of the jaws and teeth, by which specimens brought in can be more surely identified. An instance has occurred of one man receiving a hundred rupees for the snakes brought in by him to an Assistant District Superintendent of Police in one month.

The Viceroy reached Chittore, the famous fortress of Meywar that Alla-uddeen, the Slave-King, took by storm in 1803, in the afternoon of the 21st November, and spent the next day in exploring the ruins scattered over the great plateau, some twelve miles round, and on the heights. He and his party then went on to Nimbahera, where they spent the night; and the next day drove on to Oodeypore, a distance of some 65 miles. Three miles outside the city, the Viceroy was met by the Maharana; an elephant procession was then formed, and they all went on to the gates of Oodeypore. Here the Viceroy and Maharana, with the rest of the party, alighted, and the Maharana entering the Viceroy's carriage, they drove to the English palace, prepared by the Maharana for the reception of his guest. The city was illuminated in the evening.

A Cherat correspondent says:—"Of all royal salutes fired throughout the length and breadth of India at different periods, certainly none more loyal, I am sure, was ever fired than the one at Cherat when His Royal Highness landed at Bombay. An idea was started, on the evening of the 6th instant, that, as no battery of Royal Artillery was present to fire a royal salute, notwithstanding this drawback, the very rocks themselves should testify to the loyalty of the residents. This most original idea was carried out and executed by sheer hard labor, by boring 21 mines near the mess hut; and at 4 o'clock in the afternoon of the 8th instant, the mines were lit at ten seconds interval, and proved most successful. On the conclusion of the salute, a party of Highlanders were drawn up to give three cheers, which were caught up and re-echoed by the detachments on the surrounding hills. When this ceremony was over, His Royal Highness's health was drunk in Highland whisky, and thus terminated an exhibition of loyal feeling, which I venture to say has not been rivalled by any of the larger stations in India."

A Correspondent of the *Pioneer* writes from Peshawur:—"I am informed, on good authority, that Nowroz Khan, the exiled Khan of Lalpoorah, has put a stop to all traffic in the Tatra Pass, where he has made his appearance at Shamunsur Kheyl, some two miles from Michni, with a party of 60 sowars and 80 foot, intending to loot unwary travellers who frequent that route. But no news of any acts of violence having been committed by his band have reached my informant, and I do not suppose he will care to interfere with us. Ever since the sad disaster at Michni, orders have been most strict regarding officers going unarmed, or without an escort, about the Doab, and any one bent on sport, who may wander near the limits of our territory, may run a chance of becoming a target for some mischievous scoundrel who takes a fancy to pot at him. *Apropos* to the liking our lawless neighbours have for taking a shot at some unwary *Feringhee*—I accidently heard from a native, whose statement I have no reason to doubt, that one of the murderers of poor Major Macdonald, by name Kankai, has met his death in a quarrel with some of his brother clansmen. The lad who avenged the death of Hubbeeboolla Khan, has seemingly, by his valour, captivated a young woman, who coming to regard her lawful husband as a most insignificant person compared to this young David, has rushed into the arms of the avenger of the dead, and made a bolt of it across the border."

BOMBAY.

The Assistant Quarter Master of H. M. S. *Narcissus* deserted at Bombay with a sum of Rs. 50,000 or thereabouts belonging to H.M.'s local treasury. He is believed to have gone to some independent native State.

The *vakeel* of the Gondul State, one Soonderjee Durgadas, has been removed from his appointment by the Assistant Political Agent in charge, in consequence of his being considered untrustworthy. It is a pity this man was ever allowed to fill this post, considering his antecedents.

The charges brought by the Shravuks of Palitana against the Thakore, of polluting their temple, forcible entry, and tresspass, have been fully inquired into by Captain Hunter, Acting First Assistant Political Resident, Kattywar, The inquiry has, we understand, resulted in a report favorable to the Thakore.

Mr. Lee-Warner, one of the Under-Secretaries to the Government of Bombay, has been brutally assaulted by a mob of Parsees. It appears that Mr. Lee-Warner was driving into the Fort in his dog-cart from the Byculla Club, and came up with a Parsee funeral procession consisting of a long line of *shigrams*, on their way home from the Towers of Silence. With one of them he came into collision, but managed to extricate his conveyance, and drove on. When he reached the head of the procession, he perceived another carriage coming from the opposite direction, and fearing that there would be another collision, he called out to the coachman of the first *shigram* to move aside. The coachman, however, took no notice of Mr. Lee-Warner's request. Mr. Lee-Warner then raised his whip and struck the man, who thereupon moved aside as he had previously been requested to do. A Parsee who was sitting on the box of the *shigram* alongside of the driver thereupon seized the latter's whip, and struck Mr. Lee-Warner over the head with it several times. Another Parsee jumped out of the *shigram*, and rushed to the head of Mr. Lee-Warner's horse, which he forthwith commenced to pull about. Mr. Lee-Warner called out several times to this new assailant to let the horse go, and if they had any cause of complaint against him to lay an information in the Police Court, but this had only the effect of bringing a number of Parsees out of the *shigrams*, and these rushed also to the horse's head. The horse became quite restive, and, as Mr. Lee-Warner could not control it, the reins having been seized by a band of Parsees, he got out of his dog-cart, and went up to the man who had first seized his horse and told him to let go the reins. The man instantly squared up to Mr. Lee-Warner as if he wished to fight, whereupon Mr. Lee-Warner struck the fellow in the face and knocked him down. He was immediately surrounded by about twenty Parsees, who violently attacked him from all sides. A Policeman coming up, Mr. Lee-Warner pointed out the Parsee who had first seized the horse's head, and the man was at once taken into custody. This was the only one of the assailants who was captured at the time, but others have since been arrested, and will shortly be put upon their trial. Mr. Lee-Warner's injuries are severe, but fortunately not of a character to endanger life or limb.

MADRAS.

AN industrial school is to be established at Negapatam, in commemoration of the visit of the Prince of Wales to India.

THE Sessions Judge of Nellore lately convicted and sentenced a 1st class constable, named Mahomed Cassim, to two year's rigorous imprisonment, for causing hurt to a prisoner with the view of extorting confession.

THE zemindar of Walloor, a sporting native gentleman of the Kistna districts, will arrive in Madras shortly with a very pretty and unique present for His Royal Highness the Prince of Wales, *viz.*, a four-in-hand of antelopes, which have been perfectly broken to harness, and are as handy on the roads as the best team of horses.

IT is rumoured at the India Office, that the next Governor of Madras,—an appointment which it is supposed in Westminster will probably have to be again filled up at no distant date,—will be either Lord George Hamilton, or Sir Louis Mallet. Sir Louis is now on his way to this country in another capacity.

THE statement, published in a Poona paper, that Lord Suffield and other members of the Prince's suite have gone to Hyderabad as a deputation from His Royal Highness, is said by the *Bombay Gazette* to be a pure invention. These gentlemen have gone to the Nizam's capital for their own amusement, at the invitation of Sir Salar Jung.

THE *Madras Mail* learns from the Wynaad that crops which have hitherto kept back in a most extraordinary manner are now ripening fast, and nearly every planter will in a few days be in "full pick." Very hot days and strong land winds have conduced to this as much as anything. The past season has been a most trying one for numerous estates—the weeds growing with lightning rapidity owing to the light rainfall, and constant sunshine during the monsoon. The rainfall is about 33 per cent. short this year; and if there are not early rains in March, and good ones too, there is a great probability of there being a great scarcity of water during the dry season, as the smaller streams are now scarcely more than half as well supplied as in ordinary years. Canarese labor is flocking into the district in great numbers, owing to the scarcity of ragi in Mysore. It's an ill-wind that blows luck to no one, and Wynaad planters will now be able to put a little more pressure on coolies than they have been able to do for some years.

BURMAH.

WE (*Rangoon Gazette*) believe that a marriage is arranged to take place a few months hence between Prince Hassan, son of Sultan Sulliman, the late Panthay King of Yuman, and Ronuck Zemanee, daughter of Prince Jewan Bakuht, son of the late Shah Bahadoor Shah, Emperor of Delhi, and the last of the Great Moguls, at present a state prisoner at Rangoon. A handsome dower will be bestowed upon the bride, and a suitable house provided as a residence by Government. The match appears to be in every respect an eligible one, and obviates the necessity of the Delhi family at Rangoon having to seek for an alliance among the Mahomedan Princes of India, and has the additional advantage of not involving the separation of the young lady from her parents, as it is unlikely that Prince Hassan will remove for some time at all events from Rangoon. Prince Hassan, it will be remembered, went from Talifoo, the capital of Yunnan, to England some time after Major Sladen's expedition to Yunnan. We believe that the objects of Hassan's journey to England was to seek assistance in the struggle in which the Panthays or Mahomedans of that country, were then involved with the Chinese Government, to maintain their independence. Prince Hassan, while in England, was received, but not in an official capacity, by the Earl of Derby, Lord Granville, Lord Stanley, and other distinguished personages. Of course, the Prince's journey was fruitless of result, so far as obtaining any material aid was concerned, and he returned to Rangoon a little time after the fall of Talifoo, the death of his father Suliman Sultan of Yunnan, and the massacre of the Mahomedan inhabitants of the city by the Chinese troops. To proceed would have been futile, and Prince Hassan has since lived in Rangoon in retirement. A large number of his Panthay countrymen from Talifoo, Momein, and other large towns in Yunnan, who were so fortunate as to escape the general slaughter of their countrymen, are settling down in Rangoon and its neighbourhood, as all hope of a revival of a Mahomedan kingdom in Yunnan appears to be at an end, and the Panthay refugees may be expected to settle in large numbers in British Burmah, where no doubt they will form an orderly, industrious community, and, as a matter of course, will ever regard Prince Hassan as their Chief.

ASIA.

THE latest reports from Yemen state that after the dispersion of the Arab tribes, the Turkish troops were divided into three flying columns, under the command of Othman Pasha, Hafiz, Pasha, and Khalooshi Bey, and made for the Ayal Yazeed Hills by different routes. Arriving at this position, it was ascertained that the Hasheed tribes were assembled there in great force, and it was not considered prudent to attack them. The Commander, General Othman Pasha, is said to have reported the state of affairs to the Moosheer at Saana, and to have asked for orders, as the heights could not be scaled without heavy loss to the Turks. It is said the Moosheer ordered the Turkish forces to wait in their present position and to watch for a favourable opportunity to make an attack.

THE following is an extract from the diary of the British Joint-Commissioner on special duty at Ladak to the 31st October :—

A large caravan of traders has just left for Kulu—the merchants, late in the season as it is, have voluntarily chosen this route in order to get to the tea districts of Kangra by the shortest road, where they purpose making large investments in tea. As has been already mentioned, owing to recent disturbances on the Russian Frontier, the "Almaty" trade route has been closed, and as long as it remains so the Yarkandis will be thrown for their supply of tea on the markets of India. About Rs. 8,000 worth of business has been transacted in Leh during the past week, chiefly in pushm and silk; trade, however, is by no means brisk.

The traffic returns for the past week are as follows:—From India *via* Cashmere forty horse-loads, *via* Kulu ten. From Yarkand forty-five; local from Cashmere sixty-five. From Changthan thirty-six. To India *via* Cashmere twenty-two, *via* Kulu fifty-seven; to Turkistan thirty-five, to Changthan twenty-one; local to Cashmere twenty-seven.

THE *Straits Observer* gives some further particulars connected with the outrage at Perak. On the news of Mr. Birch's assassination being received at Penang, a party of 60 men of the 1-10th Regiment were despatched to Perak, accompanied by Captain Innes, R. E. 1st Assistant Colonial Engineer, as Civil Commissioner. Captain Innes reported that he had arrived in the Perak river on Friday night, the 5th instant, and it seems probable that he had reached Durian Sabotang, about 50 miles from the mouth, the highest point at which the river is navigable for the *Pluto*. He futher reported that it was his intention to march the next day to the Residency, at Bandar Bahruh, about eight miles further up, to the relief of Lieutenant Abbot, R. N., and Mr. Swettenham, who were surrounded by a large body of Malays. Nothing definite has been heard of what happened on the Saturday. On Sunday, the 7th, the force under Captain Innes appears to have proceeded further up the river to the place where Mr. Birch was murdered, where a stockade was found and attacked. The attack was repulsed with the result that Captain Innes was killed, Lieutenants Booth, Elliot, and eight men of the 10th wounded, and one man missing. The troops then seem to have fallen back, but whether to the Residency only or to the ships does not appear. They brought with them the bodies of Captain Innes and Mr. Birch. In addition to the force despatched from Penang, a large number of H. M.'s 1-10th at Singapore started on the morning of the 5th for Perak in H. M.'s gunboat *Fly*, and His Excellency the Governor left Singapore the same afternoon in the chartered steamer *M. V. Staat Roohussen*, accompanied by Captain Peyton, A. D. C. and Major Dunlop, the Inspector-General of Police, taking with him 30 Artillerymen and 20 more of the 10th, the whole being under the command of Captain Whittier of the 10th. The Governor called at Malacca and Klang on the way to Perak, and found all well at those places. He arrived at Perak on Monday, the day after the repulse, and was about to proceed up the river about 30 miles as far as Bata Rabit, the Residency of the Sultan. The *Observer* says :—"By directions received from the Secretary of State, the Indian Government have been requested by this Government to send troops to Penang, and they may shortly be expected. This prompt action on the part of the Secretary of State will probably render it unnecessary to obtain reinforcements from Hongkong, as had been previously contemplated." The report of the outrage caused no little excitement at Singapore, and at the Legislative Council held on the day it was received Mr. Shelford, in a very good speech, alluded to the subject, and tendered the hearty support of the Council and the sympathy of the whole Colony to the Governor in any steps he might think proper to take to support his policy, even if it was deemed necessary to take the most stringent measures. The Hon. Dr. Little coincided most fully, saying that a long experience of the Malays led him to advocate the strictest and boldest line of policy towards them; he thought the best way of getting rid of the refractory chiefs was hanging them or pensioning them—perhaps hanging was the best. The Hon. R. B. Read supported. The Chief Justice said the Council was bound to see that the policy it had sanctioned towards these Native States was carried out; the Governor had come at a critical period, the most difficult part of the work being dependent upon His Excellency; the Residential system had failed, and the substitution of a Council for that system was the only thing that could be adopted for Perak, and the news just received was an additional reason for carrying out the policy of the Government in its integrity. The Hon. the Colonial Secretary always was of opinion that the Residental system would fail; he was not in favour of immediate annexation, but would govern the country by some kind of Malayan machinery; he thought that it was a waste of time to talk upon the point just now, but would wait to see what a few days would produce.

MILITARY.

THE late order granting free passage to England to officers of the Royal (late Indian) Artillery, who have retired or may retire in India on the extra annuity or on full pay pension, is not applicable to officers of the Royal (late Indian) Engineers.

REGIMENTAL Field Officers of the British Service who, although their regiments are serving in India, are placed on English half-pay, on completion of a five years' term of staff employ, are entitled to a free passsage to the port of embarkation and thence to England.

THE Commander-in-Chief has issued orders that, wherever a hospital has a separate compound, a garden and shrubbery are to be kept up, at the cost of the cantonment funds or of the State. The idea is a good one. When carried out, it will afford occupation to the convalescents and do much to remove the appearance of dreariness so common to these buildings in the plains of the North-West.

THE oldest officer in the Bengal Cavalry, and nearly the oldest either in H. M.'s British or Indian Forces, has just died at Dehra Dhoon. General Alexander Dick entered the service in October 1804, received his Captaincy in the beginning of 1818, and was made General in May 1866. He served through Lord Lake's campaign in 1805, and with the expedition to Java in 1811, being present at the storm and capture of Fort Cornelis. Though he

lived to nearly 90, he never once revisited Scotland, the place of his birth.

PRIVATE BAHADOOR KHAN, of the 30th N. I. regiment, has been sentenced to be hanged for stabbing a Havildar and a Lance Naik, of Jacob's Rifles. The *Times of India* says:—We cannot but notice again the extreme length of time that elapses between the commission of a crime in the army and the carrying out of the sentence. Private Bahadoor Khan stabbed the two non-comissioned officers on the 28th of August, and his sentence is not published in general orders until the 13th of November following. Making all allowance for the distance that Jacobabad is from Poonah, we can only repeat here our statement that punishment loses half its terror and utility by being delayed until the crime for which it is inflicted is half-forgotten.

Vanity Fair thus gives one of the advantages of the Brigade system at home:—"When the brigade system was established by that British Louvois, Lord Cardwell, it was supposed and intended that by means of either the twin battalion or the brigade a battalion about to proceed on foregn service could be readily expanded. One great advantage of this arrangement was deemed to be that it would no longer be necessary to solicit volunteers from the service at large, and that the demoralizing bounty would in future be dispensed with. The keystone of the system, moreover, was to be localisation—*i. e.*, that the men of a regiment would all belong to the brigade district. The brigade system has now been in operation for about two years and a half, yet it is found necessary, in order to bring up the battalions going abroad this autumn to their increased strength, to invite volunteers from many infantry regiments at home to volunteer for other than their own brigade, and a bounty of one pound per head has been given to all men responding to the invitation. Thus Scotch regiments have received men from Ireland, and *vice, versa* all considerations of localisation and nationality being thrown to the winds. After this it can no longer, I imagine, be contested that Lord Cardwell's precious plan has proved a thorough sham. The result of the present expedients, and of our military system generally, is that what with the elimination of men within two years of completing their engagement, and of those under twenty years of age, not above thirty per cent. of a battalion going to India will be other than strangers to their battalion."

GENERAL.

BY a gracious exercise of leniency the autocrat of Russia has discontinued the flogging of women. They have hitherto been punished, the same as men, with the knout and the rod. The cruelty of the former instrument of torture may be reckoned by the circumstance that, by the new order, ten days isolated confinement are to count as the equivalent of one lash with it. Two days is deemed sufficient to compensate for a lash with a rod.

AN extraordinary tale is circulating in Paris. The skull of Mozart has been discovered in possession of Professor Hyrtl at Vienna. This gentleman, indeed, knew very well what kind of treasure he kept under a glass case in his study; but the public had supposed the musician's head to be resting with his body in that grave which will never be identified in the cemetery of St. Marx. M. Hyrtl who is an Aulic Councillor, received the legacy from his brother, who had bought it from the sexton, Mozart was buried in the common *fosse*—"the third of the first layer," as this man used to say. After some years, according to custom, the grave was opened. The sexton, meanwhile, had learned how illustrious was the corpse so carelessly interred, and he stole the head. It has passed only through three hands.

NOWHERE has the St. Petersburg minute upon Turkey caused more excitement than at Vienna. The Austrian Army is very actively employed, and its mobilisation is curiously interwoven with the sudden adoption of a new gun. The Uchatius, named after its inventor, General Uchatius, is adopted at Vienna, and the vote passed for its introduction for the whole force, though only a few weeks ago the Hungarians declined to entertain the expense of re-armament. Baron Keller, the Minister of War, arranged a trial. Secrecy was enjoined. The practice was, we are told, at 2,000 and 3,000 paces against a picked Austrian gun and a Krupp field gun. At 2,000 paces, the new gun did not shine; at 3,000 it struck the target four times to the Krupps's twice, the old gun failing altogether; but at 5,000 paces the new gun did such execution that it was adopted unanimously.

THE LONDON CORRESPONDENT OF THE *Times of India* announces "that Dr. Kenealy, the ribald spouter of seditious and libellous balderdash, will shortly be tried for perjury, and it is thought that the case against him is a very strong one. Mr. Potter, of the *Beehive* newspaper, summoned Dr. Kenealy the other day for libel. The doctor swore that he was neither the author of the article complained of, nor the editor or proprietor of the *Englishman*. However, the publisher was committed for trial, and he, becoming frightened, has, so to speak, turned Queen's evidence, and handed over to the prosecution MSS., which, it is said, will prove incontestably that Dr. Kenealy *did* write the article himself, and *is* both editor and proprietor of the *Englishman*. If that be proved, of course it will be as gross a case of deliberate perjury as was ever perpetrated, and you may be sure that Dr. Kenealy will not get much leniency from the Bench if he is convicted."

IN various parts of Asia Minor, but principally in the province of Trebizond, there are, according to the *Turquie*, entire villages whose inhabitants are to outward appearance Mussulmans, but have in reality secretly followed the Christian religion for ages. They have their priests who wear the turban in public, and their churches are subterranean chambers excavated under the mosques in which they hitherto have professed to worship. These singular people had recourse to this stratagem in early times when religious tolerance was not practised in Turkey; when better times dawned, they might have avowed their religion, but it appears they enjoyed advantages in their supposed quality of Mussulmans which they were unwilling to forego. It was only latterly when the Government called out the *redifs* that, wishing to escape the conscription, they declared themselves Christians. The *Turquie* adds that the authorities of the Phanar intend to plead the cause of these villagers with the Porte.

THE result of the United States elections, has been uniformly and beyond the secret expectation of either party—the hopes of the one and the fears of the other—unfavourable to the Democrats. A year ago an existing Republican majority disappeard before the wave of a Democratic reaction. Now that national decision is diametrically reversed, and the Republican Government is confirmed in its tenure of office. The Presidental election does not take place for another year, but President Grant may meanwhile consider that he has received a significant earnest of his success in his forthcoming candidature. Massachusetts Pennsylvania, and New York, which last year voted for Democratic candidates, now give a decided majority to the Republicans. Nor are the great Eastern States singular in their choice. Wisconsin has substituted a Republican for a Democrat. Thus Republicanism has scored a conspicuous victory, in the four most important constituencies, while in Minnesota it has held its own.

LITERARY.

OF the one hundred and forty-two books printed in Oudh, during the quarter ending in September, not more than twenty are in Hindi, the rest being either in Urdoo or Persian. "A stranger to the province, "says the *Lucknow Times*," would imagine from this that either Urdoo or Persian is the language of Oudh, and that Hindi is only an exotic. Hindi is the spoken language of ten-elevenths of the people of the province, and we very much doubt whether Urdoo is understood at all by the general mass of the inhabitants of this province. Urdoo being the court-language in Oudh, it is cultivated at the sacrifice of Hindi—the language of the people."

THOUGH only two volumes of the *North-West Gazetteer* have yet been published, the *Pioneer* says that a third has been printed. This will be found to relate to the districts of Bulundshahr, Meerut and Muzuffernugger. The fourth volume, also in the press, will refer to the districts of Etah, Etawah, and Mynpooree. The volumes relating to the Rohilkhund Division of the Hill districts are also in a forward state. With the third volume we may anticipate a botanical list of the plants peculiar to the plains, by Dr. George King of the Botanical Gardens, Howrah, and a zoological list of the corresponding mammalia, birds, fishes, and reptiles, by Mr. A. Anderson, of the Opium Department, both writers of considerable scientific reputation. In about two years, it is said Mr. Atkinson will be enabled to complete his great work; but the rapidity of his progress naturally depends to a large extent on the character of the materials he may be able to collect.

RECENT Russian papers, give some particulars respecting the Congress of Orientalists which is to meet in St. Petersburgh on the 1st of September, 1876. Three learned Orientalists, M. M. Griforieff, Patkanoff, and Hvolson have been formed into a committee, which will conduct all the preparatory arrangements. The congress will be divided into nine sections, dealing with the following subjects:—1, Siberia; 2, the Russian provinces and Central Asia; 3, the Caucasus; 4 the trans-Caucasian provinces; 5, China, Thibet, Mongolia, and Japan; 6, Hindostan and Persia; 7, Turkey, Greece, and Arabia; 8. Archæology and Numismatology; 9, Oriental Religion and Philosophy. Contemporaneously with the Congress there will be held an Oriental Exhibition divided into four departments, the archæologic, archæographic, and literary. Besides Orientalists of note, the committee announces its intention of inviting to attend the Congress all persons who take any interest in Oriental subjects or possess Oriental curiosities of any kind, and it has issued a notice, requesting every one who desires the advancement of science to send to the Exhibition any objects in their possession of interest in a scientific point of view. The following classes of objects are specified: Oriental inscriptions on stone or metal; old maps of Eastern lands; albums, portraits, and views (sketched or photographed); articles of Eastern costume, furniture, arms, and implements; medals, coins, etc.

ECCLESIASTICAL.

THE Revd. Dr. Griffiths, vicar of Llandilo, Carmarthenshire, has met the burial difficulty in a manner of his own. Mr. John Roberts, deacon of a Calvinistic Methodist Church, has just been buried in the parish churchyard. The Vicar followed the hearse, accompanied by the vicar of Llanfynydd, and read the Church of England burial service. He then gave the permission to the Revd. Dr. Charles, of Aberdovey, Calvinistic Methodist minister, to deliver an address over the open grave. Dr. Charles said the noble burial service of the Church of England was peculiarly adapted to the case of their Methodist brother.

LATEST TELEGRAPHIC NEWS.

London, 26th November.

THE English Government have bought from the Khedive all his Suez Canal Shares for four millions pound sterling cash down to what the Khedive held, which were 177,000 out of a total of 400,000 shares in the Canal Company.

A communication from the Admiralty has appeared, declaring the accounts published regarding the accident to the *Iron Duke*, whereby the vessel was said to have been in imminent risk of foundering, are exaggerated.

London 26th November.

DETACHMENTS of the 6th, 10th, 28th and 47th Regiments sailed for India yesterday.

Detachments of the 57th and 80th will follow shortly.

The English Press unanimously approves the purchase by Government of the Suez Canal shares.

The purchase has caused much agitation in political and financial circles.

London, 26th November.

THE Government has sent instructions to Sir William Jervois, Governor, Straits Settlements to abstain from the policy of annexing Perak to the Crown, and to confine himself to the punishment of the murderer of Mr. Birch.

His Majesty the King of Denmark has returned to Copenhagen.

London, 27th November.

THE purchase of Suez Canal shares by the British Government is made in perpetuity, and secures freehold right to property.

A Berlin telegram states that it is proposed to prosecute Court Arnim for treason.

The Austrian forces on the Turkish frontier have been reinforced

The Prince of Montenegro has despatched envoys to the Northern Powers to explain the difficulty of preserving neutrality.

The detachment sent by the Khedive against the invasion of the Egyptian territory by the King of Abyssinia in August last has been surprised, and completely annihilated in Abyssinia.

London, 29th November.

IT is rumoured that Parliament will assemble on the 14th proximo.

IT is the intention of Government to send a Special Commission to Cairo for the purpose of examining into the present state of the Egyptian finance, and to advise the Khedive thereon,

London, 29th November.

THERE is a rumour which requires confirmation, that Parliament will be convoked early for the ratification of the purchase of Suez Canal shares.

London, 29th November.

THE Homeward Mails *via* Brindisi, which left Calcutta 5th, Bombay 8th November, were delivered to-day.

THE sum of £98,000 was withdrawn from the Bank to-day.

The ship *Adelheid*, homeward bound, from Akyab, has been abandoned in a sinking condition. The screw was saved.

London 30th November.

THE Indian Government has announced its intention of joining the International Postal Union.

All Postal Administrations affected have been invited to a conference which assembles on the 17th January next.

It is reported that the Russian Army in Khokand is in a very precarious position.

The Honorable Stephen Cave is appointed Special Commissioner to proceed to Egypt on a special official mission from Her Majesty's Government.

Paris, 29th November.

THE French Press, in discussing the purchase of the Suez Canal shares by the British Government, admire the decisive action displayed by England in consummating so extensive and advantageous a transaction, though at the same time regretting the check which French influence in Egypt has sustained by the transfer. It is considered that the transfer is unlikely to lead to any political complication. The German and Austrian Press also approves the step taken by England.

Paris, 30th November.

M. DE LESSEPS has issued a reassuring circular to the shareholders in the Suez Canal. He regards the purchase of the shares by the British Government as a fortunate occurrence, cementing a union between British and French capital for a purely industrial, and therefore necessarily pacific working of the Canal.

The reply of the Northern Powers to the Prince of Montenegro's envoys strictly enjoins the necessity of his preserving neutrality.

Rangoon, 23rd November.

THE following particulars have been ascertained in connection with the recent plot :—

The Suratee, named Ismail Cassim Aboo, was formerly employed in connection with the King of Burmah's steamers. The Chinaman, named Moung Tsee, is respectably connected at Rangoon. Both these men are said to have undertaken the supply of swords. It is reported that a letter has been found in the house of the ringleader, authorizing him to draw upon the agent of the King of Burmah for Rs. 1,000, but it is unknown for what purpose.

Rangoon, 27th November.

AT the further examination of prisoners concerned in the recent plot some have been discharged.

Upwards of twenty have been committed for trial, the evidence being sufficient against them.

The police are engaged in searching for other persons implicated.

Aden, 29th November.

THE Egyptians have taken Zuha and Kismayo in the Zanzibar territory have disarmed the Sultan's troops, and hoisted the Turkish flag.

Aden 2nd December.

THE *Bangalore*, with the outward London Mails of the 17th ultimo, left for Bombay at 2 o'clock to-day.

The Brindisi Steamer was delayed by bad weather.

Honkong, 26th November.

MR. WADE has left Shanghai and gone north.

A traveller from Yunnan reports having met the expedition under Messrs. Grosvenor and Baber, and warned them that large bodies of troops were ready to resist the proposed investigation of Margary's murder.

Penang, 26th November.

THE Governor has gone to Perak. Latest advices state that the Coast is blockaded, and that serious resistance is not expected. The Malays are reported to be starving.

Penang, 26th November.

MR. BIRCH'S missing man has returned to the Residency. He relates that he was captured by the Malays, and that he made his escape after the taking of Passir Sala, where he says considerable loss was inflicted on the Malays, many being wounded. The Maharajah Cila is constructing strong stockades higher up the river, and declares he will resist to the uttermost, and will only yield to starvation. The Governor is at Penang. Preparations for the campaign are actively progressing.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

JESSOP & CO.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from *C. L. & Co.*, who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificent and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places enumerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

Infantile Fever Powder.

Of the greatest value for CHILDREN suffering from *Fever* in consequence either of *Cold, Derangement of the Bowels* or *Teething*, as also in various *Eruptions of the Skin, Thrush, Diarrhœa, Opthalmia*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Tonic Antiperiodic Pills.

Invaluable in *Ague, Intermittent Fevers of all kinds, Ague and Spleen;* and all those diseases that partake of a *Periodic character.* Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Spleen Pills.

Has cured thousands of cases of Enlarged Spleen—See full directions in Pamphlet. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Aperient Pills.

Mild, prompt, safe and uniform in their action. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Family Antibilious Pills.

More especially suited for acute diseases, such as *Continued Fever, Headaches from exposure, Bilious attacks*, &c. Rs. 1-4 per bottle.

DR. E. J. LAZARUS'S

Restringent Mixture.

A pleasant, safe, certain and effectual remedy for *Diarrhœa or Looseness of the Bowels*, certain form of *Dysentery, Incipient Cholera, Cholic, Griping Pains, Flatulency, Cramps in the Stomach*, &c. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Cholera Drops.

Full directions given in the Pamphlet. Rs. 2 per bottle.

DR. E. J. LAZARUS'S

Family Laxative.

A safe, certain and useful purgative; *may be taken alike by young or old.* Rs. 2 per bottle.

AGENTS IN CALCUTTA:

GILLANDERS, ARBUTHNOT & CO.

CALCUTTA METAL MART.

THE undersigned have a large stock of Machinery Metals, and Engineers tools, and stores of all descriptions, and are prepared to give designs and estimates, and contract for the supply of any Machinery. Railway or Manufacturng Plant. Apparatus for Gas and Water works &c.
They are also prepared, for a moderate commission, to import any articles from England at actual cost, and are in a position to get the best quality at the lowest possible price
The following are generally in stock or on the way :—

PORTABLE ENGINES.—Clayton & Shuttleworth's

	4 H. P.	6 H. P.	8 H. P.	10 H. P.
Prices, with Single Cylinder .. .. Rs.	2,700	3,200	3,900	4,500
	10 H. P.	12 H. P.	16 H. P.	20 H. P.
Do., with Double Cylinder .. .. Rs.	4,750	5,000	6,250	7,500

Reversing Gear,—Extra, at Rs. 200 to Rs. 400, according to size.

STATIONARY ENGINES.—Tangye's (suited for Tea Gardens), with vertical boiler mounted on base plates, occupy little room, and are well adapted for use with Tea or other machinery requiring small power. Fire-places are constructed to burn either wood or coal.

	2 H. P.	3 H. P.	4 H. P.	6 H. P.
Prices .. .. Rs.	1,400	1,500	1,650	2250

FIRE ENGINES.—Shand and Mason's and Holman's, with suction and delivery hose complete.

Centrifugal Pumps.

Gwynne's—are largely used all over the world where a rapid discharge of water is wanted.
A 6-inch pump worked by a 6 H.P. Portable Engine will discharge about 700 gallons of water per minute.
A 7-inch pump worked by an 8 H.P. Portable Engine will discharge about 900 gallons per minute.
An 8-inch pump worked by a 10 H.P. Portable Engine, will discharge about 1,100 gallons per minute.
Prices, with pipes and other fittings complete.

	4 in.	5 in.	6 in.	7 in.	8 in.	10 in.	12 in.
Rs.	460	600	750	900	1,050.	1,300	1,500.

These may be had also mounted on wheels, and will be found useful by Contractors and Engineers who require Portable Pumps.

SPECIAL STEAM PUMPS.—Tangye's, are very compact and simple in construction.

Disintegrators.

Norton and Hawksley's for grinding to a fine powder artificial manures, ores of all kinds, shale, asphalte, lime, chalk, coal, coke, clays, barks, myrobalans, leather, drugs, sugar, seeds, and grains of all descriptions, besides many other articles.
Prices,—No. 1, Rs. 450; No. 2, Rs. 1,050.

Extinctures.

Dick's—can be carried by one man, and always kept ready for instant use in case of fire. They have proved very efficacious at Home; and in Warehouses, Mills, and Ships; as well as for Private Dwellings, they form a great safeguard against damage by fire.
Prices,—No. 4, Rs. 100; No. 5. Rs. 125. Charges for ditto supplied extra, at Rs. 4 per tin.

STEAM ROAD ROLLERS.—Aveling and Porter's, 5 ton and 8 ton.

Stone Breakers,

Marsden's 15 by 7 .. .. Rs. 3,000

Steam Hammers,

3 cwt., with fittings complete .. .. „ 1,250

Soorkee Mills,

Stationery with 6-feet pan and rollers complete .. .. „ 1,025
Portable do. do. for steam and bullock power .. .. Rs. 1000 & Rs. 750

Injectors.

Giffard's—are much superior to Pumps as Boiler feeders, and are very simple in their construction.

	No. 4.	No. 6.	No. 8.
Prices .. .. Rs.	70.	90.	135.

Seed Drill.

Small fixed coulter seven row seed drill .. .. Rs. 350

Wire Tramway.

Hodgson's. These Tramways are well adapted for carrying produce and minerals over hilly ground, or in any country where good road or water carriage is unavailable; and as feeders for railways, their use might be extended.

Fencing Gates, Railing.

We have these iron-works to offer by F. Martin & Co: at row rates.

The undersigned will be happy to furnish Catalogues and particulars on application.

NICOL FLEMING & CO.

LANTERNS.—For oil or kerosine, some for Railway use.

Priced and Illustrated Catalogues Post free on application.

F. & C. OSLER, CALCUTTA.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Hornc astle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spa smodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

PROSPECTUS.
CENTRAL ASIAN TRADING COMPANY "LIMITED,"

THE NATIONAL BANK OF INDIA LIMITED.

Agent in England.
GEORGE HOLME, ESQ., PRESIDENT, DERBY CHAMBER OF COMMERCE.

Agents in Bombay.
MESSRS. FORBES AND CO.

Agents in Calcutta.
MESSRS. FITZE AND CO.

This Company has been formed for the purpose of trading with Turkishtan, Kashmir, and Affghanistan, as well as in the Punjab and will take over the good-will, business, and property of the present Central Asian Trading Company for a sum of £6,000 or Rs. 60,000.

The Maharajah of Kashmir has appointed the present Company the sole agents, for sale in Europe and America, of the manufactures and products of his country. He will make over this engagement to the new Company and give it all the support and aid in his power. His Excellency the Diwan Kirpa Ram, Prime Minister of the State of Kashmir, is a shareholder in the old Company and will, with the other shareholders, transfer his investment to the new Company.

The Manager and Shareholder of the old Company are now thoroughly acquainted with the class and quality of goods most in demand, in the countries named. Experience has shown them what produce to make in exchange from native traders, with reference to both European and Indian markets. It is certain that a large and lucrative trade already exists, and that it is capable of vast expansion.

The large profits already realised on the goods procured from Yarkand lead the present Directors to look with the utmost confidence to the results of the future trade. Valuable experience has been gained and the concessions alone obtained from His Highness the Maharajah of Kashmir are of great value.

Warehouses will be established at Srinaggur and Peshawur and eventually at Leh. At the two former places buildings have been already arranged, for caravans will not at present be sent to Yarkand. All transactions will take place at the warehouses for cash *only* or by barter.

Further particulars may be obtained from Mr. T. Russell at Murree, who will be happy to afford any information.

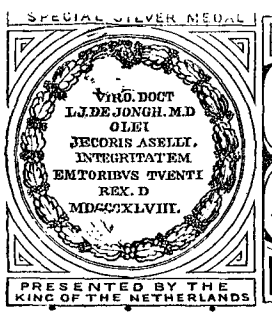
Several Gentlemen of influence and position have joined the Company, and shares have been already taken up.

Applications for shares should be made to the Company's Bankers at Rawulpindi, Lahore, Mooltan, Murree, Calcutta or Bombay in the form appended, and accompanied by a deposit of Rs. 10 a share.

A further payment of Rs. 40 a share will required on 1st January 1876. Notice of not less than three months will be given for further calls, which will not exceed Rs. 25 a share.

Murree, September 1875.

T. RUSSELL,
Manager, C. A. T. Company.



DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

LIGHT-BROWN COD LIVER OIL

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion on DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health.

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

CALCUTTA.

ASSURANCE COMPANIES.

DISTRIBUTION OF PROFITS, 1875.

THE STANDARD LIFE ASSURANCE COMPANY.

ESTABLISHED 1825.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES.

THIS INCREASE has taken place notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

THE REVENUE exceeds £700,000 per annum.

INTENDING ASSURERS,

Should lodge their proposals with the Secretaries or Agents of the Company at an early date, as Proposals dated after 15th November next, will *not* be entitled to participate in the Profits of the present Bonus Period.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th Sept. 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest*, and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit.*"—*Extract from the Speech of the Chairman Annual Meeting, 7th August*, 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT

SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ESTABLISHED IN THE YEAR 1834.

Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed*, whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium*, the sum allotted for Bonuses this year being £37,030.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

OPIUM.

"BRITISH OPIUM POLICY, AND ITS RESULTS TO INDIA AND CHINA."

WE award the 1st Prize of £200 to the writer of "Let Providence Provide." And the 2nd Prize of £100 to the writer of "Fiat Justitia."

In so doing we wish to express our high appreciation of the excellence of many others of the seventy-five submitted to us.

C. E. TREVELYAN,
H. E. BARTLE FRERE,
LOUIS MALLET.

The Author of the 1st Prize Essay is—Gilbert Malcolm Sproat, Esq., Agent-General for British Columbia.

That of the 2nd is REV. F. S. Turner, Secretary of the Anglo-Oriental Society for the Suppression of the Opium Trade.

To prevent misapprehension it should be stated that two other writers had adopted the motto "Fiat Justitia," but with the additional words "ruat cœlum."

Will be ready on 1st January 1876.

ST. PAUL'S COLLEGE provides a Public School Education on the principles of the Church of England.

The *inclusive* charge for Board and Instruction is Sixty Guineas a year. Washing, Medical Attendance, Stationary, and all necessary expenses are included in this sum.

The College is divided into Three Departments—

1. In the Junior Department little boys from 8 to 12 are grounded in the essentials of general knowledge.
2. In the Modern Department, boys are prepared for the Civil Service and other competitive examinations.
3. In the Classical Department boys are prepared for the Universities and learned professions.

Arrangements are being made for the accommodation of one hundred additional students.

Manager, *Friend of India.*

Calcutta, 25th September 1875.

EDITORIAL NOTES.

AT the meeting of the Bengal Council on Saturday last Sir Richard Temple, referring to his recent speech on the new Calcutta Municipal Bill, moved that the substance of his proposals should be drafted into shape and immediately referred to the Select Committee for free discussion and opinion. It thus appears that Sir Richard considers the business urgent, but we would deprecate undue haste in the framing of such an important measure. We do not doubt Sir Richard's ability, but it cannot dispense with deliberation. He should not commit his scheme into the hands of the Select Committee while yet too hot from the forge, or we very much fear the result of the hammering it will get it their hands. We have waited so long for the initiation of a measure of reform, that we could easily afford ample time for the most careful and deliberate labour in the production of a really wise and useful measure.

***

WE cordially agree with a contemporary that whatever were the errors of Mr. Hogg or of Sir Richard Temple in the matter *of the late election, the real fault that has to be amended lies* in the system. We have spoken strongly of both Sir Richard's and Mr. Hogg's conduct, but bygones must be bygones not only for charity's, but for prudence' sake. We trust the public meeting to be held to-day, will leave it impossible for any one to say that resentment against Mr. Hogg, or any such movement of mere passion, has produced the present stir among the citizens. The meeting to-day is a protest, less against the action of Mr. Hogg, than against the system that made it possible. There is no necessity for shielding the Chairman of the Justices from due censure; he deserves it, and is not in the least likely to die from its effects, but we repeat it will be a mistake if the least color of truth should be given to the calumny that it is less municipal reform than the degradation of Mr. Hogg that is the object of the meeting. The ground for holding the meeting is not in the least removed by the promised Reform Bill of Sir Richard Temple. We must meet, if only to show the powers that be, that we are thoroughly in earnest. We must prove by a great meeting of the influential rate-payers that the press has been expressing without any exaggeration the sentiments of the citizens. We must make it plain that is not against any man, but against the system that we are moving, though we thank Mr. Hogg for the stimulus he has applied to us. The force of public opinion while it is confined to the columns of the newspaper press, is apt to be too long disregarded by Indian officials. But a powerful public assembly unanimously declaring that the press has truly represented the citizens, will both command present attention, and will strengthen for the future, the legitimate influence of the Indian press.

***

SIR LOUIS AND LADY MALLET are now in India, and there seems to be no longer any doubt as to the real object of this visit. It is at least quite certain that the conjecture that his mission is in any way adverse to Lord Northbrook's policy was entirely without foundation. His inquiry will have nothing to do directly with the impost on long stapled cotton, but is intended to ascertain whether the time has come to entirely abolish the customs duties of which Manchester and the advocates of unconditional free-trade complain. It may, indeed, be said that he comes to India as the official representative of Manchester interests, and we greatly suspect that the result of his mission will be less favorable to what are popularly supposed to be the interests of the Bombay mill-owners, than are the provisions of Lord Northbrook's Tariff Act. The Indian Government professes to levy the import duty on Manchester fabrics, not as a protective, but purely as a revenue duty. Still it acts as protective, and must do so, unless as Manchester demands, an equivalent excise duty be levied on fabrics manufactured in India. The first question, then, will be if this measure of protection should be longer continued to the Bombay mills. If the answer be, as is not improbable, that it ought not to be continued, it will then have to be considered whether the duties should be completely abolished, or the import duty balanced by an excise duty. If the former alternative be chosen, the Government will suffer a serious loss of revenue, and it will not be easy to find a new method of raising a million a year, so unobjectionable as the present method.

***

IF, as a contemporary remarks, it was not only the right but the duty of Sir William Jervois to take over the management of Perak at the time and in the manner he did so, and if such a right was implied in the Colonial Office's communications regarding that State, it is strange that the Colonial Office should so promptly send him instructions to abstain from the policy of annexation. Why put such a drag on the wheels of his conquering chariot, if he was only exercising a right and performing a duty? "Inertia" in the Colonial Office is an insufficient explanation, and there is certainly no department of the present Government less afflicted with inertia, than the department over which Lord Carnarvon so ably presides. And granting that both the late Governor and Sir W. Jervois have in all their dealings with the State, assumed the right to take over its administration, and that the Colonial Office, afflicted with inertia, allowed the assumption to pass unquestioned, the only conclusion we can draw is that the right was assumed as conferred by heaven along with the might. If, indeed, such is the divine right of English Governors, there is no reason why Sir W. Jervois should abstain from annexing Perak, nor any reason why he should not proceed to annex the whole peninsula. The commercial condition of Singapore demands it!

***

WE extract the following from the London *Times* on the subject of the Perak war. "Whatever may be the course of affairs, it is to be hoped we shall be warned to restrict within the smallest limits possible our further intervention between these wild and inflammable communities. It ought to be well understood by this time that to appoint residents without whose advice and assistance nothing of political or commercial importance can be done, is practically to undertake the indirect government of such States, and to entangle ourselves in all their disputes. Of course piracy must be put down and peace maintained in a channel of such importance to commerce as the Straits of Malacca, but the more this can be affected by external rather than by internal pressure the better."

***

THE sudden retirement of Mr. Saunders from Hyderabad, immediately after the publication of his correspondence with Sir Salar Jung looks significant, though it may of course be perfectly true that it is entirely owing to the state of his wife's health. The *Bombay Gazette* declares that it cannot be a token of the Viceroy's displeasure, because Mr. Saunders acted strictly in obedience to orders, and obedience in Lord Northbrook's eyes covers a multitude of sins. Still, it cannot but give rise to suspicions that the late unfortunate correspondence had something to do with the low state of Mrs. Saunder's health, and that Government has been less exacting in the matter of medical testimony than it was in the young Nizam's case. The present Government has given too much

ground for the accusation that when its diplomatic measures miscarry, it makes a scapegoat of its political officer. There is also an unpleasant suspicion in some minds, that the action of the Viceroy in delicate matters, is too much under the control of telegrams from England, and that such telegrams are likely to become more frequent than ever, now that the native Courts have found a vent for their grievances in the columns of influential London journals. The *Gazette* commenting on the appointment of Sir Richard Meade to the Hyderabad residency, censures Sir Salar Jung for "abandoning his old rôle of a friend to British rule, and "letting himself be used as the instrument of the conservative "party in the Nizam's territory who wish to recover Berar, and "to create anew a great Mussulman State in Southern India. "Although they may not be conscious of the tendency of their "own policy, that is really what they are aiming at; and Sir "Richard Meade will have no comfortable but still a very enviable "duty to perform in trying to bring them to their senses." The late correspondence seems to show that the loss of senses is on the other side.

***

THE manner in which some portions of the correspondence between Sir Salar Jung and the late resident at Hyderabad were made public, has been the subject of some comment, and the *Englishman*, in a suggestive article expresses the opinion that natives of rank and influence have begun to send their complaints to the English press by reason of Lord Northbrook's action towards the vernacular papers. The leading native papers were at one time translated in the Secretariats, and extracts were circulated to the government departments and rendered available to the English press. This practice was, with questionable wisdom, discontinued by the present Viceroy, on account of the strong hostility of some of these papers, and as a consequence the vernacular press has ceased to be in contact with the public opinion of India or England. The leading natives fully understand this fact, and have therefore taken a more direct method of reaching public opinion than their own press afforded. Lord Northbrook's weapons have thus been turned against himself, and with considerable effect. The impression created in England by such disclosures as have recently been made in the *Pall Mall Gazette*, even if they were erroneous could not be removed by answer or explanation for two months. And as the Native Courts have learned to make direct appeals to English public opinion through the English journals, there is no reason why a like course should not be adopted by the numerous *quasi*-representative native associations which are becoming numerous in India. It would have been less perilous to the Indian Government, if such appeals had continued to reach the English public by the old indirect methods. The resources of weakness and timidity are often more dangerous to a Government than the perils they are meant to avoid. However seditious may be the tone of some vernacular papers, their evil tendency can hardly be lessened by hiding their contents from the English public, so long as they continue to circulate among native readers. The old practice may have had its inconveniencies, but we agree with our contemporary that it was perhaps the best that could have been adopted. "Though all the winds of doctrine were let loose to play upon the earth," says Milton, "so Truth be in the field we do injuriously by licensing and prohibiting to misdoubt her strength. Let her and falsehood grapple; who ever knew Truth put to the worse, in a free and open encounter?"

***

THE Government of Bombay has addressed the following letter to the Trades Association of that city, on the subject of the continuation of the Ajmere Railway to Ahmedahad :—"Sir,—In continuation of my letter No. 1026, dated the 13th September last, I am directed by His Excellency the Governor in Council to state for the information of the Bombay Trades' Association and other traders, that the Secretary of State for India in a despatch, dated 28th October last, No. 8, intimates that the representations of the Bombay Trades' Association and other traders contained in their memorial, praying for the speedy completion of the Ahmedabad and Ajmere Railway, will receive every consideration when the question comes before him in Council, after the receipt of the views of the Government of India on the project. I have, &c., (Sd.) W. F. Hancock, *Lieut.-Col., Under-Secretary to Government.*

There is no excuse whatever to be pleaded, for allowing a project of this nature to be indefinitely postponed. Were the country without credit altogether, and the money therefore not procurable, the action of the Government could be explained; but with a higher credit than any nation in the world, except that of England, it is wholly unpardonable to let projects like this remain unexecuted for years. We hold the Government to be hopelessly wrong in its views on the matter. Its course is simply one of cowardice, while we cloak it under the name of statesmanship. Heavy as our expenditure has been upon our main lines of railway, the country is indefinitely richer with them in spite of the debt, than it would have been without them, while the very men who will admit this frankly, have not the courage of their convictions.

***

IT is no longer possible to doubt what has often been denied—that the manufacture of opium is largely on the increase in some parts of China. Mr. Mann, in his last report on the trade of Newchwang, states that the area of production is spreading rapidly, and now includes many districts of Manchooria where the cultivation of the poppy was formerly wholly unknown. The plant is seen growing all over Shangking, and every town in the province is supplied from its yield. The sale of the drug goes on quite openly. The local authorities instead of enforcing the prohibitions issued from time to time by the Pekin Government, levy a tax of eighty taels per pecul on the manufactured article. In shops where this impost has been paid, opium may be bought at from Tls. 325 to 335 per pecul, but a good deal escapes the vigilance of the officers of the revenue, and is sold clandestinely at about Tls. 285. Its principal consumers are the poorer classes, who cannot afford so expensive a luxury as Indian opium. But the gentry also use a good deal of it, mixed in a certain proportion with the foreign drug. Its consumption is already interfering with the sale of the latter. In 1874, only 1,326 chests of Indian opium were disposed of in Newchwang, being 580 less than in 1873—a decrease of more than thirty per cent. The falling off in future years is likely to be still greater, if Mr. Mann is right in his opinion that the home grown article is capable of being considerably improved in quality. The idea gains ground, he says, that the coarseness and bitter taste which have hitherto unfavourably distinguished Chinese opium, are not due to either the unsuitability of the soil or to the unskilfulness of the cultivators, but simply to an unscientific method of manufacture. Efforts have been made to introduce a better system, they have yielded favourable results, and it is quite possible, Mr. Mann appears to think, that China may by and by produce as good opium as India. Time alone can show whether this opinion is correct, but it is that of a careful observer who has enjoyed unusual opportunities of mastering the whole question of Chinese *versus* Indian opium. And it is to a great extent confirmed by Mr. Medhurst, our Consul at Shanghai, who considers that "if *the import of Indian opium is* to continue, there must be a reduction in its cost to enable it to compete on more equal terms, with its Chinese rival." The prospect is an ugly one for the Government of India to have to face. The loss of its opium revenue would leave a large financial deficit to be made good by increased taxation. But in what direction can Indian taxation be increased? Land and salt have to pay as much as they can well be made to bear. Any proposal for raising the customs duties would have to contend against powerful interests at home. An income-tax has already been tried, and failed; shall we have to fall back on a tobacco-tax after all?"

***

THE jute trade is looking up. Within the last few days large orders have come forward from America: New York alone requires 2,000,000 gunny bags, and San Francisco 500,000. The mills have consequently not a bag left to dispose of and are again in full work. Shareholders are rejoicing over this improvement, and the prospect of future good dividends. They should not forget that they have in a great measure to thank Mr. Plimsoll for it. The present demand for bags is largely due to the prohibition, consequent on his exertions, of the stowage of grain on board ship in bulk.

***

SIR RICHARD TEMPLE is fully alive to the needs of the districts that are threatened with scarcity. He will himself, we hear, very soon visit Tirhoot, to see with his own eyes the condition and resources of the people. Steps have already been taken for the inauguration of relief measures; superintendents have been appointed to report upon the stock of grain in each district; and the sub-divisional officer of Seetamurhee has been directed to fix the boundary of the relief circles, and report immediately on the appearance of scarcity.

***

A TELEGRAM from London a few days ago informed us that a deputation from the Anti-slavery Society waited on Earl Derby at the official residence in Downing Street, and gave him the benefit

of their advice on the relations of Egypt with Abyssinia. It is astonishing to observe the amount of patience and politeness with which Secretaries of State receive such deputations. Lord Derby must, we should think, be privately a little irritated at being schooled in his official duties by these men. However, their motives are unquestionably of the most laudable kind, and to have received them brusquely, after the recent bungle of the slave circular, would have drawn down on the head of the Foreign Secretary a weight of unpopularity in philanthropic circles, which the members of Mr. Disraeli's Government cannot venture to incur. So the Foreign Secretary blandly replied that he was quite prepared to advise the Khedive to abstain from annexing Abyssinia, but that Government was not aware that any such project was afoot. He was also of opinion that if it were really true that Egyptian troops had violated Zanzibar territory, it had arisen from a misunderstanding, and in case of need, he said the Government would try to preserve good relations between Egypt and Zanzibar. While we sympathise to a large extent with the objects of the Anti-slavery Society, we cannot but think its members magnify their office a little too much, by so prematurely forcing their advice upon a minister of State.

***

A CONTEMPORARY supplies particulars of the career of Munzinger Pasha whose death together with that of his family and attendants in Abyssinia, was a few days ago reported. He was born in Switzerland, but went at an early age to Egypt. Having acquired a knowledge of Arabic, he commenced business in a mercantile house in Massowa. Business becoming dull, and his health failing, he went for a time to the hilly country of the Bogos where he was tenderly nursed by his hostess, a wealthy widow whom he afterwards married. He then spent several years in making constant journeys between the coast and the countries north and west of Abyssinia, and about twelve years ago he published the result of his researches in his *Ost Afrikanische Studien*. He afterwards become French Consular Agent at Massowa and subsequently held a similar post in the British Service, distinguishing himself as is well known, by his great services during the Abyssinian expedition. He was made an Honorary Companion of the Bath, and a corresponding Fellow of the Royal Geographical Society. When the British consulate at Massowa was abolished he was for a time out of of employment till Massowa and Suakin were transferred to the Khedive. In 1872, he was made Governor of these ports and the intervening coast, and *afterwards Governor* of Soudan with the rank of Pasha. He exerted himself with great success to develop the resources of that province, utilized the advantages of Port Mornington as a harbour, and extending telegraphic communication through the Soudan. It is supposed that while conducting an expedition for the purpose of annexing Shoa to Egypt, he fell victim to a night attack from a party of Isa Somalis and Dankalis, and that his force was nearly annihilated, himself and his wife being among the slain.

***

THERE seems to be a desire in some quarters to burke Mr. Verner's report on the abuses in the Calcutta Post Office. It has not yet been published, and the officials suspended by Mr. Verner are being quietly sent back to their desks, it is said. This is not as it should be. There is a wide-spread impression that the abuses in question are serious, and that the present state of the Post Office is anything but creditable to those responsible for its efficient administration. This view may, possibly, he erroneous, and the management and discipline of the Post Office so excellent as to leave nothing further to be desired. But then why has Government held back Mr. Verner's report? If all is as it should be, no one concerned has any reason to dread publicity. Again, why are the implicated officials allowed to resume their duties as if nothing had happened? Has a proper inquiry been made into each of their cases, and has its result been, in every instance, an honourable acquittal? We think that the community has a right to have this question answered.

***

MADRAS now glories in the possession of a real Duke as its Governor—the first man of so exalted a rank who has chosen India as the outlet for his powers of statecraft. A contemporary in an article somewhat uncomplimentary to former rulers of the "benighted" Presidency, points out that if the Duke of Buckingham has come to India to do the state service, and not to spend his time governing the Neilgherries, the slave of place hunters and pleasure-seekers, he must make a dead-lift effort to raise the administration of the Presidency out of the official rut and the mud of nepotism, even at the risk of an upset. The Duke has already given evidence that he is a conscientious and honorable man, and it is sincerely to be hoped that the rumor is a mere fabrication which states that, before consenting to take Office in Madras, he bargained for permission to reside for nine months of the year in the Neilgherries. Another danger is that having, as is exceedingly probable, come to Madras as to a mere stepping-stone to the Vice-regal *musnud* he may there supinely rest till the retirement of Lord Northbrook, which, it is now generally believed, will take place in a few months, shall clear his way to an eminence more worthy of a Duke. If he is as wise a man as we hope, he will use his time in Madras well to gain a thorough knowledge of India and her people.

***

MR. ATKINS, Secretary to the Railway Servant's Amalgamation Society has submitted to the Viceroy a scheme for the establishment of mill-colonies for the benefit of poor Europeans and Eurasians, which we must briefly summarise. He proposes that colonies should be established on the hill ranges in Bengal, Madras, and Bombay, in the North-West Provinces and the Punjab, and in the islands of the Bay of Bengal. He attributes the want of self dependence among poor Europeans and Eurasians to a feeling that the performance of menial duties would degrade them to the level of low caste natives, and he would accordingly prohibit the employment of native servants in the colonies, and would allow no natives to settle there. If colonies are wanted for natives, separate localities should be chosen. He would mark off each colony into one acre and five acre lots, the one acre lots to be in the locality most favourable for the site of a town, and one or more of the five acre lots to be given to those who wished to become agriculturists. The colonists would pay for their land by instalments, the first instalment to commence within two years after possession, and the whole to be paid within five years. The land would then become their own property on the understanding that they could not dispose of it to natives, without permission from Government. To those who at the outset require pecuniary assistance, Government would grant a loan which must be paid by instalments within two years. No large capitalists to be admitted. No charitable relief to be given unless it arose from a failure of crops. A Head of the Colony should be appointed by Government, and as soon as possible a volunteer corps should be formed.

***

A MEASURE of some importance has, we hear, been introduced into the Madras Legislative Council for the amendment of the Municipal Act. The gist of the proposal is that in place of the profession and wheel tax now in force, an octroi tax should be substituted for the purpose of obtaining the funds neccessary for the carrying out of the harbour improvements. Most articles of common consumption will be required to pay the new town dues, whether brought into Madras by road, rail, or sea. The present profession tax is held to be exceedingly objectionable, being a tax upon industry, irregular in its incidence, and inconvenient in practice. Some change is needed, but the difficulties in the way of the efficient and unoppressive collection of an octroi duty are considered by some of our Madras contemporaries to be of a very serious kind, and it will not be easy to guard against an extensive system of smuggling.

***

THE public distribution of School and College prizes, has come to be one of the features of the age we live in. The distribution day is to the pupils one of the great days of the year, and the managers of educational institutions, endeavour to add as much *éclat* as possible to the occasion, by engaging the services of some great man to hand over the prizes to the successful competitors. In the latest London papers, we read of Mr. Gladstone distributing the prizes at one institution, and the Lord Chief Justice at another; and the former gentleman thought the occasion worthy of a speech which fills three columns of a London daily. Certainly, as a London contemporaray remarks, "if young people will not study and compete for the rewards of knowledge in our day, it cannot at least be said that their lack of energy is owing to any want of encouragement on the part of our leading men, A prince was not more certain to appear at a tournament in the chivalric times, than a distingushed public man to preside over the distribution of scholastic prizes in our day." The remark is as true in India as in England for here our rulers and high men seem always pleased to get such an opportunity of showing their interest in the cause of education, and of giving it their warm encouragement. And none is readier to perform this voluntary service than Sir Richard Temple, who presided at the distribution of prizes to the pupils of the Doveton College and of the Doveton Young Ladies' Institution in the Town Hall, on Thursday last. Sir Richard has several times shewn this

favour to the Doveton, and in the course of the present year he has done it the still more substantial favor of renewing the Government grant-in-aid which had been for some years in suspension. On Thursday he delivered an interesting address which deserved attention, as do all the educational utterances of Sir Richard Temple.

***

WE direct attention to the letter in our correspondence columns signed "Accountant." We have no knowledge of the writer beyond his name and address, and the information contained in his letter, and we call attention to that information, not because we think the writer an exceptional sufferer, not because we suppose the injustice he complains of is rare or matter for a sensational paragraph, but rather because the evil and injustice, while they are very real, are, we believe, so common and so familiar, that the sufferers seldom care to address the public, and the public when it does hear of such cases views them with indifference. Only, as a rule, when the victims occupy a more commanding position than that of accountants, 3rd grade of the P. W. D. can their cry attract the interest of any considerable section of the public, and the Civilians' grievance of which we have heard so much, proves that redress is not easily found in any grade or department. We fear we cannot offer much consolation, or render much assistance, to our correspondent. He must not think us callous, but we fear both the public, and the Government will be found so. The evil complained of is briefly as follows. A set of men enter a certain department of the public service. They go through certain training involving labour, self-restraint, and self-denial, to pass certain examinations. These examinations professedly qualify the successful candidates for promotion to higher grades. But while the aspiring junior is toiling and hoping, to his mortification he sees an outsider with no special qualifications, either of education or experience, and without undergoing the prescribed training or coming to the test of the prescribed examinations, put over his head through the influence of some one whose simple word has power to take away the reward of industry, and give it to a protege as a mark of favor. There is something sadly rotten in the service and society where these things are done by men who are considered respectable and even honorable.

***

THE *Times* makes a somewhat unreasonable attack on Mr. Foster for the speech he recently delivered at the Edinburgh Philosophical Institution on the subject of the future relation between England and her Colonies. Mr. Foster is of opinion that the great aim of English Colonial policy, ought to be to maintain an intimate union in the future between the Colonies and the mother country, and he meets, satisfactorily we think, the arguments generally urged against that policy. He points out that the burden of taxation which the protection of the Colonies imposes on Englishmen is steadily decreasing, while the opinion that they neccessitate a needless expenditure on our navy, is a delusion. The protection of our commerce would need all the ships we have, although we had no Colonies to protect, and to keep them afloat would be a much costlier business if we have no Colonial ports in which to coal, provision, and refit them. And if it be possible that England may be involved in serious wars for the protection of some of her dependencies, it is certain that some of them would he able and eager to render her valuable assistance in her own wars. Mr. Foster is strongly of opinion that no colony should be cast off by the mother country, while it continues to manifest the least desire to retain the connection. The *Times* has no great faith in the loyalty of our colonies, and wishes apparently that they should be taught independence as soon as possible. It scouts an imperial policy, and declares that "it is our duty to dispel any remaining delusion that England can cover all the earth with her wings." The great question in dispute seems to be whether England ought to hold herself bound to protect her Colonies, in the event of their being attacked by a foreign foe. Mr. Foster thinks it would be cowardly to do otherwise, and the *Times* replies that "he might as well as call it cowardly in a father if he told his full grown son to take care of himself and his own honour, in as much as no nobody would do it for him." The *Times'* article is somewhat incoherent and inconsequential, and such writing is likely to prove as injurious as it is injudicious. If such sentiments were believed by our Colonies to fairly represent English public opinion, the effect would necessarily be to create a breach in their good-will and filial loyalty to the mother country.

***

WE extract the following from the *Indian Mirror* :—

Q.—Is the action of the British Government adverse to the spread of the Brahmo movement?

A. No, rather favourable. All State colleges and schools are disabusing the minds of native youth of idolatry and prejudices, and indirectly leading them into the Brahmo Somaj. These institutions are most helpful to the destruction of popular superstition and the progress of the Brahmo cause.

Our contemporary further observes that all educated natives who have any regard for religion and have not embraced Christianity, are Brahmos at heart, whether they take the name or not. These statements are worth noting. The Christian community is, we think inclined to look upon the Brahmo movement as of less importance than a few years ago. Perhaps this is a mistake.

***

NATIVE Christians in Mysore still labour, it seems, under disabilities, from which they have been long relieved in other parts of India. "It was on behalf of this numerous and ever-increasing class," says the *Bangalore Spectator*, "that last year the Judicial Commissionor addressed the Chief Commissioner with the view of inducing that high official to recommend to the Government of India that Act XXI of 1850, being an Act to declare that renunciation of caste or religion is not to affect the right of inheritance, and Act XXI of 1866, intended to have the effect of legalising, under certain circumstances, the dissolution of marriages of native converts to Christianity, should be applied to the Province of Mysore so as to place native Christians in this Province on the same footing, with respect to the important provisions of these Acts, with their fellow Christians in other parts of India." It seems that all that has been done with reference to this recommendation has been to refer it to Commissioners of Divisions for their opinions upon it, and the *Spectator* reasonably thinks that the various missionary bodies in Mysore should also be asked to express their opinion upon it. We should think it a matter on which little doubt or hesitation can exist, and we trust Government will soon give it its earnest attention.

***

THE London correspondent of a contemporary expresses himself strongly on the lack of legislative ability among the great majority of members of the English House of Commons. He attributes the low intellectual level to the manner in which seats are obtained, and the motives which lead many men to enter Parliament. It is quite true that perhaps a majority covet the honor less as a means of serving the nation than as a social distinction, and it is perhaps also true that, in spite of late efforts to abolish bribery and corruption, there are still ways and means of buying a seat in Parliament. And therefore *it is, says the writer, that* if some six hundred of the members were to deposit their hats with their names upon them, in the voting lobby of the party they belong to, they would do quite as much to aid their country as they can do by their presence in the House. This is severe enough, and it must be confessed there is some ground for severity. Yet it is perhaps convenient that a large majority of members should be men whose hats are more to be depended on than their heads, and who generally preserve the golden rule of silence. *They* are not the mischievous members. We confess to a fondness for the silent, and even stupid, members who never hinder or muddle a debate and who quietly vote with their party. We want a strong minority of eloquence and talent—genius if it can be found, but if talent and eloquence were universal among the mass of members, the floods of oratory, the mountains of wisdom, and the flashes of genius would be boundless and endless, and the real work done would perhaps be less than under the present reign of dulness, and the regime of hats whose owners are harmlessly smoking without.

***

THERE are signs that the faults of our present military system are at last becoming apparent even to those who view it through the spectacles of office. Lord Claude Hamilton, the Under-Secretary for War, in returning thanks for the toast of "The Army" at the Lord Mayor's banquet, concluded his speech as follows: It only remains for me to say that *what is left of the British army* is as ready as ever to do its duty in every part of the world. I ought to say that before many years have passed, I hope wise counsels may prevail in Parliament, *to restore the British army to what it was once; not an army existing partially on paper, but an army of blood and bone, which is at once able and ready to carry the old flag of England into every country of the globe.*" This comes nearer to an official admission of the truth than anything we have heard from a minister yet. The *Times* next morning took Lord Claude to task for his frankness, but without venturing to deny what, if not directly expressed, was clearly implied in his speech that the state of the army is as unsatisfactory as it well can be. The Government organs appear to have passed over the subject in silence, but we may safely take it for granted, that the

ministry is now fully alive to the fact that Lord Cardwell's scheme has utterly broken down. On no other supposition can we acconnt for the Under-Secretary for War permitting himself, or being permitted, to speak so plainly. The rumours of contemplated re-organisation must therefore have some truth in them.

***

We learn from the *South Australian Register* that the analysis of Australian wines, undertaken some months ago by Mr. L. A. Moody at the instance of Mr. Fallon of Albury, with the view of determining their alcoholic strength, has been completed, The experiments have incontestably established the fact that the alcoholic strength of the ordinary wines ranges up to 34 per cent., thus refuting Dr. Thudicum's theory that no natural Australian wine contains more than 26 per cent. of spirit. This testimony has obviously a most important bearing upon the question of raising the standard strength of wines, admitted at the 1s. duty in London, from the present maximum of 26 per cent. to say 30 per cent; and steps will of course be taken to have the facts brought prominently before the Customs authorities at home. A renewed appeal will also be made to them for a relaxation of what is now a prohibitory charge upon best Australian wines. If these could gain admission at the lower duty, Australian wine-growers would be in a position to compete on an equal footing with those of Europe, and we are confident as to the result. Really well-favoured, full-bodied natural wines, such as those of Australia, always find favour with consumers, and they certainly deserve to be placed on a better footing than the fortified rubbish sent to England from Spain and Portugal, instead of having, as at present, to compete with it at a disadvantage.

***

We learn that M. Maurey the author of *Animal Mechanics* and various other scientific works, has lately invented a curious instrument called the *Sphygmograph*. It is intended to register, in the form of a curve or series of curves, the beatings of the human pulse. On being attached to the wrist, a pretty mechanical arrangement produces, on a sliding glass, a varying curve, showing the condition of the pulse during the time for which the instrument is attached. The curves vary with the condition of the patient, and, given the same condition, appear to be constant; that is to say, a certain curve is produced by fever, and another by the effects of poison, and so on. As a means of enabling a medical man to know what the condition of his patient has been during his absence it may prove most valuable. To the hypochondriac it ought to be "a thing of beauty and a joy for ever," and those who are given to exceed, might do well to take warning from the—in all probability—wavy and unsteady appearance of the curve yielded by a morning trial in their case, and cry "hold enough."

***

The *Academy* states that Professor J. Buhler has started on a new tour of investigation, and is now in Cashmere. Later on he will visit Jummoo, Rajpootana, and Malwa. He has already met with signal success. He has found the Sutras of Lanjakshi to the *Kathaka Sakha* with a commentary, besides a great deal of profane literature. A *Rigveda* with a hitherto unknown accentuation has been discovered, as well as parts of the *Kathaka*, of which only one manuscript—that at Berlin—has been hitherto known. The *Rigveda* manuscript is handsomely written on Bhurja, in Sarada letters, and therefore inaccessible to the majority of Sanskritists. It is considered to be from four hundred to five hundred years old. Professor Buhler has made a new collation of the *Parangini* which has supplied about 1,600 annotations of the Calcutta and Troyer texts. Inscriptions and coins have also been found, and the Pundits have helped Professor Buhler to indentify many places hitherto not determined at all, or determined wrongly. A new translation of the work may be expected from Professor Buhler.

MUNICIPAL REFORM.

It has been said that late events in Calcutta have furnished fresh and convincing proof of the absurdity of setting up the institutions of a free country, or rather imitations of them, in a country like India, and some appear to take it for granted not only that municipal institutions here are a sham, but that they cannot be otherwise. But what is at one stage of a people's development a sensible and practical view of public affairs, may he persisted in till it becomes mere obstinate cynicism. And if late events in the Calcutta municipality have proved anything, it is that the so-called sham has now got so much earnestness and reality in it, that it will consent to be a sham no longer. It is possible to be defeated, and yet so to behave under defeat as to reap the advantages of victory, by convincing the party that is the stronger for the time, that the concession of just demands has become so necessary, that to persist in refusing such concession will be dangerous in the extreme. It is true that the independent Justices were lately brow-beaten and defeated. But they were driven from one position only; and that position, though of great importance, was not essential to ultimate success. No one looked upon the proposed election of Mr. Roberts to the post of vice-chairman, as more than a means to an end, that end being the exposure and correction of abuses in the management of municipal affairs. His election was prevented by such means as we know, but the determination to seek reform was strengthened by defeat. And though we could not but regret that so well qualified a candidate was rejected, Mr. Roberts himself will be unselfish enough to rejoice with us, if the indignation and effort aroused by his defeat should lead, as there is ground to hope, to radical reforms in the municipal constitution. If the superior powers intended merely to amuse themselves, and content the citizens with a municipality that was a toy and a sham, it has now been discovered that communities, like children, grow beyond the use of toys, and call loudly for realities in their stead. For a time, the toy is not without its uses. The child is father of the man, and the toys that are put into his hand sometimes give a bent to his manly energies. Our Calcutta municipality, in so far as it may be admitted to have been a toy and a sham hitherto, has at least served this useful purpose; and the time has now come when it must give place to a substantial reality. Sir Richard Temple sees this, and it is well that he does so—well for his fame as a ruler, and well, we trust, for the capital of his province.

In our last issue, we expressed ourselves strongly in disapprobation of his continued inaction—more strongly, perhaps, than we should do were we to write again on the same subject. But we are less inclined to look backward than forward. He has pledged himself to reform, and since he has done so, we are disposed to place confidence both in the sincerity of his intentions, and in the practical sagacity that seldom fails him in action. It has always seemed to us, that his greatest weakness as a ruler is a lack of earnestness, or it may be more correct to say that he is too seldom in earnest. But when his earnestness has been thoroughly aroused, he is by no means lacking in the wisdom and energy necessary for its translation into action. Circumstances, too, have arisen in which he can, by a wise deference to public opinion, confer a lasting benefit on the city, and in doing so earn present popularity, and a name that will live among the names of the rulers whose administration marks an era in the progress of Calcutta and of India. For he may frame a municipal constitution that will be in the first place a boon to Calcutta, and afterwards a model for other cities to imitate. And we trust that he is wise enough to discern, that he ought not to limit himself to the simple granting of such concessions as are necessary to satisfy the ratepayers for the time, but should seize the golden opportunity of proving his genius for organization, by establishing in the capital of India a system of municipal government, which may be a pattern for other Indian cities to copy, when they arrive in turn at the stage when such institutions are practicable. Sir Richard's first speech on reform, has met with very general approbation, and deserves it. It is liberal and encouraging, as a voluntary statement of the general character of the changes to which he is prepared to promise assent. It is, at the same time, as was perhaps unavoidable, too vague and indeterminate on several points, to afford either perfect satisfaction, or fair scope for adverse criticism. We have no intention of indulging much in the latter, though we may indicate certain reasons for not yet being able to cherish the former. The confidence which, as we have said, we are inclined to repose in Sir Richard Temple, is grounded, less upon his statement of the concessions he was willing to promise, than upon our conviction that when once roused to earnest action in compliance with public opinion, he is too sagacious and too thorough to dwarf his policy and injure his reputation, by an incomplete and unproductive measure of reform. In the first place, then, we

have not perfect confidence in Sir Richard's Council. In the introduction of his speech, he guards himself very carefully from seeming to take for granted that the Council will sanction all the reforms he is willing to concede, or that it will sanction them in the manner he indicates. We cannot, indeed, suppose that he will bring forward half-hearted proposals, and then shield himself from public criticism behind the reluctance of his Council to sanction them. But all his Councillors are not so favorable to reform as Sir Richard now declares himself, and we earnestly hope that he, on the one hand, and the public on the other, will make it plain to them, that His Honor's Reform Bill must not be stultified in Council by illiberal amendments. We may trust our daily contemporaries to bring public opinion to bear strongly on the discussions in Council, and Sir Richard, being, as we trust, fully in earnest, will we hope succeed in communicating like earnestness to his advisers. It is their will we doubt ; not their wisdom.

Another ground of apprehension is the absence from the speech of any reference to the future mode of appointing the Chairman of the Municipality. We understand Sir Richard to have indicated all the important changes to which he was prepared to assent, and it seems a plain inference that he does not see his way to sanction any change in this respect. This, we fear, is the one point at which reform will be stoutly resisted. And we also fear that no constitution, however liberal in other respects, will meet the wishes of the community, or prove a certain benefit to the city, so long as the Chairman continues to be necessarily a civilian appointed by Government. While that is the case, it will be of comparatively little consequence how the Municipality is, in other respects, constituted. A powerful civilian in the position of Chairman, will never be likely to look upon himself as the servant of the public ; and, if inclined to play the despotic ruler and thwart the wishes of the intelligent portion of the community, there is too much reason to fear that, for a long time to come, he will be always able to command a majority of votes at a division. Under any system of election, there must be a large number of native commissioners and a few Europeans, too pliable to the wishes of an energetic and arbitrary Chairman. The community will we trust, insist forcibly on some concession upon this point, or all other concessions will run great risk of being utterly fruitless. The conduct of Municipal affairs must not be left to depend so entirely on the character of the Chairman as it will do, if he be necessarily a civilian appointed by the Lieutenant-Governor—unless indeed the votes at a division were to be by ballot, and we suspect that is a method little likely to find favor at present.

The qualifications of voters is a subject we shall not at present discuss. Sir Richard proposes that every one shall have a vote, who pays a certain sum under the four heads of rating, the house rate, the lighting rate, the police rate, and the water rate. With his opinion as to the amount, we are not at present disposed to quarrel. "It will be a question," he says, "of time and discussion, and I can hardly indicate the precise sum at this moment that should be made the limit of qualification, except I am *sure* it ought not to be more than Rs. 50, and I *think* it ought not to be less than Rs. 20." It will not, we think, be thought advisable to fix the limit lower than Rs. 20, and perhaps the intelligence of the town will be more fairly represented, if it be fixed at a somewhat higher point. We must leave also for future discussion, when more definite proposals come before us, the measures to be taken to secure a fair representation of the European community. We have the example of Bombay as a warning not to allow the European vote to be swamped, and the servility of so many native Justices to the present Chairman, is a warning nearer home, which ought to have effect. But His Honor will have some evil counsellors when the matter comes up for discussion, and we trust he will make a firm stand against their suggestions. The extent of the compulsory powers which Government shall continue to exercise over the Municipal Commissioners, is another point on which we at present forbear to enter. Sir Richard thinks that the points on which Government ought to retain final authority are "the ordering of particular works of public utility to be executed, the levying or limiting of taxes, and fixing the strength of the police establishment." On these points, Government must certainly retain the power of exercising a veto, and that we incline to think would be sufficient.

Sir Richard will doubtless re-consider his opinion, that the election of Commissioners should be for four years. Two, or, at the utmost, three years is certainly long enough. If the term were for four years, isolated vacancies would be constantly occuring by the retirement of European Commissioners, whereas retirements would be comparatively rare if the term were for two or three years. And although His Honor's dread of the turmoil of an election once in two or three years, might be reasonable in a European city, we are inclined to think that frequent elections would prove an excellent stimulant to the citizens of Calcutta, and one that is greatly needed. Powerful influences exist here to repress public spirit. Enlightened self-interest does not so certainly kindle and feed it, as it does among English rate-payers. The remark applies of course to the European residents, who, in many cases, contemplate so brief a sojourn, that, if they succeed in business, they are tempted to treat municipal matters as of no importance to them. And unless a keen interest in the public business of the city be manifested by European residents, indolent and apathetic native gentlemen can hardly, without such example and contagion, be fired with municipal ardour. Now, if enlightened self-interest does not inspire men with public spirit, the circumstance of climate and the habits that the climate renders necessary, tend to repress the natural activity and love of excitement that often lead men into public life. And they will always be a minority in every community whose public spirit is first aroused by pure disinterested anxiety for the public weal. But it is unnecessary to prove what is so well known a fact, that public spirit and lively interest in Municipal affairs in India stands at present in need of constant stimulants. A biennial or triennial election would furnish a stimulant of the kind that is needed, and, together with the possession of a considerable amount of self-government, would soon produce a vitality and energy of public spirit in Calcutta, which would make this city, more than it has ever been, a centre of vital impulses in the Empire.

THE SUEZ CANAL.

THE purchase by England of the Khedive's shares in the Suez Canal is suggestive of results the most important, and of ideas which may never be realized, but which force themselves upon the mind of every spectator. The Empire of the Grand Turk is going to pieces. It is breaking up, as, at the commencement of the last century, was that of the Great Mogul. The principal feudatories are making themselves independent: rebels keep the field for months ; the exchequer is empty; and hostile neighbours interfere in the internal affairs of the state. And again we see England appear on the scene, purse in hand, ready to buy up the effects of the dying man. We have the same protestations that her objects are purely commercial. We wanted from the Mogul, only the right to purchase some zemindaries round our factory at the village of Calcutta, and to build a small fort there, and we were ready to part with large sums for these privileges. In Egypt, we ask only for the State shares in the canal. These are small beginnings, and appear perfectly innocent. It is only when we remember the effects of the first bargain, that we can foresee consequences of moment from the second. We know the old story of the connexion between a western and an oriental power. Suppose confusion in Egypt, a disputed succession, an insurrection of ryots. England has material interests to protect, she must extinguish the blaze. The king we have defended, turns tyrant. England can support no man, as Lord Northbrook wrote to the Gaekwar, in doing wrong ; she interferes to secure the good government of the people. The king objects to being restrained, flatters us with fair words, secretly corresponds with our enemies, and on some dark night there is a Sicilian Vespers, and every white man who can be seized, is slaughtered. Those who can get together in little knots defend themselves against the whole power of the State, and call to their countrymen at home for rescue. Then comes the expedition of succour, followed by the expedition of retribution, and the province is

in our hands. Whatever form the government subsequently assumes, safeguards are provided against another massacre :— that is to say, we hold military possession of the country.

Now, it is certain that we desire none of these possible consequences of Lord Derby's investment in Suez scrip. Our empire is large enough as it is, and we have no wish to extend its boundaries. Our responsibilities in countries which do not belong to us are great and burdensome, and we do not wish to increase them. Why then do the public at home and in India unanimously approve of this measure? It is certainly not through any mistake as to its real nature. Had the shares been bought six months ago, many would have supposed that our action was taken with a view to benefit commerce, and with no idea of political results. It would have been said that the Suez Canal Company had given us great trouble, that it refused to be bound by the decision of the Constantinople Conference as to rates, that Monsieur Lesseps insulted our flag when he wrote to the Admiralty that our ships of war would be stopped if they did not comply with his unauthorised rules, and that the best way to insure our merchants from annoyance, and our government from irritating negociations with a private company, would be to buy up the whole concern. This view might have been plausibly supported before the Eastern question was re-opened. It will now be entertained by no one. Russia, Prussia, and Austria have acted as if the affairs of Turkey concerned them alone, and as if the nation which has hitherto taken the lead at Constantinople, could be excluded from all share in the negociations. Mr. Disraeli replied that "England had in the East interests which she meant to defend"— vague words, but which, coming from a Prime Minister, were at once taken as conveying a definite though hidden meaning, to be afterwards explained by events. Within a few weeks, the world is informed that England has secretly secured a paramount interest in the highway which connects Europe with Asia. That is her answer to the manifesto of the three Emperors. They have not consulted her in the affairs of the Danube : she acts without them in those of Egypt. Her action is openly and almost ostentatiously of a political character. Every one at once perceives that it is the commencement of an active policy in Egypt, that it is designed to render the Suez Canal *one of our Queen's highways*. Why, then, we may again ask, does this step in advance cause such exultation? It is because we are all convinced of its absolute necessity. In this age, nations cannot stand still, any more than individuals, if they would escape ruin. The course of commerce changes ; the frontiers of great neighbours are moved forward towards our own ; old allies are struck down ; hostile alliances spring up. Active and aggressive nations are always ready to point the finger of scorn at those of a more quiet and peaceful disposition, and where violence is common, it is not safely to be despised. In order to maintain our power, and even our independence, we must be up and moving like the rest. We must be prepared to take our share of the dangers and responsibilities of stiring times, certain that there is less risk in so doing than in lying supinely on our backs, until the knife is at the throat. In this particular question of the Suez Canal, we have done our best to prevent all complications. When the Czar Nicholas proposed that we should take Egypt, leaving the Danube to him, we indignantly rejected the proposal, and, after we had fought and conquered to maintain the *status quo*, we claimed from the Porte no reward. We opposed the making of this Canal, invidious as was the task of attempting to prevent a company of speculators from completing a work which would greatly facilitate commerce. Lord Palmerston remonstrated on the subject so warmly, that Napoleon declared that the canal meant war with England, and tried to stop the work. Since it has been open, we have not interfered unnecessarily in Egyptian affairs. It is only now, at the last moment, when the Russian advance in Asia, and the attitude of the allied Emperors in Europe, renders it absolutely necessary to secure our communications, that we have come forward to show that we, too, know how to look after our own interests. It will soon be apparent that the opening of the overland route has rather strengthened than weakened our position in the east. If in the old days, we held the Cape and St Helena to guard our path, we have now Gibralter, Malta, and the Canal, which will, we hope be rendered as safe at its entrance as either of these fortresses, and a Torres Vedras along its line.

REQUIESCAT IN PACE.

Land in the N. W.

LAST year the Government of the North-West Provinces published a collection of papers which would at one time have created a good deal more sensation than was actually the case. Their origin was on this wise. In May 1871, Lord Mayo recorded a letter in the Home Department on the subject of certain letters from the N.-W. Provinces re-opening the whole question of the settlements in the N.-W. Provinces. In doing so, he was possibly inspired by the present Lieutenant-Governor (then Mr. Strachey and a member of the Viceregal Council) for a Minute by the hon. gentleman, of a somewhat earlier date, follows immediately upon the Government letter in the papers under review. The gist of the letter was to draw the attention of Sir William Muir, the then Lieutenant-Governor, to the facts disclosed in pergunnah Bághpat, and the Bolundshahr district ; and to draw from him the clearest available expression of his latest opinion upon the subject.

Sir William thereupon sent instructions to his Revenue Board, by whom again enquiry was made of various selected officers ; and, on the 2nd March 1874, the reply which had been so long incubated, was laid before the Government of India. In the words of the author of Hudibras,

"After much fiddle faddle
The egg proved addle."

Omne vivum ex ovo. It is hardly changing the metaphor to say, that the project which Sir William had been nursing for fifteen years, received its quietus from the hands of him who had been one of the authors of its being. The reasons for this infanticidal act, are stated with natural reticence in the letter of the Secretary to the Government of the North-Western Provinces, and are made further apparent from the appended letters and reports.

We cannot here undertake to analyze the whole of these papers. Many of them are merely the more or less intelligent essays of young gentlemen, desirous of showing how to reconstruct from its basis, a society with which they had but a superficial acquaintance. But there is among other really valuable matter, a very clever letter by Mr. Auckland Colvin, at present Secretary to the Government of the Province, through whose hands the correspondence passed in virtue of his position as Secretary to the Board. The letter is not only interesting in itself, but saves the trouble of much research among the lucubrations of less attractive contributors. The style is polished and apparently cool, yet evidently of well tempered metal, and well suited on occasion, for being used as a weapon of offence. Writing with a foregone conclusion, it is not to be expected that he would give much quarter to his opponents ; but his peroration is so full of sense, and so unusually warmed with a feeling that the interests of the native public are a reality and not mere diagrams in a proposition, that we cannot do better than quote a part of it *verbatim*.

"The conclusion which I think may justly be drawn from "the whole matter, is, that the time has not come when it would "be fair or equitable whether to the government or the people, "to introduce a permanent settlement, and that the question "can, without injustice to the people, who really only want "to have a little peace and quiet, lie over until recent settle- "ments are approaching their term. The people do not insist "on a permanent settlement ; the moment for granting it would "be unfortunate."

Thus schooled by an earnest subordinate, Sir William at length gave way, though not with the best grace. The old advocate of the scheme, is brought to admit that, like the Government of India, he too was startled by the phenomena presented in pergunnah Bághpat. It was found that the total demand at prevailing rates ought to be £24,000, whereas the settlement officer could only venture to raise the demand to £21,000 ; and up to that time it had been only £14,000 ; this now historical tract, it will be remembered, having been that

in which the full limit had been supposed to be reached when under the conditions laid down by the Secretary of State—a permanent settlement might be introduced. Sir William proceeds to confess that he had hardly recovered from the surprise caused by the eccentric and ungrateful behaviour of this chosen subdivision, when his convictions were still further unsettled by a portentous rise of rent rates in the district of Bolandshahr. He then, after some skirmishing, returned to the satisfaction which the people would derive from the knowledge that their incomes would not be subject to sudden diminution at the end of the thirty years, for which the present settlements have been concluded. This not very relevant truism, perhaps hardly justified the labour that had been expended upon its production, and it was probably under some perception of its incongruity, that Sir W. Muir went on to explain the nature of the remedy that he proposed to recommend.

It would serve no useful purpose to keep our readers in suspense, as to the judgment delivered at this late period, and on this certainly not unimportant question, by the "highest living authority." Pressed as to what he really does want, if disposed to concede to the logic of facts the inappropriateness of a permanent settlement, Sir William finally replies that he thinks the question had better be adjourned for thirty years. And so far he was no doubt right and wise. But, at the risk of what he calls "giving advice to posterity".he goes on to add that it may then be found a good plan to *raise the existing demand ten per cent, all round.* In other words, the best way to avoid diminishing a man's income, will be to take one-tenth of it suddenly away from him. Nothing more has been heard of this remarkable proposition nor of the discussion in which it originated. And, let us hope, nothing more ever will.

The objections to it are strong; and, when combined with its total inapplicability, irresistible. Not only is it in no way calculated to meet the evils attributed to the system of temporary settlements, but it is so evidently unfair that its author had to admit that, in backward tracts at least, a new settlement would still be found indispensable. More than this—to use the *ipsissima verba* of Sir William "the assessment of a "rateable percentage would press more upon the estates whose "revenue was already heavy, than on those on which it was "light." The only reply to this fatal objection that occurred to the experienced minds of the Lieutenant Governor and his secretary, was that "such divergence and variation "of burden are inherent in property, and are in themselves no "real disadvantage." An argument which applied to physical, in place of pecuniary tasks, would justify the superintendent of a jail who should make his female prisoners carry heavier loads than the men, and the convalescent more than the healthy.

We purpose hereafter to sketch a system which, in our humble opinion, seems best calculated to give the people the benefits of a Permanent Settlement, without saddling them with its evils: a system, we may add, which is adumbrated in several of the papers before us. In the meanwhile, we may conclude in the racy and vigorous language of a native revenue official, well-known in the N.-W. P., who, undeterred by the known proclivities of his Chief, thus expresses himself:—"In accordance with the old usage of this country it is admitted on all hands that the Government is entitled to its share of the land revenue. The revenue derived by the Government from the land is the safest of all taxes; and if limited to a reasonable extent, can give no dissatisfaction to the payers. Then why the talk of a Permanent Settlement? The people do not grudge the Government its share of the assets: less out of less and more out of more. . . I should therefore like the Permanent Settlement to be discussed no more, at least for the present generation." In which aspiration of Moulvie Nuzeer Ahmed we cordially concur.

NORMAL SCHOOLS.

THE Lieutenant-Governor's recent minute on the subject of Normal schools for vernacular instruction, deserved earlier notice from us. It is valuable as furnishing fresh evidence that he is fully alive to the interest and importance that belong to vernacular education in these provinces, and when we have said that Sir Richard Temple has fairly realised the importance of any undertaking, we may always take for granted an admirable activity and energy in initiating or forwarding it, and a large measure of practical sagacity in the adaptation of means to the end he has in view. We are not prepared to concur unhesitatingly in all the views contained in this minute, but we do so sufficiently to approve its spirit and intention, and we are far more inclined to strengthen his hands as far as our approbation and assistance can do so, than to indulge in unfavourable criticism of those views with which we are inclined to differ.

The great importance of vernacular education might be set forth from various points of view, but it is sufficient to state as does the minute, that of the 458,000 scholars attending, according to the latest reports, at schools of the middle and lower classes, 391,000 were learning in the vernacular only, and in fact attending schools where English is not taught. The remaining 67,000 were attending schools where a certain amount of English is taught, but a considerable portion of this number were not learning English. The exact proportion of these has not been ascertained, but His Honor is of opinion that while there are certainly five out of every six, there are perhaps eight out of every nine of the boys at school, who learn in the vernacular only. This proportion will certainly increase, as primary education expands. As by far the greater number of the boys of Bengal will thus receive instruction through the medium of the vernacular, it is of the utmost consequence that the quality of the instruction should be as good as it can be made. It is, therefore, of the first importance that the teachers employed should be well qualified for their work, and the aim of this minute is to ensure that in future no teachers shall be appointed but such as have the requisite amount of education. What that amount should be, is a question on which we are inclined to differ from Sir Richard in theory, though perhaps his is as lofty a theory as can at present be easily reduced to practice. It is our decided opinion that every teacher in every class of elementary schools, should have not only as much education as can be secured for him, but a regular professional training as well. We think Sir Richard undervalues the importance of such professional training. He inclines to the opinion that to make a man a teacher, it is enough to make him a scholar. It may be so in the case of men who are born with a peculiar aptitude for teaching, but experience proves that these are comparatively few. It may be so also in the higher walks of the profession, where the instruction is conveyed mainly in the form of lectures, but very few untrained men are capable of successfully imparting the knowledge they possess to children in an elementary school. A Normal School which affords instruction to the student in the subjects he will afterwards have to teach, but gives no training in the art of teaching, or, in His Honor's words, the art of pedagogy, performs only half the functions of a Normal School, and is, strictly speaking, not a Normal School. Sir Richard's ideas on Normal School education are not satisfactory to our minds, but we object less to them in view of what is at present practicable, than because he seems to sketch what he thinks a perfect ideal. He is anxious, and wisely so, to diminish as much as possible the expenditure on these institutions. But the importance of keeping the State expenditure low, ought not to keep the quality of education low. The safe and simple rule is to lower the former as far can be done without lowering the latter.

We shall state briefly what is the system of Normal Schools sketched in the minute before us. No institutions of this nature are wanted for the higher education, for there is an abundant supply of well qualified teachers for English Schools, and, as we have just mentioned, Sir Richard thinks a professional training unnecessary. The vernacular schools, then, for which a supply of masters is to be provided, are divided into three classes. These, beginning with the lowest, he calls primary, intermediate and middle class vernacular schools. In the primary schools there are at present many *gooroos*, who stand in need of training, but when these have all been trained or got rid of, no Normal Schools will be needed to provide teachers for the primary or intermediate schools. All that is thought necessary is that no master shall in future be appointed to a school of one class, who has not been trained up to a standard above that class. It appears, then, that a man who has passed through an "intermediate" school is to be held eligible for a mastership in a "primary" school and masterships in intermediate schools may be held by men who have been educated in a "middle" school. It remains then only to provide the means of educating masters for the middle schools, and four or five Normal schools will, His Honor thinks, be sufficient to supply masters for the whole of Bengal. Thus the Normal

schools in which the *gooroos* are trained will gradually pass out of existence, and those of the first grade only will remain. The five of these now in existence are at Calcutta, Hooghly, Dacca Rajshahye and Chittagong, respectively. And it is proposed either to amalgamate the Calcutta and Hooghly schools, or connect the former with the Sanscrit College. Of the two alternatives we would recommend the former. On the scheme described we have but one remark to make at present. We greatly doubt if a person who has passed only the intermediate standard, will be qualified for a mastership even in a primary school. We think it would not be extravagant to insist that no one shall be appointed a master in any school who has not been trained in a middle school, We presume, however, that Sir Richard has carefully limited himself in this minute to what he sees to be immediately practicable, and that he expects a time to come when the standard may be raised. And as we know him to be a real friend to the cause of education, and have great confidence in his practical sagacity, we simply state what is our own opinion without forgetting that it is easier to theorise than to organise.

On one point only will we digress from the minute. Sir Richard is anxious to do away with unnecessary expenditure :—would it not be possible to make a large saving by the appointment of a different class of inspectors for the lower schools? The present highly educated and highly paid gentlemen are thrown away upon such work. We do not deny that there are advantages arising from the employment of accomplished scholars and distinguished educationists as school inspectors, but such men could be better employed, and the work could he done almost, if not altogether, as well by men less accomplished and less highly paid. We would advocate the employment for the inspection of primary intermediate schools of men who have had experience as practical elementary teachers, who would be glad to do the work for much smaller salaries. A few good men of this class would, we are sure, be available, and the suggestion is at least worthy of consideration.

We return to the minute, to notice the only other point to which we need advert. Sir Richard proposes to abolish the stipends paid to the students at Normal Schools, and to grant the funds necessary to enable them to go through the course, no longer as stipends, but as scholarships. The objection to the present system is that they are not only educated gratuitously but are paid stipends "in order to induce them to accept the instruction whereby they are to earn their own living." Sir Richard thinks that this objection would lose its apparent force if the money were granted like other scholarships by competition. At present, scholarships are granted to *the middle class vernaculars schools* which are tenable in the higher class English Schools, and to these he proposes to add a certain number of scholarships which will be tenable in the first grade Normal schools. The wisdom and propriety of this change are incontestible. We hope Sir Richard Temple will continue to devote a considerable share of his time and energy to the great cause of education among the masses in Bengal. The importance of the work to be done can hardly he exaggerated; the time to do it has come; and Sir Richard is admirably fitted to be the man.

DR. JOHN WILSON.

WHEN, with deep regret, we last week announced the death at his house in Bombay of this veteran missionary and distinguished scholar, we proposed to attempt in the present issue something like an estimate of the value of his long and laborious life-work in the west of India. But we feel that to do so would be presumptuous in us, who, though we have long regarded him with reverence and admiration, are destitute of the accurate knowledge and many of the qualifications requisite for such a task. The main facts of his life are, indeed, before us, but no mere enumeration of these, no statement, however comprehensive, of his achievements, no panegyric, though at once truthful and enthusiastic, would furnish sufficient data for finding the value of such a man as Dr. Wilson. While his scholarship and immense social influence, made him the most notable man in the West of India, it was, after all, as a Christian Missionary that he was truly great, and it is no mere form of words to say that the immense value of his services to the missionary cause, can be sufficiently estimated and rewarded only by the Master whom he so faithfully served. We shall attempt nothing beyond a statement of the few facts we have gathered regarding his life. He was born at Lauder in Scotland on the 11th December 1804, and was thus when he died within ten days of the end of his seventy-first year. In May 1828, he was licensed as a preacher of the Gospel by the Presbytery of his native town, and in the following year, under the auspices of the Scottish Missionary Society, he sailed to Bombay as a missionary, bringing along with him his first wife, Margaret Bayne. He arrived in Bombay, sometime before the arrival of Dr. Duff in Calcutta, and has therefore been justly called the Father of Indian missionaries. He began his Indian labours at Hurnee, and there made himself master of the Marathee tongue. But he soon made the city of Bombay the head-quarters of his mission, and in a marvellously short time the young Scotch missionary was recognised as one of the leading men in that part of India. It would be interesting to have from a skilful and well-informed pen, a comparison of the systems, by which Mr. Wilson in Bombay and Mr. Duff in Calcutta set themselves to elevate the intellectual, moral, and spiritual condition of the natives of India. Both saw clearly that something more than mere preaching was necessary, but while Duff determined, to communicate to the natives a knowledge of English, and impart a knowledge of Christianity and western civilisation through the medium of his own tongue, perhaps too much ignoring the value of a knowledge of the vernaculars, Wilson, while striving to forward their education in English, devoted himself, from the first day of his arrival, to the acquisition of the languages of India, and sought to reach the minds of the people through the medium of their vernaculars, and by means of an intimate and extensive knowledge of their manners and customs. The choice of each was remarkably appropriate to his peculiar natural gifts. It does not detract from the value of Dr. Duff's labours in the cause of educational missions, to say that he wisely chose the English tongue as the medium through which to instruct the natives, for, though a great organiser, he was no linguist, and when he left India had not we believe acquired an accurate knowledge of a single Indian tongue. Dr. Wilson, on the contrary, was distinguished in his college days, for his linguistic talents, and the fame be afterwards acquired as an orientalist is well-known. We believe he was examiner in the Bombay University after its establishment in 1857, in Sanscrit, Persian, and Vernacular. His first educational work in India was the establishment of vernacular schools, and he has stated that after he had been a year in Bombay their pupils numbered 853, of whom 148, were girls. He was greatly assisted by his first wife, but after six years of arduous toil she was removed from him. But he did not faint or flag in his labors. He was no mere book-student, but gained his extraordinary knowledge of the people, their customs and characteristics, by travelling among them, making periodical tours in the Konkan, the Deccan, Guzerat, and Kattiawar, and this is how he speaks of his experience of the people :—

"From the savage (as by some he is esteemed) in the forests of the "Konkan, the Barya, the Nerbudda, the Taptee. and the mountain ranges "of Maharashtra, Gujerat, and Rajpootana, I have met with the greatest "kindness, as well as from the sage and disputant of the great shrines of "Indian pilgrimage. Seldom, from my desire to find access to the people "and to gain their confidence, have I troubled myself to carry with me a "tent when in daily stage, performing journeys even of many hundred "miles in extent; but, except on the rarest occasions, I have never been at a "loss for accomodation either by day or by night. It never was a primary "object with me in this country to hunt for antiquities or for curious "objects in nature; but I never avoided turninig aside to look at them "when they came near my path, nor failed to attempt to find out their "bearing on the obscure history of India or its natural productions."

The first educational institution in Bombay, not connected with the government, for the higher education of the natives through the medium of English, was established by Dr. Wilson in 1832. In 1835, he was unanimously chosen as President of the Bombay Branch of the Royal Asiatic Society, of which society he was made Honorary President when at a later period he departed on a visit to Scotland. In 1843, he travelled overland to Europe, and by the way he collected the materials for his work on "The Lands of the Bible." He also published in 1843, a work on the Parsees. His vast stores of learning and information are not displayed to advantage in his published works. He had no graces of diction, and no great lucidity of style, but some of his works have nevertheless been recognised as of great value. Their solid worth is greater than their general attractiveness. The year 1843, was that of the disruption in the Scotch church; and Wilson, like the other missionaries, cast in his lot with the party of freedom, and the Free Church of Scotland has long recognised him, as one of her most distinguished and valuable men.

In 1847 he returned to Bombay bringing with him his second wife, who was his help-meet in his missionary labors for twenty years. When the Bombay University was founded in 1857, Dr. Wilson was one of the original Fellows, named in the Act of Incorporation. He was an examiner in oriental languages, a member of the Syndicate, and for about six years Dean of the Faculty of Arts. After the death of his second wife, he paid his second and last visit to Scotland, in 1870, and his church honored him by choosing him as Moderator of her General Assembly. He came back again to India, resolved, we believe, to die like a brave soldier on the field. He belonged to the class of Anglo Indians

now so few, who really looked on India as their adopted country. He might have spent an honored old age in his native land, but he must have felt that it was in India alone where he could excel in usefulness. Such men as Dr. Wilson never retire from the labor of life, till disease and death strike them down. He had for a considerable time been in feeble health and symptoms of an affection of the heart had shown themselves. It was quite recently that we heard alarming news of the state of his health, but from later intelligence we hoped he might still be spared for a little longer. Our readers are aware of the graceful act of Lord Northbrook in paying a visit to the good old doctor, when he was in Bombay a few weeks ago. Sir Bartle Frere paid him a complimentary visit in the name of the Prince, and it was thought by some that the Prince himself might have found time to see the venerable missionary, who though never inattentive to his proper duties, was so will versed in public questions and so great an authority on all Indian matters, that he has been the confidential adviser of a long list of Bombay Governors, and has often given valuable counsels to Governor-Generals. Perhaps the excitement connected with the recent doings in Bombay, quickened the progress of his disease, but we had not heard of any fresh alarming symptoms till the telegraph flashed us the news of his death on the evening of the 1st December.

His funeral was one of the most notable that Bombay has ever witnessed. It was attended by all classes and creeds, from the Governor to some of the poorest natives of Bombay. The Scotch cemetery in Marine Lines, which had been closed since 1868, was opened in order that the Doctor's remains might be laid beside those of the wife of his youth. *Requiescant in pace*.

THE MALAYAN PENINSULA, AND THE BRITISH SETTLEMENTS IN THE STRAITS.

THE Malay Peninsula, as most of our readers are aware, is the southern extremity of the continent of Asia, and is about 750 miles in length, with a breadth varying from 60 to 130 miles. It separates the Gulf of Siam and the China Sea on the east, from the Bay of Bengal and the Straits of Malacca on the west and south-west. It is divided into ten states *viz.* Patany, Quedah, Kelantan, Perak, Tringanu, Kimaman, Pahang, Salangore, Rambow, and Johore. The main topographical feature of the Peninsula, is the chain of mountains which traverse its entire length. In the northern portion the mountains cover the largest part of the country, having only a few miles of level tracts on either side. Between 4° and 6° north latitude the plains are more extensive, varying from 20 to 25 miles on either side of the central range, that extending to the China Sea shore being larger than that stretching out towards the western coast. Further south the mountain range subsides into hills, while at the extreme south it becomes strongly undulating. A few isolated hills rise to a moderate height along the western coast. Mount Ophir, a detached mountain 30 to 40 miles east of Malacca, is about 6,000 feet in height. The principal rivers on the west coast are those of Quedah, the Perak, the Salangore or Laroot river, the Singi, the Muar, and the Batupahat. On the east are the Johore, the Sidili, the Indan, the Patang, the Tingoran, the Tringaun and the Klantan. Those running through the state of Perak are the Krian, the Laroot, the Bruas, the Dinding, the Perak and the Boina. Their general course is from east to west. Those taking their rise in the mountain range are described as having low swampy banks covered with mangrove, nipah, nibong and other trees. Their channels are muddy, except near the estuaries, where sand banks and coral reefs are met with. The mouths of the rivers are frequently obstructed by bars. The Perak river is one of the largest and most rapid streams in the Peninsula. It is said to be navigable by vessels drawing 12 feet, but the channel is tortuous and intricate, and is probably not accessible to any but small craft at any distance from its mouth. Its banks are generally covered with dense brushwood, with here and there a village. The most noteworthy are Kota, Lumut, Bandor, Pantang, Panjang, Passir Garam. The chief generally resides at Passir Sagong or Passir Pulye about three or four days pull from the mouth, or between 45 and 60 miles. It is believed that there are, or were, several stockades commanding the approach by water to those places. The climate of the Peninsula may be described as generally humid; the wet season is the summer, and the dry season is the cold season. Rain falls at all times however, and the range of temperature is usually not more than 10° or 12°, the mean temperature being 80°. Captain Begbie says of the Province of Wellesley that at daybreak a cool breeze from the east sets in, succeeded by a short calm at 9 A.M. A strong sea breeze then follows—temperature 85°. Fahrenheit on a hot day—76° to 80° in a cloudy day. This lasts till 6 or 8 P.M., when a cold easterly land wind sets in, and the temperature falls 5° or 6°. There are no hot winds and a *punkha* is not required. The climate of Penang is described as "delightful," while that of the coast opposite is said to be even better. Refreshing showers fall at short intervals and there is a never failing breeze. The rain-fall is about 75 to 80 inches. The greatest quantity falls from July to October, and the dry season lasts from December to March. Altogether the climate appears to be most pleasant and salubrious. The Province of Wellesley before its occupation by the British, was totally destitute of communications and altogether in a wretched state, and what that province was, Perak and other Malayan states are probably now. The rivers are the main lines of communication, the native roads being mere foot-paths cut and cleared by the Malays as they pass along with their "parangs." The Malay roads run over the bunds of the paddy fields, which frequently break down, leaving a deep puddle over which it is usual to throw a bamboo or two as a bridge, while streams and rivulets have no better bridges than a few trees felled and thrown carelessly across with sometimes a slight bamboo hand-rail. These paths, especially when not used, are liable to serious obstruction, in a military point of view, from the numerous forest trees blown down by the wind, or falling through the decay of age and thus forming most effectual natural barricades. During the *Nanning* expedition of 1832, a military road was opened. The forest had to be cleared 70 to 100 paces across, and the low underwood burnt. Brushwood and branches of trees secured on either side by strong piles, and layers of gravel thrown over the whole, enabled the guns and provision carts to pass over the numerous marshes. In the second Nanning expedition, the troops were ten weeks in getting over 12 miles, and in both these small expeditions, the progress was very slow. The history of the Peninsula is briefly this. The Modern Malay, it is generally believed, springs from a colony founded in the 12th century by people from Sumatra. The southern states acknowledge a kind of allegiance to the state or people of Menang-Cabowe, the ancient power, which itself derived its origin from the great parent state of Menang-Cabowe in Sumatra. Besides the Malays and Siamese, there are wild tribes called Orange-Benna or country people. Prior to the formation of the colony from Sumatra at Singapore, the coast and adjacent islands were peopled by a savage race still called Rayet-Sant or sea-men, and the interior by aborigines called Ray-et-utam or Iakongs. These aborigines many of whom are of the same character as the native Australian race, were gradually driven back into the mountain by the adventurers from Sumatra.

In A. D. 1276, Sultan Mahomed Shah was the first Malayan Prince who adopted the Mahomedan religion from Arabia. His influence extended over all Malaya; but, during the 15th century, much of the country seems to have been under Siamese subjection. In 1511, the Portugese under Alphonso D'Albuquerque conquered Mahomed Shah, the 12th Malayan Prince. They held Malacca till 1641, when it fall into the hands of the Dutch, who kept it till it was taken by the British in 1795, and Rhio and Perak were then transferred to our protection. In 1818, Malacca was restored to the Dutch, in accordance with the treaty of Vienna and it remained in the possession of Holland till 1825, when it was finally ceded to Great Britain. Perak (which signifies silver) was formerly tributary to the Malayan Sovereigns of Malacca, and afterwards to those of Achin. Since the decline of Achin it has been in some measure independent, though Siam has at various periods asserted her claim to sove reignty. In 1818, Perak was over-run by the Rajah of Quedah by order of Siam, but the Siamese were expelled in 1822. For a century and a half the Dutch enjoyed the monopoly of the Perak tin and established a factory at Sanjong Pulton on the river, and a small fort on the harbour, near the dividing islands. The whole population of the Peninsula is estimated at 1,000,000, and that of Perak in 1839, was only 35,000 besides Chinese, Arab settlers, and aboriginal tribes. The Malayas are short and robust, their average height being 5 feet 2 inches. The bulk of the population are Mahommedans of the *sufi* sect. In some works it is said the modern Malays are *sunis*. As regards agriculture very little appears to be done, except in the cultivation of rice. Perak itself is considered a vast jungle in which are scattered a few villages. Fishing is the great occupation of the river and coast population, with piracy and plunder whenever a favourable opportunity offers. The coin in use is the Spanish dollar divided into cents, and is valued at 100 to 120 pice.

The British settlements comprise Singapore, Penang and Malacca, having an aggregate area of 1,225 square miles with a population of 300,000. Singapore is an island at the south extremity of the Peninsula

length 27 miles, breadth 11 miles. It was taken possession of in 1819, by Sir Stamford Raffles, and is the seat of the govenment of the Straits. Penang, or Prince of Wales' Island, is about 14 miles long by 9 broad, and is situated off the west coast of the Peninsula at the entrance of the Straits. It was ceded to the East India Company in 1786, by Quedah. Province Wellesley, opposite Penang, is a strip of coast land 35 miles long by about 4 in breadth, and is a dependency of Penang. Malacca is one of the oldest European settlements in the east. The Malays form the chief part of the population, and the Chinese about 1-6th. The government of the Straits settlements, transferred in 1866, from the Government of India to the Imperial Government, consists of a Governor (Col. Sir, W. Jervois C. B., K, C, M. G. Royal Engineers) assisted by an executive council of nine members, and a legislative council of ten members nominated by the Crown, including in each the Lieutenant-Governor of Penang, the *Hon'ble Col. Anson* R. A. and the Lieutenant-Governor of Malacca. The garrison in ordinary times consists of one, regiment of British infantry, and one, garrison battery of Royal artillery divided between Penang and Singapore.

Our political and commercial relations are based on the treaty of 1818, which secured to the British the right of free trade and guaranteed the protection of Perak. Our treaty of 1826 with Siam, provided that the Rajah of Perak should govern his country according to his own will. The British guaranteed protection to Perak against the aggressions of Siam and Salangore. By the terms of our several treaties we were bound to protect British subjects resorting to Perak for trade. The articles of these treaties were violated in 1861, by the Hysam tribe attacking and plundering some native British subjects. Blockade was in consequence established and compensation obtained. Similar outrages took place at Laroot in 1866, when the Government of the Straits Settlement was transferred to the Imperial Government, and since then its political affairs have been conducted by the Colonial Office. Perak has for some time been in a very unsatisfactory state, and the people in an oppressed condition. It is understood that the reigning Chief, Sultan Abdoola, who was recognized by us as the legitimate ruler, resigned his Government into the hands of the British Power in consequence of his alleged inability to carry out the engagements he had entered into, and on intimation that he would not be allowed to withdraw from them, and to continue his unsatisfactory conduct. On the 15th ultimo. Her Majesty's Government assumed the administration of Perak. The rebellion is supposed to have been incited by Sultan Ishmael, the unsuccessful claimaint to the throne, and it is said that the neighbouring chiefs have declared their intention of resisting the British Power. With respect to the military characteristics of the country, it is to be observed that the Malays are said to be very poor fighters on land except behind stockades &c., but they appear clever at taking advantage of the natural defensive characteristics of the country, and at attacking the communications. As pirates they are noted for their skill, courage, and ferocity, their weapons are the "Kris," the "limbing" or lance &c. They manufacture a kind of rough gun-powder and use tin bullets. Ordnance was manufactured in two or three places—the "Mariam" or six pounder, the iron "Raulata," the "Jala Kanbang" with a muzzle about as large as a blunderbuss, and other wall pieces, some of which are loaded with leaden or tin slugs and placed on swivels in stockades. Their match-locks are long unwieldy pieces, but there is every reason to believe that they are in possession of superior weapons of comparatively recent importation. They are clever at the construction of stockades, and are capable of offering a stubborn resistance, and should the neighbouring states join the Sultan of Perak we are likely to have a more serious task in hand than is generally supposed.

HOLY SCRIPTURE,

Its Inspiration and Historical Truth.

[*By the late Bishop Cotton.*]

II.

THE extreme view of inspiration noticed in our last Essay is inconsistent with the whole method in which it has pleased God to reveal His will to man. It sweeps away an important chapter of Christian evidences. How can it be said that the evangelists mutually confirm each other, nay, as Chrysostom argues, that their very variations prove their veracity, if the four Gospels merely contain the declarations of one Omnisicient Mind? Why should there have been four narratives of the same series of events, if all are the exclusive work of one divine Author? What becomes of the ingenuity with which Paley and Blunt have strengthened the intellectual foundations of our faith, by collecting undesigned coincidences from the Pentateuch and other historical books of the Old Testament, and from the Acts compared with the Epistles, if no independent human agency has been employed in the composition of the Bible? There is surely nothing in it which can, without irreverence, be called *undesigned* at all.

And there is another branch of evidence which the theory of dictation sweeps away, the testimony to the truth of Scripture borne by our own hearts and consciences, responding to the human utterances which express the temptations, the struggles, the falls, the triumphs, the joys and sorrows, of the saints of God. The fifty-first Psalm, with all its intense penitence, ceases to be a true confession of sin, if David's free-will had no share in framing its supplications. The record of St. Paul's struggles with his thorn in the flesh, his calm happiness in the obedience of the Philippians, his grief over the wilfulness of the Corinthians, or the return of the Galatians to the beggarly elements of Judaism, is surely meant to be a genuine picture of a servant of Christ, agitated between the joys and disappointments of his ministerial course. All these utterances of personal experience are, no doubt, inspired, for the Holy Spirit was with David in his repentance and Paul in his apostolic labours, and guided each to record for our instruction a different phase of spiritual life; but still they both express in their own words their own heartfelt individual convictions; they were not mere instruments acted on by an infallible Intelligence.

The truth is that the theory of dictation rather describes the fictitious origin of the Vedas or of the Koran, than the true origin of Holy Scripture. Orthodox Hindoos maintain that the works which contain the *Sruti*, or divine revelation, were not composed by men at all, but only seen or perceived by them. * And in the Koran we have a historical example of a book supposed to be written by God's exclusive agency. It is believed to be a literal transcript of the Divine original, Mahomet being the amanuensis who copied out what was dictated from heaven. Hence it is thought impious to translate it from the original Arabic, and the unedifying scene of a number of boys asembled in the Jumma Musjid at Jaunpore, and learning to repeat it by rote in a language of which they do not understand a word, may any day be witnessed. The Khalif Othman, fearing lest the existence of various readings should imperil men's faith in its Divine authorship, burnt all which had come into existence between Mahomet's death and his own reign. † The whole action, so to speak, of the Koran is limited to a portion of the Prophet's life, and covers about twenty years. It is distinctly one revelation; complete in itself, stationary, monotonous, describing no life except that of the desert. Many writers have eloquently sketched the entirely opposite features of the Bible. For Scripture is not one revelation, but many, all proceeding from one Divine Source, but scattered over many centuries. It is not written in one language but in three; not in one style, but in many styles; it is transmitted to us not always in its original form, but with changes arising from revision and transcription. It contains poetry and prose, history, law, and philosophical discussion, fable, parable, and allegory, as well as direct religious teaching. It presents to us many states of society: we pass from the pastoral simplicity of nomadic tribes to the court the camp, the prophetic school; we trace the growth of a nation, we are present at the foundation of great cities, we catch glimpses of the ancient dynasties of secular history, we follow the steps of the great apostle from the East to the West, and we leave him calmly awaiting death in the midst of imperial Rome. The authors through whom God has revealed His will represent all classes; kings, priests, warriors; prophets, some carefully trained for their office, some called by a Divine voice from humbler occupations; Pharisees brought up at the feet of Gamaliel; fishermen bidden to leave their nets and to catch men. But all this wonderful variety is thrown away, this heavenly machinery becomes purposeless, we learn nothing from these special characteristics of Scripture, if the messengers thus Divinely taught were not spontaneous workers, and if their rebukes, arguments, warnings, pictures of life, historical descriptions, proverbs, and discussions, were merely dictated to them, as to a set of scribes, copying out the words of one master mind.

But if we must not accept the theory of dictation as warranted by the facts of Scripture, far less can we tolerate the opposite language which practically denies any special Divine interposition in the composition of the Bible, and excludes God from its authorship, almost as completely as the views just considered exclude men. Here again we appeal to the evidence furnished by Scripture itself. If there is one feature of the Bible more

* Max Mullers's *History of Ancient Sanskrit Literature*, p. 74.

† Muirs, *Life of Mahomet*, p. xiii.

clearly marked than another, it is this, that it professes to record a long series of Divine revelations. The inspiration claimed by its writers is altogether supernatural, quite different from the highest efforts of human genius, or the holiest outpourings of human piety. Neither Plato and Dante and Shakspeare on the one hand, nor Chrysostom and Henry Martyn on the other, can be classed, as some would class them, with Isaiah and Paul and John. Dante may be as great a poet as Isaiah : Martyn may have been as thoroughly penetrated with the love of Christ as the apostle of the Gentiles : the eyes of the one may have been opened by his marvellous mental power, of the other by his constant communion with God, to discern truths hidden from men less highly gifted, or of less fervent piety ; but "the inspiration of genius cannot give us Divine omniscience ;" * none but prophets and apostles and evangelists were directly commissioned to deliver an immediate revelation of God's purposes for His children Divinely taught and miraculously attested. Doubtless, as *every good gift and every perfect gift is from above, and cometh down down from the Father of lights*, there is a sense in which inspiration belongs to all great works of genius, and still more of heroism and piety. In this general sense the word is used more than once in our Prayer Book. But while we thankfully acknowledge that all good things are from God, we yet maintain that the revelations of the Bible were given by Him in a special manner. The collection of Hebrew writings which we call the Old Testament has certain features which are shared by no other literature, and which fix upon it at once the seal of a Divine purpose. Throughout these writings we trace one single and pervading object, the revelation of a personal God, the Creator of the world, who loves men as their Father, who gives them righteous rules of life, who governs their affairs from His unseen dwelling place, and sends from time to time His specially chosen servants to prepare them for the advent of One who in the fullness of time should put away sin by the sacrifice of Himself, and establish a kingdom of righteousness and peace upon earth. And that this was no mere national tradition of the Jews, as some would persuade us, is proved by the fact that the expectations of the prophets were accurately fulfilled. There did arise out of the Hebrew race a Man of faultless excellence, just as they had predicted, One on whom the Spirit of the Lord so entirely rested, that His words and deeds have changed the whole history of the world. And throughout the period of preparation for Christ's coming, as well as during the first preaching of His Gospel, there never was any question in the minds of those who bore these messages of warning and mercy, that they were directly commissioned by God. There can be no mistake as to the language used by the writers of both Testaments, and above all by our Lord Himself. We cannot escape the declarations of the prophets that *the word of the Lord came unto them*, nor the emphasis with which the apostles quote Scripture as a conclusive authority, nor St. Paul's assertion that he did not receive his glad tidings from man, *but by the revelation of Jesus Christ*, nor our Lord's decisive *it is written*, nor His assurance that *the Scripture cannot be broken*. The writers of the Bible undoubtedly claim a direct inspiration, and profess to be the trusted messengers of the Most High. If it be argued that though the "Holy Ghost spake by the prophets," yet there is no evidence to shew that to mere recorders of facts, such as the evangelists, God granted any special guidance in composing their histories, we may call to mind our Lord's promise that the Holy Spirit should guide His apostles unto all truth, and bring to their remembrance all that He had said unto them. If therefore the writers of Scripture are merely worthy of credit, as accurate narrators of their own experiences, we must accept their assurances that they were specially taught by the Spirit of God. And we should feel little disposition to gainsay this claim, who know from the evidence of our own hearts, what power is exercised by the written record of their teaching in comforting sorrow, restraining enjoyment, rebuking sin, converting the unbeliever, softening the hard heart, revealing Christ to the anxious soul, giving peace in time of trouble, hope as death draws near, and who also know that it has shewn itself adapted to the wants of men in every stage of intellectual progress, and every form of social and political life.

The first result then of a candid enquiry into the character of Scripture must be the recognition of the Divine and human elements which are combined in its composition. It is emphatically God's Book ; but God employed human agents to write it, and did not supersede their individuality, their tastes, their intellectual gifts, their natural dispositions, their powers of observation. In its transmission to us it has been subject to human revision, but God has providentially watched over it, so that we find in it a perfect declaration of His will, and a sure foundation for our faith. But if our readers ask us for a precise theory of inspiration, we confess that we can only urge them to repudiate all theories, to apply to theology the maxim which guided Newton in philosophy, *hypotheses non fingo*, and to rest their belief upon the facts which God has made known to us. Shall we with some modern writers maintain degrees of inspiration, and distinguish between *excitement, invigoration or elevation, superintendence*, and *guidance* ; or shall we in the yet stranger language of certain German theologians, talk of *pisteodynamical, charismatical, and apocalyptic* inspiration ; or shall we say that the doctrine of Scripture is inspired but the history not ; or shall we merely teach with Morell that the better men are, the more truly they are inspired, or with Coleridge, that "whatever *finds* me, that is, finds words for our immost thoughts, songs for our joy, and utterances for our hidden griefs, bears witness for itself that it has proceeded from the Holy Spirit *?" We cannot accept the teaching of any of these theories, some of which tend altogether to subvert the revealed truth of God. A living writer has defined inspiration to be such a "Divine influence as employs men's faculties according to their natural laws," † and another has said that it consists in giving "to the inspired writers such a measure of wisdom, knowledge, and utterance, as enabled them to fulfil perfectly the work to which God in his love to man appointed them." Both these explanations seem to us to express fairly the facts which are before us ; and yet, though quite willing to accept them, we do not know that we can do better than content ourselves with the wise and pious language of our own formularies. We shall not go wrong if we heartily accept the declaration of unfeigned belief in the Bible as the written word of God, containing all things necessary for our salvation through faith in Christ, out of which we have promised to instruct the people committed to our charge, according to which we are endeavouring to frame the manners of ourselves and all around us, and by which through the heavenly assistance of the Holy Ghost, we hope to wax ever stronger and riper in our ministry. A good and thoughtful man, to whom the Church of Christ owes many obligations, has well said that "there is no need of a new theory of inspiration, or new principle of biblical interpretation, but this only is needed, that every hypothesis and theory, better or worse, should be put out of view, should be laid aside, should be forgotten. The mode of that commingling of the Divine and human in Scripture, on which these theories profess to shed a light, will never be known to us, any more than the commingling of the world of mind and matter in the scheme of animal life will become known to us : both are inscrutable." ‡ There is an obvious analogy between the ancient disputes concerning the Person of God's Incarnate Word, and the modern disputes concerning the inspiration of God's written Word. It has been observed that the "Nestorian and Eutychian parties correspond to the neo-rationalist party on the one hand, and the supporters of verbal [or mechanical] inspiration on the other ;" § and as the Church has been led by the Spirit to the faith that Christ is God and Man, without defining the exact mode of that union ; so I trust that Christians will be content to receive the Bible as God's word, revealed to human messengers, and by them written for our learning, without enquiring too minutely (to quote once more Bishop Wilson's words) "where nature ends and inspiration begins."

But though we decline to advocate any particular theory of inspiration, we have a right to say that there are three main reasons for accepting the New Testament as God's book, spiritual, moral, and historical : spiritual, because it gives an adequate answer to the anxious enquiries of him whose conscience is roused to a sense of sin, and restores him through a crucified Saviour to his Father's love : moral, because it reveals as the object of our faith and adoration, a Character not only morally perfect, but absolutely unique in history, whose teaching satisfies our highest aspirations after purity and goodness ; historical, because the fact that Christ came into the world, and taught, and died, and rose again, is proved by sure evidence, beginning with the testimony of contemporaries, as of St. Paul, that he knew of nearly five hundred persons who had seen the risen Saviour, of St. John, that he had heard and seen and handled the Word of Life, and of St. Peter, that he was *a witness of the sufferings of Christ*. On these grounds we accept the New Testament as a Divine record, describing the beginning of a new æra in the world's history ; and when we read it, we find, as one of its most noble peculiarities, that it often refers to a preparation for this new æra, a former dispensation, which was about to be expanded and completed.

And here we must turn aside from our main purpose, to protest against the notion, which though not new, has lately been put forward with startling boldness, that our Lord Himself was deceived

as to the truth of the Old Testament, and its connection with the Gospel, because "He took our nature upon Him, fully and voluntarily entered into all the conditions of humanity, and among others into that which makes our growth in all ordinary knowledge gradual and limited." * For if he could be deceived as to the authority of Moses and the Prophets, He may have been deceived in His doctrinal and ethical teaching, and in the practical principles which He has left for our guidance. Thus we have no guarantee that in His crucifixion *He gave His life a ransom for many;* or that *the Son of Man is Lord also of the Sabbath;* or that the Sermon on the Mount is a perfect moral code. The fact that *Jesus increased in wisdom and stature* is precious to us as a proof that he perfectly shared our nature, but would not be so, if it injured our trust in Him as our infallible Teacher. When He was inaugurated into his ministry by baptism, the Spirit visibly descended upon Him, and as we are *told elsewhere, was not given by measure unto Him,* so that, from that day at least, we sit at His feet, and listen to His word, with entire humility and undoubting confidence. Above all, it would be monstrous to regard Him, after His Resurrection, as fallible "like any other devout Jew." † Yet it was the risen Saviour who joined the disciples on their way to Emmaus, and *beginning at Moses, and all the prophets, expounded unto them in all the Scriptures the things concerning Himself.* Thus we ground our belief in the Old Testament, in the first place, on Christ's own words: for throughout His ministry He appeals to its ordinances, its types, its histories, its prophecies, and especially to the writings of its great lawgiver, as the Divine preparation for His own work. We shall not indeed push this argument further than facts will warrant; we shall not imagine that our Lord's words (which are general in their character) exclude a legitimate criticism on the Pentateuch, or bind us to the belief that Moses wrote every part of it, including (as has been asserted) the account of his own death, and (as we are surprised to see that even Professor Rawlinson thinks possible) the allusion to the kings of Israel in the genealogical table of Edom. Surely even the less improbable of these opinions implies a needless waste of prophetical power. Our Lord has said nothing which forbids us to enquire whether the Pentateuch contains fragments of patriarchal records and other ancient documents of more than one authorship, or which excludes the belief that it partly owes its present form to some editor of a later date than Moses, or which prevents us from calling Ezra, (if we think that facts justify Jerome in so doing), *instaurator Pentateuchi.* Undoubtedly Christ teaches us to regard *Moses in a very different light from "Minos,* or Lycurgus, or Numa," ‡ for He has distinctly spoken of him as the inspired founder of the Jewish commonwealth, and as a prophet who wrote concerning the coming Redeemer. And thus we are forbidden even to listen to such conjectures as that the Pentateuch was forged partly by Samuel, and partly by Jeremiah. Alas! that all moral considerations should be so completely postponed to the license of conjectural criticism, that the holiest of God's Prophets are selected as the most probable authors of deliberate falsehood.

But we do not rest our belief in the Divine authority of the ancient Scriptures exclusively on any external testimony, not even on that of our Lord and His apostles. It would cause reasonable perplexity if the candid enquirer could find nothing to confirm their declaration in the Old Testament itself. But, confining ourselves at present to the Exodus only, as the subject of most special interest, we maintain that the consequences of this event, asserted recently to be a doubtful legend, have been only second in historical and religious importance to those of our Lord's Resurrection, Ewald's statement that the general truth of the wanderings in the wilderness is an essential preliminary to the whole history of Israel, though condemned by the Bishop of Natal as an "assertion without proof;" is demonstrated by facts or documents in every part of the Old Testament; by the book of Joshua from the first verse to the last, by the song of Deborah, by the complaints and self-denial of Gideon, by the warnings of Samuel when the people demanded a king, by the glorious recollections of the Psalms, by the exhortations of the prophets, from Hosea, who recounts how God *brought His son out of Egypt,* to Malachi, who speaks of the law which God commanded unto Moses in Horeb. The two great ideas revealed to Moses in the desert, the pure non-idolatrous worship of one God under the Name of Jehovah, and the theocracy, or Divine government of Israel, though often obscured by the perversity of the people, can be distinctly traced throughout the Old Testament, even when many special laws seem to have been in abeyance. Again, it is impossible to gainsay the consistency of the history. The truthfulness of the pictures of patriarchal and pastoral times is unmistakeable. The primitive grandeur of the Decalogue, the archaic character of some laws, especially those which bear on questions of inheritance, and the exclusive adaptation of others in their original form to desert life, are incompatible with the theory that the Pentateuch was devised by Samuel or under the later kings So too several of the Mosaic institutions, as we should expect, seem suggested by Egyptian usages; but on the other hand, lest we should be tempted to ascribe to the law an Egyptian, and therefore human origin, we find others absolutely opposed to the customs of that house of bondage, out of which God brought His people. Such is the limited authority of the Hebrew compared with the enormous power of the Egyptian priesthood; such again are the liberty and equality of all the Israelites, contrasted with the kingly tyranny and system of caste, which *they had left behind them. The attempt to revive* the worship of the bull Apis proved that they had witnessed this degrading idolatry; its prompt and stern repression that they were called to a purer creed, While in domestic customs, ceremonial usages, and police regulations, we see signs of the connection between Israel and Egypt, the whole inner life of the Mosaic ordinances is so completely original, that we do not hesitate to regard it as inspired by God. As the Exodus is described in a very ancient narrative, naturally and simply written for a religious purpose, and not with any reference to the requirements of art and criticism, we may be prepared to find in it difficulties of detail, though most of those recently alleged have been satisfactorily solved, and some have been most justly censured as the mere fancies of a careless and one sided criticism. Against any which still remain we may set at least an equal number of undesigned coincidences, such as are pointed out by the critical sagacity of Professor Blunt, while the fact that many points have been thus casually confirmed leads us to believe that other doubts would also be removed, if our knowledge were greater, and if such little incidents, as have illustrated the truth of the narrative in some case, had been everywhere preserved to prove its accuracy.

PROFESSOR TYNDALL ON MATERIALISM.

(*From the Spectator*)

PERHAPS it is our own fault that the moment Professor Tyndall leaves physical philosophy, and betakes himself to the theological or metaphysical assumptions which underlie it, we never fail to be bewildered as to what his meaning really is. He contributes, for instance, an essay to the November number of the *Fortnightly* subsequently to appear, we are told, as a preface to his forthcoming "Fragments of Science," which, clear as is the style of its individual sentences, and clever as are certain of its sarcasms, appears to us to remain one of the obscurest riddles in modern literature, when, even after perusing it two or three times, we lay it down and ask, what then, really is its drift and teaching? We will attempt to state its main positions in Professor Tyndall's own words, and then to show the exceeding difficulty of understanding what jointly they amount to. The Professor is answering the various critics of his Belfast address,—chief among them Mr Martineau, on whom he expends the main portion of his philosophical ammunition. Now, if we understand him rightly, he has two complaints to make against the ablest of these critics. In the first place, they misunderstood him to say, without his having given any excuse for such a misunderstanding, that he can "explain" mind from matter. On the contrary, he maintains and proves somewhat elaborately that he has always said just the contrary, that even granting you could know absolutely the physical conditions of the molecules of the brain which correspond to each condition of consciousness,—to each thought, feeling, hope, perception, imagination, &c.,—you would not be a tittle nearer towards bridging the impassable chasm between a state of matter and a state of mind. "You cannot," he quotes from himself, "satisfy the human understanding in its demand for logical continuity between molecular processes and the phenomena of the human mind. This is a rock on which materialism must inevitably split, whenever it pretends to be a complete philosophy of the human mind." Well, then, here is Professor Tyndall's first position. Whatever strength there may be in materialism, here is one great and impassable flaw in it. It cannot get out of itself. It cannot bridge the gulf between matter and consciousness. If it proposes to do so, it is making a vain boast which it cannot sustain. So far then, Professor Tyndall is not a materialist. He apparently thinks it much more promising to investigate physical phenomena separately, and mental phenomena separately, than to try to explain the passage from the one to the other; but as there is a whole class of phenomena of the most

important kind for which he can find no key in molecular causes, he so far admits, not speculative materialism, but the speculative failure of materialism. But this position is no sooner clearly established in the reader's mind, than, to his bewilderment, he suddenly finds himself overwhelmed by a very different class of equally positive and even tartly and dogmatically stated speculative opinions, such as, for instance, the following :—"Were not man's origin implicated, we should accept without a murmur the derivation of animal and vegetable life from what we call inorganic nature. The conclusion of pure intellect points this way, and no other. But this purity is troubled by our interests in this life, and by our hopes and fears regarding the world to come. Reason is traversed by the emotions, anger rising in the weaker heads to the height of suggesting that the compendious shooting of the inquirers would be an act agreeable to God and serviceable to men. . . . . Our foes are, to some extent, they of our own household, including not only the ignorant and the passionate, but a minority of minds of high calibre and culture,—lovers of freedom, moreover, who, though its objective hull be riddled by logic, still find the ethic life of their religion unimpaired. But while such considerations ought to influence the form of our argument, and ought to prevent it from ever slipping out of the region of courtesy into that of scorn or abuse, its *substance*, I think, ought to be maintained and presented in unmitigated strength." Here Professor Tyndall appears to maintain that "pure intellect" has none of the speculative fault to find with materialism, which he reproached his critics so vehemently before for forgetting that he had found with it. The only flaw, he now says, in the materialistic argument is, not its inability to bridge the gulf between molecules and consciousness, on which he had previously insisted, but only man's dislike to face the conclusions of pure intellect when they are disagreeable to himself. Here, then, it is only "courtesy," not in the least an intellectual sense of the inadequacy of materialism, which makes Professor Tyndall tender with the anti-materialists. The "objective" truth of their religion has been positively riddled by logic, and if their position be worthy of respect, it is not for any grain of speculative strength in it, but solely because it is the source of a certain 'ethic life' in themselves, That very materialistic argument on the hopeless and ineradicable flaw in which he had previously insisted, when he overwhelmed his critics with reproaches for failing to recognise that he had seen and pointed out its shortcomings, he now finds one of "unmitigated strength."

These discrepancies are puzzling enough, but when we come to consider the sphere assigned by Professor Tyndall in this relation to what he terms the "potency of matter," we are more hopelessly out of our depth than ever. "Think," he says, "of the acorn, of the earth, and of the solar light and heat,—was ever such necromancy dreamt of as the production of that massive trunk, the swaying boughs, and whispering leaves from the interaction, of those three factors? In this interaction, moreover, consists what we call *life*." And then he goes on to illustrate this "potency of matter" more elaborately still :—

"Consider it for a moment. There is an experiment, first made by Wheatstone, where the music of a piano is transferred from its sound-board, through a thin wooden rod, across several silent rooms in succession, and poured out at a distance from the instrument. The strings of the piano vibrate, not singly, but ten at a time. Every string sub-divides, yielding not one note, but a dozen. All these vibrations and sub-vibrations are crowded together into a bit of deal not more than a quarter of a square inch in section. Yet no note is lost. Each vibration asserts its individual rights; and all are, at last, shaken forth into the air by a second sound-board, against which the distant end of the rod presses. Thought ends in amazement when it seeks to realise the motions of that rod as the music flows through it. I turn to my tree and observe its roots, its trunk, its branches, and its leaves. As the rod conveys the music, and yields it up to the distant air, so does the trunk convey the matter and the motion—the shocks and pulses and other vital actions—which eventually emerge in the umbrageous foliage of the tree. I went some time ago through the greenhouse of a friend, He had ferns from Ceylon, the branches of which were in some cases not much thicker than an ordinary pin—hard, smooth, and cylindrical—often leafless for a foot and more. But at the end of every one of them the unsightly twig unlocked the exuberant beauty hidden within it, and broke forth into a mass of fronds, almost large enough to fill the arms. We stand here upon a higher level of the wonderful, we are conscious of a music subtler than that of the piano, passing unheard through these tiny boughs, and issuing in what Mr. Martineau would opulently call the 'clustered magnificence' of the leaves. Does it lessen my amazement to know that every cluster, and leaf—their form and texture—lie, like the music in the rod, in the molecular structure of these apparently insignificant stems? Not so."

Now, in that fine passage, Professor Tyndall seems to us to yield all, and more than all, that Mr. Martineau asks, when he challenges the physicist really to explain the universe as a result of 'material' causes. 'Potency,' we suppose, is power; and 'potency' to do something in the future which is not yet within the reach of actual energy, is power to anticipate the future and to provide for its contigencies. Preparation for conditions which are as yet neither present nor, by such minds as ours, even imaginable, implies, of course, a mastery of laws of measure and laws of quality and laws of combination and co-ordination, which involves not only what we call mind, but infinitely more than we call mind. 'Potency of matter,' in Professor Tyndall's sense, is matter with most elaborate conditions grafted on it, which have reference to the most distant spaces and the most remote times. Are such conditions conceivable except as proceeding from a being who, in some sense immeasurably higher, rather than lower than ours, *knows* those distant spaces and distant times for which these conditions are prepared. Take the case of the electrised wire, which differs from other wire only in physical conditions perfectly invisible to any man surveying it, but which were preconceived by him who sent the current through it and by him who marks off its results. Here is a 'potency of matter' of which we know the precise meaning, and it is a meaning which involves *knowledge on* the part of him who produced the potency. So in the case of Professor Tyndall's sounding-rod ; it contains now only potencies of sound, which, if the sounding-board at the end be forgotten, may be potencies of sound never likely to reach human ears, and it must have contained once also those potencies of leaf and verdure which Professor Tyndall so eloquently describes in the case of the twig of fern. In this case, then, one set of 'potencies' have never reached their actual efflorescence to human eyes, and have been succeeded by another set of 'potencies' which may never wield their power of delight for human ears. But is is conceivable that, in either case, the 'potencies' were there without the power which knew what was in them? If it takes mind, and very refined mind, like Professor Tyndall's, even to discover these laws of adaptation of distant conditions of space and time to each other, does it not take much more than what man calls mind to embody the laws and keep them at work? It seems to us that in this talk about the 'potency' of matter, Professor Tyndall gives up entirely the materialism for which he argues. Potency is an *idea* simply, without any meaning except for one who can see both ends of a long chain of complex conditions, and can see the beginning make provision for the end. But this is equivalent to mind plus matter, or rather something more instead of much less than what we call mind, plus matter, and not matter alone. If it takes what we call mind, and mind at a stretch, to adapt the conditions of locomotion, say, to the conditions of the people who desire to go about a day or two in advance, —it must be something not less, but infinitely greater than mind so stretched, which adapts *the conditions of a sun in space to the* myriads of lives which will, sooner or later, if scientific evolution be on the right track, be evolved from the conditions so prepared. In the word 'potency,' Professor Tyndall seems to us to have assumed a mental, and excluded a purely material, cause as conclusively,—and let us also say, as unconsciously,—as his 'unsightly twig' assumed its beauty and put off its unsightliness when it burst into that "clustered magnificence" of fronds of which he speaks. 'Potency' assumes the capacity to see present and future at once, and prepare the present for the future. Matter, as such, can have none but accidental 'potency,'—the potency of changing place when force is forthcoming to change its place. But force acting under rhythmical laws of specific and complex provisions, force moulding and constraining force, till matter gives out music, and beauty, and conciousness, and suffering and joy,—this is all language without meaning, unless you credit the force so at work, with all, and much more than all the qualities, which are combined in what we call 'mind'.

And yet Professor Tyndall appears to make it his main charge against Mr. Martineau, that all this inference is a mere feat of 'feeling,' for which there is no sort of intellectual defence. After explaining that the animal world is a distillation through the vegetable world from inorganic nature, he goes on :—

"From this point of view all three worlds would consitute a unity, in which I picture life as immanent everywhere. Nor am I anxious to shut out the idea that the life here spoken of may be but a subordinate part and function of a higher life, as the living, moving blood is subordinate to the living man. I resist no such idea as long as it is not dogmatically imposed. Left for the human mind freely to operate upon, the idea has ethical vitality; but stiffened into a dogma, inner force disappears, and the outward yoke of a usurping hierarchy takes its place."

What Professor Tyndall means by 'ethical vitality' is one of the great mysteries of this beautiful but mysterious paper. We should have said that if there was a word wholly inapplicable to the conception he is here describing it is the word 'ethical.' We suppose he means by 'ethical vitality,' that the notion has a charm for us which gives us new impulse, but that it has no basis at all in our pure reason. We should have said just the reverse. There is no 'ethical' vitality in this or any other idea, till you put some moral or spiritual

character into it, which hitherto Professor Tyndall has not done. It is to the intellectual nature of man, and to that alone, that this notion appeals with irresistible force. Here is an infinite wealth of minute correspondence between the most distant parts of space and time, which, unless we assume mind, and much more than human mind, operating in and through what Professor Tyndall calls matter, is simply a miracle of harmonious accidents, of happy rhythm in events which no one ever intended to be linked together, of poetic coincidences and convergencies of energies, the rhyme and music in which no one ever preconceived. And this the imagination of man refuses to conceive. As far as we understand Professor Tyndall, what he calls "feeling" we call "reason," and what he calls pure reason we should call, if we did not feel so much respect for him as a physicist, pure folly. Certainly he is not happy in expounding 'materialism' to his readers, in spite of the fact that he possesses, as he does, the ear of nature, and catches so much more than most of us of her hidden secrets and inspirations.

LETTERS TO THE EDITOR.

MEDICAL SERVICE AND SUBORDINATES.

To the Editor of the Friend of India.

SIR,—Permit me to reply briefly to your correspondent "Authority" upon this subject. Where he writes from, and what authority he holds, do not appear. This is fortunate, for he is evidently unacquainted with the Bengal Medical Code, though he addresses himself to Bengal readers.

Had he taken the trouble to ascertain what the orders of Government really are upon this question here, he would hardly have committed himself to coarse strictures upon gentlemen he knows nothing about, who are in the habit of charging 2 per cent, upon pay and allowances for the medical charge of the families of Civilians, with the sanction, if not by the direction, of the Governor-General in Council.

ONE OF THE CRIMINALS IN QUESTION.

RAJENDRA NATH DATTA, BAHADUR.

To the Editor of the Friend of India.

SIR,—We beg you to kindly insert this and oblige:—A few days ago, we the undersigned, two poor Eurasians, went, to Royna, a distinguished and wealthy village in district Burdwan, and hearing of the liberality of Mr. Rajendra Nath Datta, Bahadur (who, as we have heard, is one of your subscribers) of Royna, went to him and begged some money for our daily bread, on which he kindly offered us a good sum, and promised to supply us with our food until employment be given to us by our benefactor. We have our wives, daughters and sons, who are suffering much for want of daily food. Sir, such liberality is worth notice; Mr. Datta is about to establish a "Stranger's Home," for which contributions will be thankfully received by Mr. R. N. Datta of Royna.

J. A. HEYMANS, and C. T. BENJAMIN.

A COMMON GRIEVANCE.

To the Editor of the Friend of India.

SIR,—May I presume on the aid of your influential pen in putting forward a grievance which we of the P. W. D., in common with others of the different services, often have to complain of. Outsiders of very doubtful ability, possessing no knowledge of the working of the department, are placed over old and experienced hands for the very unfair reason that some influence can be exerted through a late employer.

If a man is to be served by being placed in another department, owing to the abolition of his own, why, sir, should he not be made to do as others less fortunate have done *i. e.* commence at the lowest grade and receive according as he deserves if he is a man of *education* below the average?

In the present instance, the man was employed I believe as head clerk on Rs. 150 in the office of the Cotton-Commissioner, through whose influence he has just been appointed an accountant, 2nd grade, in the P. W. D., a grade to which an accountant already in the department, attains, only after he has passed the prescribed examination in the P. W. Procedure, a knowledge of which can be obtained solely by serving in the department.

Now, Sir, others along with myself are preparing for this same examination, and it is really very discouraging to see a man not a whit one's superior in any way, overtop those who have put themselves into many a strait to qualify for this and other positions of responsibility in the department.

I simply put the facts before you and beg you will take some means to draw the attention of Government to the injustice that is often done by reason of the abilities of individuals being exaggerated or mis-stated by late employers anxious to serve them—but at another's expense.

ACCOUNTANT.

OUR LIBRARY TABLE.

History of Mandu the Ancient Capital of Malwa, by a Bombay Subaltern. This, as Lieutenant-Colonel Kincaid informs us, in the preface, is a reprint, at the expense of the present Raja of Dhar, of a portion of work published in 1844 by an unknown author, "A Bombay Subaltern." Mandu, an ancient hill fortress of great natural strength, is situated on a spur of the Vindhyan range about sixteen miles from Mhow. It appears to have been held by Hindoo Rajahs from the earliest times up to the period of the Mahomedan conquest, and subsequently by the independent Mahomedan kings of Malwa, whose line came to an end about the year 1525 A.D. It then sank into insignificance, and is now a place of little importance or interest except to archæologists or historians; but the ruins of its noble temples, palaces, and tombs are still left to testify to its former grandeur. An account of these antique monuments as they appeared to the eye of an English traveller thirty years ago, is given in the first part of the volume before us. The second part contains a sketch of the history of Mandu under its Mahomedan rulers. We have found the work, as a whole, highly interesting. The Rajah, we think, deserved the thanks of the reading public by its republication, and not less those of all students of Indian antiquities, for the care which, as we learn from Colonel Kincaid, is now taken of such remains of Mandu's ancient greatness as have been partially spared by time. One of these is the grand hall of the famous Hindola (or "Jula") Mahal, "the most unique specimen of pure Pathan architecture in India." Its interior has been long disfigured by the rubbish of the fallen roof, "but last year," says Colonel Kincaid, "the Rajah caused the debris to be cleared to the floor, and the full proportions of this magnificent room are now open to view." The are many fine old buildings in India, of equal beauty with the Hindola Mahal, which are slowly but surely falling to pieces literally crumbling into dust from sheer neglect. Their sites, if nothing be done to arrest the further progress of decay, will in a few more generations be marked only by shapeless heaps of stone and earth. Why cannot their apathetic owners take a lesson from the Rajah of Dhar?

THE *Christian Intelligencer* for November opens with a notice of Professor Pritchard's *Essay on Modern Science and Natural Religion*, from which it gives copious extracts, in the hope that they may have a wholesome effect on the young men of the rising generation in India "who talk so glibly about scientific authors and know so little about Science." The next article is a "Reminiscence" showing how an Indian *Rector!* was duped into paying a runaway midshipman's bill. The other papers are more strictly religious. There are some valuable notes at the end on "Church and Public affairs."

We have had before us for some time the *Report of the Exploration Survey of the Naga Hills*, giving a clear and interesting account of Captain Butler's proceeding among the Nagas and of the valuable work done by him and his co-adjutors, especially by Lieutenant Woodthorpe, to the worth of whose services Captain Butler pays a very high tribute. A map showing a tract of something like 800 square miles was completed by Lieutenant Woodthorpe, on the scale of two miles to an inch, a tract comprising the whole of the country trained by the Desoi and Jhansi rivers, and lying between the Doyong and Dikhu rivers, besides an overlap of about 300 square miles out of a total area of 1,100 square miles done by Mr. McCay on the scale of four miles to an inch. The work was done within the brief space of two months, and during the greater part of that time, survey operations had to be suspended on account of the resistance offered by the Wokha people and their allies. The Wokha men received Captain Butler and his party in a very sulky manner which evidently boded mischief. No assistance was given in the building of huts, the coolies were stoned while cutting grass and bamboos, and great reluctance to bring in provisions for sale, was manifested. On the day after their arrival a coolie was brutally murdered. Captain Butler used every precaution in his dealings with these men, and he ascribes success mainly to the very simple measure which he never neglected, of allowing no armed natives to enter his camp. An attempt to investigate the circumstances of the coolie's death was met with insolence and in the evening an attack was made on the camp. The Nagas were driven out into the jungle and must have suffered pretty severely, for eighteen dead bodies were counted lying where they had fallen. A second attack was made five or six days afterwards, and though the Wokhas had been joined by several neighbouring villages, and the assailing force must have numbered between four and five hundred men, they were again repulsed and several of them killed and wounded. They were then glad to make peace. Next day, twelve Wokha men approached the camp waving green boughs and on being invited to enter, declared that "their stomachs were quite sick of fighting." They soon came to terms and the investigation into the circumstances of the coolie's murder proceeded. "Thus," says Captain Butler, "in the brief course of thirteen days, the Nagas had attacked us twice, and suffered a signal defeat on each occasion; a most brutal murder had been avenged, the demands of justice fully satisfied, our prestige re-established, peace made, and everything cleared once more for a fresh start into the unknown regions lying beyond us."

DR. FORBES WATSON'S pamphlet advocating the establishment of an *Indian Institute for Lecture, Enquiry, and Teaching*, is also before us. The paper was prepared for the Oriental Congress which assembled in London in September of last year, and Dr. Watson states that the idea of an Indian Institute has long occupied his attention. He believes it would exercise a great influence on the study of Indian subjects in England, "on the progress of higher education among the natives of India, and on the training

of candidates for the Civil Service of India." The pamphlet is well worthy of study.

WE hope to notice more fully in a future issue the *Report on the Progress of Education in the Province of Oudh*. Meanwhile we may refer to an interesting matter on which there is a difference of opinion between Mr. Nesfield the Director of Public Instruction, and the officiating Chief Commissioner. The former gives figures to show that the number of Mahomedan students in proportion to the total Mahomedan population, greatly exceeds the number of Hindoo students in proportion to the total Hindoo population, and that in all classes of schools. From these figures he draws the inference that "the Mahomedans in Oudh, whatever they may be elsewhere, are, as a body, far more appreciative of State education of *every kind* than the Hindoos are." Mr. Inglis was unable to agree in this opinion, and pretty clearly shows how the Director of Public Instruction was misled by his own figures. It is unfair to the Hindoos to take the proportion of those attending school to the total Hindoo population, as a comparative test, for the well-known reason that low caste Hindoos are at present practically excluded from the Government schools. "From the report of the last Oudh Census, it appear that the Mahomedan population amounted to 1,195,817, and that the total number of the higher castes of Hindoos was 2,480,414; while there were only 15,276 Mahomedans at our schools to 43,565 Hindoos. It follows that the Hindoos were not less, but more appreciative of the advantages of State education, than the Mussulmans. The officiating Chief Commissioner is convinced that by this calculation he has arrived, if not at a more satisfactory conclusion than that expressed by you, certainty at a more correct one."

WE acknowledge, with thanks, receipt of the *Indian Bradshaw* for December, and *The Land of the Tamulians and its Mission* by Rev. E. R. Baierlem translated from the German by J. D. B. Gribble F. R. A. S., M. A. I. The latter will deserve future notice.

POETRY.

ANNUS MIRABILIS.

Nec Deus intersit nisi dignus Vindice nodus,
Inciderit——

I.

Viceroy of India! you've the prize of Europe,
The *Open sesame* to wealth and fame;
Wealth you'd already, and to spare—but your hope
In sailing sunwards was to earn a name.

II.

Veil, kind Oblivion, veil Baroda's blunder!
A truce to dreams of glory... Sire, we know
You're fond of ciphers; never play with thunder;
Be Neckar, never pose as Mirabeau.

III.

A *lettre de cachet* would have crushed the vermin;
Why gather chiefs and judges from afar?
Why cast a stain upon the law's fair ermine,
And break the word you plighted in durbar?

IV.

Enough of bootless embassies, and quarrels,
In which, save honour, everything we win;
Look to the city, Cæsar, for your laurels—
They love the air of Bishopsgate Within.

V.

Yes: India needs a Ruler: tongues satiric,
Proclaim that in the West our reign has ceased;
Victories like yours, though bloodless, can be Pyrrhic—
One more may shake our Empire in the East.

VI.

Courage! the Prince is here, and while fresh tannage,
Bronzes his cheek on Brahmaputra's churs,
Hunting the boar, perchance you still may manage,
My Neckar-Mirabeau, to win your spurs.

VII.

Win them: but tell the wire-pullers the fable
Of him that wrecked the chariot of the Sun—
An Empire never can be ruled by cable—
A Viceroy reigns, or falls like Phäeton.

THE WEEK.

WE are now fast approaching Christmas, and there is every sign that it will be a merry one. Our Royal Visitor expectant arrives at Madras to-morrow, leaves for Calcutta a week after, and will probably take his first look at this City of Palaces and huts—the latter are in the majority, slightly, in some parts of the town—on the day before Christmas Eve. The preparations for his reception go on apace, and are already beginning to assume a tangible form in the leading streets. Chowringhee Road is spanned by a triumphal arch, the front of the Indian Museum is rendered additionally imposing by two huge square towers of bamboo, and long rows of telegraph posts, bearing miles of iron wire on which thousands of gay little oil-lamps will by and bye be strung, mark out the route the Prince is to take on the night of the procession. It is to be hoped that everything will go off well. Calcutta never before had such a chance of distinguishing herself, and will lose half her prestige if she does not rise to the full height of the occasion. The illumination especially should be made a success. It may be a ticklish thing to manage—we believe an illumination always is, even if organised by the most brilliant administrative talent. The Bombay people, we all know, had theirs spoiled by the strength of the wind. But Mr. Hogg, with his well-known energy and a numerous corps of lamplighters to back it, ought to be able to cope with the gentle breath of a December breeze, such as we may look for here. Everyone, we beg to remind him, expects the metropolis to eclipse the presidency towns, and the task should be easy. Bombay shone with somewhat ineffectual fire; Madras is hardly to be considered our rival, for its inhabitants, though undoubtedly loyal, are proverbially sleepy, and not of the temperament that exults in delirious festivities.

THE Municipal quarrel will of course he kept entirely in the background from the time of the Prince's arrival to the date of his departure. But we see no reason why the discussion of certain questions should be dropped at once, as a contemporary recommends, merely because the Lieutenant-Governor has announced an intention of altering the constitution of the Municipality. None of us we trust, are so simple as to suppose that Sir Richard Temple appears in his new character of a reformer of his own mere motion. He has yielded to the pressure of public opinion—that is both true and to his credit—but to remove that pressure until his promised Bill has become law would be, in our judgment, an act of the most egregious folly. Nothing he now says or does can relieve the inhabitants of the town of the necessity of considering the almost ruinous results of his former *laissez faire* policy. It is therefore the obvious duty of all public-spirited citizens to continue the agitation they have commenced, so long as they are not actually in possession of those constitutional rights they demand, and to which they are justly entitled. The independent Justices have sent the Lieutenant-Governor a protest in which the town's grievances are well stated. They have observed, they say, with deep regret, a "disposition to interfere with the legal rights and moral duties of the Justices, in a way that is incompatible with the interests of the rate-payers." That "strong official influence has from time to time been used to repress their freedom of action, or to nullify it when exercised." That "this influence has been notably manifested recently," in certain given instances which are only too notorious, and that "it appears as if a state of things has been induced in which it may no longer be possible for honourable men, beyond the official circle, to hold any public office with credit to themselves, or with advantage to the public." There is not a word of exaggeration in these statements—they represent undoubted facts—and their truth is an ample justification, if one is wanted, of the public meeting which has been called for to-day. We trust that something of their substance will be embodied in the resolutions to be passed in the Town Hall.

THE contemporary above alluded to gives currency to some of the latest rumours regarding the long contemplated reconstruction of the High Court. Ten new zilla judges, it has heard, are to be appointed on Rs. 3,000 a month—the legal remembrancer is to draw the same amount—and, lastly, the pleaders are to have their pay raised, but to retain their extra fees. This will be a comfortable arrangement for all concerned, and makes us think very highly indeed of somebody's talents as a law reformer. Nobody loses his place under it, and a good many get an increase of pay. A plan of law reform which comes recommended by such substantial advantages may be expected to win a certain amount of support even from the legal profession, and accordingly we are not the least surprised to hear that for one post in the new Court alone—that of legal remembrancer—there are six Richmonds in the field already—Messrs. Bell, Prinsep, Field, Wells, O'Kinealy, and Maclean, being all mentioned as candidates. It is sad to think that five of them, if no more must be disappointed.

GOVERNMENT has at last granted a site for Lord Mayo's Statue We cannot call it a good one. A point far out on the Maidan, between Fort William and Theatre Road, where the road running past the east of Government House intersects that to Alipore, is the spot selected. It seems to have been chosen on the principle of "out of sight out of mind," and in strict accord with the determination shown from the first not to allow the statue of our late Governor-General a position in a too conspicuous or frequented locality. Lord Mayo's admirers, that is to say, the whole public, are disgusted at the slight thus cast on his memory, and certainly

common decency, as well as common sense, demand that his monument shall be placed where it can be seen by everyone. We hope that better counsels will yet prevail, and some less out of the way place be found. The Viceroy should take this matter up personally and, for the sake of his own fame, see that justice is done to the memory of him whom he lately eulogised at Jeypore.

MONEY MARKET.

FRIDAY, 10TH DECEMBER.

THE very easy position of Money still continues, and until the Bombay Cotton crop and the Burmah rice crop fall to be financed for, there is no prospect of more active employment for the large sums of money now accumulated here. Although export business is now large, last month's return showing an increase as compared with last year in the most important articles of merchandize, funds prove to have been provided by the Banks on a more extensive scale than is required, and the consequence has been such a strong competition for Sterling Bills that rates have fallen to a lower point than they probably ever touched before, and certainly lower than for years back. During the present week Bank Bills at six months' sight were sold at 1-9¾, Credits of same currency at 1-9 13-16, and Document Bills at 1-9 15-16, and for some days it looked as if further decline were imminent. Within the last two days a reaction has however taken place. Business has been done at an eighth above those quotations, and rates have now a much steadier appearance; private buyers for remittance are mostly refraining from operating at the decline, and as Calcutta may be considered the financial centre of the east, it is not unlikely that the news of the present financial strength may induce applications from other places. There has been a fair amount of Telegraphic Transfer taken at the low rates of 1-9 5/16 and 1-9⅜, also Demand Bills at 1-9 7/16 and 1-9⅜, but rather better can be done now. The closing rates for the mail are lower than last week's, although showing recovery of a quarter to a half per cent, on the lowest point during the week.

Bank Bills	1-9 13/16 to ⅞	Six months' sight.
Credit Bills	1-9 15/16	
Document Bills	1-10 1/16	

The Bank of Bengal increases in strength, by augmentations to the private deposits, and by contractions of the amounts advanced to the public: and whereas a few months ago, nearly all the money in the Bank belonged to Government, now the tables are turned, and the public generally are the depositors. Under the previous circumstances it was thought by many that imports of silver would be required by this time, but the action of Council Bills has proved sufficient to lower exchange much below the present cost of silver, comparatively low as that is. It may still be, however, that present stocks of bullion may be fully required for Rice and Cotton, and it would have afforded greater safety against a possible run on the Cash Balances in February and March, had the Secretary of State imposed a minimum on his drafts, approximating to the cost of silver at time of their issue. That would no doubt have saved Government much loss in exchange, and have tended to keep the money market here free from wide fluctuation.

The Piece Goods trade is keeping very dull indeed, and causing great disappointment to all concerned in it. Everything pointed to a good cold weather demand, and at length shippers at home have begun to operate on a reasonable scale. The population generally are well off, but business goes on in quite a hand-to-mouth way that is very remarkable.

Business in exports is now going on actively, and a considerable quantity of Indigo has passed the hammer, prices tending downwards as the sales progress:—Exchange is a great element in favor of touching the dye this year, and it is being taken, notwithstanding heavy stocks in Europe, by a class of firms who have been leaving it alone for a long time back. The Tea sales have also passed off easier, if anything, but there are ready buyers, influenced by the heavy deliveries to the trade in London. Jute has become dull, and balers have difficulty in finding customers even at a reduction in price; loose Jute finds steady buyers, to a good extent, amongst the mills, but it too is declining in price both here and in the mofussil.

The market for Government Securities can scarcely be called better, for although prices are steady, there has been very little demand; indeed, the market may in some respects be called intrinsically worse, the lower exchange and very cheap money having failed to galvanize any life into it. It is really a very suggestive thing, as regards the Government financial policy of late years, that the Government Loans are not a good deal higher in price, under the present monetary circumstances of the country. The week's business has been small, with scarcely any fluctuation, namely:—

4 per cents, 101-15, 102, 2-1, 2, 2-1, 2, 2-1, 2-2, 102.
4½ do. 102-15, 2-14, 102-13.
5½ do. nothing.

quotations now being,

4 per cents. 102.
4½ do. 102-12 to 102-14.
5½ do. 107-8 to 107-12.

The Share market is still very lifeless, but here and there slight symptoms of coming animation are to be seen; for one thing, there are a few time bargains again going on, and higher prices than the present are given.—Tea Stock looks as dull as ever, although there is reason to look for a good year in the gardens in 1876, but the soundness of Jute Spinning Mills is being more generally conceded and the scrip of the best of them is decidedly hardening.—Coal Shares are looking firmer. Bank Stock has been actively enquired for, doubtless in hopes of the new charter working wonders, for prospects of dividend must necessarily be very poor this half-year, with business so reduced.—The week's business includes the following:—

Bank of Bengal 1,435, 37½, 1,440.
National Bank 111, 10½, 11, 10, 111.
India General Steam 415, 395.
Barnagore Jute 83, 4, 5, 5½, 7, 90.
Howrah Jute 77.
Calcutta Jute 97.
Budge Budge Jute—par.
Bowreah Cotton 85, 86, 87.
Dehing Tea 60.
Chandipore Tea 650, 655.
Bisnauth Tea 358, 360.
Durrung Tea 70.
Singell Tea 99,

The English mail of 19th November will be delivered here on Sunday morning.

THE PRINCE.

THE Prince, his suite, and the specials, are all said to have been delighted with their visit to Kandy. The Chiefs were introduced, and presented a silver casket and sword of Native workmanship for his acceptance. His Royal Highness and suite had a private view of Buddha's tooth, and the nine gold shrines and massive temple jewels. The Prince presented a copy of the Pali dictionary to the Chief Priest. He next resorted to the Octagon tower, to view the procession of forty caparisoned elephants with bells and retainers, and the illuminations. The grand square facing the lake, and surrounded by hills, was magnificently lighted up with bon-fires on the eminences, and the Island and buildings with variegated lights. A deputation of priests presented a copy of Buddha's writings on talipot palm leaves. The Chief Priest recited in Pali. The Kandyan Chiefs were much pleased, it is reported, with His Royal Highness' manner and appearance. The Prince left next morning for the scene of the elephant kraal and sport, and arrived at Navalapitya, the mountain terminus of the railway, early in the day, proceeding thence to Kuanwella by coach. The weather was unfortunately unfavourable, the rain being very heavy. Twenty elephants had been driven together near Avisawella, and the Prince shot two of them in the course of the day's sport. In returning to camp His Royal Highness had a narrow escape from a serious accident. The carriage, coming in contact with a culvert, was overturned and smashed, the Prince being underneath it, but he was fortunately extricated without having sustained the slightest injury. By noon of the 7th the Royal party had reached Colombo. A levee was held at 1 o'clock, and a State dinner and ball came off at night.

His next trip is to Tuticorin, where he was to have landed yesterday morning. Great preparations are being made for his reception. Numerous *pandals* have been erected, the town is beautifully decorated, and business is at a standstill in the neighbourhood. Two Companies of Infantry and 600 police have arrived in Madura, also a detachment from Madras, and the Governor's body-guard have been posted at the railway station. At Mamatchu the Prince will receive a deputation of five thousand native Christians headed by the Revd. Doctor Caldwell Sargeant, Bishop designate of Tinnevelly.

From Tuticorin the Royal party proceed to Trichinopoly, where to-day will be passed. On Sunday morning the Prince will reach Madras. The shooting trip to the Annamally Hills, which it was proposed to abandon, will after all probably be carried out—but when is uncertain. This decision, it is said, was come to at Beypore before the Prince left for Colombo, at a consultation meeting held on board the *Serapis*, Sir Bartle Frere and Dr. Fayrer appearing for the Prince, and the Hon'ble Mr. Robinson, Colonel Michael, Dr. Houseton, and Messrs. MacGregor and Logan, for the Madras Government. Colonel Michael and Mr. MacGregor have left to select the safest course to be taken by H. R. Highness to the Hills, and to decide upon the arrangements to be carried out.

At Madura, where comfortable accommodation has been provided, the Prince will visit the famous Temple the most remarkable of its kind in Hindoostan, and Sirumal's palace, a fabric less enormous and costly, but more beautiful, than the temple itself.

As the natives of Madura have subscribed so generously towards the expenses of the Royal visit, native taste is to be allowed to predominate in the style of the decorations. It is unfortunate that the fireworks ordered from Mr. Brock are likely to arrive too late.

INDIAN INTELLIGENCE.

BENGAL.

THE thanks of the Bengal Government have been given in the *Calcutta Gazette* to Rai Shamanand De, Bahadur, for having given a sum of Rs. 5,000 to found two scholarships of Rs. 100 per annum each at the new Orissa College, now being established at Cuttack. The scholarships are to be called the Prince of Wales' scholarships, as a memorial of His Royal Highness' visit to India.

WE regret deeply to announce the death of Captain James Hunter, extra Aide-de-Camp to the Viceroy, by his own hand, at

the Great Eastern Hotel on Saturday morning last. The cause of the unhappy act has not, we believe, transpired. The coroner's jury returned a verdict to the effect that the deceased committed suicide whilst in a state of temporary insanity.

NAWAB ABDOOL GUNNY, C. S. I., intends, it is said, to make the following presents to His Royal Highness the Prince of Wales—a pair of young elephants 5 feet high; two tiger cubs; a chandelier; an ivory mat; an ivory cover for a pillow; a silver box made of silver wires: gold embroidered velvet sheets, &c., &c. The Nawab has estimated the cost of his trip to Calcutta and back, including the presents, at one lakh and fifty thousand rupees.

THE *Darjeeling News* of the 4th says:—"We have not been able to learn any precise details about the robbery of the mail which should have reached here last Saturday. All we know for certain is that the robbery occurred between Caragola and Purneah, and that none of the letters which should have reached Darjeeling on that day have yet come to hand. This is the second mail robbery which has taken place on the Ganges-Darjeeling road, within the last few months."

THE Maharajah of Cashmere and Maharajah Holkar are expected to arrive in Calcutta on the 18th instant; Maharajah Scindia and the Maharajah of Puttialla on the 17th; the Begum of Bhopaul on the 15th; the Maharajah of Rewah and the Rajah of Jhind on the 16th; the Maharajah of Travancore and Jodhpore on the 20th; Sir Salar Jung on the 21st; and the Nepal Embassy (General Runodip Sing Rana) on the 11th instant. The dates of the arrival of the Maharajahs of Jeypore and Johore, and of the Burmese Embassy, are not yet fixed.

LAST week no less than three deaths, by accidental submersion in water, were reported in Calcutta. One took place in Watgunje, one in Ekbalpore, and one in Garden Reach. In the first case a coolie employed in an Emigration Office overbalanced himself, and fell off a wharf into the river. In the second a woman, who had gone to a tank to wash, was seized with a fit and falling head foremost into the water, was drowned before assistance could be rendered her: and in the third, a male child, aged one year and seven months, strayed away from his custodian, his elder brother, to a tank, unnoticed, and was, when looked for, found submerged in water.

AT the meeting of the Legislative Council of Bengal, held last Saturday, the whole of the members were present, with the exception of the Hon'ble Mr. Brookes. The Irrigation Bill was considered by the Council, and several important amendments were introduced. The consideration of the Calcutta Municipal Bill stood over till to-day, but the Lieutenant-Governor proposed and carried a resolution, to the effect that the Clerk be requested to put into form the suggestions made by His Honor the Lieutenant-Governor at the last meeting of the Council that the suggestions made by him should be put into shape, and submitted to the Select Committee on the Bill. His Honor observed that since his remarks regarding the constitution of the Bill have been published, the rate-payers and the public in general had an opportunity of submitting their views on the subject, no definite opinion had been sent in on the subject, and he wished the Committee to consider the suggestions he had made. The resolution was carried.

SIR RICHARD TEMPLE has recorded another Minute on the probable scarcity in Behar. In the Minute of 6th November, he stated the population likely to suffer, with more or less severity, comprised about 8,000,000. He now states he is very thankful, to be able to report that the above statement may be divided into two parts, one of which will consist of the population which will suffer less than was at first anticipated, so that no serious anxiety need be entertained regarding it. The reports received up to 2nd December justify him in stating that fortunately general or serious anxiety need not be entertained regarding about 5,600,000 of the above total.

Regarding the districts of Chumparun and Sarun, the Commissioner (Mr. Metcalfe), by a telegram states that he (having just inspected those districts) still thinks that relief circles will be needed for the prevention of scattered and individual distress. But the general anxiety still continues regarding the following:—

Districts.		Sub-Divisions.		Souls.
Durbhunga		Mudhoobanee ...	...	650,000
		Durbhunga ...	...	250,000
Mozufferpore		Seetamurhee ...	...	550,000
		Mozufferpore ...	...	450,000
Bhagulpore		Soopool ...	...	500,000
		Total ...	...	2,400,000

Regarding even these, however, the estimates have improved, as the crops are reported by the European officers to be looking better at the end of November than they did at the beginning of the month.

The Nepaul Terai crops (though no positive estimate was obtainable, as that tract was beyond British jurisdiction) were understood to be suffering from the same causes which affected the adjoining territory of Seetamurhee and Mudhoobanee. The latest accounts from Mozufferpore states the Nepal Terai crop at six annas. The fact that importations of grain from Nepaul to British territory are reported at two points on the frontier, points to the probability that the crops are not seriously bad in Nepaulese territory. The generally favourable view is borne out by the fact that prices are not dearer on this date than they were on the first week of November, and are in some places slightly easier.

He, however, adverts to the Minute of 12th November, wherein he recommended the undertaking of two sections of State Railway—

	Miles.
I.—From Durbhunga to Gopalghat ...	... 32
II.—From Samastapore to Mozufferpore ...	... 30

And says that he still considers the construction of No. I very desirable, and that it probably may be necessary; but the point does not appear to him so urgent now as it did on the 12th November, and he would therefore suspend the carrying out of the recommendation till the 15th December.

But as regards No. II, the Collector (Mr. Worsley), after seeing all the crops for himself, earnestly requests, by more than one letter—the last of which bears date the 30th November—that the lines may at once be undertaken. The calculations which have been under preparation for several weeks past in Mr. Macdonell's office point to the same conclusion. In fact, if Mr. Worsley's evidence (which is of the very best kind) is accepted (and Sir Richard sees no reason to doubt it), there is no alternative but to again recommend the immediate undertaking of that short line of railway of 30 miles.

NORTHERN INDIA.

THE Public Works Department have set to work to beautify or rather to restore to something resembling their former beauty, the Dewan-I-am and Khas at Agra. A great change in their appearance has already been made, and there is now no ground for alarm lest these ancient halls of Mahomedan magnificence will be otherwise than suitable for the Prince's fête.

THERE were 136 dispensaries in the Punjab in 1874, against 120 in 1873. The number of patients increased from 825,885 to 894,267, a satisfactory proof that European medicine is beginning to be appreciated, the year having been a healthy one. Each patient treated cost little over 6*d*, so that no room for carping at the outlay on these institutions exists.

"A FEW days ago," says an Allahabad correspondent, "I mentioned that the Bishop of Calcutta while here seriously remonstrated with Mr. Wilkinson, the Railway Chaplain, about his ritualistic practices, and peremptorily desired their discontinuance. I added that these practices had been introduced by Mr. Wilkinson's predecessor, and that Mr. W. had only taken up what he found fully developed. I said furthermore that the Bishop had winked at the bud, and now that the flower had opened his action was too late, and so it has proved to be. Mr. Wilkinson adheres to his opinions, and has consequently been transferred to Bhaugulpore, I think. Another *Padre* of the same name, though, it is to be hoped, not of the same mind, comes from Arrah."

THE little State of Dhar, which the Viceroy has been visiting, when the mutiny broke out rose against the English (the Rajah, Anund Rao Puar was only a boy of 13 or 14), and the English took the fort, their guns making a great breach in the walls. The State was confiscated, but in 1862 it was restored, and since then the Rajah has done all in his power to show his sense of the obligation. In 1864, when the administration was handed over to him—he had been considered too young before—he gave promises of good behaviour, but he was obliged to leave the fort as it was, with the breach in the walls still open. The Viceroy has removed this injunction, and the Rajah, to whom the breach has long been an eyesore, may now close it up.

THE Punjab Government has issued a series of rules for regulating the issue of agricultural loans. The Lieutenant-Governor has not established any agricultural banks; but nevertheless, under the system now in force, the Deputy Commissioner, the Financial Commissioner, and even His Honor himself, may be regarded as agricultural bankers. The first-named may grant loans up to Rs. 500; the second up to Rs. 5,000; the Lieutenant-Governor to Rs. 10,000; while for larger loans the consent of the Viceroy must be obtained. The loans will be granted on easy terms—Rs. 6-8 to be charged for every Rs. 5 borrowed, and the whole amount, including principal and interest, to be paid by instalments in seven years. The rules are very precise as to the means which must be adopted for testing the borrower's reasons for applying, his ability to repay, and for ascertaining, from time to time, the progress he may have made in carrying out his proposed improvements.

A PESHAWUR correspondent writes that that troublesome ex-chieftain, Nowroz Khan, who has possessed himself of the road in the Tatra Pass, has been attacked by the Ameer's troops, a force of which had been despatched from Lalpura by Zerdast Khan. Nowroz Khan had taken up his position at about two miles from Michni; and since he had been there his band had been increasing every day with recruits from the many lawless gentlemen of the hills ever ready for plunder and rapine. On the approach of the Ameer's troops, a straggling fight ensued which ended in a decided triumph for the bandits, who succeeded in forcing the attacking party to fall back on Lalpura, there to await reinforcements. But Nowroz Khan still makes his very unpleasant presence felt in the Tatra, which is closed to all traffic, and any traveller along the road, uninformed of that very decided block in his way, has but little chance of getting through alive, and none at all of retaining his property.

"ONLY a week ago," says the Allahabad paper, "the Colonel and officers of our very popular regiment here, the 5th Fusiliers, commenced the festivities of the too brief winter season with a dance at the Railway Assembly Rooms, at which every element they could command to ensure its success ensured it. Our pleasant neighbours at Papamhow, the 18th Cavalry, have kept the ball rolling; their dance on Wednesday night,—or Thursday morning shall we call it, since midnight saw the mere beginning of the fray,—went off as well as it could: the mess-house, not, if we may say it, the ideal arena of the occasion, was wholly transformed, showing how taste can triumph over discouragement (especially when the smiles of the fair are the stimulant); and the floor, another standing difficulty where there is no planking, was admirable. On the 8th the Club give a fancy-dress ball. Our friends on the Committee must look to their laurels, or rather win some, for hitherto the dances at the Club have fallen somewhat short of the ambition of their projectors."

THE Lahore Free School is in difficulties, and appeals to the public for help. Its object is to give education to the children of poor Englishmen and Eurasians, and if possible to teach them a trade. Up to last March it seems to have been fairly solvent for an Indian charity. But on the first of April, says the appeal, the Rev. Mr Baldwin converted the day-school into a day and boarding-school. *Hinc illæ lachrymæ.* Its income is about Rs. 150, and that is likely to be withdrawn, and its expenditure is about Rs. 350 per mensem. There is a debt due to the Treasurer and Manager, Mr. Masson of the Punjab Bank,—who has most generously and manfully struggled to carry on an impossible enterprise,—of more than a thousand rupees. Mr. Masson has given a loom, on which carpet-making was taught; he has provided the girls with hats and clothing, and has done all that a man single-handed could do. Mr. Baldwin (the chaplain) conceived, says the appeal, that the voluntary poor rate would support the school; but this conception remains unfulfilled, and the public is now asked to contribute Rs. 1,000 down, and to provide Rs. 200 per mensem hence-forward.

MR. E. B. PEACOCK, *late Judge of the Small Cause Court of* Delhi, has, at the instance of the Punjab Government, withdrawn the suit instituted by him against Messrs. Smyth and Delmerick. It appears that in April last, three or four suits having been filed against him in his own Court, the matter was brought to the notice of Government, on the ground that, under the existing procedure, he would be in the anomalous position of defendant and judge at the same time, as no other Court had jurisdiction to try the cases. On being called upon for an explanation, Mr. Peacock said that he had paid some of the claims, and was about to discharge the remainder. As the explanation was not deemed satisfactory, the Government decided to relieve Mr. Peacock of his office as Judge of the Small Cause Court. Meanwhile, the unadjusted suits were tried by the Deputy Commissioner of Delhi, who was invested in August with the powers of a Small Cause Court Judge to dispose of them. On examining the "file of the cases," Mr. Peacock came upon a document which seemed to him actionable, and hastily entered the suit against Messrs. Smyth and Delmerick which he has been induced to withdraw.

A MELANCHOLY pig-sticking accident has occurred near Muttra. The 10th Hussars are at present encamped at Jait, nine miles from Muttra, and thirteen from Baharban. On the 31st a party of pig-stickers from that regiment came to the Baharban jungles. While Lieutenant Startin and two others were pursuing a pig, the animal suddenly jinked under one horse, and nearly upset him. At the same moment almost, Mr. Startin's following at a rapid pace, cannoned against him, and both came down together. In the fall the spear of the first horse's rider caught Mr. Startin in the breast to the left, a little below the collar-bone, and passed right through him, coming out at the right shoulder. The regimental doctor arrived in a couple of hours; but all efforts to save the wounded man proved unavailing. He died about ten hours afterwards. His loss is deeply deplored by his friends, whose warm regard, our contemporary hears, he thoroughly deserved. He was active and zealous in his profession moreover, and was altogether an officer of rare promise. We are assured that the officer whose spear was the instrument of Mr. Startin's death, was absolutely blameless in the matter, bitterly as he feels his accidental connection with the sad result.

BOMBAY.

THE Agent of the G. I. P. Railway has been in Poona making arrangements for the enrolment of a Railway Volunteer Corps at that station.

SEVERAL distinguished American military officers have arrived in Bombay *en route* to the Delhi Camp of Exercise. These gentlemen have been deputed by the United States Government to observe and report upon the manœuvres at the Camp in January next.

THE *Times of India* says:—Any check on the wholesale destruction of game which is but too frequently practised will be welcomed by every true sportsman. We are glad to see that the matter has been taken in hand by the Sholapore Gymkhana, the members of which have passed a series of resolutions regarding it. The dates of close and open seasons to be in future adhered to in the Sholapore Collectorate are given. The action of the Sholapore Gymkhana is highly creditable, and we trust the co-operation necessary to secure an extension of their rules to other parts of the Western Presidency will not be wanting."

LIEUTENANT MURPHY, whose name is well-known in connection with the Cameron Expedition into Central Africa, has arrived in Bombay. The gallant officer has a companion, also distinguished in African travel. This is the late Dr. Livingstone's dog—the only dog that has survived a journey into Central Africa. This faithful creature travelled from Zanzibar to Unyanyembe with the explorer, and then followed Livingstone's body back to the coasts. The dog wears a medal bearing the following inscription:—"Mable, F. R. G. O., late Livingstone East Coast African Expedition, 1873-74." It is a small-sized bull terrier, white in colour, and we are sorry to say in very infirm health. It travelled fifteen hundred miles in Africa—a wonderful effort in pedestrianism—before it was twelve months old, and has since travelled 15,000 miles by sea.

A NATIVE prow put out from Bombay on the morning of the 26th ultimo for the purpose of fishing, and at nightfall, when about fourteen miles from land, dropped anchor. She had not long lain thus when one of the two men who were keeping a look-out, raised an alarm, and a large ship (the *Othello*) was seen approaching, Having no signal or lights on board the prow, her crew cried out to the ship, and one of them waved a burning wood brand in the air. The vessel however came straight on, and striking the prow amid-ships cut her in two. The crew were subsequently picked up by a boat from the ship. One of them, named Suddoo Mullaree, was so severely injured by the shock of the collision that he died shortly after being taken on board the *Othello*, An inquest was held on the body, when the jury returned a verdict of accidental death. The occurrence will probably form the subject of a marine court of inquiry.

THE Bombay *Native Opinion* says:—"On the day His Royal Highness the Prince of Wales embarked for Ceylon he Knighted Mr. Souter, the Commissioner of Police, Bombay. That among others our Commisssoner of Police alone should have been selected for the honour, and that no other person, either among Europeans or Natives, should have been deemed fit for it has created a great deal of surprise in Bombay. Whatever services Sir Francis Souter may have rendered to the State, they have been rewarded in his being made a Companion of the Star of India, and the conferring upon him of the Bombay Police Commissionership. We should not have grudged the conferring of Knighthood upon our Police Commissioner, if he had done fresh services to the State to deserve the new honour. At least the public is not aware of these. He signally failed during the Mahomedan riots of 1874. If he is rewarded for his services—if he has done any—in the Baroda affairs, then all we can say is, why not reward the "pious" Gajanand, the two Khan Bahadoors, and the immortal Damodur Punt?"

A CORRESPONDENT of the *Indian Railway Service Gazette* writes:—In travelling through the Central Provinces I paid a visit to the Chanda Coal Fields to see what progress has been made, and having witnessed what is done in this line of business at Home, I expected to have seen something for the six lakhs which I hear Government has already expended. From enquiries made at Wurrora, I learned that no coal has been got out of the pit as yet, and as for the machinery, from what I saw of it, is not of the best; the engines are oftener standing than working, and after six lakhs of expenditure coal should have been at the pit-head long ago, as the colliery has been at work for two years. To tell you the truth I have seen an old man and a boy, with a couple of fifty shilling old horses, work a larger colliery than the Wurrora one. I also visited the Mahpanee Coal Mines, and must candidly confess that I witnessed something like business there; the men and machinery were as busy as bees, and there is great hope that the Company working these pits will make a good profit in a short time.

AT the special general meeting of the Bombay Municipal Corporation, the consideration of the question as to the best mode of disposing of the liberal gift of H. R. H. the Prince of Wales of Rs. 10,000 to the poor and distressed people of the city elicited a very warm and animated discussion. Mr. Raghunath Narayen Khote advocated in a long speech the advisability of erecting a Lepers' Asylum, but as it was thought that the appropriation of the money solely to one purpose would not fully carry out the intention of the Royal donor who, it is believed, wished that both Europeans and Natives whose poverty or misfortunes are equally entitled to sympathy, should be benefitted by the gift. The proposition of Mr. Khote was withdrawn, and it was finally arranged that a committee be appointed to consider the claims of the various charities of the city and to determine how His Royal Highness' gift should be appropriated. Colonel Hancock, Mr. Raghunath Narayen Khote, Mr. Cumroodin Tyabjee, and the Municipal Commissioner were nominated as a committee for the purpose. The thanks of the Corporation on behalf of the city of Bombay are to be tendered to H. R. H. the Prince of Wales through His Excellency the Governor for his munificent gift.

MADRAS.

THE Nizam's State Railway traffic receipts for the week ending 30th October were Rs. 9,925-13. The Oomrawuttee State Railway traffic receipts for the week ending 30th October were Rs. 410-13.

IT is said that Dr. Maclean, the Canarese Translator to the Madra Government, who was lately appointed as Tutor to His Highnes the Maharaja, is to get 1,800 Rupees per month, besides free quarters He will take charge of his office after the Prince of Wales leaves the province.

THE health of the town of Madura seems in an unsatisfactory state. A correspondent has ascertained from daily municipal reports that "on the 23rd instant, we had thirteen cases of cholera in the town alone. On the 24th we had eleven cases. And, as if this were not sufficient, we have numerous cases of fever."

THE Inspector-General of Police, Madras, submitted to Government a letter from the Inspector of Post Offices, Cuddalore, showing a correct list of the contents of the Mail plundered between Punrootee and Arrasoon; and that all the property lost has been recovered. The missing notes valued Rs. 3,820. Rs. 1,620 have been recovered also, but the half-notes of the difference for Rs. 2,200, though lost, have already been received by the consignee, so that there is no actual loss by the crime to the public. The Government have sanctioned the rewards proposed by the Police authorities aggregating Rs. 120.

THE Ootacamund paper of Nov. 30 says:—

"A sale took place at the Club yesterday morning of the articles that had been purchased for use during the stay in that establishment of His Royal Highness the Prince of Wales, servants' clothing, bed linen, cooking utensils, butter, rice, gram, grass,—all came to the hammer of an amateur auctioneer. Among those who attended the sale, the staple of conversation was how neatly everybody had been "sold" over the Royal visit, and an occasional growl was heard at those who are supposed to have been at the bottom of the mischief; for no one yet believes in the "cholera cry."

"THE Government," says the *Madras Times*, "have not been satisfied with the result of the last commission appointed to submit a scheme for the reorganisation of the Public Works Department, and a new commission has been appointed for the same work. The commission is to consist of the Hon'ble R. S. Ellis, President, and the following members:—Major-General G. Walker, Secretary to Government, Public Works Department; Colonel J. Mullins, Secretary to Government, Irrigation Department; Captain

Conway Gordon, Controller of Public Works Accounts; and Major A. D. Scott, Under Secretary to Government, Public Works Department.

THE Governor of Madras in Council having selected certain forms of address equivalent to "Mr." and "Esquire" to be used in the case of those native functionaries who in virtue of their office under Government would be addressed as "Mr." or "Esquire" if they happen to be Europeans or East Indians, the controlling authorities of all officers under Government have been called upon to indicate the several posts, the holders of which should in their opinion be styled by the equivalent of "Mr." and "Esquire" respectively. The Mahomedan equivalent for "Mr." has been put down as "Sahib" affixed, and for "Esquire," "Sahib Bahadur" affixed, their respective native equivalents being "Garu" or "Avurgul" affixed ("Mr." and "M. R. R." prefixed with "Garu" or "Avargul" affixed ("Esquire.")

ACCORDING to the *Deccan Times*, the unexpected retirement of Mr. Saunders is attributed to the declining health of Mrs. Saunders, which renders her stay in India unsafe. Mr. Saunders belongs to the Bengal Civil Service, and has held many very responsible posts. Before his appointment to Hyderabad, he was Judicial Commissioner of Mysore, where he was deservedly popular, in May 1868, he was nominated to the Court of Hyderabad in succession to Mr. Roberts, and during his seven years' tenure of office has conducted the administration of the Hyderabad Assigned Districts. The resignation was sent in by telegraph it seems, to the Government of India, and was to take effect from Saturday last, from which date also Mr. Saunders retires from the service. Sir Richard Meade was to take over charge the same day. Mr. Saunders was to leave Hyderabad by the morning train, and to meet his successor at one of the stations on the line, to hand over charge as a matter of form.

BURMAH.

THE Masonic Lodges of Burmah intend presenting His Royal Highness the Prince of Wales with an address accompanied with a Silver Casket of Burmese manufacture.

MOUNG ONG, 2nd Judge of the Small Cause Court, Rangoon, comes to Calcutta, to be presented to H. R. H. the Prince of Wales. "A better representative of a Burmese gentleman, says a local paper, it would have been difficult to produce out of the whole province."

A NUMBER of elephants have been purchased at Tounghoo, for service in the Madras Presidency. The *Nemesis* leaves Rangoon shortly for the Krishna Shoal, taking Captain Arnot to inspect the coast light-houses. The closing of this monsoon has been a very strange one, rain occurring much later than in most years, with fewer storms. The *Rangoon Mail* hopes there is no chance of the *Nemesis* having bad weather outside, for she is not in a highly seaworthy condition.

THE *Mail* is sorry to learn from Maoobeng that the steamer *Mandalay* on her last trip, came into collision with the steam yacht belonging to Mr. S. F. A. Smith, Deputy Commissioner at that station. The amount of damage done is estimated by Mr. Smith at Rs. 5,500, and legal action is threatened if the amount is not paid. As Mr. Smith's own Court is the only one at Maoobeng with jurisdiction to that amount, we presume the case, if it comes into Court, will have to be tired elsewhere.

THE *Rangoon Gazette* says of the plot to seize the arsenal:—It is beyond doubt that this alarming conspiracy was designed some months ago, and for a considerable time past has been slowly but steadily advancing towards maturity, It must assuredly have broken out with possible fatal consequences, but for its opportune discovery, and the fortunate capture of Moung Bhaw, while the subsequent arrest of a considerable number of those concerned has caused its total collapse. We gather that so far back as April last the first seeds of disaffection were sown amongst the people of Rangoon, and the first germ of sedition showed itself, when in the middle of the last rainy season the Burmans were in high expectation of a rupture between the Court of Ava and the British Government. It was, we believe, Ko Noe, the captain of His Burmese Majesty's steamer *Setkya Yaymoon*, who first desseminated treason amongst the discontented classes of Burmans, who, amongst other blessings of British rule, resented the night-soil tax as an intolerable wrong, and whose sympathies were readily enlisted in the cause of his Golden-footed Majesty. So cautious were the movements of this individual, and so insidiously was his work done, that the local authorities failed to detect him; and it was not until one of his own servants, employed on board the steamer broke loose from the confinement in which he was placed, and with the irons yet dangling on him came up before one of our Police Inspectors, that some inkling of his purpose leaked out. The name of his servant was Shway Long, whose fidelity the captain had reason to suspect; and the latter, entertaining fears for his own personal safety if he allowed Shway Long to be at large, caused him to be placed in irons and confined on board the steamer on a pretence that he had been gambling. It was elicited in the course of this man's examination before the Magistrates that the Captain was engaged in collecting men for the King as well as guns and ammunition, and it was also apparent that he was doing his utmost to spread disaffection in Rangoon. The Magistrate, however, at the time thought it advisable to simply order him to find bail for his future appearance when required by the court, in the sum of Rs. 1000. Subsequently the uncertain relations between ourselves and Upper Burmah tended not a little to raise hopes in the minds of discontented people in the province of bettering their condition under the Burmese, whom they believed would be victorious, while a prospect of extensive *loot* doubtless had considerable influence. Every one must recollect the rumour during the rains that bands of dacoits were organizing in the district for the purpose of devastating Rangoon—and the insignificant little gang of robbers at whose hand Colonel Hamilton lost his life was even said to form part of those concerned in these nefarious schemes. We can hardly wonder that a conspiracy planned and arranged so long since should have by this time matured on a large scale: and we hear that no fewer than five thousand men are concerned. Bodies of men were appointed, we hear, for each division of Rangoon, commanded by a Captain, the whole subject to the orders of the Chief, *Thike Moung Bhaw*. This man, whose surname of *Thike* signifies "interpreter of prophetic sayings," is an old retainer of the King of Burmah, and though he has been a Resident of Rangoon for some years past he has, throughout the period, acted we are told as the King's emissary, and holds secret correspondence with the King's Ministers. A document discovered in his box soon after he was arrested purports to be a letter written to him by one of the King's Ministers in which he is told, in the event of his requiring money, to seek it from the writer, and promising accommodation to any extent. This letter serves to confirm the impression that he is an emissary of the Burmese Government. In appearance he is a well-looking fellow.

The remainder of the men arrested are nearly all residents of this town. Their names have been disclosed by informers, and their detection was aided by their distinctive tattoo marks on the nape of the neck, and by their having a peculiar leaf called *Thabyay-ban* stuck in the ears, or *young*, the former as a sign by which to know a friend from an enemy, the latter as a signal to denote the time for the rising, and we believe it was the day on which the information was given through the municipal office that the conspirators had selected as the one for this purpose. Some of the men since their arrest have confessed that their intention was to burn down Rangoon, *loot* the arsenal, and massacre the Europeans, but they do not seem inclined to give any information as to details. We hear, however, that amongst the intended victims of the massacre Colonel Ardagh and the President and Secretary of the Municipality were to be spared—in order to be tortured subsequently. Of course, this is no matter for a "goak," but there is something irresistibly ludicrous in the notion of reserving these three gentlemen for subsequent diversion. We may add that in connection with this matter the name of a high official of the Burmese Court, which we refrain from giving, has been freely mentioned.

ASIA.

A MONUMENT is being erected at Leh by the Government of India, in memory of the late Doctor Stoliczka, who died on the return journey of the last British Embassy from Yarkand. It is to be an obelisk of granite quarried in the neighourhood of the site with the inscriptions in Latin and English, on marble slabs. The design is by Mr. Kirby, Executive Engineer of Kangsu, and the work is being executed under the superintendence of Mr. Morris. The foundation has already been laid, and the work closed for the winter, to be resumed and completed next year. The tablets meanwhile are being prepared at Delhi. The grave itself is within a walled enclosure, in a grove of poplar trees, about a hundred and fifty yards from the residence of the British Commissioner. The site is highly picturesque: to the north lies the lofty Kardung range, and to the south-east are the Kowri and other high snow-clad peaks.

THE following is the official Aden news-report from the 18th to the 24th November 1875:—Information has been brought from Saana that the Hasheed tribes have submitted to the Turks. Turkish troops are occupying their districts and they have entered Khawar, the town from which they were driven out last year. It is reported that Egyptian troops have reached Shoa by the Tajoora and Aussa route. Kaoof Pasha is said to be in Hurrar. The Ameer plotted with the Gallas intending to attack the Egyptian troops at night. The scheme was discovered by the Pasha, who is said to have ordered the execution of the Ameer. The brother of the Ameer, who had been a prisoner for fifteen years, and had been released befor the Pasha arrived, is said to have divulged the plot. Upwards of one hundred Gallas were slain, who were found outside Hurrar. Few of the Ayal Yoonus are at Berbera this year, as the roads are still unsafe. It is said that Eda Gall tribes attacked the Ayal Yoonus and plundered ten of their villages, not far from Berbera.

THE following is an extract from the diary of the British Joint Commissioner, Ladakh, to 10th November:—

Traders have begun to clear out of Ladakh fast: during the week two large caravans have gone off southwards, and another has started for Turkestan. A few merchants are still here, waiting to dispose of goods brought up from the Punjab during the summer, but it is not likely they will wait much longer, for the season is already far advanced, and the difficulty of importing goods to the Punjab and taking a caravan across the Zojila may at any time now become serious. Bargains at this time of the year are usually for this reason much more rapidly effected than earlier in the season, for traders who are prone enough to stick out for prices in July find it pays them better to sell cheap, as the winter approaches and risk of detention on this side of Zojila increases. Even in mid-winter, however, there are never wanting a few hardy traders who are ready to go anywhere with their goods, neither the icy cold of the Karakorum or the difficulties of the Zojila, when it is yards deep in snow, causing them to defer their departure from Leh to a more favorable season. The trade totals for the past month have exceeded a total of five lakhs, a figure that until the arrival of the Caravan of the Central Asian Trading Company in August 1874, when the value of trade was quite exceptionally increased, had never been approached in the statistics any single month. It speaks well for the total value of this year's trade, which will, I trust, compare favorably with that of 1874. This year will not indeed be wanting, I think, in symptoms which tend to show the natural tendency Ladakh trade has to develop. Some time ago a Yarkandi in the employ of Sayad Yakub Khan, the envoy from Yarkand, brought back with him from Constantinople a small consignment of otter skins. These

sold so profitably in Yarkand that several traders have since been induced to prolong their travels to Turkey for the purpose of investing in the same kind of goods, and only the other day a large consignment of them were imported here from Constantinople for onward export to Turkestan. A Turkish merchant has also arrived from the same city within the last few days with machinery for setting up a silk manufacture in the Ameer's dominions. He purposes visiting Khotan and Aksu to see where the trade could be most profitably worked. Business to the value of about Rs. 7,000 has been transacted during the past week in Leh. The traffic for the past ten days has comprised 22 horse-loads from India, 26 from Turkestan, 21 from Changthan and Chinese territory, and 28 local from Cashmere; while 37 have gone out to India *via* Kulu, 25 *via* Cashmere, 23 to Changthan, 35 to Turkestan, and 32 to the Maharajah's territory.

MILITARY.

IT is notified that the staff salary of the Commandants of Native Field Mountain Batteries is raised from Rs. 250 a month to Rs. 300 a month, in addition to Staff Corps pay of rank.

LIEUTENANT-GENERAL SIR C. REID, K. C. B., has been appointed President of the Special Committee to be assembled at the Delhi Camp, in connection with the further experiments to be undertaken in embarking and disembarking troops, horses, and guns, on to and from railway trains.

A CODE of "Regulations for the Volunteer Forces in India" having been approved by the Hon'ble the President in Council with the concurrence of the right Hon'ble the Viceroy and Governor-General, the orders therein contained will supersede all circulars and orders hereto in force relative to the Volunteer Forces in India, and are to be strictly observed.

CAPTAIN WILLIAM INNES, R. E. who was killed in Perak, obtained his commission in June 1858, passing out of the Woolwich Academy at the head of his batch. His first appointment was on the fortification works at Dover; then to the same sort of employment at Halifax and Portland. When Sir William Gordon was made Inspector-General of Engineers, he chose Lieutenant Innes as his aide-de-camp. On the death of his chief, Mr. Innes was posted at Shoeburyness; and some little time afterwards he accepted the post of Assistant Colonial Engineer and Surveyor-General of the Straits Settlement.

THE *Madras Standard* says:—"A grand parade of the troops in Trichinopoly was ordered to take place but is postponed owing to a paucity of officers. There are two corps of native infantry stationed at Trichinopoly, a battery of artillery and a detachment of the 89th Foot. The wing officers of the native corps reported sick owing to the heavy musketry work they have had to do. The circumstance reminds one of the fact brought to notice the other day that there were but two European officers attached to a regiment of Native Infantry in a station in the N.-W. Provinces, thanks to the new army system."

CAPTAIN E. ROGERS, in an interesting paper on the Gatling gun, published in the journal of the *United Service Institute*, considers that Gatling batteries should form a fourth arm of the service, and points out the advantages of so formidable an armament in the hands of well-trained men. Russia, it appears, has already acknowledged the value of the Gatling gun by forming fifty batteries of eight guns each, of which 328 guns are in European Russia; 48 to guard the Caucasian territory, and 24 are in Eastern Siberia and Turkestan. It is said that in the Khivan campaign a couple of Gatlings were used with great effect, and are highly suited to this class of warfare. The Gatling designed for the Indian Service has eight barrels, weighs 150lbs. and has been proved effective up to 1,400 to 1,500 yards.

GENERAL.

THE amount of opium imported into America, according to the Custom House returns, is ten times more than it was thirty years ago.

A FRENCH scientific expedition is being fitted out to make a "Tour du Monde" in ten months. The excursionists are to visit India, Japan, the interior sea of Japan, Chinese ports, Australia, &c. A special library, with instruments, will be placed on board. The members of the expedition will be exclusively of the male sex. The fare is to be £8000, everything included. The Geographical Society will superintend the management of the enterprise, although it will be supported by private funds, and is altogether a private speculation.

THE plan of the German African Expedition for penetrating inland from Chinchoxo, the coast station selected, has, we see, failed. Dr. Paul Gussfeldt, the head of the expedition, having returned, and seventy out of a hundred of the bearers having succumbed to climatic influences. Three officers of the Society are, however, left to carry on the expedition, Dr. Lenz on the Gaboon, and Dr. Pogge and Lieut. Lux, to the south, from the Loanga Coast. Dr. Lenz was advancing up the Ogowai, and had succeeded in securing a live gorilla, which was expected to arrive in Berlin at an early date.

THE chief points in the Premier's speech at the Guildhall were testimony to the energy of Mr. Wade in the China negotiations; admission of the forbearance of the Northern Powers in respect of Turkey; and a clear intimation that should the financial difficulty give occasion for a departure from this line of forbearance, England would not forget that her interests were, if not so direct as those of Russia and Austria, considerable; these interests the Government would guard and maintain. Mr. Disraeli simply glanced at the past legislative action of the Government, and made no attempt whatever to give a forecast of the measures of the next year.

THE opium most esteemed in Europe and the United States is the produce of Smyrna, and is shipped in tin, soldered tight, with an outer case of wood. Each case contains about 140 pounds of the drug. Egypt exports a little opium, but of poor quality, Persia, a very considerable quantity for China and some to Europe. Opium has been successfully produced in France, England, and the States; and the opinion is held that the poppy can be profitably cultivated in America for its seed, from which a fine bland oil, it is said, can be made after the opium has been extracted. In Prussia, the drug is largely produced, for the morphine makers. The Turkish yield has risen to 8,000 baskets, but consumption keeps pace with this increased production. The consumption of opium in the States was upwards of 319,000 pounds in 1872-73.

THE interview of General Ignatieff, the Russian Ambassador at the Porte, with the Sultan on November 3, which lasted two hours, is understood to have been of a character to rouse the indignation of the Father of the Faithful. It is true Sir Henry Elliot, our Ambassador at Constantinople, had said as much as General Ignatieff, but the lecture received amicably in the one instance, in the other was understood as partaking of the nature of a threat. The Sultan was taken to book on the three counts—the defects of administration, the discontent and disorder among Turkish peoples, and the deplorable condition of the exchequer. The Vienna press is desirous that it should be known that the reforms which General Ignatieff urged upon the Sultan, Austria also desires to see; and that Russia was not speaking alone, but in alliance with Germany and Austria. Military activity is the great feature of the time, both in Russia and Austria.

THE site for the new India Museum building in London has been selected. The Government have directed notices to be given for a bill, to acquire as a site for public offices the ground extending from the new public offices, and the India Offices, to Great George-street and the park, including Charles-street, King-street, Delahay-street, Duke-street, the remainder of the west side of Parliament-street, and the north side of Great George-street. This is the site that Dr. Forbes Watson has so long proposed should be chosen, and the result will be that a fine square of public buildings will be completed near the Houses of Parliament; at the same time the position is a very central one, being about equi-distant from the great public buildings in London, having the Albert Hall and South Kensington Museum on the extreme west, and the bank and Royal Exchange on the extreme east, whilst the British Museum occupies the northern point with the Courts of Law lying between, and all the clubs and West-End portions of London close at hand.

LITERARY.

IT is stated that the great work upon which Mr. Gladstone is engaged, and to which he has more than once made allusion, is *The Claims of the Papacy as viewed by the Light of History*.

THE author of some recent letters on Oriental diplomacy in the *Pall Mall Gazette* is supposed to be Mr. (now Lord) Hammond, whose behaviour towards Sir Henry Rawlinson was, the *Pioneer* says, the real cause of that officer's resignation of the Persian Legation.

PROFESSOR J. BUHLER, whose visit to India we noticed the other day, has been finding precious manuscripts. These, according to the Academy, are the Surats of Laujakshi to the *Kathaka Sakha*, a *Rigveda*, and parts of the *Kathaka*, of which only one manuscript has hitherto been known. The Professor has also made a new collation of the *Paranguni*.

A THEISTIC Magazine is about to be started in London, under the editorship of Mr. Charles Voysey, who will himself contribute the articles expounding the views peculiar to the sect, of which he is among the foremost representatives. More than one well-known Indian pen will be employed on the new publication, we are told, which is to be issued monthly at a shilling.

LATEST TELEGRAPHIC NEWS.

London, 1st November.

THE Thirty-first Anniversary of the birth of Her Royal Highness the Princess of Wales was celebrated at Windsor Castle to-day amid great rejoicings. Her Majesty the Queen of Denmark and the Princess of Thyra were present.

THE Foreign Press expresses apprehension lest England should acquire exclusive possession of the Suez Canal, and insists in the maintenance of its neutrality. The Russian Press is silent on the subject.

London, 3rd December.

RUSSIA and Germany have notified their approval of the Austrian scheme of reforms in Turkey. Final arrangements only wait for the return of Gorstchakoff to St. Petersburg. The weather throughout Europe is severe, and in some parts heavy snow storms have fallen.

London, 4th December.

OFFICIAL despatches have been published in Paris, respecting the recent interviews between Lord Derby and the French Ambassador in London relative to the Suez Canal question. Lord Derby, in replying to the Ambassador on the 27th ultimo, stated that he adhered to his previous declaration that the Lords would not oppose an arrangement for placing the Canal under the management of an International Syndicate, though they would not propose it. His Lordship stated that the object of England's action was a purely defensive one, and intended to prevent preponderance of larger foreign influence in the management of the Canal.

THE recent rumour of the earlier assembling of Parliament is authoritately denied.

A DEPUTATION from the Anti-slavery Society of Great Britian waited on Earl Derby to-day at his official residence in Downing-street. The Earl, in replying, said he was quite prepared to advise the Khedive to abandon any scheme if such existed for the annexation of Abyssinia, but Government is at present without any information on the subject. He believed that the violation of the Zanzibar territory by Egypt, if authentic, must be due to some misunderstanding. In case the Sultan of Zanzibar requests the interference of England, the Government will endeavour to preserve good relations between Egypt and Zanzibar, and to prevent injustice by either side.

London, 6th December.

IN accordance with the request of the Egyptian Government, that the British Government should send two gentleman to be employed at the Egyptian ministry of Finance, Colonel J. Stokes, Royal Engineers, has been ordered to proceed immediately to Cairo as second Special Commissioner.

THE Queen of Denmark and Princes Thyra left England on Saturday *en route* to Copenhagen.

Obituary.—Mustapha Pasha, brother of the Khedive.

London, 6th December.

THERE was a terrible explosion to-day at Swaithsmain Colliery, near Barnsley. It is feared that above two hundred lives have been lost.

Several minor colliery explosions have occurred in other parts of the kingdom recently.

London, 7th December.

COLONEL J. HOKES, R. E., will accompany the Right Hon'ble Stephen Cave to Egypt, Mr. Victor Buckley, of the Foreign Office, is appointed Secretary, Mr. Cave, and Mr. W. H. White Deputy Accountant-General, War Office, as Financial Secreatary, Mr. Archer Taylor, of the Foreign Office, has also been attached to the Mission.

London, 8th Decemher.

THE Queen has invested Generals John Garooch, N. B. Chamberlain, and A. H. Horseford, as K. G. C. B; Generals E. A. Holdich, E. B. Johnson, George Cadogan, and Francis Seymour as K. C. B; and the Hon'ble B. H. Ellis as K. C. S. I.

The Princess of Wales has returned to Windsor.

Berlin, 1st November. 1875.

GORTSCHAKOFF arrived here from St. Petersburg and had a long conference with Prince Bismarck and the Emperor.

Madrid, 1st November 1875.

THE Cortes meets on the 1st February.

Madrid, 3rd December. 1875.

A MINISTERIAL notification again nominates Senor Canovas del Castillo to the Premiership.

St. Petersburg, 3rd December.

A fresh rising of the Kiptschak tribes against the Russians at Khokand. An engagement took place on the 24th ultimo, in which the Russians proved victorious, having defeated with great slaughter 20,000 Kiptschak troops on the Syr Daria.

Cairo, 7th December.

RATIL PACHA, Commander-in-Chief of the Egyptian Army, has left here to take command of Egyptian forces in Abyssinia.

Washington, 7th December.

CONGRESS was opened yesterday. The President's message will be delivered to-day.

Washington, 8th December.

PRESIDENT GRANT'S message to Congress disapproves of the recognition of the belligerent rights of the insurgents in Cuba for the present, but if the pacification of the island is not soon accomplished, the President will propose some necessary measure during the present Session of Congress. The message recommends the resumption of specie payments in 1876, free secular education, and taxation of Church properties.

Penang, 3rd December.

MR. B. P. AVERY, American Minister, died at Pekin on the 8th ultimo A body of 400 Malays attempted to escape down the river, but were prevented by a blockade and retreated. The remainder of the Buffs, Ghoorkahs, and Artillery have arrived. General Colborne will commence active operations immediately the forces are in position. Troops *via* Laroot are expected at Qualla Kangsa to-morrow.

Hong-Kong, 30th November.

INFLMMATORY placards have been posted at Pekin, censuring the Chinese Government for arranging terms with Mr. Wade, They were immediately removed by the authorities. An uneasy feeling prevails among the native officials regarding the recent negociations with Mr. Wade. It is reported that fresh information has transpired, implicating the Momein authorities in the treacherous murder of Mr. Margary.

BIRTH.

SHIRREFF.—At Sindooree Kishnaghur on the 2nd instant the wife of William Shirreff Esq., of a daughter.

MARRIAGE.

Vice-Presidents.

HIS GRACE THE DUKE OF SUTHERLAND, K.G. | HIS GRACE THE DUKE OF ABERCORN, K.G.

Chairman of the General Court of Directors.

THE RIGHT HONORABLE LORD LAWRENCE, G.C.B., G.C.S.I.,

Subscribed Capital—Two Millions. | **Life Reserve Fund £2,682,513: 7: 6.**

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

CONSULTING ACTUARY J. HILL WILLIAMS, ESQ. *President Institute of Actuaries, London,*
Extract from the Actuary's Report, dated 10th September 1875.

"It will be a matter of congratulation to the Directors, the Assured and the Proprietors, that the close of the first five years of the business of the Company a valuation made on the strict principles I have adopted should exhibit such satisfactory results."

Participating Policy-holders who have paid five complete premiums to end of 1874, are entitled to have their premium reduced 40 per cent. during the 5 years ending 1879. Policies of more recent date share in proportion,

INDIAN RATES of Premium charged while in India, English Rates on leaving for Europe. Assurers who do not contemplate spending a *life-time* in India or other tropical climates will find that the rates of this Company compare *favorably* with *enhanced English Rates.* They have the advantage of *consistency* as it is proved *beyond doubt* (by the various Civil and Military Funds &c.) that English life is of *less value* in India than in Europe.

ASSURANCES EFFECTED IN THE FOLLOWING FORMS:—

(1.) WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
(2.) POLICIES, FOR SHORT TERMS, for 1,3,5,7, and 10 years at low rates.
(3.) PENSIONS granted. The Rates are more *favourable* than those of any similar Fund in India.
(4.) EXCHANGE OF POLICIES by substitution of Lives.
(5.) WHOLE LIFE POLICIES with payment of premiums *ceasing at the option of the Assurred* after 5, 10, 15, or 20 years.
(6.) ENDOWMENT POLICIES payable at 50, 55, or 60 years of age, *or earlier in the event of death.*

PROMISSARY NOTES OR PAID-UP POLICIES issued under Forms 5 and 6 *for each Premium paid* if assured on the With-Profit scale, 40 per cent. or if on the Non-Profit scale, 30 per cent. of the Premium is withdrawable at three days' sight. As each Premium effects a *Complete paid-up* Assurance independent of any further payment, *the Forfeiture of a Policy is obviated,* and it also ensures a *Fixed Surrender value payable in cash at the will of holder.*

LAPSED POLICIES REVIVED WITHOUT FINE.

REDUCTION OF PREMIUM to English Rates from date of *leaving* any Port in India, Ceylon or China.

In Assurance transactions what *ought* to be sought *beyond everything else* by the Assurer is *absolute Security,* which can only be obtained by *sound* and *consistent* rates, combined with investment of Funds in securities of an *unimpeachable nature.*

The two Grand Inducements to Policy-Holders.

MUST ALWAYS BE

UNQUESTIONABLE SECURITY, AND AS LARGE PROFITS AS THE SYSTEM OF LIFE ASSURANCE ADMITS.

Assurances effected on lives of EUROPEANS, EURASIANS, HINDOOS and PARSEES.

LIVES BELOW the average Standard of Health may be assured at increased Rates in proportion to the extra risk.

For Forms of proposal, Tables of Rates, and information, apply to the Company's Agents, or to

D. LANCASTER, *Secretary*
Meerut. *Fellow, Institute of Actuaries.*

AGENTS.—The following Banks are Agents for the "INDIAN LIFE":—Agra, Agra Saving. Allahabad, Alliance. Bank of Upper India. Delhi and London Himalaya, Mussoorie, Punjab, Simla, Uncovenanted Service.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt,* by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Hondurus Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood,* and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children. CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

PRINCE OF WALES'S ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.
PRINCE OF WALES'S
COAT OF ARMS,
PRINCE OF WALES'S
CHROMATROPE REVOLVING CROWNS,
AND
OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No. 10 *and* 11 *Park Street.*

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,
Calcutta, 13*th May* 1875. E. LAFONT,
Rector.

OPINION OF BRADFORD LESLIE, ESQ., C. E.,
Chief Engineer, Calcutta Municipality.

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.
Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary
P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,
GREAT EASTERN HOTEL, NIAUDE,
Calcutta, 17*th January* 1874. *Secretary.*

Calcutta, 28th December, 1869.

MESSRS. P. W. FLEURY & CO.,

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.

MANUFACTURERS OF

Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware,
&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office,) No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

DISSOLVED PERUVIAN GOVERNMENT GUANO,

PREPARED BY

OHLENDORFF & Co.,

LONDON, ANTWERP, HAMBURG, AND EMMERICH-ON-RHINE.

GUARANTEED TO CONTAIN

Nitrogen equal to 10 per cent. of Non-Volatile Ammonia.
20 „ Soluble } Guano Phosphate.
4 „ Insoluble }
Price £14 per ton for 30 tons and upwards.
„ £15 „ under 30 tons.
Delivered Free at any of their Depôts in the United Kingdom.

TERMS.—CASH.

THIS Manure is prepared from *genuine Peruvian Government Guano.* The result of its special treatment is, that the Ammonia is fixed, the Phosphates in the Raw Guano rendered soluble, and the Manure brought into the condition of a free dry powder.

It loses nothing from exposure to the atmosphere, or to the heat of the sun. It is offered to the Planter with a *Guarantee* of its composition, and is, in fact, the richest, and, considering the quality, the cheapest *Guaranteed Manure* at present in the market. Its fertilizing properties are such as will enable the consumer to derive the greatest economical advantage from the use of Guano.

APPLICATION OF *DISSOLVED PERUVIAN GOVERNMENT GUANO TO COLONIAL* PRODUCE.

INDIGO.

Dissolved Peruvian Government Guano will give the plant greater strength to resist unfavourable influences and the Planter in thus developing the crop will be amply repaid the cost of the manure by the increase and superior yield of Indigo.

Dissolved Peruvian Government Guano is a highly concentrated Manure offering a large and guaranteed percentage of fixed ammonia and soluble immediately available phosphate of lime, and may therefore be recommended with the utmost confidence for Indigo plantations. A quantity of about 3 cwts. per acre will be found materially to benefit and increase the crop. This quantity may be increased with advantage if the land be impoverished by previous crops.

RICE.

We would strongly recommend the use of 2 to 3 cwts. per acre for Rice; for, although irrigation is generally solely relied upon as a means of producing a good crop of Rice, there can be no doubt that, in addition to irrigation, 2 or 3 cwts. of Dissolved Peruvian Government Guano per acre will be highly beneficial.

TEA.

We are confident that Dissolved Peruvian Government Guano will be highly esteemed as a Manure for Tea, and we recommend, say, 3 cwts. per acre, mixing the Dissolved Guano first with vegetable ashes or dry soil so as to secure its uniform distribution. If the land is very poor, and exhausted by previous cropping, more Guano may be used with advantage.

SUGAR-CANE.

Dissolved Peruvian Government Guano produces heavy crops of well-matured Canes, rich in juice, yielding a high percentage of crystallizable sugar, without detriment to the soil. From 3 to 4 cwts. of Dissolved Peruvian Government Guano per acre is a good dressing for Sugar-cane. A few trials of Dissolved Guano in comparison with other manures will soon convince the Planter that no manure yields so large a profit in the increased production of sugar as Dissolved Peruvian Government Guano.

COTTON.

Dissolved Peruvian Government Guano meets the requirements of the Cotton Plant, inasmuch as it furnishes all the elements of fertility which are calculated to promote the luxuriant growth of the same. If the increase in quantity be made the chief object, 4 to 5 cwts. of Dissolved Guano per acre will prove most advantageous; but if greater care be given to the fine quality of the Cotton, the use of 2 to 3 cwts. of Dissolved Peruvian Government Guano, together with 2 to 3 cwts. of mineral superphosphate, per acre, will be found to answer better.

JUTE.

3 to 4 cwts. Dissolved Peruvian Government Guano cannot fail to materially increase both the quantity and quality of this crop which is becoming of more commercial value every year.

RAPE AND LINSEED.

Colza and Flax exhaust the land very rapidly, and for this reason require liberal treatment with manure. Experience has shown that Dissolved Peruvian Government Guano is the most efficacious manure that can be used. Mixed with diluent as we recommend sow the Dissolved Guano broad-cast, and harrow it in with a light harrow about a week or a fortnight before the rape or linseed is sown. 4 cwts. of Dissolved Guano is a fair dressing per acre on land of average fertility. On poor soils 5 to 6 cwts. will give a more profitable return than a smaller dose.

CASH PRICES.

The Telescopic or long-sight Binocular

Admirably suited for very distant objects. Of the most superior construction, covered with Morocco leather, and containing Five Lenses on each side, Ten Lenses in all. Diameter of Object-glass. 1 inch; diameter of Eye-glass, ⅜ inch. Length when closed, 8½ inches; opening to 11¼ inches, with 4 inches,

Price, Rs. 100.

The New Elliptic Binocular Glass.

In this form of construction the Eye-pieces and the Object-glasses are Elliptical or Oval in shape, thus offering an increased width of field. They are of the best quality, and are most carefully finished:—

No.
1. Fifteen lines. Black Japanned and covered with Morocco leather. Height when closed, 2¼ inches... Rs. 22
2. Fifteen lines. Black Japanned and covered with Calf leather, with neat gilt beaded rims ... ... „ 24
3. Fifteen lines. Best African Ivory, with gilt rims ... ... „ 32
4. Seventeen lines Black Japanned and covered with Morocco leather. Height when closed, 2½ inches ... „ 24
5. Twenty-one lines. Black Japanned and covered with Morocco leather. Height when closed, 3½ inches ... „ 34
6. Twenty-one lines. Black Japanned and covered with Morocco leather, with gilt rims, Sunshades, and curved Bar, oval Eye-pieces, and round Object-glasses. Height when closed, 4½ inches. A very superior glass ... ... „ 36

The Field Binocular.

A very useful and portable Field Glass. The size is 13 lines. The casing is Black Japanned and covered with calf leather. The outer leather case is furnished with strap and swivels. Height when closed, 2⅝ inches Rs. 22
Ditto, larger size ... ... „ 32

The "Cyclops" Field Glass.

This novel Field Glass is convenient and portable. It consists of a single Object-glass tube, Morocco covered, with gilt rims, to which is fitted two Eye-pieces, for both of which, by an ingenious arrangement the single Object-glass is made to do service. Height when closed, 4¼ inches:—
In Morocco outer case, Velvet lined, with shoulder strap ... ... Rs. 36

Aluminium Binoculars.

These choice Binoculars are very light and portable, and are admirably adapted for a lady's use. A more elegant present for a lady can hardly be desired:—
Height when closed, 2⅝ inches.
Covered with Russia leather ... ... Rs. 52

Single Opera Glass.

A neat small Glass for one eye. Very portable and convenient for the pocket. In Black Japanned casing. Height when closed, 1⅝ inch. In neat leather bag for the pocket. Rs. 8

The "Duchesse" Opera Glass.

Particular attention is directed to this Binocular, which is of the best quality, and is made in variety of styles adapted for presentation:—
1. Eleven lines. In Morrocco, with gilt beaded lines and mounts ... Rs. 15
   Or, in Ivory, with gilt mounts ... „ 16
2. Fifteen Lines. In Morocco, with gilt beaded lines and mounts ... „ 18
   Or, in Fancy Morocco, or Russia leather ... ... „ 18

The New "Conical" Pattern Binocular.

Covered Morocco, in Morocco case.
A beautiful Glass of great power ... Rs. 20
Ditto ditto. in Mother-o-Pearl, with gilt mounts in Morocco case ... ... „ 36

Presentation Opera Glasses.

1. Dark-blue Ground, with Pearls Inlaid, Black Metal Mountings, in Morocco case.

ASSURANCE COMPANIES.

THE STANDARD LIFE ASSURANCE COMPANY

has placed on its books New Assurances to the amount of £1,000,000 every year since 1865—a result maintained by no other office in the United Kingdom for so many successive years—some of them years of doubt and anxiety in the Assurance World.

THE INVESTED FUNDS of the Company have increased from £2,696,052 in 1865, to £4,821,005 in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES,

notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,436), being at the rate of upwards of **£1,200 per Business day.**

ANNUAL REPORT, 1875.

Copies of the Annual Report containing Schedule of Investments, &c.; and all further information may be obtained on application.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th December 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August,* 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT
SECURITY LIFE ASSURANCE COMPANY LIMITED.
Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.

AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Policies in force, upwards of £1,000,000, (One Million sterling.)
Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.

ATTENTION is particularly requested to the Regulations of this Society, respecting its large abatements of Premium. The Scale of Premium is based upon data carefully re-investigated by eminent Actuaries in London, at the expense of this Society. The result established the fact that the present Indian rates are as moderate, with reference to the risk incurred, as is consistent with perfect security to the Assured, and to a Society which returns to its Policy-holders no less than Three-Fourths of its whole Profits from English and Indian business, at its Annual Investigations and Divisions. It is most important that all intending Assurers should consider well, not only the rate of Premium primarily charged, but also the percentage of Profits actually applied (annually by this Office) in reduction of such Premium; the large Profits thus returned to the Policy-holders of the "Universal" in the last 41 years having greatly exceeded the proportionate Profits in other Indian Life Offices, and having proved the real ultimate economy of Assurance with this Society, which for twelve years continuously has now returned *Fifty per cent.* of premiums on the participating scale.

Insurances effected for Whole Term of Life, or short Periods,
With or Without Participation in Profits:
The Medical Fee in all Cases Paid by the Society:
Premiums payable Yearly, Half-Yearly, or Quarterly,
at Option of Assured:
Reduced Rates of Premium during Residence in Europe:
Participating Policies share in Profits after Six Years:
Lapsed Policies revived on Special Terms:
Military Lives insured at slightly enhanced Rates, without extra
premium while engaged in Actual Service:
And at reduced Civil Rates during Residence in Europe:
Female Lives taken at Ordinary Civil Rates:
No extra Rate for unimpaired Whole-term Lives in India.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 per year only, payable in advance.

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

ADMINISTRATOR-GENERAL'S OFFICE.

THE undermentioned Estates having come under charge of this office, all persons having claims upon, being indebted to, or holding property belonging to the said Estates, are requested to place themselves in immediate communication with the undersigned :—

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2127.] Calcutta: Saturday, December 18, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

EDITORIAL NOTES.

BEFORE the appearance of our next issue, the Prince of Wales will be among us, and the preparations to receive him are being carried on with such energy that we may be assured the illuminations and all other arrangements will be a success. In another column we give detailed information about these things, and we have now only to reiterate the hearty welcome that we gave expression to when the Prince landed in India. He has won golden opinions from all classes of people in every place which he has visited, and the knowledge of this will add fervour to the warmth of the welcome which every section of the community was prepared to accord him in the metropolis. Meanwhile all burning questions should if possible be laid aside, and it will be much to be deplored, if by putting forward Mr. Hogg to present the address of the city to the Prince, those who have the management of such arrangements should infuse an element of bitterness into the proceedings. In the present state of public feeling it is impossible that the choice of Mr. Hogg to *perform this duty*, and *to represent a city* which he does not in any real sense represent, can cause anything but dissatisfaction to a large section of the community. We trust it is not yet too late to avoid such a blunder.

***

THE meeting of rate-payers in the Town Hall a week ago, was not a stormy one, for the large body of citizens present was unanimous as one man. There was no unnecessary "sound and fury," but all, speakers and hearers, were calm, united, temperate but resolved. We have never seen a public meeting for the ventilation of grievances, of which we could have said with more confidence than we can say of this one, that a perfect stranger, hearing and seeing all, without any previous knowledge or prejudices, would have gone away from it with his mind convinced that those men were certainly in the right and ought to get all that they demanded. There is no concealing the fact, however, that many men of influential position in Calcutta whose hearts were with the meeting, were prevented by powerful social forces from attending, and this is deeply to be deplored. But, when in spite of the attempts that were made to weaken the influence of the meeting, it proved so decided a success, we refuse to believe that Sir Richard Temple and his advisers will be so destitute of true policy as to attempt to make light of it.

***

A GREAT deal of obscurity hangs over the part Germany has played in the recent negotiations between what Mr. Disraeli calls the "Imperial" powers, on the Eastern Question. Prince Bismarck can be frank enough when it suits him, but no statesman is more reserved where frankness would be indiscretion, and in the present instance he has apparently had strong reasons for keeping the secret of his policy to himself. The nature of the advice he has tendered to Russia is, therefore, to a great extent a matter of conjecture. But it seems certain that he has refused to countenance any attack upon Turkey. So much may safely be inferred from the announcement, made early in the week, that the three powers have determined upon pursuing a peaceful policy and not pressing for a definite solution of the Eastern Question. We cannot ascribe this decision to any sudden access of moderation on the part of Russia. Her hand was clearly shown when she mobilized her southern army, and only some such discovery as that she could not rely upon the help, or possibly even the neutrality, of her powerful neighbour, appears sufficient to account for the sudden change in her plans. That unexpeeted stroke of policy, the purchase of the Suez Canal shares by England, seems to have caused a diplomatic crisis on the continent. It was accepted everywhere as a declaration that England would not allow her interests to be ignored, but would maintain them, if necessary, by force, and, consequently, it became necessary for Russia to ascertain at once how far Germany was prepared to go with her on a course that might lead to a British occupation of Egypt. Gortschakoff's hurried journey to Berlin in the depth of winter, must have been made in order to get this important question definitely answered, and an answer was doubtless given, but not, if appearances can be trusted, a favourable one. Russia's snbsequent attitude towards Turkey has not been such as she might have been expected to assume had Germany been ready with her support. Her present demands seem to amount to little more than a claim of equal rights with the Turks for the Christian subjects of the Porte—a concession which the Sultan may very well make, and England, least of all countries, would dream of opposing. The talk about "guarantees" seems to have died away.

We may conclude than that Prince Bismarck has given no encouragement to Russian designs upon Constantinople. Nor from the point of view of German interests, is there any visible reason why he should. Germany has nothing to gain by Russian aggrandisement, nor does she just at present, want Russian help. As for the purely sentimental consideration of gratitude for Russian neutrality during the French War, sentiment counts for very little at Berlin.

***

WE shall probably never know what schemes may have been afoot for the dismemberment of Turkey, and the settlement of the Eastern Question by the northern powers; for the action of the British Government has brought them, apparently, to a standstill. If Russia thought that, because we weakly yielded up to her all that we gained by the Crimean War, she might proceed to any length in solving the Eastern Question without any thing more than perhaps a remonstrance to dread from England, it is satisfactory to see that her confidence was based on a presumed want of will, and not of power, in England. The recent frank and bold utterance of the Premier, promptly followed by so masterly and significant a stroke of policy as the purchase of the Canal shares, has convinced Russia that England has still a "thus far and no further" that she will not permit her rival in the East to pass beyond. Not long after we had heard of the purchase of the shares, a telegram informed us that Gortschakoff had gone to Berlin, and now it is announced that he and Bismarck have agreed to a peaceful policy on the Eastern Question. The policy of waiting must be adhered to a little longer, and we may for a time breathe more freely. The proposal to have an international conference on the Suez Canal question is also shelved for the present. We suppose we ought to congratulate ourselves on this proof that England's influeuce in great European questions is still respected, when she chooses to exert it. We never doubted it, and we trust alarmists will not forget this striking evidence of it, when they enlarge on the threatening movements of Russia. It is perhaps significant that Russia seems never to have quite believed that England was enough in earnest to fight, till the latter threw down, as it were, a fresh stake of four millions. Nothing further was needed.

***

OUR readers are, probably already acquainted with the substance of a letter, published in last week's *Indo-European Correspondence*, pointing out the extreme danger which attends the mission of Messrs. Grosvenor and Baber to Yunnan. Who the writer of the letter is, the *Correspondence* cannot disclose, lest it should endanger

his life, and "lead to other painful consequences," but it declares the information to be thoroughly reliable. We may surmise that the writer is a Catholic Priest in Western China, and we believe some of these men know really more about the people and affairs of China, than any other foreigners in the country. Taking the letter however, for what it is worth, it will at once be clear that it gives a very serious emphasis to the doubt we have frequently expressed as to the wisdom of the mission and the safety of our embassy. Only a week or two ago, we expressed a fear lest we should have three murders to avenge instead of one, and a doubt of the wisdom of sending out missions like this without such protection as would afford absolute safety. And we have all along had grave doubts of the wisdom and justice of the ordinary British policy of compelling semi-barbarous and unwilling peoples to admit our commerce, and whenever, in consequence, the barbarians assassinate a British subject, inflicting punishment by war. That is what we are now doing in the Malayan Peninsula, and it is suggestive of grave reflections to ask ourselves why we did not go to war as eagerly to avenge the death of Margary, as to avenge the death of Birch.

We give an extract from the *Correspondence*' letter:—

"Margary was killed, treacherously killed, in territory immediately subject to China—killed by positive orders from Tsiang-ta-jen, the General commanding the Chinese garrison of Momein—killed by the emissaries of one Ly-se-ta-jen [Li-Si-Tahi of Mandalay notoriety], that very same Ly who, after the murder of Margary and of his followers, went down hastily to Mandalay and was triumphantly received by the King—was killed, finally, not for any [motive of] personal revenge or offence, but for [motives of] commercial mistrust and mercantile jealousy that very same Ly-se-ta-jen being officially recognised as the Chief [in charge] of the whole Chinese trade with Burmah. These facts are undeniably established, related and believed in Western Yunnan; a little child knows them; a boy five years old will narrate the whole history at full length. To what purpose, then, are further enquiries to be made?

"Now the affair has grown to such an extent that it seems to enter into a new phase—a more dreadful one. The cry is spread like wild-fire among the Chinese: "Down with the white Mahomedans," *i.e.*, with Europeans at large! On the other hand, the same affair has its ludicrous aspect; many Mandarins say Mr. Margary has been accidentally killed by some savage freebooters, or perhaps devoured by some wild beast!!

"The Yunnan authorities appear to have lost their heads. Whether this can be rightly said, you may judge from the plot laid by them—the highest among them. [The following is the plot:] If Grosvenor and Baber proceed as far as Ta-ly [Talifs], they must part with their bones nowhere else. You, therefore, Mandarins and Litterati, stir up a riot, in what town or market soever, to the cry of: "Down with the foreign spies!" After the death of these intruders, let the local officers at all speed run to the spot, carefully attend to the dead bodies, and in [apparent] earnestness enquire after the ringleaders who gave so fatal a direction to the popular element! But your ringleaders, that is to say, your own soldiers or satellites, worthy Chinese, appear no more; they run away laughing heartily and making game of the stupidity of transmarine barbarians! . . . When shall the hour come to put an end to such an atrocious farce?

"In the meanwhile every thing is done to stimulate popular hostility to foreigners. The present excitement spread into every part of the province, may produce a dangerous outbreak at any point; monstrous reports may be made under exaggerated forms in many distant provinces, where nothing is found too extravagant that may not be said and believed about Western barbarians.

***

We compress the following from the Aden correspondence of the *Bombay Gazette*. Munzinger Pasha with eight Dankalee guides and a party of 456 souls, including his wife and other women, set out from Tajurra on the 28th October, having two small mountain train-guns, some ammunition, and a few days' provisions. The road was bad, they suffered many hardships, but on the 9th November they reached the bank of the "Hawash," and were respectfully received by Sultan Mahommed, of the Hanfalee tribe, who tendered his submission. While crossing the river at midnight, on the 11th, they were attacked by 6,000 Daukalees and, by daybreak, 312 officers, men, and women, including the Pasha and his wife were slain: 144 men with a captain and lieutenant escaped, and though keenly pursued reached the coast in safety on the 22nd November. The cause of the attack is said to have been that for some slight offence, Munzinger Pasha had tied some Dankalees to his gun and given them four dozen apiece.

Raoof Pasha narrowly escaped a like fate at Hanar, where the Emir had planned a midnight attack, which, however, was disclosed by his brother inspired with gratitude to the Egyptians for having released him from prison where he had been long confined. The Pasha, thus warned, is said to have slain 100 Gallas and beheaded the Emir for his treachery, and the latest news is that the enraged Gallas had surrounded him so that he could not get out of the city without a reinforcement and had telegraphed for assistance from Aden.

The Egyptian power in Berbera is said to be on an unstable foundation. The conquerors of Somali land take the precaution of sleeping on board their ships. Only two tribes have even nominally given in their submission, and one of these has done so for the present purpose of getting Egyptian aid against the Yusuf tribe with which they have a deadly feud.

There seems to be a real aggression on the Zanzibar territories. McKillop Pasha, and Redhwan Pasha went in four ships to Guardafui, thence to Hafoon which they took, as also Hamada, Magodore, Marka, Brava, Juba, and Kismayo. At Kismayo, 400 miles from Zanzibar, the Governor refused to allow the Egyptian flag to be hoisted, and fled on the approach of an armed force. McKillop Pasha then razed the place to the ground. Rumor said that a force was about to be despatched from Zanzibar to oust them, and the absence of all British men of war from these waters is much commented on.

***

In anticipation of the special intecession on St. Andrew's day on behalf of missionaries to the heathen, the Archbishop of Canterbury addressed a letter to the clergy of his province, urging upon them the vital importance of taking zealous measures for the development of *native churches* in India in connection with the national Church. He is exceedingly anxious that the Indian Episcopate should be increased, and states that large contributions have already been promised for the establishment of a fund for that purpose. He thus concludes his letter. "The increased means "of intercommunication between ourselves and the east, the "extension of civilising influences now at work in India, through "a generally diffused education—the consequent unsettlement of "Hindoos and Mahommedans ready to throw off the traditions "of their ancient beliefs, and the fact that our wisest statesmen, "who are best acquainted with India, now publicly acknowledge "that the English nation has no more useful or faithful servants "than our missionaries; all these concurring circumstances call "upon us to spread in India, the blessings of the Gospel, and to "help our Indian fellow-subjects, while they form themselves into "Christian communities, held together by a well-compacted "ecclesiastical government, and united with our Church at home "by the profession of a common faith and the love of a common "Lord."

How discouraging it is that it should be utterly impossible for our churches at home to combine their efforts and work together, on one common basis of Gospel truth for the evangelisation of India. Would not the truths, which they hold in common be enough to ask the native converts to accept, as the creed of a native Christian Church? We are quite aware that any such suggestion is altogether impracticable in the present state of faith and feeling, but the fact that it is so, ought to be a very disturbing agent to the self-complacency that reigns in our Churches.

***

The reply of the Prince of Wales to the address presented to him by the Tinnevelly missionaries, is of sufficient interest and importance to deserve to be reproduced in every newspaper in India. It was as follows:—"Gentlemen—I thank you for the address and "for your good wishes, and accept with pleasure your memento of "my visit. It is a great satisfaction to me to find my countrymen "engaged in offering to our Indian fellow-subjects those truths "which form the foundation of our social and political system, "which we ourselves esteem as our most valued possession. The "freedom in all matters of opinion which our Government secures "to all, is an assurance to me that large numbers of our Indian "fellow-subjects accept your teaching from conviction. Whilst "this perfect liberty to teach and to learn is an essential characteristic of our rule, I feel every confidence that the moral benefit-"of union with England may be not less evident to the people of "India than are the material results of the great railway which "we are this day opening. My hope is that in all, whether moral "or material aspects, the natives of this country may ever have "reason to regard their close connection with England as one of "their greatest blessings."

Along with the address the Missionaries presented the Prince with a Tamil Bible and Prayer Book, and some rare specimens of lace. We understand that, in Calcutta, the Bible Society will present him with a copy of the Bible in Bengalee. It is being handsomely got up, we understand, by Messrs. Newman &Co., The Prince will have another opportunity of declaring that the Bible contains "those truths which form the foundation of our social and political system, which we ourselves esteem as our most valued possession.

***

We have heard several citizens express themselves with too much apathy on the subject of Sir Richard Temple's profferred Municipal Reform Bill, and many refuse to share the anticipation we have indulged that some real and valuable concessions will be made. Their apathy is not owing to any want of dissatisfaction with the

late mismanagement of municipal affairs, nor to any lack of desire for reform, but to an incredulity which we trust will not be justified by events. "What matters it" they say "that elective powers and this and the other concession, may be made to us, so long as an official of Mr. Hogg's class continues to be saddled upon the Municipality? A despotic civilian will always do what he likes, no matter how the Justices or Commissioners are elected." Unless some concession is made on this point there is a strong feeling among the citizens that all other concessions will be unproductive of satisfactory results. The rate-payers of Calcutta have so long been sat upon, that many of them are, we think, too hopeless of receiving any real relief.

***

No one has a word to say against Mr. Bullen Smith who is to be our sheriff *for the ensuing* year. He is much and worthily respected in Calcutta. He is perhaps more generally acceptable to the whole community than Mr. Roberts would have been, yet people are not a little curious to know the particular reasons which led Mr. Roberts to be passed over. They are probably not difficult to be guessed. Independent public spirit is an admirable thing, but it will not bring its possessor honorable or lucrative appointments in this part of the world. Mr. Roberts is not surprised, we presume, that his name has been forgotten on this occasion, and though a considerable section of the community is disappointed on his account, no one, so far as we are aware, thinks the appointment of Mr. Bullen Smith other than an excellent one.

***

THE *Daily Telegraph* announces the arrival of letters from Stanley, which will be published as soon as they have reached the *New York Herald*. They are said to be deeply interesting, and to contain a description of the south eastern, eastern, and northern shores of the Great Lake, whose unity and magnificence Stanley has been the first to reveal. That the Shimeeyu is the principal feeder of the lake and the farthest discovered source of the Nile, is confirmed, and new light (much needed, we may observe) is thrown upon the import of the adventurous voyage round the Victoria Nyanza. Incidents of his cruise, conflicts with slave-dealers, his reception by King Mtesa, and that monarch's change of religion, are all described in a very attractive manner, and much valuable geographical information is given. The letters had a somewhat remarkable adventure by the way. Colonel Ernest *de Bellefonds met Mr. Stanley at Mtesa's capital*, and set out thence on the 17th April bearing the despatches to Colonel Gordon, but when he had nearly arrived at Gordon's station he was attacked by Bari robbers, and himself and thirty-six of his followers were massacred. The despatches seem to have been flung into the jungle and were afterwards found by a detachment of Col. Gordon's forces. The fact that the manuscripts can be referred to as lying "stained and torn in our possession" adds a thrill to the interest in them, which was already romantic enough. Romance and adventure hover round the name of Stanley.

***

THE *Telegraph* is happy to announce that King Mtesa's appeal through Mr. Stanley, to the English nation, to send Christian instructors to himself and people, has not been without response. Mr. Stanley estimated that the cost of the mission would be five thousand pounds sterling, and a generous donor, whose name is not yet disclosed, has already placed a sum of ten thousand pounds at the disposal of the Church Missionary Society in order to carry out the great enterprise of establishing "a Christian centre of civilization in the heart of the Dark Continent." The Committee of the Church Missionary Society was to meet on November 23rd to discuss the preliminaries of the undertaking, and a hope is expressed that this may prove the beginning of the emancipation of Africa.

***

MR. STANLEY will soon claim to be not only the prince of explorers, but of missionaries. True he disclaims the title of missionary at present, but he feels that he could be one if he chose that vocation. And facts as narrated by himself, amply justify the feeling. We doubt if any missionary could cope with Mr. Stanley in "tumbling religious fabrics to the ground." Until I arrived, "he says "at Mtesa's court, the king delighted in the idea that he was a follower of Islam; but by one conversation I flatter myself that I have tumbled the newly raised religious fabric to the ground and if it were only followed by the arrival of a Christian mission here, the conversion of Mtesa and his Court to Christianity would I think, be complete." Meanwhile Mtesa has undertaken to observe the Christian as well as the Moslem Sabbath, and has got the Lord's Prayer, the ten Commandments, and, "Thou shalt love thy neighbour as thyself," put up on a board, in Arabic, for daily perusal. Surely we must needs withhold the censures we were inclined to pronounce on Stanley when we heard of the heaps of slain and the demolished villages by means of which he was making a lasting impression on the minds of the savages. Since the days of Charlemagne there has hardly arisen a more energetic converter of the heathen than is the Commissioner of the *Telegraph* and the *New York Herald*.

***

IT was rumoured some time ago that the Duke of Buckingham had bargained for permission to spend nine months of the year in the hills, and it is intimated in the *Madras Times*, that he has resolved to leave Madras for the Neilgherries about the 1st of March. We have never been so strongly opposed as some of our contemporaries to the annual flight of our rulers from the heat and langour of the plains, as we are not convinced that their work is necessarily worse done in consequence. But we would curtail considerably the stay in the hills, for it is not there that a ruler can become justly acquainted with the people and with the needs of his province. By a too prolonged residence at the sanatarium he is in danger of becoming the instrument of men who have very one-sided opinions as to how the country should be governed, and it is not at the Neilgherries that the Duke will learn how to govern Madras in the real interests of the province and its people.

***

THE state of the Native Army is just now attracting considerable attention at home. The difficulty experienced in relieving the little garrison of Perim has been much noticed, and is said to have produced a profound impression of which there will be visable tokens when Parliament meets. "It is felt to be altogether intolerable," says the *Home News*, "that an island which commands the entrance to the Red Sea, and thus practically is the key to Aden, which might be described as the Gibraltar of the East, should be held by a garrison of forty Sepoys, commanded by a single subaltern. In the present instance, as it is almost superfluous to state, when, at the expiration of the regular two months, the time for the relief of the Perim Garrison arrived, neither officer nor men came from Aden, and the unfortunate officer, who had already sustained serious inconvenience, found himself condemned to adjourn his departure from the barren island *sine die*."

We are sorry for the officer. Perim is not exactly the place one would choose for a permanent residence. But the incident is, in the interest of the army, not to be regretted, if it has the effect of rousing public opinion in England to insist upon a reform of the absurd military system, which is responsible for it.

***

IT is satisfactory to see that Lord Carnarvon has taken care, sufficiently we hope, to guard the country from awkward entanglements in New Guinea, which might arise from the adventurous expedition projected to that island, of which we recently gave an account. His Lordship foresees that though it is not so stated in the programme of the association, "yet to the ordinary intelligence the idea of force as the ultimate resort was not darkly or dimly indicated." He protests against the Pizarro-like spirit of adventure that characterizes the whole scheme, and, although he was not sure that he had the power to forbid the expedition, he warned the adventurers "that they were embarking on a most unusual and dangerous course; that if they acquire land, the Crown will not recognise titles which they may have acquired in an improper way; and that, if there should be occasion to colonise New Guinea hereafter such holdings would not be recognised as legal." And we hope it will be distinctly understood that whatever may happen to the adventurers, if they really carry out their projected design, Britain will not send a warlike expedition to New Guinea to protect or avenge them.

***

NO one possessing an honest hatred of slavery, and who knows anything of the curious history of the little Republic of Liberia but will hear with regret that it is being desolated by war. By the West Coast steamer that reached Liverpool shortly before the departure of last mail, letters were received, from which we extract the following;—"On Sunday the 10th of October, the Government troops made another attack, and were defeated with the loss of twelve killed and fifty or more wounded; six cannons were captured, and five or six houses burnt. Many of the wounded were afterwards taken and killed, their heads and right hands cut off.

to be dried and kept as mementoes of the battle; the rest or greater portion of the bodies were eaten by the native warriors. For the sake of humanity, do try and assist us. The first cause of the war was that the Liberian Government wanted to put down the semi-slave trade carried on by the Cape Palma's natives with the interior; three years ago Her Majesty's Government had to send the gunboat *Torch* respecting the same thing. Cannot the ladies of England send a little help in the shape of medicines, bandages, and old clothes? for many women and children are almost naked, having lost everything,, and I fear starvation will soon set in, as there is not much supply in town."

***

THE *Englishman* understands that "a powerfully written memorial against the Majority Act has been drawn up and largely signed by Hindoos and Mahommadans of the upper Provinces, for submission to his Excellency the Viceroy. We hope to be able in a few days to comment upon this document, which is most ably argued and, if we are not mistaken must command attention. It goes to show that the new law will not only aggravate the very confusion it was intended to remove, but will, in spite of the exempting clause, clash with the religious customs of those whom it affects, and create a multitude of difficulties of a most embarrassing nature."

***

RECENT incidents have given some colour to the suspicion that Egypt has embarked on the daring enterprise of conquering and annexing not only Abyssinia but Zanzibar. Lord Derby cannot of course stand by and see Zanzibar interfered with, and probably the Khedive will be found amenable to good counsel. But England's connection with half barbarous peoples in so many quarters of the world, is becoming very troublesome indeed. Awkward entanglements are continually taking place, and interventions and punitive expeditions, with results of very doubtful value, are the frequent consequence.

***

IF Mr. Disraeli has half the genius with which he is usually credited, he has before him a brilliant session of Parliament. He still has a large majority. He has inspired the country with confidence in him by a few vigorous words opportunely spoken, and by the purchase of the Canal shares. At the same time, the liberal party is in a state of anarchy, has no united policy on which to base a strong opposition, and no leader to marshal and conduct them. Lord Hartington's policy is of the *laissez-faire* type, and radicals and home-rulers are sadly disgusted with him. But Gladstone will not forsake the felling of trees, and letter and pamphlet writing, and there is no one else to whom they can turn. If the Conservatives pursue a wise and vigorous foreign policy, they may remain in power a long time.

***

THE work of making up the accounts of the Central Relief Committee is now so far advanced as to show that the unspent balance of the famine fund will amount to at least fifteen lakhs, and, possibly, if government fulfils its promise of doubling all subscriptions, to nearer twenty, but no useful end would be answered at this time of day by handing over the money. The question how the fifteen lakhs should be disposed of has, however, to be answered. The Committee do not know what to do with it. Their power is that of trustees only, and has so to speak lapsed. The fund was placed in their hands for a specific purpose—the relief of the sufferers by the famine, and they have obviously no right to divert what is left of it to any use not contemplated by the donors. What then is to be done? In England the difficulty would be met by calling a general meeting of the subscribers, and telling them to decide, and perhaps that is the simplest solution of the problem that offers. The great bulk of the famine fund, we believe consisted of contributions sent in to the Mansion House. Why not ask the Lord Mayor to take the sense of the English subscribers as to the best way of utilizing the unexpended balance of their money. Their reply would relieve the Committee of all further responsibility. Since writing the above we have read in the *Patriot* the almost incredible statement that the Executive Committee has voted away the whole amount to Government. Surely this cannot be true.

***

THE following is the proclamation addressed to the Sclavonian young men by the Herzegovina insurrectionary leader Ljerbobratich:—

"Young brother Sclavonians,—Some months ago our cry of despair resounded through Europe and to the whole civilised world. The nations would not listen to us, however, and our cries were left unanswered Being convinced of the justice of our cause, we did not waver for a single moment either in the presence of hunger, cold, bad weather, or the enemy's fire. Victorious or vanquished, we constantly exchanged blows with our tyrants, and inflicted losses upon them. We did not despair even then, when our cause seemed to be hopeless. The Herzegovina, devastated and covered with ruins, now addresses herself to you, young men—to your valour, to your passion for liberty. You will not remain deaf to the voice of unhappiness; you will not confine yourselves to words; you will not say that we are unworthy of liberty. You will understand that every people, before all other considerations, possesses the right to direct its National Government, to labour in its fields, construct its means of communication, and educate its children. In order to attain all these blessings we need ammunition and money. Come to us; you shall be received as brethren, and greeted as liberators. Let those who cannot take part in the holy struggle of the Sclavonians against their oppressors, send us arms for those who, in addition to warm hearts and elevated minds, possess a powerful hand. I do not wish to deceive you, the Herzegovina is poor. Turkish sloth has provided her with few roads, and these leading only to forts. Before you is a struggle beset with many and great obstacles, but the obstacle is a sublime one—the deliverance of a great people. *Let your* rich and luxurious clubs be converted into subsidiary committees for our revolution. *Give* us your surplusage, and we are saved. You will, then, have the right to think that you helped on the triumph of a cause glorious to all who were engaged in it On our banner are inscribed these holy words: Liberty and Independence."

***

THE *Statesman*, says:—The Guibord funeral took place at Montreal on November 15. The coffin was escorted by 900 of the military and a strong police force. There was a great crowd of French Canadians at the cemetery, but no disturbance took place. The sarcophagus was not used. The *Indo-European Correspondence* tells us that the Church has snatched a victory from the Law Courts after all, by the Bishop formally laying an interdict upon that portion of the cemetery where Guibord's body is interred. "Buried in the Catholic cemetery, Guibord has no part in the "Church's blessing, and desecrates only the earth which his body "touches." Our contemporary professes to give a more correct account of the case, than that of the *Times'* correspondent. We take the liberty to doubt it, for its very opening paragraph contains a statement quite inconsistent with the following part of the story.

***

THE Bombay Steam Boilers' Act has been suspended because, it is found, it cannot be made self-supporting. This seems a strange reason for nullifying a useful, and by all accounts much needed, measure for the prevention of loss of life and property by a certain class of accidents. The Act was passed, we presume because it was thought necessary to place some stringent legal check on the practice, said to be only too common in the Western Presidency, of working steam boilers which from age or other causes are in a dangerously unsafe condition. If so, both common sense and humanity would appear to demand that it should be enforced, whether "self-supporting" or not. What would be said of a proposal to abolish the Police on the ground that it does not pay? Yet there would be nothing in the suggestion more unreasonable than this idea of the Bombay Government, that ricketty steam boilers ought to be allowed to go on exploding until it has hit upon some plan of having them looked after without cost to itself.

***

THE *Howe News* says: The preliminary soundings for the Channel tunnel which is to unite France and England are now being actively carried out near St. Margaret's, Dover, and the engineers conducting the work are entirely satisfied with the results obtained. Their expectations as to the nature of the strata have been realised. The two great difficulties they have to encounter, are to establish ventilation and to find means to take out the chalk cut away, and bring in the materials required for the work. It is intended to put down two pneumatic tubes to meet the latter difficulty, and ventilation will be secured by providing a current of air.

***

IF all our clergymen were of the same way of thinking as the minister of the Brahmo Somaj in Calcutta, we wonder how many silent pulpits there would be all over Christendom. The *Mirror* informs us that the minister has discontinued the practice of giving sermons, for the reason that the Brahmos and their Missionaries do not give due heed to his precepts, and do not exhibit sufficient holiness and devotedness of life. We should have thought that a reason for the minister to "cry aloud and spare not," but we suppose he expects by silence to bring them to humiliation and penitence. "Speech is silvern, silence is golden."

***

THE *Mirror* accuses Europeans, especially Christian Missionaries, of a strange disinclination to mix at large with the people of the countries where they sojourn, and can find no other explanation of

the fact than the supposition that it is a characteristic of European civilization. How many of the European travellers and others coming to India, asks our contemporary, try to get information about the natives from the natives themselves? They exchange opinions among themselves, form and conform their opinions with mutual aid, completely throwing out of the calculation those about whom such opinions are made, and who alone are able to correct them. For Missionaries and officials, whose position and knowledge of these things are really important, such a course of conduct is wrong and dangerous. Our contemporary fears that any protest against it is too late and not likely to have much effect. There is doubtless much truth in the accusation, especially in Calcutta and other large towns. Most of us are conscious that we come and spend years here, and go away knowing little more about the inner life of the people than when we arrived. This may be partly due to the fact that we are gifted with a large amount of self-love, and a profound respect for our own habits, institutions, and characteristics, which make it extremely difficult for us to think a set of habits and characteristics widely differing from our own, worthy of careful attention, or even of toleration. Many of us do not want to know the inner life of the natives, because we cannot bear to think that there may be much in it that is really admirable as well as interesting. We want to change all the native characteristics, not to know them, and by no means to sympathise with them. Our great anxiety is to civilize and Christianize the people of India, and we set about the task as if we were unaware that there are elements in their religion and civilization that are worth retaining. The natives and ourselves have in fact not yet learned to understand each other. But our contemporary most not forget that there are very great obstacles to a mutual understanding between the two peoples, and that many of the most formidable of these are presented to us by the natives themselves. The faults are not all on the side of the Europeans, but we are more anxious to have it acknowledged that a defect exists, than to defend ourselves from blame.

***

A VERITABLE sea serpent has been seen at last, and the *Illustrated London News* has a picture of a contest between the monster and a whale. The strange sight was seen by Captain Drewar of the Barque *Paulina*, in lat. 5°13, S., long, 35° W., on the 8th of July. The captain and the crew are responsible for the truth of the story and the description of the serpent, and the sketch is by Rev. E. L. Penny, Chaplain of H. M. S. *London*, at Zanzibar, who places great reliance on the testimony of Captain Drewar. The serpent has made two coils round the body of the whale, and his head is raised erect in the air to a height of about thirty feet. The serpent's girth was about eight or nine feet. The performance is thus described :—"Using its extremities as levers "the serpent whirled its victim round and round for about fifteen "minutes, and then suddenly dragged the whale down to the "bottom, head first. The other two whales after attempting to "release their companion, swam away upon its descent, exhibiting "signs of the greatest terror. On the 13th of July the serpent "was again seen, about two hundred yards from the vessel, shooting "itself along the surface, forty feet of its body out of water at a "time, and again on the same day it was seen with the body quite "perpendicular out of the water to the height of sixty feet. This "time it seemed determined to attack the vessel, and the crew "and officers armed themselves with axes for self-defence."

THE LAND N.-W. P.

II.

IT appears to have caused surprise in some quarters that such a singular termination as we lately described, should have been put to the labours of one who had been cited by the Government of India as "perhaps the highest living authority" on subjects connected with the Land Revenue of the North-West. But there are two cautions to be observed. One is that the expression borrowed by Lord Mayo from Mr. Strachey, was little more than a polite hyperbole. No one, probably, knew better than Mr. Strachey, that however high an authority he might be as to the law, procedure, and practice of settlement, as an Act of the Legislature, Sir W. Muir was not, and could not be, in possession of that practical knowledge of the habits of the agriculturists, which can only be obtained from a long and constant intercourse with them. With the exception of a brief study of the subject in Bundelkhund—which it is said has never recovered the effect of his vivisection—Sir William had spent all his life in various secretariat offices, apart from "the busy haunts of men." If we are rightly informed, he was never either a collector, a judge, or a commissioner. We desire to write with all respect of one who has served his country long and with distinction. But facts should have their force. A man who has no practical acquaintance with a subject cannot be a *real* master. Pricked by the point of this one *simple* statement the bubble of Sir William's *boasted* "experience" of course bursts at once. But this is not the only flaw in Sir William Muir as an authority. All the opportunities of a life-time, could not make facts useful to one who closes his eyes to their teaching, so long as he can clutch at the shadow of an *à priori* rule, or so-called "principle."

In this respect Sir William Muir has perhaps only displayed the tendency which the late Mr. Buckle long ago exhibited as the chief characteristic of the Scottish intellect. Readers will call to mind a brilliant chapter, in which the historian of modern civilization illustrated this position by a number of instances drawn from the writings of the most distinguished writers from the north of the Tweed. In place of the laborious method inculcated by Bacon and carried out by Locke, Newton, and other southern discoverers, the philosophers of the north have always been famous, according to the writer to whom we refer, for assuming as axiomatic some fancied truth, and then arguing from it, deductively, by more or less skilful ratiocination. Whatever may be thought of Buckle's rather bold generalization, there can be no doubt that the habit of mind attributed by him to the Scots, has certainly been shown by the late Lieutenant-Governor of the N.-W. Provinces, and has been conspicuous in many other of the performances of Anglo-Indian government. Indeed it has gone far to justify Lord Salisbury's famous complaint that India had, in modern times, produced good administrators in creditable abundance, but could show no statesman. Possibly the short tenure of every body's office, may have something to do with this; possibly also it is partly due to the somewhat windy condition engendered by governing supple Asiatics, the vegetable diet of politics. Stubborn in their private habits and their inward convictions, the people of this part of the world, and especially the Hindoos, are famous for the plausible show of submission with which, in all other respects, they bow to authority. And the natural consequence is that the half-educated men by whom, till lately at least, India has been chiefly ruled, have found (or fancied that they found) it a *corpus vile* for their experiments, and an imaginary proof of their *à priori* wisdom and knowledge.

Nothing else, it seems to us can account for the airy way in which one system of land revenue has been run to extremes in one part of India, and another in another. Here, the rule has been, 'Settle direct with the cultivator;' there, 'Create a landed aristocracy.' Each school has worked out its own fallacy. In the North-West Provinces, it is true, more moderate counsels prevailed than elsewhere, though not without much opposition and much interference from the deductives. Many times threatened, the right of the State to participate in the enhanced rental has escaped to a certain, if not a sufficient, extent. The middlemen who were found in possession of the right of collecting the surplus produce, and paying it to the State (after deducting their commission), have not been made into squires with the right to all but a quit rent. Unhappily, however, their position, useful in itself, has been turned into "a heritable and transferable right." It was assumed in the teeth of Bengal experience, that to give the holders of land a fixed "estate", as it would be called in English law would stimulate them to improve it; and the settlements were accordingly made with these men, who at best were only farmers, to the neglect of the interests of many of the occupying classes. Yet nothing is more certain than that this assumption, and this settlement, were wholly opposed to native feeling and native practice; and deep has been the mischief that has ensued.

The thirty years system is probably, next to the Permanent Settlement of Bengal Proper, the worst way of asserting the right of the State (*i.e.* the Public) to the surplus produce of land, that has ever been devised. The worthy Caledoninas—

Holt, Mackenzie and Thomason—by whom it was conceived and developed, made as many mistakes as their countrymen elsewhere, as Shore in Bengal, or Munro in Madras. Endeavouring to mediate between two opposite principles, they met with the proverbial fate of the sitter on two stools. Or perhaps it might be more explicit to say, that with some of the evils of each system they contrived to blend a new one that was peculiarly their own. The evil of the Madras system was, that by dissociating capital from the land it rested the hopes of agriculture on *la petite culture*. The fault of the Bengal system was that it created sinecures, endowed annuitants, and left the peasantry without protection. The thirty years system certainly made some attempt at protecting the peasantry, but it combined all the other evils, and added *this, that the* life time of a generation, though encouraging to personal indolence, exposes the family income to an abrupt and indefinite decrement at its diminution. Such a system, having no roots in popular sentiment, can only be preserved by being constantly irrigated from the fountains of sophistry.

PERAK.

IT is still impossible to arrive at a clear and satisfactory understanding of the causes of the war in Perak. Of one thing however we may be quite sure. We are not fighting the wild and lawless Malays, solely in "the cause of suffering humanity." It would be gratifying to our self-love and our national vanity, if we could lay to our hearts the assurance that we have entered into our present entanglements and are cutting our way out of them by the sword, from a lofty desire to put down violence and wrong-doing, to evoke order from anarchy, and peace and prosperity from a scene of feuds, roberries, bloodshed, and oppression. And that is what the Government of the Straits and some of our contemporaries wish us to believe. But we must not forget that there were other motives for our interference with the affairs and government of Perak. The country is rich in tin, and even, it is said, in silver and gold. It possesses a rich alluvial soil—countless acres of undeveloped wealth, buried under primeval forest. These were the attractions that drew us to Perak. We would be the last to blame our traders in Penang for endeavouring to increase their wealth from the mines of Laroot, or those of Singapore from desiring a new source of more remunerating commerce. But it should be clearly borne in mind that we are there primarily in our own interests, that our sole right in Perak is the right assumed for British subjects to live and labour there, and for the British Government to extend protection to them, and exact compensation and punishment for any wrong or injury inflicted upon them. On such grounds we gain a footing in the State; we find that the people and their chiefs are turbulent and faithless, that the Government is about the worst Government on earth, that our relations with the country are dangerous and disagreeable in the extreme; and we—wisely and beneficiently as some think, rashly and selfishly as others believe—attempt to take into our own hands the virtual management of the State. There is no doubt that those who engaged in this hazardous enterprise hoped that in accomplishing their aims, a great benefit would be conferred on the people, but it is equally certain that we should never have gone out of our way to save Perak from anarchy and its people from oppression, had we not been induced to do so by the deeper motive of self-interest. We are glad to see the *Times* is endeavouring to look the whole question fairly in the face. That journal has plainly enough stated, what we wish to bring out, that we have got into a very awkward and undesirable complication from which it will be difficult to free ourselves; and have done so not from any magnanimous desire to rescue an oppressed people, but purely from our eager hunting for commercial gain. It expresses anxiety that Government should avoid burdening us with fresh responsibilities in that quarter, but, "meanwhile there is the tin, the silver, the gold, and the alluvial soil, on the one side, and English traders with strongholds at Penang and Singapore on the other; and how they are to be kept at a prudent distance it will be every year more difficult to say."

Now we have never said that we ought to have retired at once from Perak, when we found that our relations with it were likely to be troublesome. It is indeed difficult to say how far we are justified in pushing aggressive action in the interests of commerce. What we do say at present is, that we ought to frankly avow our real object in being there, and in exerting diplomacy and force to bring the State and its rulers under our superintendence, and to avoid all such insincere and self-deluding professions as that we are now warring in Perak in "the cause of suffering humanity." Let us frankly admit that what we are now doing is primarily in the interests of British trade and commerce, and that whatever advantages may ultimately arise to the people, will be of the nature of accidents—inseparable accidents, if we please to call them so—and then we shall be in a position to consider without *prejudice whether* we are justified in our motives of action, and whether our actions have *been guided* by forethought and justice.

While much is still hazy and undefined in our information as to the rise of the present complications, one thing is pretty clear. It is clear, we think, that all the steps of the Straits Government from the Pangkore treaty of Sir Andrew Clarke to the posting up of the proclamations by Mr. Birch, were calculated, whether intentionally or not, to lead to one result—the ultimate annexation of the State of Perak. Now while we can understand, and to some extent sympathise with, a thoroughgoing policy of annexation in the hands of wise and considerate statesmen, and while we imagined that we understood the nature of the non-annexation policy which the British Government has now for some time professed to act upon, we are unable to comprehend or in any degree approve of, the indescribable policy which disclaims all wish or intention to annex, and yet persistently takes, or permits to be taken, measures that can lead to nothing, but miserable collapse or ultimate annexation. Such has been our policy in Perak. An examination of the conditions under which the Pangkore treaty was formed, and the residential system established, will probably show that even then a false step was taken. Men were found, like the Straits Colonial Secretary, who with a full knowledge of these conditions, predicted that the residential system would prove a failure. And, as the *Times* remarks, "it ought to be well understood by this time, that to appoint Residents without whose advice and assistance nothing of political or commercial importance can be done, is practically to undertake the indirect Government of such States, and to entangle ourselves in *all* their disputes." Yet the Home Government approved of the step, thus making itself responsible for its success or failure. It failed; and Sir W. Jervois, the new Governor went precipitately into a policy which we have already characterized as virtual annexation, and which has led to the present war. We were the first to protest against the rash and self-confident manner in which he took over the administration of the State, without waiting for direct authority from the Home Government. We pointed out what seemed to us a most hasty and hazardous proceeding on the part of the late unfortunate resident—the attempt to establish a complete new system of collecting the revenue, on principles, it may be presumed unheard of among the wild rajahs of Perak. Had our policy been a declared policy of annexation, we could hardly have gone more directly towards its fulfilment. And now that our forces are actually fighting in Perak, we can with difficulty foresee any rational conclusion to the war but annexation. We cannot expect that we shall be able to set up a Malay Government, after all that we have done and are doing, which can be in any sense an independent government. If we are fighting for the virtual annexation of the State our position is easily comprehended and something might be said in its defence. But the Home Government has sent instructions to abstain from annexation, and what the result of our subjugation of the belligerent chiefs is to be, one can hardly forecast. The whole history of our relations with Perak and the real nature of our policy as manifested in action, require to be set in clearer light. It is pretty certain, meanwhile, that there has hitherto been a good deal of rashness and blundering in our proceedings, and, whatever may be the result, the history of the Perak war will scarcely redound to our honor.

THE INDIAN ARMY.

II.

TURNING over the pages of some old Indian army list of twenty years ago, it is impossible not to feel astonishment at the number and variety of the regiments recorded therein. There were the local European forces of several thousand men. the native artillery numbering thousands more, the regular native army a host in itself, and a surprising agglomeration of irregulars levied here and there throughout the country. Besides the regular and irregular regiments, there were also many armed *Sibandies* or semi-military, semi-police corps, of whom no particular account was taken; but the total of all troops and officers, so far as it was realised in the estimates, was of such a prodigious amount as to render an Indian *army* for all time the bug-bear and terror of financiers. We shall now consider the quality of the pre-mutiny troops. On the whole it was good, but abuses had taken root and flourished in an army too big for our requirements in a time of profound peace, not the least of which was the practice of encouraging regimental officers to seek civil employment. The officers contemned regimental duty, made a jest of their poverty in comparison with the fine emoluments of the civil service, and the tone of the native army was so low immediately before 1857, that it must have been seen by any observant person of the period that this prodigious host of mere mercenaries was utterly and irretrievably demoralised. Of the events of 1857, it is unnecessary to speak, and we now come to that time when the Government of India had to create a new army, a phœnix from the ashes of the old one. Here we have the initial chapter of the most remarkable series of blunders which has ever been perpetrated in a country too much given to such things. The great mistake committed by Sir Charles Wood, or his advisers, was to turn the whole native army of India into an irregularly organised force, because in the first place such an organisation was economical, and in the second place, because one or two dashing irregular corps, commanded by special leaders like Fane or Probyn, happened to be just then held in high favour by the world. This was a great error, and Sir Charles supplemented it with what might not have been a blunder though it has turned out one,——the Indian staff corps. The original idea of this much abused institution was not a bad one, though the corps was always open to the grave objection of supplying the well-paid civil service and the ill-paid military service from the same fountain. Of course discontent, and "Dowbism," and all sorts of grievances and grumbling followed this, nevertheless, so long as the Indian staff corps was maintained as a *corps d'elite*, into which studious and talented men would pass, it had its uses if its abuses too. But unfortunately the host of officers thrown out of employment by the new organisation and reduction of the native army, had to be provided for, and to effect this Lord Cranborne committed the extraordinary *betise* of bundling all that would go, into the staff corps, with or without the qualifications hitherto requisite for admission to that corps. From that moment the staff corps was swamped and became a folly. It was as if the whole nation was invited to take their seats in the government offices. Confusion prevailed, which people totally ignorant of the subject, strove to check with orders and counter orders from home, and this went on year after year until at last it was felt that unless the Indian Army could right itself, no one could right it, and this is very much the position of that Army at present. We are patiently waiting for the retirement of all the old officers, and for the disappearance of grievances, and are looking for the native army to settle itself, but it is not easy to say how this *desideratum* is to come about without that outside assistance which is needful in the matter. The Government of India declines to run the risks and expense of materially altering the organisation of the native army once again, and perhaps they are right in dreading the agitation and the errors that are likely to follow on a measure so profound, as the reconstruction of an army such as that of India. The question really resolves itself into this:—Do we want an efficient native army or do we not? Do we want an army to fight, or one only to look at? The native army as it is, is quite equal to the duties of a time of peace, but we deny that it is fit to stand the stress of war, for an army without a proper complement of officers, can never be expected to sustain the wear and tear of active service. Especially should we be mindful of this in reference to native troops. The average native soldier, whatever part of India he comes from, has an immense reliance upon the courage, resources, and *prestige* of his English officer, and it has been historically shewn often enough, what he can dare and do under the guidance of English leaders, but that very simplicity which induces him to trust with all a child's faith in the English officer, renders him perhaps foolishly distrustful of his own people as commanders, so that for our own part we think it exceedingly doubtful if a native regiment would distinguish itself in action under the sole command of native officers. Let the experiment be tried the next little war we are engaged in. Let the two or three European officers who accompany a native corps into action be withdrawn from the same—as they probably would be withdrawn by wounds received in battle,—and let the regiment be handed over to a native officer to command—perhaps for the first time in his life—and we shall then have the opportunity of testing the present organisation of the native army in a practical manner, and without dependence on theories or individual opinions for our facts. But this is an experiment which no one has ever yet had the courage to try. Far from trusting the native captains in an emergency, the contrary has been the practice, and, whenever we are engaged in some little jungle war, the native regiments employed are always re-inforced for the occasion with English officers drawn from other regiments—in fact, it is thus acknowledged that we cannot do without them. But to return to the question:—Do we want a really effective native army? We think the answer should be in the affirmative. Not a large army, but one on which we could thoroughly depend, and one which could be made the nucleus of a considerable host were the need to arise for the employment in the field of large reserves. We will come to this part of the subject by and by, but we have first to argue out this question of an effective and a non-effective army, on which the whole business of a construction may be said to hang. Now Lord Napier of Magdala appears to be satisfied with a native army "good enough for the purposes for which it was intended," that is to say, we apprehend, for the ordinary purposes of garrison work. The opinion of the Commander-in-Chief in India, on such a subject as this, is worthy of all respect; still, opinions of this kind will not avert the calamity of war or render the public mind easy in the event of the native army ever being again called upon to act as an army in the field. It would be idle to speculate as to what point of the compass may discover the war cloud; as idle as to deny positively that any war can come upon us. These things are beyond all human calculation, and we can only believe in our *liability* to war, and act as is best upon it. We think it unwise to deny, as some do, the possibility of the native army being again actively employed in anything greater than a jungle campaign, and thinking thus, it follows that we are disatisfied with a military policy which acts just as if a war was impossible. Suppose a war—let us say in China. Is the native army effective to fight there? Let us consider a native regiment as it is, and leave the answer to the intelligence of the reader. A native regiment is supposed to have eight English officers, but has practically, on an average, four. Send it to China, and in the course of a month there would probably not be one of the original officers with it. Who is to replace them? There will soon be none in India to take their places, and if the alternative is adopted of taking officers from British regiments to fill up vacancies, the sepoys will be given officers who know nothing of them and cannot even speak their language. There remains then nothing but to trust to the native officers; men whom it is our policy to keep in the back ground to so great an extent that they are never experienced in commanding a regiment, or in doing any responsible work a European officer can do for them. This is the situation, and every one is at liberty to draw his own conclusions from it. True there may be no war in China in our time, or any where else, and there is no denying that the organisation of eight officers to a regiment has the merit of economy when half the number is in Europe on half pay

and the other half is doing double duty on half allowances. That war is a possibility, however,is an assertion beyond dispute, and the question to be considered is, are we justified in preparing for it? Assuming a reply in the affirmative, we shall have to consider the future of the army of India in our next article.

THE LAND OF THE TAMULIANS.

MR. GRIBBLE of the Madras Civil Service has given us an interesting translation of *The Land of the Tamulians and its Missions* from the German of Rev. E. R. Baierlein of the Evangelical Lutheran Society. The contents of the book amply justify the translator's statement in the preface that, "the book contains so much that may be new to many readers, and so much that will be of interest to many more that I do not think an apology is needed for it." We have found it full of interest and information, and the style is more pleasing than we are accustomed to expect in a translation. We believe a large number of our readers will thank us for calling their attention to it, though we are unable to do its contents justice in the brief notice we can afford to give. We can only give a short sketch of the contents, and here and there an extract to give the reader a specimen of what he may expect to find in the little book itself.

The first part of the volume is occupied with the land itself and its people, and the second part gives an interesting account of the various missions to the land of the Tamuls, from the traditional visit of St. Thomas to the present day. We shall glance for a little at the first part. In the whole book there is nothing dry, or uninteresting. Without any attempt at fine writing, the author, or the translator, (both must, we suppose, share the credit) has succeeded in throwing a pleasant charm around the commonest themes. The first chapter on *The Land and its Products* is quite as attractive as the legends that illustrate the early history of the Tamulians and their literature. The following is a fair specimen of the writer's descriptive powers, taken almost at random. "In the districts well supplied with water, the principal product is rice, and for ever rice, as far as the eye can reach. The land is divided into flat square fields, each with an incline of a few inches so that each of these fields lies higher than the other. The water is then taken from the channels (of irrigation) and allowed to run from the topmost to the lowest field, so that all are under water. The fields are ploughed and sown with the water standing on them, and when the young plants are grown about a foot above the water they are taken out, tied in bundles, and transplanted into other larger fields, prepared in the same manner. This work is generally done by women who stand in the water like storks, but bent at right angles, and thus plant entire fields with great industry. Far as the eye can stretch for days' journey together, every field is planted with rice. In good soil with plenty of water, two, and in some places, three crops are raised a year." In this simple, pleasing, and not unpicturesque style, the natural and industrial features of the country are described, together with its products, mineral and vegetable. The iron manufactures of the Tamulians are described as especially important and interesting. The iron is obtained with little trouble or skill from the mountains rich in that ore. The ore is simply picked up, broken in pieces, washed, and thrown into a rude furnace of plaster walls which two men can build in a day or two. A man squatted on the ground keeps up a regular and powerful blast by moving up and down, somewhat quickly, two entire goat-skins, one in each hand. After four hours the iron is taken out with tongs, beaten with hammers to free it from dross, and is then ready for the blacksmith, who throws it into chauldrons full of charcoal, blows away for some time with the goat skin bellows, and then hammers it out into bars. Although the metal thus rudely prepared would probably be rejected by most of our blacksmiths, the author tells us that "this unpretending material produces the Indian steel, celebrated already in the earliest ages, and from which the swords of Damascus were manufactured; and, as in olden times no other steel could be procured anywhere, it is probable that steel from India was used in polishing the granite monuments of Egypt." The primitive process of preparing the steel is also instructively described.

It is unnecessary to dwell on this part of the book, where the author proceeds next to describe the trees and fruits, but we may notice that in treating of the different species of palm trees, he alludes to the liquors that they yield, and is unhesitating in his condemnation of the attitude of the English Government towards the manufacture and selling of these liquors. At the same time he is of opinion that English example has its share in inducing the people to drink, as well as the policy of the Government. "The responsibility of the increase of the Vice of drunkenness is generally supposed to lie upon the Government alone, which by introducing the system of renting the exclusive manufacture of liquor, has rendered the preparation of spiritous liquors not only legal but universal. But though there is a great deal of truth in this, there is, in my opinion, another factor, which is also, and I maintain even more, to blame for the prevalence of drunkenness; I mean example; whilst the lords in the land consume beer, wine, and brandy in enormous quantities, it follows that the subjects soon regard drunkenness as a portion of civilization, in the culture of which no one is willing to be left behind."

In treating of the people and their literature, the author asserts that the Tamulians are the most enterprising and movable people in India, and are to be found wherever their is a lazier and more superstitious people to be shoved aside. In support of this statement he remarks, that the Tamil language has spread with the spread of railways and roads, more than any other language in that part of India. In the district of Cuddapah, for example, Canarese was seventy years ago the predominant language; now it is Telegoo, but that is being rapidly displaced by Tamil, for wherever they come unto collision, Telagoo shoves aside Canarese and is in turn shoved aside by Tamil. The author conjectures that in another hundred years Tamil will be the universal language of the Madras Presidency. In the most ancient times three royal dynasties made themselves remarkable among the many kings of Tamil land. These were the Pandian, the Chera, and the Chola dynasties. Though the two embassies to the Emperor Augustus recorded by Eusebius and Strabo, may have been as the writer phrases it, "the making of the Alexandrian Greeks," it s cer tain that in those days there existed a mighty and prosperous empire in the South of India, and the ancient palace at Madura of the old Tamulian kings "is so remarkable a building that at the present moment the British Government is spending hundreds of thousands of rupees in order to save it from decay and to preserve it to posterity." Madura was built by Kala Sakhara on the site of an old lingam said to have been placed there by Indra himself. A famous high school with forty-eight Academecians sprang up in the royal residence, and there the Tamil language, in contradistinction to the Sanscrit of the north, was cultivated and developed. But days of degeneracy came, and the old language was becoming corrupted, when it was saved from the destructive process by the arrival at Madura of the famous Tamulian poet, Tiroovalloovan. He was a *pariah* priest and weaver from Mylapoor near Madras, and came to obtain from the Academicians of Madura a hearing for his famous poem, the Kural, which was written in the purest high Tamil. The legend is as follows:— "When Tiroovalloovan came to Madura he proceeded at once to the temple and recited his poem in presence of the King and the Academicians, the latter being greatly terrified. These tried to get him into a corner by all kinds of sharp questions, but he answered them immediately in fine verses. Then they said: Listen O Vallava! the last test rests with this bench of gold; if the bench will accept your book, it is accepted; if it does not, it is rejected; whereupon they spread themselves out and so pushed against each other as not to leave the smallest space remaining. Tiroovalloovan, however, nothing daunted, approached the bench, book in hand, which as soon as he came near, stretched itself out so that he and his book found a place on it. Thereupon the book commenced to swell so enormously that it shoved one Accademician after another off the bench until they were all left sprawling on the ground. This was a disgrace that they could not bear, and so they all went and drowned themselves in the fine big tank which is still to be seen in Madura. This probably means that Tiroovalloovan found favour in the eyes of the King, which indeed was the fact, and that his reputation soon surpassed that of all his rivals. The bench of gold means, of course, the good income of the Academicians." Tiroovaloovan was soon the greatest of the wise and learned men of Madura. By his poems he preserved the language from degenerating, and checked the introduction of Sanscritisms. He was famous not only as a poet but as a sage, and scholars and wise men came to him to have their difficulties resolved. But, after the manner of Indian sages, he was accustomed to keep the inquirer waiting long for an answer, and the answer when given at last, was generally to be gathered from certain acts, which like the responses of the oracles, were often of doubtful interpretation. The inquirer who hoped to glean a meaning from them would have needed to be almost as wise as the sage himself. Tiroovalloovan's wife, "as she lay dying, begged her stern husband to explain what to her was a matter of great mystery, and had puzzled her since the day of her marriage. "My Lord, when for the first time I cooked your rice and placed it before you, you ordered me always to place a jug of water and needle by your side; why did

you order me to do this? Whereupon her loving consort replied: If, my dear, one grain of rice should fall to the ground, the needle is to pick it up with, and the water to wash it! Then the wife knew that her husband had never dropped a grain of the rice she had cooked for him and she died happy." The sage's lament on the death of his faithful wife was as follows: "O loving one, sweeter to me than daily rice! Wife, who failed not in a single word! Woman who, gently stroking my feet, lay down after me to sleep, and rose before me? And dost thou leave me? How shall I ever again be able to close my eyes at night?" Tiroovalloovan was however an innovator in matters of religion a kind of Indian rationalist, in fact. Either through his influence, or at least about the period of his ascendency, Jainism made considerable inroads upon the Brahmanical religion. Most of the academicians became Jains, and so did King Kuna himself. But the king took to wife a young princess of the Chola dynasty, all of whom were zealous and orthodox Sivaites. Queen Dasvani brought with her to Madura a learned Sivaite, Nyana Samander, and and through his influence the orthodox religion began to be restored. It happened at this time that king Kuna fell dangerously sick, and none of the physicians of Madura could save him from the deadly malady. Then he sent for the sage Samander and told him that if he could cure him from the sickness that was threatening his life, he would embrace his religion and drive away all heretics. Samander cured the king, who was preparing to fulfil his promise, but the Academicians demanded another proof of Samander, and he agreed to submit to the test. They would write holy words (*Mantirams*) on palm leaves, and would place them on the Vyga river; he was to do the same, and he whose palm leaves should float upwards against the stream should have his religion pronounced the true one. Each party threw leaves into the Vyga, and behold! Samandar's leaf floated up the river. Then arose a mighty storm, and the Jains who did not at once depart were put to death or hunted out of the country, to the number of eight thousand principal men. Thus did the land find repose from religious strife, and Brahmanism was triumphant at Madura. Madura was burnt to the ground about the close of the eleventh century, and the king and the royal family perished in the flames of it. It never regained its pristine magnificence and glory, though one of its future kings built a hall of pillars which cost, is is said, ten millions of rupees, and which is at the present day one of the most splendid ancient buildings in India. The days of the Mahomedan conquerors came, and the Tamil princes were sadly repressed. The shadow prince of Poodoocottah is now their only representative in the land of the Tamulians.

Tiroovalloovan's famous poem, the Kural, is said to consist of 1,330 verses, each of two lines, and sings of the three objects of man—Virtue (denial), Possession, and Love. The rhyme in Tamil is at the commencement of the verse and the language is so much compressed that it is not easily understood, and is not very attractive to Europeans. We cannot praise it very highly from the extracts before us, but we have to remember that they have, as we presume, undergone a double translation, first into German, and then from the German *into* English. An English Tamil scholar would probably be able to give us more favourable specimens of the great Tamil poem. But the quotations in the volume before us seem not to be from the Kural, but from several other poems of a somewhat more recent date. We may give one or two examples.

"The mighty seed of the sweet juicy fruit of the palm tree
"Though nourished and borne high up in the heaven,
"Yields when grown to a tree for one man not even
"Shadow sufficient:
"The dimunitive seed of the fruit that grows on the banian
"Though smaller than even the tiniest fish spawn in water,
"Gives when grown to a tree—to kings and their four-fold army
"Of riders and footmen, of chariots and elephants,
"Shadow sufficient."
Therefore:—

"The great's not always great at all,
"Nor always little what is small."

"Not always children those we bear,
"Nor are our kinsmen always friends
"The married often not a pair."

The oldest Tamil writings are all in verse, even those that are philosophical. At the present day, we are told, much poetry is written by the people. But the prose is of considerable importance, and the Tamulians believe that their prose translation of the Ramayana is even better than the original.

The Christian literature of the Tamulians is perhaps richer than any vernacular Christian literature in India. They have four translations of the Bible, a large number of hymns, and many books published by the "Christian Vernacular Education Society." "There are several Tamil newspapers, and an enormous quantity of tracts, which, it is true, are not all an ornament to the language. In 1871 alone, 717 different Tamil books, big and little, were printed. The Christian Vernacular Education Society printed, between 1862 and 1871, 1,088,320 Tamil School books; and other works which were printed during these years (but without reckoning the labours of the Bible Society), amount to about four million copies. In no other of the twenty languages of India is there anything like the same number of books printed. It is not, therefore, without reason that I have called my dear Tamulians the most movable and stirring people in India."

So much for the literature of the Tamulians. We have then several chapters descriptive of their external appearance and domestic life, their religion and worship, and their sacred temples. A great deal of exceedingly interesting information is contained in these chapters, and is set forth in a form which will make the book very pleasing reading for many persons who would be deterred from the study of more ponderous volumes. But we cannot enlarge further on the first part of "the Land of the Tamulians."

EUGENIE AND MAURICE DE GUERIN, AND THEIR HOME AT LE CAYLA.

[FROM OUR OWN CORRESPONDENT]

CAHUZAC, LANGUEDOC, SEPTEMBER 27.

FEW I think would read the letters and journals of Eugénie de Guérin and her brother Maurice—contributions to literature which were not given to the world until after their writers' deaths, and the merits of which were first made known to English readers by Mr. Mathew Arnold—without feeling a desire, if ever their wanderings should lead them to the South of France, and to the rich vine-growing province of Languedoc, to turn aside from the paths usually trodden by tourists, and visit the chateau of Le Cayla, in which Eugénie spent nearly the whole of her life, and in which Maurice passed his early days, and to which he returned at last to die.

It was in 1805, that Eugénie de Guérin was born in the solitary chateau. Her brother Maurice was born when she herself was five years old. When he had reached the age of twelve he went to school at Toulouse. He was a shy and nervous boy. He, however worked so well that before three years were ended, the Archbishop of Toulouse, who had heard of his ability, offered to take charge of his future education. This offer his father did not feel justified in accepting. He sent his son to Paris to the College Stanislas. There he remained six years. His father, though of a well descended family, was not wealthy. The Great Revolution had brought disaster to the family. As in those days travelling was costly, Maurice had to remain in distant Paris all the six years without knowing the enjoyment of home in the vacations. During his later days at college he manifested literary power both in prose and verse. He had early felt an inclination to enter the ecclesiastical life. This however he had lost at the end of his college days. He tried to make up his mind to devote himself to law and began the study of the civil code. Though he disliked the thought of working for a livelihood in the law-courts, he tried to persevere in the work he had so little taste for. After a few months spent at Le Cayla, when he was one and twenty, he went back to Paris with the intention of continuing his legal studies. But his desires for a literary career now strongly asserted themselves. He wrote an essay and sent it to a review. It was accepted. He at once looked upon his success as assured. He put aside all notion of devoting himself to law. But his success did not bring him daily bread. Young writers were expected to be content with the honor of having their contributions accepted, and as they feasted their eyes upon their own printed words, to consider that they so got all the sustenance their articles would yield. Ere long he went home again. His father was grieved that he had ceased to look forward to the law as a profession. He himself was troubled with the difficulties he had met with in the path of literature. His thoughts began again to turn to the ecclesiastical career. He felt a longing this time to enter into the quiet seclusion of a religious house. One of his college companions had joined a small community gathered arround the Abbè Lamenniais at La Chênaie in Brittany. He felt an impulse to do likewise. His father gave a reluctant consent and at the close of 1831, he was numbered among the Abbé's novices. He has in his journal left an interesting account of the days spent at La Chênaie. He became much attached to the Abbé. He could sing well, and the Abbé was charmed with his sweet rendering of the psalms. But troubles were at haud for the Abbé. He had already twice given offence by his writings. His "Essay on Indifference," the first parts of which received great praise as containing a wonderfully

able defence of Catholicism, in its later parts seemed deeply tinctured with a democratic spirit, and condemnatory voices were raised. He hurried to Rome to defend himself, was honorably received, but was quietly counselled to be in the future more moderate in his tone. He came back to France, and for a while occupied himself in translating "The Imitation of Christ." Soon, however, he wrote a book which caused the Government to prosecute him as a teacher of sedition. Berryer defended him, and the fine of thirty-six francs which he was condemned to pay, was looked upon as the token rather of a triumph than of a defeat. He went again into retirement, wrote two works of devotion, and then startled the French world with his book, "The Progress of Revolution and the War against the Church." The Archbishop of Paris pronounced censure upon him; but the Revolution of 1830, came, verifying the expressed anticipations of the Abbè, and enabling him to defy the censure. He then joined with M. de Montalembert in founding a journal, *L'Avenir*, which had for its motto, "God and Liberty." His articles brought him a second warning from Rome, and thither he went again to avert the Pope's wrath. But in vain. In an encyclical letter his articles were condemned. He submitted for the sake of peace, and went back to his retreat and his community at La Chênaie. Such was the man to whom Maurice de Guèrin attached himself. His year of probation had just ended, and after an inward struggle he had taken the initiatory vows of the new order, when a fresh outcry was raised against the Abbè, and his diocesan the Bishop of Rennes commanded him to cease from teaching and to transfer the novices under his care to the Brothers of Christian Instruction at Ploërmel. Thither Maurice went very reluctantly; but the rule of passive obedience was there enforced with such rigidity that his whole nature was thrown into revolt. A decree from the Bishop enabled the novices, if they chose, to be released from their vows. Maurice availed himself of this decree and quitted the dreary cloisters. After a short interval passed as a guest at the home of M. de la Morvannois in a beautiful valley on the Breton coast—an interval which he speaks of in one of the most charming chapters of his journal as one of great happiness,—he went again to Paris. He made another attempt to secure literary work. He met with scanty success. He received remuneration at the rate only of six francs a column. He could with difficulty earn only sixty francs a month. One occupation was open to him, the drudgery of which he had all along dreaded—that of a tutor. At last he was compelled to make up his mind to enter upon the distasteful work. He secured a mastership at his own College. A stipend of 1,800 francs a year was all that he received. He became at length reconciled to teaching, but the weariness caused by long hours of daily toil, so hindered him in the work on which his early desire had been fixed, that he was able to do but little in literature. At length a future of ease seemed to be unfolded before him. He married, in 1838, a wealthy lady, a Mademoiselle de Gervain from Bombay, with eastern blood in her veins. But he was then really worn out by the toil of the previous years, and seven months after his marriage he went home to Le Cayla to try to gain strength in his native air, and there a month later he died.

During his student days at Paris and while he was in Brittany, Eugènie was his constant correspondent. Through the years of weary toil as a teacher, she also for his sake wrote down the incidents and thoughts of her daily life. The journal she thus kept he was from time to time enabled to read. The letters and journals which thus were written by her, contain the most charming sketches of her life at Le Cayla. No such complete picture of country life in a French chateau, or such complete revelation as her writings contain of the sentiments inspired by religious training in Roman Catholic homes, in those days unmingled with the extravagances which have recently sprung up so profusely, has ever before been given to the world. Her letters abound with reminiscences of her earliest years. She tells how she was taught to kneel to say her morning and evening prayers before a picture of the Crucifixion in her father's room, how she took there all her little griefs, how once she asked that some stains on a new frock might be caused to go away, how as they gradually faded she thought a miracle had been wrought for her, and how as she began to think that everything could be obtained by prayer, she entreated that her doll might have a soul. She tells of a visit she paid to an old castle in the mountains where her cousins lived—a castle partly in ruins, with love stories, and ghost stories, and all manner of old legends connected with it. She writes of the small occurrences of daily life, of the swallows flying past the door, of the fall of the great oak caused by the strong winter's wind, of the cat which pounced upon a half frozen pigeon she was trying to revive at the kitchen fire, of her father's evening adjournment with her to the kitchen for the sake of its warmth and to read there the "Antiquities of the Anglo-Saxon Churches." She speaks of the walk to the Andillac Church on Sundays. She says "I like the life of a country Sunday, so active, gossiping, and varied. We meet all our neighbours on the road; we have a curtsey from all the women, and, as we go along, such a talk about the poultry, the sheep, the goodman, and the children. My great delight is to pet the little ones, and to see them run and hide their rosy faces behind their mothers' aprons. She describes one walk to midnight mass at Christmas, how the ground was white with hoar-frost, but the air warmed with the bundles of blazing torchwood which were carried before to light the way. She says: "The hoar frost makes the most lovely flowers. We saw one long spray so exquisite that we wanted to take it with us as a posy for the altar, but it melted in our hands." She tells how once when there was at the chateau a visitor, she overheard the tattlers at Low Mass coupling his name with her own, and murmuring "Ah! but he is too young for her." One story she puts on record is of a poor old woman whom she tended during her last days; how the poor creature gave her sixty francs which she had saved up during long, long years, *sou* by *sou*, and kept hidden beneath a faggot of firewood, and which she had so stored up to provide for masses for the repose of her soul. She tells how once when Maurice came home, his good nurse came to see him with a pocketful of nuts, and how one old woman showed him, still safe under her cottage eaves, a swallow's nest he had charged her to take care of when he first left home for school at Toulouse. All her friends to whom she writes are charmed with her letters. One of them once said to her: "Where others see nothing, yon find ever so much to say; you could say a hundred things about this door-latch." Eugènie in her journal adds: "Surely there would be much to say and to think about that bit of iron which so many hands have touched, which have been lifted and dropped in such different moods, under so many eyes, by so many masters, for so many days and years. Oh! the history of a door-latch would be long!" The letters and journals not only form together a most picturesque record of daily life, but are also full of the most tenderly expressed sentiments. They were mostly intended only for Maurice's perusal. Eugènie had unbounded confidence in her brother's ability. She was always overjoyed to hear of the occasional appearances in print of his contributions to literature. She believed in the coming of a day when his merits would be unmistakeably recognised. She ever encouraged him to persevere in his efforts. But in his life time no such recognition came as she had hoped for. After his death some of his poems were put into the hands of Madame Georges Sand, who at once discerned their merit. To the *Revue des Deux Mondes*, of May 15th, 1840, she contributed an essay on Maurice's life, letters, and poems. But Eugènie was not pleased to find her brother spoken of as a sceptical, pantheistic, young poet. She was more pleased with an article in reply written by M. de la Morvonnois in the *Universitè Catholique*. The two articles excited considerable interest. A wide-spread desire was manifested for the publication of Maurice's literary remains. They were gathered together from various sources, and entrusted to the hands of a literary friend of Maurice's. He, however, failed to do what he had undertaken, and put vexatious hindrances in the way of publication. Year after year passed by and Eugènie's desire was still unrealised. After a while her health failed, and in 1848, she died and was laid in Andillac churchyard by the side of her brother.

In her journal Eugènie makes constant reference to her sister. Marie and speaks often of her kindly household ways. This sister henceforth devoted herself to do honor to Eugènie's memory. Eugènie had bidden her burn her manuscripts; but she knowing their value did not heed the dying request, and very patiently did she wait for an opportunity to reveal to the world the literary treasures left behind by her sister. Seven years had to pass by before she could get printed for private circulation a small edition of the journal and letters. They were published in a provincial town. Small as the edition was, it excited considerable attention. A demand arose for a more complete edition. Maurice's writings were again spoken of, and at length in 1861, his literary remains were published at Paris by Messrs. Didièr. The increased interest excited led on to the publication of a larger edition of Eugènie's book. It received a wide-spread welcome. It was "crowned by the Academy." It was translated into other languages, and numberless readers have taken as deep and abiding interest in the thoughts and lives of Eugènie and Maurice de Guèrin.

And it is to see Le Cayla, the chateau so many details about whose inner life are given in Eugènie's journal, that I have turned aside from Toulouse and sought the village of Cahuzac. Le Cayla is about five miles from the village station. The road winds along through a broken and picturesque limestone district. Rich vineyards stretch on either hand all the way to Andillac. There I

pause to visit the church and churchyard. I see the graves of brother and sister. Over Maurice's grave is a marble obelisk surmounted by a metal cross ; over Eugènie's is a simple cross of wood attached to which is a wreath of *immortelles* protected by a glazed medallion and by a net work of fine wire. I pass into the church and remember that it was there that Maurice when a boy seemed to his sister, as, in his surplice, he swung the censer at mass, like a beautiful little angel ; that it was there he learned to sing the psalms with that sweetness which was afterwards so solacing to abbè Lamennais when dreading the troubles which came upon him so soon afterwards. I pass from the church and soon reach the mill, and the washing pool which Eugènie in one place speaks of as so beautiful in the fresh green hollow, surrounded by trees in which the birds delight to come and sing. She speaks too of her own pleasure in spreading the white linen on the grass, or in seeing it floating on the lines. She can fancy herself Homer's Nausicca, or one of the princesses in the Bible, who washed the tunics of their brothers. The chateau is soon in sight. It is squarely built and surrounded by a tower. The old ruined shutters spoken of as rattling so on windy nights have long been replaced by others. I am soon at the wayside-cross at the foot of the hill on which the chateau stands—the cross at which so many parting words were uttered by brother and sister. I ascend the path winding through the grounds, and soon receive a hearty welcome from the dwellers in the chateau, who break off their play with children on the lawn to listen to my errand. The lady of the chateau is a niece of Eugènie, and her husband has adopted the ancient name of De Guèrin. But there is a yet nearer relative who comes forward to welcome me and to be my guide to all that she knows will interest a reader of the Le Cayla literature. She is no other than the sister of Eugènie, the Marie so often spoken of by her, and so devoted to her memory. She takes me to the little room in which Eugènie wrote her journal, and in which she died. For twenty-seven years has she kept the room just as it was in her sister's lifetime. On the walls hang the same engravings, on which the marks of time are gathering. As I sit at the little writing-table to read the names of those who like myself have been attracted to the shrine of Eugènie, I have opposite to me the same sweet saintly faces upon which she must often have looked in the pauses of her writing. I am taken through the grounds to see the woods, the warren, the orchards, and vineyard surrounding the chateau. The "hill of the seven springs," the walk towards which was so favourite a one with brother and sister, is pointed out to me. In the wood upon the hill-side I am shown a recess under a bank in which the young Maurice used to preach little sermons to his sisters. They thought him earnest and eloquent, and called the recess the "Pulpit of St. Chrysostom," and looked forward with fond hope to the time when preaching would be part of the work to which he would be devoted. At La Chênaie the novices, as a kind of exercise, had to read and preach before the whole community, and when Maurice's turn came all were charmed with his utterances. Preaching was evidently work for which he was well fitted ; but the vows of the Roman Catholic Church, from which he finally shrank, kept him from the work which his early sermons in the wood show how well he would have done. What I am shown by my friendly guide, who speaks with pleasurable remembrances of the various visits to Le Cayla by wanderers from England, will enable me henceforth to superimpose upon the printed page of Eugènie's writings, pictures of the scenes, in the midst of which she lived and wrote down her beautiful thoughts. During my short stay of two hours or so at the chateau, its hospitality was pressed upon me, and I am able to say that the Le Cayla vintage is a very choice one. "Come and see Le Cayla again," are the kind words which are spoken as I take leave of the chateau, in which had lived one who has won the hearts of so many readers, not only by her devotion to her gifted brother, but also by the tender spiritualising influence of her own thoughts.

HOLY SCRIPTURE.

Its Inspiration and Historical Truth.

[*By the late Bishop Cotton.*]

III.

NOT in the account of the Exodus only, but throughout the Bible, objections and questions arise which we cannot answer. Some of these, such as the discrepancies in dates between the books of Kings and Chronicles, or the enormous numbers which sometimes startle us in the wars between Israel and Judah, may be explained by the imperfect state of the Hebrew text, which, as was long ago pointed out by Kennicott, is liable to great uncertainty in the matter of numbers. Bishop Ellicott, however, has declared his opinion that "in the case of the written word, viewed on its purely human side, and in reference to matters previously admitted to have no bearing on Divine truth, we may admit the existence of such incompleteness, such limitations, and such imperfections, as belong even to the highest form of purely truthful human testimony."* How far we must go along with this view is a question on which we confess that, like Professor Harold Browne, we are not careful to form a confident judgment, believing that the Church will be led to a right decision through the progress of criticism and evidence, providentially guided by God, and that such considerations do not touch our faith in the Bible as a divine revelation. We must certainly admit that the writers of Scripture speak of natural phenomena according to appearances, and not in language scientifically correct. If it is urged that this concession hardly reconciles the Bible with all the discoveries of modern science, we shall at least refuse our assent to this assertion while the sciences which are said to contradict Scripture remain in their present imperfect condition, and while the evidence for the alleged facts is involved in utter uncertainty. On the other hand, the chronology of Genesis is uncertain likewise ; the system of Archbishop Usher, though generally accepted, often rests only on inferences from Scripture ; and as our three chief authorities for the text, the Hebrew, the Samaritan, and the LXX, differ in their dates, we cannot feel sure that any one of them is now in all respects correct, though doubtless we can feel sure that God did not intend our hope in Jesus Christ to be perilled by some uncertainty as to the precise interval between the Creation and the Flood, or the Flood and the Call of Abraham. If we may hazard a conjecture on such a subject, we venture to expect that the present stumbling block, such as it is, will be removed out of the way by additional light on biblical chronology, coupled with an immense reduction of the myriads of ages, by which some geologists are disposed to measure the past duration of our race. With regard to the far more important subject of moral difficulties, such as the sanction given in the Law to slavery, polygamy, and other usages of an uncivilized society, or again the approbation accorded to the slaughter of the Canaanites, and the manner of Sisera's death, we are persuaded that they are perfectly solved in the New Testament. Let us call to mind the rebukes which our Lord addressed to those who would have relaxed the law of Christian marriage in accordance with the precedent set by Moses, and to those who desired to destroy the inhospitable village after the example of Elijah. Let us read these passages in connection with the assurance given in the first verse of the Epistle to the Hebrews that the Old Testament was only a partial and progressive revelation, that God spoke *polumeros*, that is, *in diverse portions or fragments, in time past to the fathers by the prophets.* And if we further unite with these Divine declarations the fact that many practices allowed by Moses were patriarchal customs, or in their general features not unknown among other nations, but that the whole tendency of his legislation was to regulate and purify such practices, to mitigate their evil, to remove the abuses which defiled them, to train the Israelites to mercy, justice, and love to the brethren, we shall have no difficulty in acknowledging that the system which he founded, though imperfect, was yet Divine, and that he was sent by God to govern His chosen people, not by forcing on them a standard of morality which they could not have appreciated, but by raising them far above every contemporary nation, and thus fitting them to preserve the sacred deposit of His revelation, and to impart a new spiritual life to the world.

Moreover it is a remarkable proof of the world wide power of Scripture, that points which are felt as difficulties by one class or generation are seen to be of the highest importance by other sections of the great human family. We have lately been struck by two instances of this. No parts of the Scriptural records have been more severely criticized than the Mosaic cosmogony, and the doctrine of sacrifice. One of the best known papers in the volume of *Essays and Reviews* undertook the refutation of the former : and more than one vain attempt has been made to shew that the latter has no connection with our Lord's death, and no part in the Christian scheme. Such are the opinions of students who have grown up in habits of thought exclusively European. We bring the Gospel to India ; we persuade a few thoughtful men to accept Christ as their Saviour, and we find that these very parts of Scripture strike home to their hearts as full of instruction. In a lecture delivered in London, Professor Gannendro Mohun Tagore thus speaks : † "Cosmogony forms the

* *Aids to Faith*, p. 418. References to a long *consensus* of English divines, more or less agreeing with Bishop Ellicott, will be found in Farrar's *Critical History of Free Thought*, (the *Bampton Lectures* for 1862), p. 667.

† *On Buddhism*, by G. M. Tagore, Professor of Hindoo Law in University College, London, p. 15.

essential basis of all religious development, as far as we are able to collect. Hence the vast importance which must necessarily be attached to the Mosaic cosmogony, notwithstanding the many and perhaps everlasting disputes which may be raised against it. The Hindoo cosmogony is the mythical development of the historical realism of the Mosaic : and the absence of the notion of a personal and living God in all false religions, and its conservation in Judaism...forms the most remarkable feature in the religious history of mankind." And the Reverend Krishna Mohun Banerjea sees in Christ's Sacrifice the explanation of a remarkable feature in the religion of his countrymen. "We find," he says, "that in the inscrutable wisdom of God there could be no remission of sin apart from sacrifice, that Christ was revealed in the primitive age of the world as the great Sacrifice for the sins of men, and that immolation of animals was ordained as typical of that rite...While the ceremonial performance of the rite was kept up probably everywhere, its object and intention were gradually forgotten . . The zeal and assiduity with which it was maintained in our country is accounted for by its transmission from age to age as a primitive practice ; but the inability of our ancestors to give the least intelligent explanation of the rite, and the want of any information in the oldest of the Vedas on its connexion with the celestial fruits of which it was believed to be productive, are enigmas which can only be understood by the light of the Biblical history."* Miracles furnish another instance of the same kind. If there are some scientific minds which cling so closely to the conception of law, that they are unwilling to imagine any interruption to it, there always have been other minds to which miraculous agency seems an essential part of the evidence of Christianity, proving that the Gospel was the work not only of infinite goodness, but of infinite power. Surely then God's wisdom is vindicated by the provision made for the spiritual needs of all His children. At great turning points in the world's history miracles have proclaimed His special presence, but in the ordinary course of events His fatherly care has been manifested in the unbroken supremacy of those wise and merciful laws which His providence has impressed upon His creation. All these facts shew that the Bible contains a universal revelation, and confirm the truth of Bacon's words, that "the Scriptures, being written to the thoughts of men, and to the succession of all ages, with a foresight of all heresies, contradictions, and differing estates of the Church....have in themselves infinite springs and streams of doctrine to water the Church in every part."† We have not, we trust, dwelt needlessly on this momentous subject, even though we are not here, as at home, agitated by controversies raging immediately around us. For there is no doubt that these difficulties are often discussed both among Europeans and educated Hindoos. Of the young men who are constantly landing on these shores, there are many who, had they lived twenty years ago, would have taken orders, but have been brought out here through the coincidence of the present reluctance to enter the ministry, with the attraction of the competition for the civil service, and other openings which India offers to industry and ability. Among these, it is to be feared, there must be some on whom the Gospel retains but a weak hold, who seldom think of the Lord Jesus Christ, or if they do, think of Him with indifference or unbelief. To approach such persons with unobtrusive kindness, to sympathise with their troubles and their failings, to raise them from doubt to faith by wise counsel, and above all, by the example of a holy life, is one of the most obvious yet hardest duties of a Christian. And we should watch the progress of these opinions among the higher class of natives. Of the many painful documents which have appeared of late years there is none more painful than the letter addressed by Mr. Francis Newman to the Brahma Somaj, in which an Englishman of great intellectual gifts, who has not only been baptized into the Christian faith, but has experienced its power in his soul, and even worked for its propagation, dissuades the heathen natives of India, many of whom, we doubt not, in their own helpless way may be said to be almost *hungering and thirsting after righteousness*, from seeking it in Christ Jesus. Yet when he would deter them from entering the Christian Church, because it is divided into sects and agitated by controversy, he must know that his own deism offers no more peaceful haven. Many Hindoos, who had hoped to find a refuge in that dreary creed, are already tempted away by the pantheism of Emerson : while below all systems which retain even the name of God yawns the gulf of the Comtist philosophy with its blank scientific atheism, and its attempt to adore abstract Humanity with a ceremonial borrowed from the Church of Rome. As to Bishop Colenso's book we should not have thought it likely to exercise much influence on Hindoos, who perplex themselves with metaphysical rather than historical difficulties. Yet owing to the agitation which it excited, it roused for a time considerable interest among them. We heard of missions in which it was a real hindrance, and a Bengalee gentleman gave it to a youth who was enquiring into the truth of the Gospel, with the remark that it would cure him of foolish propensities, since it shewed that educated Englishmen had ceased to believe in Christianity. Doubtless the Bishop would protest against such an inference, and point to his own assertion of "entire and sincere belief in our Lord's Divinity" * as a proof that it was unwarrantable. Yet he has himself given grounds for such judgments by his own inconsistencies. While declaring his faith in Christ's mission, he so completely repudiates all that is distinctive and positive in Divine revelation, that he proposes to enlarge the national Church till it includes not only all the piety, but all the learning of the nation, and he believes that nothing is required for the union of Jews and Christians in missionary work, except that both should give up the Pentateuch as a historical record, Nor must he wonder if our *Pundits* welcomed his writings as auxiliaries *against the Gospel*, when he extols pantheistic prayers and thanksgivings to Rama, here regarded as inculcating the belief that good and evil are alike from God, and calls them "living truths learned by the secret teaching of the Holy Spirit," † to be placed side by side with the revelations of Scripture. ‡ It is probable that such passages were penned partly in haste and partly in ignorance, but we read them with sorrow and surprise.

In considering this subject however, we in India have at least one advantage, that we contemplate from a distance the troubles which have distracted England. Thus we have more time for reflection, and can learn from passing events lessons to be used, if we should ever be placed in emergencies like those which have troubled our brethren. We will mention a few of these and so conclude.

I. The first shall be the duty of speaking the truth in love. However much we may be shocked by the perversities of unbelief, we cannot expect to attain Christian knowledge, if we are forgetful of Christian charity. While thankfully admitting that many who have taken part in recent controversy have written with courtesy and forbearance, we have to lament some exceptions to this rule. Nor is it easy to decide, we are sorry to say, whether the more violent language has been used on the orthodox or the rationalistic side. Sometimes indeed the use of unrestrained invective against heresy is defended, because it saps the foundations of the Christian life ; and ecclesiastical and scriptural precedents are quoted to justify the use of such language. Yet if we turn to the highest and holiest Example of all, we find the intellectual error, however dangerous, is generally *spoken of with* sorrowful reproof, while stern condemnation is reserved for hypocrisy and other forms of moral wickedness. The mild pathos with which our Lord refutes the Sadducees, *Ye therefore do greatly err*, forms an instructive contrast to the denunciations which he hurls against the Scribes and Pharisees. Moreover, the style of writing sometimes adopted in theological controversy is impolitic as well as unchristian. For, first, it is easily retorted. Thus if one of Bishop Colenso's critics can denounce him as "this modern Judas," the prelate can retaliate by asserting that one who was offended at the theory that Samuel forged the chief part of the Pentateuch, had "abrogated the rights and duties of a reasonable being." § Again, a reader is almost prejudiced against the truth, when it is supported by uncharitable insinuations and personal insults ; and is even unduly attracted towards views which are advocated with candour and courtesy. Such writing as that of Professor Jowett on the one side, or on the other of Dr. Goulburn and Mr. Haddan in the *Replies to Essays and Reviews*, and of Professors Browne and Rawlinson in *Aids to Faith*, ensures an attentive consideration of the doctrines which it supports, while we turn away with pain, (we say it with reluctance of persons who believe that they are serving God, and can point to evidences of piety and learning,) from the arrogant invectives of Mr. Burgon and Dr. Williams.

II. We must beware of panic : no dread of scepticism must deter us from the accurate study of Scripture, and legitimate criticism on its contents. Experience proves that we have nothing to fear from honest enquiry. We now look back with amazement on the persecution of Galileo, and on the alarm which troubled the pious Bengel when he began to consider the variations in the MSS. of Scripture. We regard these variations, not as our weakness, but as our strength. If Biblical criticism has ventured on many unwarrantable conjectures, it has on the whole been of

;nfinite service, and has solved more difficulties than it has left unexplained. The objections to the book of Daniel cannot indeed be charged on German rationalism, for some are as old as the time of Porphyry; but it has been reserved for modern archæologists to suggest a probable solution of one difficulty, by the discovery of the name *Bel-shar-ezer* among the Assyrian ruins, and for modern philologers to remove another, by shewing that the non-Semitic words which occur in this book, and have been used as an argument for assigning its composition to the time of the Maccabees, belong not to the Greek but to other Aryan languages, and are therefore "evidences to the contrary of what they were once adduced to prove." * So, too, recent research has discovered the explanation of one of the most celebrated objections to the accuracy of the New Testament, the supposed mistake of St. Luke in asserting that *Cyrenius or P. Sulpicius Quirinus* was *governor* of Syria at the time of our Lord's birth. But we must not dwell on special instances; we will only mention one of the widest importance. Modern scholars have made it impossible for any one who accepts Scripture as his guide to regard Christ as a mere human teacher, for they have proved that all attempts to interpret its language in accordance with such a view are utterly vain: and hence it is acknowledged that the old Socinian opinions are inconsistent, not only with the theology of the Creeds, but with the theology of St. Paul and St. John. The Old Testament has not yet been subjected to the same thoughtful scrutiny as the New. It is still suffering from hasty generalizations, and theories hazarded in ignorance of facts. When therefore Bishop Colenso exclaims in a defiant tone that "the spirit of enquiry must unquestionably be carried into the writings of the New Testament," † we reply that this has been done already, and that our faith in their Divine authority is only strengthened by the result. So also God will doubtless lead to sound and sure conclusions the criticism now employed on the older portion of His word; and our children will regard the "younger Elohist," the author of the "Book of Origins," and the other grotesque personages to whom German commentators assign the composition of the Pentateuch, with as much indifference as we feel towards the *Urevangelium* and other figments which have been invented to explain the Gospels. Indeed there is reason to hope that the present agitation has already led to a more accurate acquaintance with the Old Testament, a truer appreciation of its place in the Divine economy, and a deeper reverence for its holiness and wisdom.

III. A third requisite in this controversy is honesty in dealing with difficulties. We must not propagate untenable expositions, we must be ready to wait and confess our ignorance when we cannot fully understand. It may have been hasty in Dean Alford and Mr. Fairbairn to assert that there are two historical mistakes in St. Stephen's speech, (though we cannot see that this difficulty about his statements at all affects the accuracy of Scripture as a record) but it is worse than hasty to explain one of them by the extraordinary assertion that Stephen had a habit of uniting two separate events, and that when he says that Jacob was *laid in the sepulchre which Abraham bought of the sons of Emmor the father of Shechem*, he means that Abraham purchased a grave for Jacob at Machpelah, and Jacob another for Joseph at Shechem, and then combines these facts in a single phrase. It may be rash to pronounce St. Matthew mistaken in attributing the prophecy of the thirty pieces of silver to Jeremiah instead of Zechariah, but it is better to say this than that God has designed this apparent error in order to teach us that Jeremiah is nothing and Zechariah nothing "but that the Holy Spirit Himself is the Author of all prophecy." ‡ Surely our proper course is to admit (as Heber did in speaking of the difficulty about Cyrenius,) that these are points which have not yet been explained, but also to maintain that if they never are explained, they cannot touch the truth of that Gospel, by continuing in which *we shall both save ourselves, and them that hear us.* In short, in reference to all such questions we maintain, with Butler, that "neither obscurity, nor seeming inaccuracy of style, nor various readings, nor early disputes about the authors of particular parts, nor any other things of the like kind, though they had been much more considerable in degree than they are, could overthrow the authority of Scripture, unless our Lord had promised that the book containing the Divine revelation should be free from all these things." §

IV. We must not then view with jealousy the progress either of criticism, or of any other intellectual pursuit, such as physical science, which intersects the sphere of God's written word. Let us have faith enough to be sure that truth can never contradict truth, and that the source of all truth is the Spirit of God. But I cannot quit the subject without a word of protest against an opposite state of mind, now unhappily common. Many modern teachers, not content with bespeaking a fair consideration for difficulties, require us to open our ears to every new rationalistic hypothesis, and denounce as beneath contempt all divines who are not familiar with the latest conjectures of Hupfeld and Hitzig. Thus they would erect a tyranny of German commentators quite as galling as the yoke of traditional belief which they so vehemently repudiate. But we must not allow them to persuade us that candour and honesty require us to criticize the Bible in the same spirit as the writings of Homer or Herodotus. We should not distrust, but cherish, those prepossessions which attract us to it through our religious feelings, and lead us, before entering on any minute enquiry, to regard it as God's word because it speaks peace to the troubled soul, reveals Christ as the Propitiation for our sins, and fills us with a desire for that holiness which it describes.

We cannot suppose that in treating of various subjects at a time of excitement and controversy, we have avoided statements which many will question, nay perhaps, though we have striven to speak in love what we believe to be truth, we may have given pain and offence to some among our readers. Let us then conclude with a precept which all will at once accept. We are sure that the Bible besides being an infallible guide for our moral and religious life, contains a true history, and rests on a firm basis of fact. But a great historical critic, writing in defence of Christianity, has remarked that historical evidence, "being the evidence of witnesses who are dead, and who may possibly, however improbably, have been mistaken, cannot rise beyond a high probability, and cannot amount to such an absolute certainty, as we derive from the evidence of our senses, or of our moral perceptions." * He reminds us therefore that it must always be combined with other evidence, the testimony of conscience, the satisfaction of our religious cravings, the idea of God as the Father of all men, and the character of Christ as the object of our personal love. Here then the theoretical and the practical, the spiritual and the intellectual, meet together.

THE UNSEEN UNIVERSE.

(From the Spectator.)

A THIRD edition of this now well-known work presents an opportunity of notice in some respects more favourable than its first appearance. The preface to this edition does not indeed add anything to what we have to comment on in the book, but the fact of two editions of a volume so abstruse and difficult being exhausted in so short a period, is of great significance, while the preface to the second edition, in its warning against certain misconceptions, is a valuable guide to understanding the work. It has, we think, two literary blemishes. It mixes up reasoning of different degrees of cogency, and addresses minds of different calibre. Both these hindrances perplex an argument not in itself perplexing, and the second defect is not compensated for by those advantages for which it was perhaps worth while to incur the first. The reader is interrupted by jolts of transition from too much to too little explanation, excursions into abstruse speculation that strains his whole capacity of attention, and then retrogressions into a kind of dissertation that an intelligent person is rather aggrieved at having to peruse. It is a great tribute to subject and authors that, with transitions so deadening to attention, a third edition should be called for within the year. Our part, however, must, in this short space, be that of a mere interpreter. We need all our space to put before an uninstructed reader what seems to us most cogent in the argument which has led two men of science to gather from the study of the natural world an expectation of something that lies beyond nature. This exposition, therefore, forms our whole aim.

The great intellectual achievement of our day is the theory of the conservation of force. From the dawn of scientific thought it began to be seen that no particle of matter was destructible, but this principle was not applied to the correlate of matter—force—till our own day. The application seems to us, indeed, to have been virtually made when Newton formulated the three laws of motion. If we may sum up those laws in the assertion that motion, when apparently destroyed, is actually transferred, and add to this summary the definition of force as that unknown reality which lies behind motion, we may surely say that the idea of the indestructibility of force is contained in the *Principia*. The two centuries intervening between the implicit and explicit

Goldwin Smith, on the doctrine of historical progress, p. 42.

statement of this truth were necessary, however, for the transference of the imponderable agencies affording its illustrations from the domain of matter to that of motion, and the correlation of the physical forces received its first literary statement thirty-two years ago, in the lectures of one whose study of laws other than those of nature has always seemed to us a grievous loss to science. The principle then enunciated by Sir W. Grove has been illustrated, confirmed, and defined by every fresh discovery, and is now a common-place. Nevertheless, a familiar statement of its import may not be unnecessary.

The varied forces of nature must be pictured to the mind as a kind of alternate agitation between the small and the large divisions of matter, a ceaseless activity now concentrated on the movement of a single mass, now spent in sending thrills of palpitation through countless atoms. If our sense of sight were keen enough, we might see this interchange ; under the present circumstances, it presents itself alternately to our eyes as movement, and to that unnamed sense in us which takes account of "warmth" or "chill" (words which we think it would be a great convenience to keep for our sensations, as "heat" and "cold" for their causes). We may bring a sort of pictorial representation of this change before our mind, by imagining what happens in a railway collision, the sudden cessation of movement in the large thing, the train, causing a clashing together of the smaller things, the human beings inside it. This is a pattern of the way movement passes from masses to molecules ; make the train large enough, and the people inside small enough, and it becomes a specimen of such a change. When our feet strike the ground, movement is in just the same way transferred from a large thing to a number of small things, for the sensation we know as warmth cannot, except *as* a sensation, be described in different terms. Just as a person watching a train stop suddenly would know nothing of any number of collisions inside, so movement vanishes to our eyes when it changes into the molecular form known as heat. And as a brisk walk may remind us that heat is transformed motion, a railway journey may remind us that motion is transformed heat, Motion—heat—motion again, thus we may to uninitiated minds, condense the whole cycle of force which the scientific observer knows on a large scale. Some fragment of this cycle forms the object of every scientific experiment and he who is familar with the whole, realises vividly the truth denied by none, that force, like matter, can be transformed only, never annihilated.

The art of measurement," Socrates is made to say, in the *Protagoras*, "will teach us to do away with the art of appearances, and find rest in the truth;" and the great lesson of this unerring teacher is to verify, to the furthest decimal figure, the principle that what seems destruction is only change. It is a lesson impressed on the physicist in every form, at every turn, with every corroboration of convergent illustration. It moulds his whole mind. It gives form to his fancies and hopes, as well as his legitimate anticipations, and the tendencies it fosters are as large a part of its influence as the inferences it authoritatively prescribes.

"Knowledge once gained," said Professor Tyndall in 1863 to the British Association, "always casts a faint light beyond its immediate boundaries." It is in this faint light that we must seek for new revelations of truth.

We should have thought the conviction borne in upon the mind that there is something behind all appearances, that remains unchanged throughout their changes, would have given the belief in immortality whatever support analogy can give. For an individual being cannot be resolved into its elements; it must exist as a *self*, or not at all. Experience, however, refutes the anticipation, natural as it seems to us, that the study of the visible world would thus suggest the existence of the invisible. The fact is, that scientific men are attracted by another line of suggestion, and the unmaterial is confounded with the unreal. The grandeur of the visible universe seems to satisfy the mind given up to it. Men so occupied live in something large and permanent out of themselves, and just as the Roman or the Hebrew neglected all speculation as to his own future in his strong sense of a national immortality, so now has it been with the physicist. He has been the citizen of a world of order, of stability, of permanence. He could afford to regard human life as a ripple on the stream.

But what if this world of order should not prove a world of permanence? What if we are in the position of the vintager in *Lucretius*, who complains of the poor return the aged earth makes for his toil,—

> "Nec tenet omnia paulatim tabescere et ire
> Ad capulum spatio ætatis defessa vetusto?"

Then what becomes of the sense of permanence fostered by the study of science? If all that we meet in nature forbids the thought of an absolute end, and yet certain indications prove that the whole physical universe is approaching its end, then will not the principle of continuity call upon us to recognise that here, as elsewhere, what seems destroyed is transformed?

At all events, this universe of order, of life, and to translate its Greek equivalent, of ornament, is approaching its end. We learn from this volume that "it is absolutely certain that physical life depends upon transformations of energy; it is also absolutely certain that age after age, the possibility of such transformations is becoming less and less, and so far as we yet know, the final state of the present universe must be an aggregation into one mass of all the matter it contains with uniform temperature throughout the mass." (pp. 91-92). Why is this? Why cannot these transformations of energy go on for ever? Unless we are deluded by superficial knowledge, the answer given by our authors to this question is addressed to the scientific reader exclusively,—a great pity, it seems to us. No doubt the elaborate dissertation into which we are called upon to follow them, may be quite necessary in order to satisfy a mind open to all possible objections. But a mind open to all possible objections is familiar with all the facts of the case, and it confuses the reader who has to learn both facts and arguments to set before him the train of reasoning necessary to bring home a particular conclusion to a mind needing only arguments. Whether or not the following translation is faithful, therefore, we are sure it is not superfluous.

No law of thought seems to us to have a wider range than what we should call the law of imperfect antithesis. Hardly anything in nature, in experience, in human life, is entirely antithetical, and it is in the slightly varying form we are obliged to give the converse of any statement that we often find the most important bearings of the truth therein expressed. Motion is convertible into heat, Heat is convertile into motion. Keep clear of modification, and you may make one statement the converse of the other, but bring in defining terms, and this is impossible, for *all* motion may be changed to heat, and *some* heat only may be changed to motion. This mutual and unequal exchange is going on every day, every hour, every moment. Now as force can no more be created than it can be destroyed, there will be, apart from miracle, no more force in the universe millions of ages hence than there is now. But all that time one kind of force will be constantly changing itself into another kind of force, and at last it is evident the change must be accomplished, and all the force in the universe will be of one kind.

To understand the full bearing of this fact, we need only remember that what the very existence of organic nature depends on,—in fact, what the very word *natura* means—is transformation of force. The simplest experiences show us as clearly as the most elaborate experiments that every time any force becomes manifest to our senses it is transformed. Again take the case of heat. What has happened when we warm ourselves? What does the sensation of warmth mean? If it were not for the sunshine, we should be forced to realise that every time we warmed ourselves something was expended. Two people feel cold on a winter's day; one takes a brisk walk, the other sits by the fire, but the empty coal-scuttle reminds the indolent person that in order to give him warmth something has had to give up its substance, apparently to give up its existence. Two different forces here have been changed into heat; the essential thing is the change. We might perish of cold in a coal-mine ; the coal itself, apart from the change which combines it with the oxygen of the atmosphere, is valueless to us. And we must not suppose that the necessities of animal life are the only claims made on the transformableness of force. Every natural event is such a claim. In fact, nature *is* the transformation of force. This idea includes all the varying senses of that word. There is no part of nature that is not a transformation of force ; there is no transformation of force that is not a part of nature. The supernatural, alike for those who believe and disbelieve in its existence, is the region above this cycle of interchange—the region where something may be achieved and nothing expended, something given and not lost. And the region where this is impossible, whether in the world of matter or of spirit, is nature.

The want of perfect reciprocity between the various physical forces is, therefore, undermining the stability of our system. Heat will do no work, even in a theoretically perfect steam-engine, without squandering itself on the atmosphere all round it, and there is no corresponding liberality by which this lavish giver may be reinstated in the full working power thus lost, for we must remember that what we want to produce motion is not only heat, but unequal heat. We can get no more work out of equal heat than of level water, and the continual tendency of heat is to become equal. "Heat," say our authors, with epigrammatic felicity, "is, *par excellence*, the communist of our universe, and will no doubt ultimately

bring the system to an end." For this want of reciprocity between heat and movement is not confined to our globe; the sun himself is squandering his heat. and must change first to an icy mass, then to the material of a new conflagration, then, again, to the particle of a new cold globe, exceeding it in vastness as much as our globe exceeds a clod of earth, and then, perhaps, if we have rightly understood the author's views of matter and ether, into an invisible and intangible form.

We find ourselves then, face to face with an ultimate destruction of the universe:—

> "All wordly shapes must melt in gloom,
> The Sun himself must die,"

has become a teaching of science. The dream of poets has become the certainty of physicists. The day draws near when "the heavens shall pass away with a great noise, and the elements shall melt with fervent heat; the earth also, and the works that are therein shall be destroyed" No doubt, we are separated from that event by millious of ages, still *those millions of ages will pass.*

Now what the study of nature impresses indelibly on the mind is the lesson that nothing is lost. Destruction to the man of science means change. The end of one thing means the beginning of another. Where the steam vanishes beneath the earth he, like another Alpheus, is ready to follow his Arethusa to her escape, whether under a colder or a brighter sky. When he learns, therefore, that all that we mean by nature is hastening to its tomb, can he make the fate of nature one vast exception to the whole teaching of nature? Or may we not say, somewhat exaggerating our authors' over-timid statement of their aim, that the laws and the prospective fate of the visible universe together suggest the belief in one which is invisible?

If it be asked,—What is an argument worth which can be stated only as a suggestion? we should concede that it proved nothing in either a mathematician's or a lawyer's sense of proof, But we should urge that most of the considerations which induce deep and abiding belief are not proof in this sense. No book is richer in such suggestions than Butler's *Analogy*, but it proves nothing to the mere logical ear. It is hardly fair to the work under notice to compare it with one so mature and thoroughly thought out, but the most different kinds of intellectual effort may be grouped together when the aim is alike, and the present work, no less them its immortal predecessor, is an effort to show that the "Constitution and the Course of Nature" presents an analogy to something outside nature. Analogy, we believe, is the largest agent in all change of belief. "I refused to listen to this *kind* of evidence yesterday and was wrong,—had I not better try to-day if it proves a true guide?" is the form generally assumed by the reasoning, conscious or unconscious, of all those who have sufficient depth of character to profit by the teaching of experience. Analogy may be a deceitful guide, as we are reminded by one who has profited most from it, and at the strongest, it never rises to certainty. Still it is the intellectual inlet to all new truth. The mistakes and success of thinkers alike remind us that it is the seed of science. When Comte forbade the attempt to assimilate the laws of light and of motion, he was, like some of our authors, and critics restricting a generalisation to a set of phenomena beyond which he knew of nothing but analogy to extend it. When Newton first endeavoured to assimilate the laws of weight and of planetary motion, he was, like our authors, extending a generalisation to a set of phenomena beyond which he knew of nothing but analogy to extend it. Of course, while the theory of gravitation, for instance, *rested* on analogy, it was not a part of science properly so called, and it is at this stage that we must compare it with the view under notice. But still the extension of a principle found to hold good on this earth to the heavenly bodies before the discovery of any property common to both, is exactly parallel to that extension of the principle of continuity to a region other than that of nature, which is attempted in this volume.

Do we, then, anticipate that our author's suggestion will ever take its place, for instance, beside the theory of gravitation? We have no such anticipation for any theory that assumes the existence of a spiritual world. As long as it is possible to ignore all direct evidence for such a world, so long will it be possible to declare all indirect evidence fallacious. Not thinking a conclusive argument possible, we do not think the present a failure because it is something less. We are not prepared to say exactly what it is worth. The idea of the destruction of the universe is too new and too large for any one to attempt to measure its influence on thought. It will, we believe, ultimately shut in the instinct that seeks permanence to some non-physical region; it will make men ready to listen to every whisper that tells of an enduring world other than this, which we know of through our eyes and ears. Just as the decay of national life during the first preaching of Christianity developed the sense of individual immortality, by detaching this instinct of continuity from the national life which had hitherto satisfied it, so we believe this wider sentence of destruction will prepare many ears to listen for a new promise of resurrection. On those who hear no such faint whisper anywhere, we do not suppose this argument, or any of like nature, will have any effect whatever.

LETTER TO THE EDITOR.

FUTURE PUNISHMENT.

To the Editor of the Friend of India.

SIR,—Much has been said in your columns of late on this important subject, and many are, I believe, thanking you for allowing it to be discussed, and for the views you have yourself expressed on it. I wish now only to advert to a letter that appeared in your issue of November 20th, signed R. R. Meadows, as a specimen of the style of argument frequently adopted by good men in defending the doctrine of never-ending misery. He asks what force such texts as Luke XII; 5, and Mark XII; 42, can have without the doctrine of Future Punishment in the back ground. He does not say without the doctrine of endless misery in the back ground, and yet this, not future punishment, is the matter in dispute. As to the first text, why does not Mr. Meadows rather quote the parallel passage Matt. X; 28, "Fear not them which kill the body, but are not able to kill the soul, but fear him which is able to destroy both body and soul in hell." Does not this imply that in hell sinners will be destroyed *entirely*, not kept alive in order to be eternally tormented? As to the passage about Judas, I would ask, if Judas and all other sinners are alike to live for ever in torment, what great difference can the amouut of that torment make—what *proportions* can there be in the sufferings endured? But surely Judas, without living for ever, may be subject to such a fearful punishment that it would have been better, *far better*, for him never to have been born. Does Mr. Meadows think that the holders of the destructionist theory believe that God's judgment against sinners will he *merely* "cessation of being"? If so, he cannot have read much on the other side.

As to Paul's teaching.—All Destructionists (I use the term for want of a better) believe that "God hath appointed a day in which He will judge the world in righteousness." Therefore, why quote this text, as though it proved any thing on the other side? There will, no doubt, be *righteous retribution* awarded on that day—the few stripes and the many—but is there anything said, or even hinted, in that text about suffering being eternal? Take again the text, Rom II; 5—9. This too is what all Destructionists believe, and they also believe the words of the context, "To them who, by patient continuance in well-doing seek for glory and honor and *immortality*, ETERNAL LIFE." "Everlasting destruction from the presence of the Lord" is scarcely likely to mean "everlasting torment in the presence of the Lord." Does it not rather mean that the wicked, banished from God's presence, where alone is life and joy, will be punished with an irrecoverable destruction. Can Mr. Meadows produce a single passage from the Epistles of St. Paul, St. Peter, or St. John which would lead us to think that they believed in the eternal misery of the wicked, and yet, if they held this doctrine, one would think that there were many occasions when they would have expressly asserted it.

As to Matt. XXV; 46, explanations have been given by those who hold the destructionist theory which are satisfactory *to me*. I will not state them here, as they would not, probably, satisfy Mr. Meadows and those who think with him. The "clever barrister" he consulted, was perhaps in the right in saying that his belief was not built on particular texts, meaning, as I suppose he did, that a few (very few) isolated texts, which appear to teach the everlasting torment doctrine, are not to be received in that sense if opposed by the whole tenor of Scripture, which teaches plainly that death and destruction are the doom of the impenitent. Does Mr. Meadow accept the transubstantiation doctrine because of a few such texts as "This is my body," or the Unitarian doctrine because of a few such texts as "My Father is greater than I," plain as the words appear to be? He knows from many other passages of Scripture that this cannot be the meaning of them. So, from the whole tenor of Scripture we can judge that "These shall go away into everlasting punishment" cannot mean that they shall live on for ever in misery.

In conclusion, in opposition to what Mr. Meadow's says in his conclusion, I cannot but think that if readers of the Bible could begin to read it with their minds perfectly free from the teachings of the Churches that all men must live for ever and that the ungodly will live for ever in misery, they would certainly draw the conclusion that God will, after inflicting righteous punishment, destroy all sinners utterly and banish *all evil* from His universe.

A LOVER OF TRUTH.

NOTICE TO CORRESPONDENTS.

A. B.—Two letters received, the matter of which we cordially approve, but we cannot find space to publish them just at present.

A PILGRIM.—Will appear in our next.

THE WEEK.

WE are now only five days from the date appointed for the Prince's arrival in Calcutta. On the afternoon of Thursday next, if all goes well, His Royal Highness will land at Prinsep's Ghaut amidst the roar of cannon and the acclamations of thousands of his future subjects. The Municipal address which has cost so much trouble to draw up, will be duly presented—so will be the Native Chiefs—a "strictly official" procession to Government House will be formed—the unofficial crowd will follow—and for a week the town will give itself up to gaiety. The programme of amusements may now be considered settled, barring accidents. There are to be four dinner parties, a levèe, and a ball, at Government House; a public ball in the Town Hall; a garden party at Belvedere; an installation of the Star of India (which should be a splendid spectacle if well managed), on the *Maidan;* and a drive through the illuminated city at night. The last will be the great sight for the masses, and probably not the one least appreciated by our Royal Visitor. Every thing is being done to make it the best display of the kind he has yet seen in India. The fronts of all large buildings, whether public or private, are to blaze with light; the whole route of the procession will be lit up by lamps and Chinese lanterns hung in festoons along the sides of the streets; and hundreds of devices and coloured transparencies, many of them very handsome, will help to give brilliancy to the *tout ensemble.* Altogether, the illumination is likely to be a success, and a great one.

IT is to be hoped that other matters will go off as well. The public ball has had a narrow escape of being a failure through the singular want of tact of the Executive Committee, but that is now over. They were unwise enough to invite subscriptions in a circular headed with the words "Ball to be given to the Prince of Wales by the *Society* of Calcutta," and at the same time to carefully reserve to themselves, in the concluding paragraph of the document, an absolute discretion in granting or refusing tickets—that is, of determining who did or did not belong to "Society." It is no wonder that such an absurd pretension was generally resented, or that up to Monday last less than fifty tickets had been applied for. As the ball was estimated to cost something like Rs. 40,000, this looked rather awkward for the Committee, and they hastened to get off their stilts. The intervention of the Lieutenant-Governor was invoked—a meeting of the General Committee was called—a large number of the public were asked to meet them—explanations were tendered—and the right to grant tickets was gracefully conceded to the members of the General Committee. Subscriptions have since poured in like a flood, and the ball promises to be one of the most brilliant that has ever come off in Calcutta. The incident is thus at an end, but it points a useful moral, and might make a capital text for a lay sermon on the impolicy of trusting matters of public interest to the hands of mere cliques.

CALCUTTA, however, seems to be fast out-growing cliques. The meeting of last Saturday on the affairs of the Municipality afforded pretty strong proof of the determination of the town to possess and exercise the fullest rights of self-government, and to be held in the old official leading-strings no longer. It is clear that representative institutions must be conceded to us, even Sir Richard admits so much, and before many months are over we shall probably enjoy the same Municipal privileges as have long ago been conferred on the other presidency towns. The gift comes rather late in the day, but it should be none the less welcome, and the rate-payers will do wisely to make the most of it.

WE are glad to hear that the site for the Mayo Statue decided upon last week has been abandoned in favour of one where it will at least stand a chance of being seen. An oval is to be formed on the *Maidan* at the point where the road from Park Street crosses that from Jaun Bazaar to the old Course—these two roads will be carried round it—and the statue will be placed in its centre. A still better position might, we think, have been found, but this cannot be called a bad one, as it is sufficiently near town, and at the meeting point of two considerable streams of traffic. Of course all hope of having the statue unveiled by the Prince of Wales must now be given up. There is not sufficient time left to clear the ground and erect the pedestal. But we are told that measures are being taken to place it, temporarily, during His Royal Highness's stay, on the site selected for the statue of Lord Canning. We don't know whether Lord Northbrook's return to town has had anything to do with this change in the arrangements made during his absence, but the coincidence may possibly have something in it.

THE ceremony of unveiling Lord Lawrence's statue was performed by the Viceroy on Wednesday afternoon, in the presence of a brilliant assemblage of English ladies and gentlemen and native chiefs. His Excellency made a very fair speech on the occasion, and paid a just compliment to the "simplicity of character, soundness of judgment, and strong common sense" which distinguished the brilliant career of his great predecessor. We can hardly agree with him, though, that the events of 1857, produced "more intimate and more firm relations between the British Government and the Native Princes of India." The fact, we are afraid, is rather the other way. What proofs of either "firmness" or "intimacy" can His Excellency point to in our recent dealings with Baroda and Hyderabad?

AN advertisement in another column invites the attendance of the public at a meeting of the Bengal Social Science Association, to be held at the Town Hall at four o'clock this afternoon, with Sir Richard Temple, the President, in the chair. The proceedings are likely to be more than usually interesting. Miss Mary Carpenter will deliver an address, and an attempt is to be made to put a little more life into the Association, which has lately been dragging on rather a languid existence. We should be glad to find it successful.

MONEY MARKET.

FRIDAY, 17TH DECEMBER.

ALTHOUGH more money has been taken out of the Bank, the ease which previously characterized the market has not been diminished, but a feeling is gaining ground that hardening rates will set in by the turn of the year. It is now a long time since any Silver was imported, and the proportion of Council Bills allotted to Calcutta is at present on a much smaller scale than usual. So if any active demand for hard cash should appear, a very different style of account might be seen at the Bank in a very short time. During the past week the private deposits have fallen 21½ lakhs, but they still remain at the high level of 289 lakhs, a sum very unlikely to be left lying idle there for any length of time; it is well known that a large amount of buying took place some time ago, by some of the exchange Banks, of Mercantile Paper, for delivery now and later on, and funds are no doubt being provided to pay for them:—those forward operations brought down Exchange with a run, and now they are keeping it down by showing an apparent superabundance of unemployed money, and a great scarcity of Commercial Paper:—the latter is very striking at present, seeing that exports are going on vigorously, and the fact can be explained only on the ground that the contracts of two or three months ago are swallowing up the bulk of the bills now making. If this view of the position be correct, it is very probable that dearer money may be seen after the present deposits are worked down a bit, and under such circumstances as the present, a material rise in Sterling Exchange could hardly fail to follow. The Treasury balances at the Bank have been increased to such an extent as not only to provide for the public demands above named, but also for an increase of 4½ Lakhs in the accommodation items (which still remain very small) and for the paying off of Post Bills, without affecting the cash balances, which now stand at 3¾ crores.

The new Directors of the Bank, in room of Mr. John Cowie and Mr. Morgan retired, are the Hon'ble David Cowie, and Mr. Berners.

The new charters for the Presidency Banks are now before the public, and seem generally approved of in the main, but there are still strong traces of officialism running though the bill, especially in the part where precautions are taken to keep the management within bounds. The hard and fast rules which are so congenial to the heads of departments, and which make it as difficult to provide a bottle of ink as to raise a loan of 5 crores, will not work at all in real business matters, and if the Bank is to be so much hampered in its working it simply comes to this:—it will be kept from doing much good business that it might do, if allowed, and, be consequently tempted to undertake business which it is allowed to do, but would rather not. The Bill is in the hands of a select committee of the Viceroy's Council, and may possibly be amended on that and other important points before coming into force.

Sterling Exchange has been very quiet since last Mail left, and the absence of telegraphic information about the Council Bills has checked business considerably. A very limited amount of Document Paper has appeared, doubtless owing to the causes above alluded to, but the demands of remitters have been more limited still, so that the increased weakness of exchange cannot be put down to that:—it seems to come rather from a general disgust and disappointment at the unexpected and inexplicable course exchange has lately followed, going on drooping and weakening with no other cause apparent than over anxiety to buy, exhibited only very partially too, by the Exchange Banks:—Some decided and strong trade movement will now evidently be required to regain a tone for exchange; our indigo season has failed to do so, but the Bombay Cotton crop looks likely to help, and Burmah may also assist. Business for to-day's Mail has been done as under; Bank Bills on demand 1-9½ to 7/16, three month's sight 1-9 5/8, six months' sight only, a very little at 1-9⅞ and the rest at, 1-9 13/16. Credits

were stiff, at first selling at 1-10 and 1-9 15/16, but subsequently something was done at 1-9⅞. Document Bills for payment have mostly gone at 1-10⅛, but a little has been taken at 1-10 1/16, which has also been the rate for acceptance.

Closing quotations are,

Bank Bil's	1-9 13/16	Six months' sight.
Credit Bills	1-9 ⅞ to 15-16	
Document Bills	1-10 1/16 to ⅛	

The course of business is not improving for Importers, and no one seems able te explain the reason, everything visible telling in favor of a good trade. Exporters are busy, especially with indigo and Tea:—the price of the latter is rather higher again, but the dye droops. There is not so much doing in Jute just at present, but prices are firm.

Government Paper is steady, and a good few moderate orders for Fours have been put through, without, however, raising prices. Four and a half Stock is difficult of sale, although much cheaper in proportion than any of the others, and Five and a half is quite out of the market, ouly one small transaction being recorded: the course of business has been as under :—

4 per cents, 102, 2-1, 2-2, 1-15, 2-0, 2-1, 2-2, 1-15, 102.
4½ do. 102-15, 102-14.
5½ do. 107-14.

The final quotations are :—

4 per cents. 102.
4½ do. 102-14.
5½ do. 107-12.

The share market is perhaps rather better this week, and certain stocks have been dealt in at an advance. The enquiry that has sprung up is so far very partial however, and the improvement is spreading but slowly. Bank Shares have been flat, tending downwards, and Jute Mills are scarcely so strong as they were. Tea Stocks are at length beginning to move, the most marked advances being in Central Cachar and Assam; Singell Scrip is enquired for also, and there are signs that the better feeling will spread. The business of the week includes the following, in order of its transaction :—

Bank of Bengal 1,437½, 40, 1,437½, 40.
National Bank 110, 9½, 10, 9½, 110.
Agra Bank 93, 93.
Howrah Mills 77, 77, 76.
Oriental Mills 60, 61, 63.
Barnagore Mills 90.
Bowreah Mills 85½, 87, 85.
India General Steam 410, 405.
Carew and Co., Limited 115.
Beerbhoom Coal 111.
Central Cachar Tea 129, 34, 36, 137.
New Golaghaut Tea 220, 220.
Gowhatty Tea 87½.
Singell Tea 101,
Assam Tea 580, 580.

The next English Mail, that of 26th November, is expected on Monday.

THE PRINCE.

THE Prince arrived at Tuticorin in the *Serapis* at nine o'clock on the morning of the 10th, and was received with enthusiasm. An address, enclosed in a handsome casket studded with valuable Tuticorin pearls, was presented by the Zemindars and native officials. His Royal Highness replied briefly, and left at ten o'clock for Madura, where he arrived, after receiving and replying to an address from the missionaries at Mamache, at 1 P.M. At Madura, the Prince visited the Temples and Palace, and opened the South Indian Extension Railway, baptizing a locomotive the "Alexandra' in honor of the Princess. On Saturday morning the Royal party reached Trichinopoly. His Royal Highness, who wore the blue undress of a Field Marshal, inspected the guard of honor drawn up for his reception, and then entered the Judge's house, where he received the Tanjore address, enclosed in a silver casket. The Ranee of Tanjore presented a gold swamy pattern belt, valued at Rs. 7,000, for the Princess, and other ladies gave presents of Trichinopoly jewellery.

After lunch, the Prince held a durbar, and then proceeded to Srirungur, where he visited the great temples. After hearing an address read he returned to Trichinopoly to witness the illuminations. H.R. Highness complimented the Sheristadar on his management of the preparations, and dined at nine in the pavilion at the Judge's house. After dinner, the ladies of the station were presented to him informally. At ten o'clock the Prince proposed a dance, and danced five times, concluding with *Sir Roger De Coverley* at one in the morning.

Sunday was spent quietly, Divine service being attended, and at four o'clock the Royal party left for Madras, which was reached on the morning of the 13th.

The Governor, and other high officials, besides the Chiefs of Travancore, Cochin, and Vizianagram, the Prince of Arcot, and a large assembly of Europeans welcomed His Royal Highness at the railway station.

The Municipal address was read and replied to, and the procession to Government House then moved off. The streets were densely lined by the people, who gave a hearty reception. The most striking scene, however, along the route, was the gathering of 14,000 children, who sang "God bless the Prince of Wales" as he passed. The beautiful dresses of the girls, the various colours and ornaments incidental to different castes, presented a most charming picture, and every available spot was crowded by sight-seers. The Prince held a levée at one o'clock.

The 14th was spent in seclusion at Guindy in memory of the death of the Prince Consort. On the 15th H. R. Highness attended the races at Guindy Park, where fifty thousand people had assembled to meet him. The Rothsay Plate was won by Mr. Dunbar's *Trumpator*, the Denmark Plate by Mr. Covey's *Minnie*, the Prince of Wales' Plate by Mr. Dunbar's *Grass Widow*, the Alexandra Plate by Mr. Leslie's *Plenshave*, and the Sandringham Steeplechase by Mr. Taaff's *Artaxerxes*. No accident occurred. The Races were over at half past nine o'clock. The Prince returned to Madras in the after-noon, and received numerous deputations. In the evening he laid the foundation stone of the harbour works. There was an enormous crowd for two miles, most orderly and silent. H. R. Highness inspected the model and plans with considerable interest, and after laying the stone visited Fort St. George, where he spent an hour in inspecting the Church and reading the inscriptions. He was shown Lord Hobart's grave, and expressed sorrow for his death. The Royal party then proceeded to the arsenal, where the military trophies were examined with much interest. In the evening the Prince received Madras society in the banqueting hall. The fireworks at night were a disappointment, owing to the fall of a heavy shower of rain. On Thursday morning the Prince hunted with the Madras hounds. Three Jackals were started, and two of them were killed—the other managed to escape. The Prince is said to have expressed himself as greatly pleased with his visit to Madras, which may now be considered at an end, as he leaves to day for Calcutta. The Duke of Sutherland has gone to Hyderabad, with what object is not stated.

INDIAN INTELLIGENCE.

BENGAL.

JUDGMENT has been given by Mr. Justice Phear, in the breach of promise case of Adams *vs.* Hill, for the plaintiff. The damages are assessed at Rs. 7,000, with costs on scale No. 2.

WE have been favoured with a copy of a memorial signed by the inhabitants of Serampore and its vicinity, which has been lately presented to the Lieutenant-Governor, praying the retention of the services of Dr. J. A. Greene, Civil Medical Officer. Dr. Greene is highly respected by people of all classes and denominations. Dr. Greene has, we understand, applied for transfer, so he has been ordered to join Maldah. But the strong representation of a multitude will, it is hoped, induce the doctor to change his mind, and the Government to cancel the order.

THE annual distribution of prizes of the St. Xavier's College took place on Monday evening, in the Lieutenant-Governor's presence. The distribution was preceded by a dramatic exercise, entitled "Arthur von Tennenburg," and the boys acquitted themselves well in their respective parts, reflecting great credit on the Jesuit Fathers. The scenery and dresses were very good, and the tableaux excellent. The medals were then distributed to the successful students, after which the Lieutenant-Governor in a short speech addressed the students of the College, and retired amidst loud cheers. The National Anthem then ended a very pleasant evening.

AT the High Court on last Monday, Mr. Branson, instructed by Mr. Camell, applied to Mr. Justice Phear for an attachment to issue directed against the Steamer *Sultan*, as the vessel was about to leave the port. The plaintiff had delayed filing his suit against the owners of the ship till the last moment, expecting to hear the decision of the Marine Court of enquiry regarding the collision that had taken place between the plaintiff's vessel and the *Sultan*. The Marine Court intimated to the plaintiff that it would not acquaint him with the result of its finding until the proceedings were returned from the Government of Bengal, to which they had been submitted. Hence the delay in instituing the suit. As the *Sultan* was about to leave, plaintiff was obliged to apply for an attachment before decree. The application was granted.

AT the High Court on Monday last, on the Original Side, before Mr. Justice Phear, a very important question of jurisdiction was argued. The East India Railway Company applied for an injunction, asking the Court to restrain the Bengal Coal Company from sinking their shafts contiguous to the boundary line of their mine at Raneegunge. The plaintiffs were apprehensive that the Bengal Coal Company, if not restrained, would in course of time encroach upon their property, and cause injury to the same. The Advocate General and Mr. Jackson, instructed by Messrs. Chauntrell and Knowles, appeared for the plaintiffs, and Messrs. Woodroffe and Branson, instructed by Messrs. Berners, Sanderson, Upton, and Adkin for the defendants. The learned counsel for the defence raised the issue that the High Court had no jurisdiction to try a suit in which the land was situated out of the jurisdiction of the Court, though the proprietors of such land might be living within its local limits.

The Advocate General contended at considerable length that the suit was not one in which the title to the land was involved. What the plaintiffs asked the Court to do was to decide whether the defendants had any right to work their mine in a manner which was detrimental to the plaintiffs' rights. The late Supreme Court had the power to try suits involving the title to property situated in the Mofussil, but when the High Court was established that power was taken away. But he submitted the relief which his clients sought for, had nothing to do with property, nor were the defendants disputing the plaintiffs' title to the mines held by them. They simply asked the Court to restrain the Bengal Coal Company from laying down shafts close to their property. Mr. Woodroffe, on the other hand, argued that the Court was

virtually asked to try the plaintiffs' right to the property. The defendants disputed their right. They denied that they were anywhere near to the plaintiffs' boundary. Surely that was disputing their title to the property. The Court would have to decide whether the defendants were either approaching the plaintiffs' property or was encroaching upon it. The learned counsel cited a number of decisions of the Calcutta High Court, N.-W. Provinces, Madras, and Bombay, showing that the Court even declined to hear suits for foreclosure, redemption, &c., on the ground that they involved, in some shape or another, title to property.

His Lordship said that he would hear the Advocate General in reply after which he would give judgment. It is said that the Court has decided the question of jurisdiction in favor of the defendants.

THE *Dacca Times* says:—Lately it has become rather a common practice for natives to assault Europeans, both official and non-official. The worst feature in these assaults is that large numbers of Natives assail a single European, showing an entire absence of that manlinsss which prompts a single individual to fight out his quarrel with the person who has aggrieved him. A brutal assault of this nature lately occurred in this city, but we refrained from noticing it in our columns, as the case was *sub judice*. We now publish a reliable statement of the facts of the case as they occurred, and were sworn to before the Joint-Magistrate, by whom the case was tried. It appears that as a gentleman was retiring to rest after a hard day's labour, a *nautch* was commenced in a native house not more than twenty yards distant. He told the men to stop and asked them if they had a "pass." On their answering in the negative, and being impertinent to him, a constable from the Town Station was sent for and accompanied the gentleman to the spot, but all their efforts to stop the *nautch* proved fruitless. The Assistant Superintendent of Police then came to try what he could do in the matter. The men were very insolent, but for a time the *nautch* was stopped. No sooner, however, did the Assistant Superintendent leave the neighbourhood than it recommenced. The gentleman went down to the place again, and called out to the *nautch-wallahs* to stop. No sooner had he done so than the ten or twelve men nearest to him rose simultaneously, and rushed on him. He had barely time to tell his two servants who were with him to go for the Police, and to put his back against the wall of the but, when he was struck in the face and his cap knocked off his head. He succeeded in driving off his assailents with his fists, and went to fetch the District Superintendent, but before he had gone a fourth of the way he heard footsteps coming swiftly behind him, and ere he had time to turn fairly round he was seized by some eight or ten men and dragged back some distance. They all fell, the gentleman underneath. One man then held him down by the throat while the rest begun to kick and strike him wherever they could. At last he threw off the man who held him by the throat, and managed to regain his feet, though before he could do so he was struck three blows with a *latti*—one across his right eye and bridge of the nose, cutting both, another across his forehead, also cutting that, and a third across his right leg, cutting it above the knee. After regaining his feet he went and brought the District Superintendent and his Assistant to the spot. Two of the assailants were identified and arrested on a warrant the next morning. The defence set up was that the last time the gentleman went to the place, the *nautch* had stopped, and the men were eating; that by entering the place when they were eating, he had polluted their food, while all knowledge of the assault was denied *in toto*. Several witnesses were called to prove the defence, but they were all contradicted by the witnesses for the prosecution as well as by the prosecutor. We are glad to learn that the Joint-Magistrate sentenced the two defendants each to one year's rigorous imprisonment.

NORTHERN INDIA.

THE sentences passed by Mr. Burkitt, the Magistrate, on the instigators of the late claimant to the Landhura Raj, have been confirmed on appeal by the Judge, Mr. Probyn.

WE learn from the Agra paper that Thomas Kirby, Head Master of Christ Church School, Cawnpore, was accidentally drowned on the 7th instant, whilst bathing in the River Burna, near Benares, where he had gone to spend his Christmas vacation with a friend.

VISITORS to Agra, when the Prince is there, will be able to encamp in the large open space reserved for them to the west of the Drummond Road, between the dâk bungalow and the church. Streets will be marked out from the Drummond Road westward, and everybody is exhorted to pitch his tents along these lines.

THE cantonment householders of Agra are just now much exercised in their minds by an order issued from the Cantonment Magistrate's court, by which householders are forbidden to restore wall copings out of repairs to their original condition, but requiring them to be made of a uniform pattern. One householder alleges that it will cost him Rs. 1,000 or more to comply with this order in respect of all the houses he possesses, One of the disobedient landlords has been fined, and, it is said, intends appealing against the conviction to the High Court if necessary.

THE people in the vicinity of Toondla would seem to be deriving some advantage from the theft of the Government Telegraph wire, for within the past six months the wire has several times been cut in that locality, and again the other day it was cut and stolen—but the offenders have not yet been arrested, though rewards have been offered. The Assistant superintendent of the Government Telegraph of the Meerut sub-division notifies that he will give a reward of a hundred rupees to any one who will give information that will lead to the arrest and conviction of the offenders on this last occasion.

THE *Delhi Gazette* hears with no small concern that that most useful and most enduring animal, the camel, is getting scarce in India. In places where it could be had in large numbers, the supply is decreasing; and unless means are adopted to encourage breeding the demands of the Military Department may not be met fully. The swift camels of former days, so extensively and profitably employed by private enterprise and native governments in sandy plains like those of Rajpootana, may be said to be almost extinct, and probably the loss is not felt much in these days of railways and telegraphs, but we doubt whether we shall ever be able to dispense with the camel as a beast of burden.

WE regret to still hear unfavourable accounts of the health of Meean Meer, the troops of which garrison are suffering severely from the autumnal fever so common to this part of the Punjab. The hospitals of all the regiments are full of patients. In the Royal Scots the number of sick in hospital is two hundred and fifty, and the regiment is so crippled in its non-commissioned ranks that privates are in most cases doing the work of Sergeants. The officers of this regiment have also been sufferers. The Artillery are in no way better off than the Royal Scots, while the staff keeps the Staff Surgeon's hands completely full of work, when he is not himself under treatment for the same fever.

AT the beginning of last month a paper was read by Mr. W. H. Price, at the Institute of Civil Engineers, on the "Manora Breakwater, Kurrachee." This breakwater, the most important part of the Kurrachee Harbour Works, was begun in 1860, and finished on the 22nd of February 1873. It is 1,503, feet long, and cost £62-5-0 a a foot. Besides the Breakwater, there are harbour improvements at Kurrachee already costing about £450,000; but this does not seem much considering the trade of the port, estimated at about 3½ millions sterling a year. When the breakwater was finished, the monsoon of 1873 did some small damage to it, and the shore end had to be repaired at a cost of £199. The monsoon of the next year did £418 worth of damage.

BOMBAY.

THE costs incurred by both parties in the Towers of Silence civil case amounted to Rs. 50,000.

THE working of the Cotton Frauds Act last year is reported to have been, on the whole, satisfactory. Out of fifty-nine cases, implicating sixty-two defendants, there have been forty-six convictions and forty-seven persons convicted, three of whom were afterwards discharged on appeal. Most of the cases have been in the Southern Mahratta country.

LIEUTENANT MURPHY writes to the *Times of India*:—"I saw, to my surprise, a paragraph in your paper of Wednesday last, that I had landed in Bombay, accompanied by 'the late Dr. Livingstone's dog.' The dog never belonged to Dr. Livingsone, but was given to the 'Livingstone East Coast African Expedition' by the German Consul at Zanzibar when we started from the coast in the spring of 1873, and accompanied us to Unyanyembe. When we found Livingstone was dead, and Lieutenant Cameron sent me back to the coast in charge of the body, I was allowed by him to keep the dog, which, as you say, is the only one that has ever survived a journey into Central Africa. We had two other dogs with us, one of which died of snakebite, the other being killed by monkeys when about half-way back to the coast."

THE Natives of Bombay were less puzzled about the Prince of Wales, when His Royal Highness was in Bombay, than about his companions. They could not be made to understand for a long time that the Duke of Sutherland, Lord Carrington, and others, were men of great estate and independent income. The novelty of the idea that there could be Englishmen of high rank who were not paid so much *puggar* a month, was too much for them, and was hardly cured by the kind condescension of the Duke of Sutherland who, with much consideration for the feelings of Sir Philip Wodehouse, explained to a Borah that he (the Duke) had landed property which brought him in as much a day as the Governor of Bombay was paid every month. His Grace, however, completely established his nobility in the Borah's estimation by pulling out of his pocket 100 sovereigns, and telling him to change them into rupees; and, when the Borah explained that a sovereign in Bombay was worth a good deal more than ten rupees, bidding him keep the difference of exchange. The Borah pocketed about 75 rupees on the transaction, and now goes about Bombay declaring that His Grace of Sutherland is a much greater prince than any of the Native Rajahs, not one of whom would have refrained from demanding the exchangeable value of the sovereign to the last pice.

THE *Bombay Gazette's* Aden correspondent gives the following account of the affray in which Mr. Munzinger lost his life:—Munzinger Pasha set out from Tajurra on the 28th October. His guides were eight Daukalees under a man named Shaikh Mahomed. The Pasha and party, to the number of 456 souls, among whom were several women, including Mrs. Munzinger, were conducted along a very bad road. The Egyptians had with them two small mountain train guns and some ammunition, also a few days provisions. On the 9th November, after enduring great hardships, the expedition reached the bank of fhe river "Hawash," about six hours' journey from Aussa. Sultan Mahomed of the Hanfalee tribe received the Pasha with respect, and tendered his submission, and was invested with a richly ornamented sword. While crossing the river at midnight on the 11th, a body of 6,000 Daukalees of the Hanfalee tribe suddenly fell on the party, The fight continued until dawn, and 312 officers, men and women, were slain, among the rest Munzinger Pasha and his wife. One hundred and forty-four men, one Captain, and a Lieutenant alone escaped to tell the tale; they were pursued, but managed to reach the coast in safety on the 22nd November. Many Daukalees were killed in the fight. It is alleged that Munzinger Pasha had tied some Daukalees to his guns and given them four dozen a piece for some slight offence, and this so rankled in the minds of the natives that they fell upon the Egyptians sooner than they had intended.

THE new iron clipper ship *Buccleuch*, 1,350 tons register, Captain Webster, on her maiden voyage from the Clyde, arrived at Bombay after having been on fire four days during the passage. This is the last ship built by Messrs. Steele and Co, of Greenock, and is owned by Messrs. William Thomson and Co. of Leith. She is a noble specimen of naval architecture, being fitted up with all modern appliances to insure speed and comfort, as well as being ventilated by no less than six large permanent ventilators, on a new and improved plan regardless of expense. The *Times of India* publishes an interesting report by Captain Webster concerning the conflagration, which burst out fourteen days ago amongst the cargo of coals on board the vessel. It cannot be for a moment doubted after reading Captain Webster's report, that the prompt and extreme measures he took, by knocking out rivets under water, and allowing ten feet of water to accumulate in the hold before he plugged them up again, were the salvation of his ship. So thickly was the ship enveloped in smoke and gas for four days, that the crew could obtain but little sleep, and they in a body requested Captain Webster to get out the boats. He replied that the boats were all ready, and could soon be got in the water, and that in the mean time all their energies must be used to save the ship. Animated by the Captain's example, and inspirited by the company of the French barque *Ellen Isabelle*, whose Captain, DuPay, came on board and cheerfully offered all assistance, the crew stuck to their work, obeyed the captain's orders, and the result is that this splendid ship, whose cost was £25,000, has arrived in Bombay harbour in safety.

THE following are copies of two very gratifying testimonials received by Captain Hutchison, of the Anchor Line steamer *Trinacria*, on the occasion of the recent voyage of that vessel to Bombay and back :—

To Captain R. HUTCHISON,
Commander of steam-ship *Trinacria*.

DEAR SIR,—We, the undersigned passengers, desire to offer you our sincere thanks for the kindness and courtesy received by us during our voyage from Liverpool to Bombay. We wish through you also to thank the officers and all under your command for their endeavours to make our passage speedy and pleasant, which would otherwise, doubtless, have been tedious and monotonous. Wishing you a safe return to the old country and God-speed,—We are, &c.,

Signed by the passengers.

Bombay, 13th September.

Steam-ship *Trinacria*. 13th November,

We, the undersigned passengers per steamship *Trinacria*, Anchor Line, before disembarking at Liverpool, wish to express our sincere thanks to Captain Hutchison for bringing our voyage to a satisfactory termination, notwithstanding perpetual contrary winds, and on one occasion (under Divine Providence) through a night of great difficulty and danger. The whole of the passengers feel deeply grateful for the care and attention bestowed upon them by Captain Hutchison *and the officers under his command*. To Dr. BROWN, *in* medical charge, they also wish to express grateful acknowledgments of his skill and kind attention.—We are &c.,

Signed by the passengers.

MADRAS.

A CANOE Club at Manantoddi, named the Wynaad Wanderers, has been in existence for more than 18 months, and is a great success ; the Cubany being admirably adapted to canoeing. So far only about 80 miles of the river have been explored, but it is intended, after the crop season is over, to cruise down to the junction with the Cauvery in Mysore. Mahseer and Mugger fishing are great adjuncts to the canoeing.

A BANGALORE correspondent says that owing to the scanty rainfall, Kurange tank, which is the only source of water-supply for the Pettah, is fast drying up. "The Sumpunghi tank, which should be a large sheet of water at this time of the year, is altogether dry, except here and there. The wells in localities on a higher level already show a diminished amount of water, and the next rainy season being six months hence, the prospect is in no wise cheering."

A CURIOUS story is told of the peculiar way in which a certain native Judge, whose court is not a hundred miles from Bangalore, decided a case which came before him. It would seem that the plaintiff said that if the defendant would enter a certain temple, and there swear by the presiding deity that he did not owe the amount sued for, he (plaintiff) would give up his claim. The Judge, it would seem, at once adjourned the case, and the next morning both parties and the Judge appeared at the temple, when the defendant swore by the idols that he did not owe the money. That day, on the Judge taking his seat, judgment was entered for defendant.

THE Maharajah of Mysore lately held a reception at the Residency in Mysore, when the presents given to His Highness by the Prince of Wales were shown. They consist of a double express rifle, a double breech-loading pistol, a gold-mounted riding whip, a gold-mounted sword, a goblet made of silver after the fashion of one presented to the Duke of Marlborough after the battle of Blenheim, two handsomely bound books, *viz.*, "Native States," the "Albert Memorial," a beautiful photographic album containing the likenesses (cabinet size) of the Royal Family, a gold snuff box set with jewels, a gold ring, containing a coloured likeness of the Prince of Wales, and a pair of field binoculars.

SOME time back the District Magistrate of Coimbatore, Mr. Wedderburn, brought to the notice of Government that a dancing girl had applied for sanction to dedicate her minor daughters, by tying "pottu," a small necklace, as an insignia of her children being dedicated to such temple service, and that this custom in reference to the prositution, which characterizes this class of persons, has been treated as a criminal offence by the High Court (Vol. V. High Court Reports 415). The Government referred the case for the opinion of the Advocate-General. The Hon'ble Mr. Cunningham submitted that the language of Sections 372 and 373 of the Indian Penal Code is somewhat wide, and, as is shown by the Madras High Court Reports, 415 will in some instances be deemed to cover the case of children handed over to others for dedication for a pagoda, and the trade of prostitution incidental thereto. Further when dedication to a temple is shown to be the habitutal traditionary and recognized practice of any people, the courts should be reluctant to put on the section a sense causing it to operate opressively, and therefore the right course for the Magistracy is to decline to give any sanction, or say anything about the matter. The opinion of the Advocate-General has been communicated to all Magistrates, and to the Inspector-General of police.

A POONA paper is informed from a private source that the circumstances connected with Mr. Saunder's departure from Secunderabad tend to show that he did not either care or like to have a parting visit from Sir Salar Jung, the Minister, and the other Nawabs. The railway station at Hyderabad was the most likely place for the Resident to start from, being the nearest to the Residency. The Mooktiar-ool-Mulk, Nawab Mookroomdowla, and other Nawabs, as well as the leading officials in the Nizam's dominions, were present there to meet him. But it appears that Mr. Saunders went to his bungalow at Bolarum over night, and from that place came to Secunderabad station, and evaded going on to the next station of Hyderabad, where the train usually stops for more than 15 minutes. It appears that the arrangement was made with the District Traffic Superintendent to attach the Resident's saloon carriage at the other end of the train, and detach it at the Hoosain Saugur Junction, from which place the train takes a curve to go to Hyderabad, and on the train starting from Hyderabad the saloon was coupled again. The Nawabs and others, on hearing that the Resident's Saloon was detached at the Hoosain Saugur Junction, made a move towards that place, but were disappointed, as the train moved on before they could reach the junction. Mr. Deway accompanied the train on his district, and returned by the evening train on the same day which brought Sir Richard Meade to Hyderabad. All the Nawabs and officials were present to receive the in-coming Resident who, on alighting from his carriage, touched his hat to all those who were present, and went straight on to the Residency accompanied by Major Fraser.

CEYLON.

FROM some proceedings of the Madras Government in the Revenue Department, just published, it appears that extensive enquiries have been made on the subject of leaf disease in coffee, which seems to have existed in Ceylon for some twenty-six years past, and in other districts for various shorter periods. The enquiries have resulted in its being pretty clearly proved that the disease is a fungus, which spreads itself over the leaf, and the spores of which being very easily detached, spread themselves in all directions and so affect the neighbouring plants. It would appear that the presence of the disease is owing to the lack of certain chemical constituents in the soil, and that high cultivation and manuring with cattle manure have been found the best remedy. In some places this has been accompanied by close pruning of the roots, and where this has been done the disease appears to have been eradicated. The whole of the proceedings have been forwarded to the Secretary of State.

BURMAH.

ORDERS have been issued to push on the work of the Prome Railway with all possible despatch, a mile of rails to be laid, if possible, every day. The completion of about sixty miles is expected by Christmas, by which time arrangements will be made to start a few excursion trains.

THE *Moulmein Advertiser* gives an account of a terrible accident which occurred on board the S. S. *Madura* at the end of last month. Some coolies were engaged lowering a heavy log of timber, when the chain sling by which it was suspended, gave way, bringing the timber down with a crash which was heard even on shore. Four men, two of the ship's crew and two coolies, received severe injuries. The third cook of the steamer was so badly hurt about the head and limbs that by the time medical assistance reached him, which was promptly sent for, he died. A fireman of the steamer was also severely injured about the head, and was in a dying state when seen by the Doctor. Of two coolies one had his left leg completely smashed, but had been so skilfully attended to by Captain Gavin and his officers, that when seen by the medical gentleman, bleeding had ceased, and the man was removed ashore by his friends, who however, unfortunately, were resolved not to take him to the Hospital, but to a *Phongyee*. The only chance of saving this man's life would be to amputate the limb. The fourth man, a cooly, escaped with a slight scalp wound.

MILITARY.

A BOMBAY paper says that His Excellency the Commander-in-Chief has determined, after all, on taking a tour this year, and making himself personally acquainted with more of the stations and regiments under his command. As last year he went north, so this year he will go south, and will visit and inspect Sattara, Kolapoor, Belgaum, and Dharwar.

ALTHOUGH the results of the last course of Garrison Instruction have not been published, the *Madras Mail* believes the three following officers head the list in the Order of Merit for the three Presidencies :—1st, Captain E. H. Eyre, M. S. C. ; 2nd, Captain D. J. S. McLeod, Cavalry General List ; 3rd Captain E. W. Begbie, Sapper, and Miners. These three officers belong to the Madras Army.

SOME months ago Gunner Dickerson, of the Royal Artillery, was found guilty by Colonel G. C. Evezard, the Cantonment Magistrate

and a Justice of the Peace at Poona, for voluntarily causing grievous hurt by burning a native with a heated iron, and sentenced to one month's rigorous imprisonment. The Judges of the High Court of Judicature of Bombay, having called for the papers in the case, have now enhanced the sentence from one month to three months. The convict Dickerson after undergoing one month's sentence, was released from the jail, and joined the Artillery,— but on the receipt of the High Court's order, enhancing the sentence, the Cantonment Magistrate applied to the Officer Commanding the Royal Artillery to make over the Gunner to the Civil power, in order that he may undergo the further imprisonment awarded by the High Court. But the Poona paper says that the Officer commanding the Royal Artillery at Kirkee has referred the matter for the opinion of the Judge Advocate-General of the Army, and until that officer's opinon is received, Gunner Dickerson will not be made over to the Cantonment Magistrate.

GENERAL.

A BOTTLE has been picked up on the beach at Tynemouth, containing a statement written in pencil, dated August 6, that the *Rover*, which left Calcutta on the 1st of July, was burnt at sea on the 5th of August. The crew, eight in number, took to the boats, which swamped, and three lives were lost. The paper is signed by J. Druma, Peter Kello, Thomas Patterson, William Chielson, and George Craig, who bade a farewell to all friends.

A POPULAR cure for fever in Siam is the following. Take fragments of the horn of the rhinoceros, the tooth of an elephant, tiger, bear and crocodile; add to these portions of the flesh of a vulture, a crow, and a goose; a morsel of the horn of a bison and a stag, and a little sandal-wood; pound all up, on a moistened stone; administer the half to the invalid and rub his body with the other moiety, when the fever will disappear.

A PARLIAMENTARY blue-book has just been printed, containing a statistical abstract relating to British India. Under British administration there are 907,086 square miles, of 50 divisions and 235 districts, with 37,041,259 inhabited houses, containing a population of 190,563,048. The Feudatory States extend over 546,695 square miles, with a population of 48,267,910, making an area of 1,453,781 square miles, with a population of 238,850,958. Of the population in British India, 139,248,568 are Hindoos, 1,174,436 Sikhs, 40,882,537 Mahomedans, 2,832,851 Boodhists and Jains, 896,658 Christians, and "others" 5,102,823, and, to make up the number 190,563,048, it is stated that of 425,175 the religion is not known.

THE award of the "Opium Essays" has at length been announced. The committee of examination consisted of Sir C. E. Trevelyan, Sir Bartle Frere, and Sir Louis Mallet. The first prize is 200*l.*, and the second 100*l.*, and the donor is Mr. Edward Pease, of Darlington, who invited the competition with a view to elucidate and expound what is known as the opium trade, and the connection of our Government with the same. Mr. Pease is an active member of the Anti-Opium Society, and it was chiefly through the medium of the Society that the opium debate was introduced into the House of Commons last June. The first prize has been awarded to Mr. Sproat agent-general for British Columbia; and the second to the Rev. F. S. Turner, secretary of the Anglo-Oriental Society for the Suppression of the Opium Trade.

THE *New York Herald* says that Professor Schroeder, in his steerable air-ship, proposes to visit different portions of the United States and the Old World. His air-ship was on exhibition last week in Baltimore. A number of applications have been received to take passage, and among them the application of Professor Wise, the aeronaut, who, with professor Schroeder, is sanguine of a safe voyage across the Atlantic, Schroeder says that he has expended years of study and large sums of money upon the invention. In 1872 Schroeder states he made an ascension with a smaller machine, similarly constructed, from Brazil. The ship portion of the balloon, the propeller, &c., is 85ft. in length, 9ft. high, and 8ft. wide. Its lifting capacity will be for ten tons. The balloon portion, which has not yet been adjusted, will be 65ft. high, 85ft. in circumference, and 65ft. in diameter. The pushing and pulling propellers to be attached to the bow and stern of the ship are 10ft. long and 3½ft. in height. These propellers will be covered with canvas, as also the sides and top of the ship. The ship was to be completed about the 1st instant., when Professer Schroeder would undertake daily ascensions. It is to be worked by a crew of eight men, and, Schroeder says he can readily steer it through the changing currents of the air as well as a mariner does his vessel upon the sea. He is shortly expected to start upon his first trip, from Baltimore to New York, 200 miles, which he thinks he would make in three hours. He has he says, made seventy-four miles an hour in a balloon. The air-ship will be exhibited in New York, and the venture across the Atlantic will not be made until the spring of next year.

THE Official Aden *News Report* from the 25th November to the 1st December states:—

Intelligence has been received that the Egyptian troops, about 450 strong, that marched from Tajurra, towards Shoa, under the command of Munzinger Pasha, were attacked by the surrounding Daukallee tribes at Aussa while endeavouring to cross the river Hawash. The Pasha, his wife, and all excepting 146 soldiers, were killed. The survivors contrived to reach Tajurra. A force that started from Massowa to join Munzinger Pasha at Aussa failed in its object, and has met with difficulties. The particulars are not as yet known. The two Egyptian vessels that brought the above news for communication to the Khedive by telegram sailed for Suez after coaling to bring reinforcements.

Abdool Kadur Pasha, the newly appointed Governor of Berbera, who arrived by the last mail from Egypt, sailed on the 25th November in the Egyptian corvette *Sennar* for Tajura, to ascertain the state of affairs there. The news regarding the execution of the Ameer of Hurrar is confirmed, and rumours are afloat that Raoof Pasha is in a critical position with his small detachment, as he is constantly harassed by the Gallas.

The Egyptian commanders have apparently committed mistakes in venturing too far into the interior with insignificant forces and without keeping open their communications. It is easy to occupy positions on the coast supported by men-of war, but the difficulties of troops commence when they march towards the highlands with insufficient carriage and provisions.

The Khedive's S.S. *Negila* is now running between Aden, Berbera, Zaila, and Tajura as a postal vessel, and other Egyptian ships of war come in from the latter ports for coals and provisions, &c,

McKillop Pasha is cruizing on the African Coast with an Egyptian squadron. He has passed Cape Guardafui, and, it is said, he has gone as far as Kismayo, south of the river Juba, annexing the country and hoisting the Egyptian flag. Kismayo belongs to the Sultan of Zanzibar, who, it is said, has imprisoned the Arab Governor for not resisting the aggression of McKillop Pasha.

Rain fell in camp on the 25th November, but not sufficient to run into the Famela tanks or Koosaf works.

LATEST TELEGRAPHIC NEWS.

London 10th December.

AT a dinner held in Fishmonger's Hall on Saint George's festival, the Duke of Cambridge said that the recent events in Burmah, China and Malacca showed the necessity of being prepared. The Duke said that the conscription was impracticable, and it was therefore only possible to recruit the Army by offering higher pay.

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

INDIAN BRANCH.—CENTRAL OFFICE, 1, HASTINGS' STREET, CALCUTTA.

Local Board of Directors.

F. S. COLLIS, Esq., Administrator-General.
R. A. LYALL, Esq. (Lyall, Rennie & Co.), Merchants,
Captain H. P. LOVELL, Superintendent, P. and O. Steam Navigation Company,
E. T. ROBERTS, Esq., Solicitor.

Medical Officer—DR. EWART.

Agents—CHAUNTRELL, KNOWLES & ROBERTS.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, *Toothache, Meningitis, &c.*

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so prompt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

THACKER, SPINK & CO., CALCUTTA.

The Game of Badminton.

May be played in the hall or on the grass-plat or lawn. The dimensions of the ground for out-door play should be 60ft. long by 20ft. to 30ft. wide. The net sold with the implements is stretched across the ground and secured to a standard at each end by means of tent pegs. Thus divided into sides by the net, each side is further divided into two courts, from which the game is played according to certain rules laid down.

No. 1. For out-door use, containing net 20ft. long, Painted Standards, three pair large Battledores, one dozen Shuttlecocks, Pegs, Rules, &c. in box complete with lock and key 35 0

Manufacturers of

Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware, &c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office,) No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

Candelabra,

JESSOP & CO.

ESTABLISHED IN 1820.

C. LAZARUS AND CO.,

(Incorporated with Shearwood & Co.,)

CABINET MAKERS, UPHOLSTERERS,

BILLIARD TABLE MANUFACTURERS,

BY APPOINTMENT

To His Excellency the Viceroy and the Governor-General of India,

AND

His Royal Highness the Duke of Edinburgh,

CALCUTTA.

THE NEW PATENT

ELECTRIC BILLIARD MARKER.

C. LAZARUS & Co. beg to draw the attention of Clubs, Messes, and the public in general, to this wonderful and very ingenious adaptation of the great principle of

ELECTRICITY

As applied to the noble recreation of

BILLIARDS.

One of the greatest inconveniences attendant on this scientific game and the one most felt by players, is the interruption to play by having continually to run to the wall marking-board to mark the score, and the liability to mistakes in so marking. By this new invention mistakes are impossible and annoyances and inconveniences are done away with, and the interest, in the game is doubled. *Every player can now mark his score without leaving the table and from the cushion he is standing near.*

The apparatus itself is so simple in construction that an Amateur can put it together in half-an-hour without the assistance of an Electrician. The Battery will last for months without being refilled, and when it needs to be renewed can be done at any time for a few annas.

The extreme simplicity of the ELECTRIC MARKER and the low charge for the same will, C. L. & Co. are satisfied, make it as popular with the Billiard-playing community of India and the East, as it has already become in England and on the Continent. C. L. & Co. have at present only a very limited supply of the ELECTRIC MARKERS, but are expecting fresh consignments shortly. Meanwhile all orders will be registered for execution.

The MARKERS can be seen in full work and all particulars may be ascertained from C. L. & Co., who have been appointed by the Patentees sole Agents for India and the East. They cannot therefore be procured elsewhere.

MIRRORS.

THE Mirror has undoubtedly, in this country, long been esteemed and sought after as a beautiful and Appropriate Embellishment to the Indian Mansion. Knowing that Mirrors hold such an important position in Decorative Art, C. Lazarus & Co. have made arrangements for the supply of Mirrors from the most celebrated manufacturers. They have just received, and have now on view at their show rooms,

A Magnificient and most varied Assortment of

PLATE GLASS MIRRORS,

Of every design and size, by far

THE HANDSOMEST AND LARGEST

ever imported into the Country, and which for brilliancy of reflective power, truthfulness of reproduction, and Style of Mounting have never been surpassed. The Silvering also of these Plates is on a new and most approved principle, not so liable to deterioration as the old method of Mercurial Silvering.

C. L. & Co. earnestly and respectfully solicit an inspection, satisfied that, what they would here desire to pronounce, *viz.*,—an opinion on the Intrinsic Excellence of the Mirrors, will be better done by those who may favour them with a visit than by any description in a trade advertisement, which must of necessity fail to convey to the mind an adequate idea of these really superb works of Decorative Art.

In order to effect a speedy sale with a view to further importations, C. L. & Co. are prepared to offer these Mirrors to the Public at exceptionally low rates, being in fact very little over manufacturers' prices.

Billiard Tables.

The numerous flattering testimonials received by C. LAZARUS & Co. from all parts of India, China, Burmah, Persia, Java, Ceylon and the Straits, prove that their tables are now considered the best manufactured, and are the only ones appreciated in the places umerated.

"THE FAMILY FRIENDS"

Is the name bestowed by the discerning and grateful Public on

DR. E. J. LAZARUS'S

DOMESTIC MEDICINES.

Parents, Guardians and persons residing in out districts, where medical aid was not available, or when circumstances prevented their calling in a physician, have used them for a number of years, and very many thousands of cases have been cured by their judicious use. They consist of

SUTTON'S HOME-GROWN SEEDS

ARE HELD IN HIGH REPUTE BY THE PRINCIPAL RESIDENTS IN INDIA, AS ALSO BY LEADING AGRI-HORTICULTURAL SOCIETIES, AND MESSRS. SUTTON HAVE PLEASURE IN REFERRING TO THE FOLLOWING UNSOLICITED TESTIMONIALS :—

From A. JAMIESON, Esq., Superintendent, Government Gardens, Ootacamund, India.

Aug. 6.—"The Seeds and Bulbs arrived here in good condition in March last. Both the Flower and Vegetable seeds have germinated exceedingly well, and given the greatest satisfaction."

From Mr. J. M. HENRY, Superintendent Agri-Horticultural Society's Gardens, Madras.

July 3.—"We received the Seeds and other things in excellent order. We have tried them all, and find them of first-class quality, and not one seed failing to germinate, and this being our very hot season, everything was against them."

From W. NEW, Esq., Government Gardens, Bangalore, India.

July 17, 1873.—"Your last consignment of seeds turned out well."

From Capt. JNO. HIBBERT, Executive Commissariat Officer, Neemuch, Rajpootana, India.

March 28, 1873.—"I shall send you another order in a short time, and only hope that the seeds will be as good as the last; certainly no better could possibly have been sent."

GROVE PARK SCHOOL, WREXHAM.

PRINCIPAL.—J. PRYCE JONES, L. C. PREC.

ATTENTION is respectfully invited to the following facts :—1. The locality of the School is remarkably healthy. 2. The premises are extensive, and fitted up with due regard to the comfort of the Pupils. 3. Every facility for recreation is afforded by the large playground and cricket-field which adjoin the house. 4. There is a sufficient staff of well qualified Masters, including a Classical Master, B.A., in Classical honours, Cambridge, and a resident Frenchman. 5. At the Examinations of the College of Preceptors and the Oxford and Cambridge Universities, Pupils from the School have taken Honours in several distinct branches of Education, *e.g.*, Latin, French Mathematics, Book-keeping, and English. 6. At five examinations by the College of Preceptors, Certificates were Awarded to one-third of all the pupils in the School. 7. At five out of seven examinations by the College the highest place in Book-keeping was given to candidates from the School. 8. The Principal earnestly endeavours to form in his Pupils a manly Christian character. 9. The Diet is liberal.

TERMS which are moderate and inclusive, with lists of successful pupils on application.

The only real test—universal medical experience during twenty-five years—has conclusively proved DR. DE JONGH'S COD LIVER OIL to be, beyond all comparison, the purest, the most palatable, the most easily digested, and the most rapidly efficacious of all kinds.

SELECT MEDICAL OPINIONS.

SIR G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favour of DR. DE JONGH'S Cod Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist whose investigations have remained unquestioned."

DR. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor Law Board of Great Britain.

We think it a great advantage that there is one kind of Cod Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by DR. DE JONGH."

DR. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.

"DR. DE JONGH'S Light-Brown Cod Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

SIR HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen in Ireland.

"I have frequently prescribed DR. DE JONGH'S Light-Brown Cod Liver Oil. I consider it to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. LETHBY.
Medical Officer of Health and Chief Analyst to the City of London.

"In all cases I have found DR. JONGH'S Cod Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in state of organic combination, are the most remarkable."

DR. GRANVILLE, F.R.S.
Author of the "Spas of Germany."

"DR. DE JONGH'S Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oils."

GENERAL DEBILITY AND EMACIATION.

In cases of EXHAUSTION and PROSTRATION produced by exposure to the debilitating influence of tropical and unhealthy climates, DR. DE JONGH'S OIL is much more safe and useful than the ordinary stimulating tonics, and it has been resorted to with the most beneficial effects after the whole range of these had been tried in vain. By its administration the natural appetite is revived, and the functions of digestion and assimilation are improved, reanimated, and regulated; the muscular power and activity are sensibly and rapidly increased; and, when its use has been steadily persevered in, its peculiar nutritive and reparative properties have entirely restored health and strength to the most feeble and deteriorated constitutions.

BENJAMIN CLARKE, ESQ., M.R.C.S., F.L.S., *Author of "Notes and Suggestions on Cod Liver Oil and its Uses,"* writes:—

"Having myself taken both the Pale and Light-Brown Cod Liver Oils for debility I am able, from my own experience, to remark upon their effects and comparative usefulness as remedial agents. After the Pale Oil and all other remedies that I I could think of had failed, I tried, merely as a last resort, DR. DE JONGH'S Light-Brown Cod Liver Oil. I received immediate relief, and its use was the means of my restoration to health. In their sensible properties and chemical constituents the Pale Oil and DR. DE JONGH'S Light-Brown Oil are distinct medicines; and from my observation of their mode of action and effects. I must believe that I have seen many patients die, both in hospital and private practice, some of them of juvenile years, and others in the prime of life, who in all probability, would have been cured, if the medical properties of DR. DE JONGH'S Light-Brown Cod Liver Oil had been known as they are now, and its use prescribed."

ROWLAND DALTON, M.R.C.S., L.S.A., ESQ., *District Medical Officer at Bury St. Edmund's,* writes:—

"In giving my opinion or DR. DE JONGH'S Light-Brown Cod Liver Oil, I have no hesitation in saying that I have not the slightest confidence in any other kind. The effects of DR. DE JONGH'S Light-Brown Cod Liver Oil are sure and most remarkable, especially in that broken down state of health and strength which usually precedes and favours tubercular deposit; and I never recommend any other sort. The Oil I have had from you was for my own use, and it has certainly been the only means of saving my life on two occasions, and even now when I feel 'out of condition,' I take it, and like it, unmixed with anything, as being the most agreeable way. I could wish that DR. DE JONGH'S Oil would come into general use, and entirely supersede the Pale and other worthless preparations."

THE WASTING DISEASES OF INFANCY AND CHILDHOOD.

In those severe disorders, *Infantile Wasting and Rickets,* from which children suffer so extensively, and which destroy so many infants, the good effects of this Oil are incontestably established, its operation being often-times so very remarkable as to cure the disease when every other remedy had failed, and all hopes of saving life had been abandoned.

In cases of languid and imperfect nutrition, often observed in children, where the appetite is capricious, and digestion slow and painful, and the body becomes weak and wasted, without any apparent disease, this Oil, after a few weeks, and sometimes in a few days, has produced the most extraordinary, transition to a state of normal health

THOMAS HUNT, ESQ., F.R.C.S., *Surgeon to the Western Dispensary for Diseases of the Skin,* writes:—

"In badly nourished infants, DR. DE JONGH'S Light-Brown Cod Liver Oil is invaluable. The rapidity with which two or three teaspoonfuls a day will fatten a young child is astonishing. The weight gained is three times the weight of the Oil swallowed, or more; and, as children generally like the taste of DR. DE JONGH'S Oil, and when it is given them, often cry for more, it appears as though there were some prospect of deliverance for the appalling multitude of children who figure in the weekly bills of mortality issued from the office of the Registrar-General."

DR. ROBERT C. CROFT, *Author of "A Handbook for the Nursery,"* writes:—

"I have tried DR. DE JONGH'S Light-Brown Cod Liver Oil, and find that it contains all the properties which render the Oil so efficacious. I find, moreover, that many patients prefer it to the Pale Oils, and are able to retain it more comfortably. It is almost a specific in many of the diseases peculiar to infancy and childhood, and I have seen marked benefit produced by its use."

*** DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold ONLY in bottles sealed with a metallic capsule impressed with his Stamp, and bearing beneath the pink outside wrapper a label with his stamp and signature, and the signature of his Sole Consignees, ANSAR, HARFORD AND CO. A sixteen-page pamphlet, with stamp and signatures, accompanies each bottle. To this capsule, and to these marks on label and pamphlet, purchasers are earnestly requested to pay particular attention.

WITHOUT THESE NONE CAN POSSIBLY BE GENUINE.

Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.

Sole Consignees—ANSAR, HARFORD AND CO., 77, STRAND, LONDON.

SOLD BY ALL RESPECTABLE CHEMISTS, DRUGGISTS, AND STOREKEEPERS THROUGHOUT THE WORLD.

CAUTION.—*Purchasers are earnestly cautioned against mercenary attempts frequently made to substitute other inferior kinds of Cod Liver Oil when* DR. DE JONGH'S *is applied for. All offers of other Oil should therefore be firmly rejected.*

PRINTED AT THE "STATESMAN" OFFICE, CALCUTTA—BY W. H. TARGETT, PUBLISHER.

Registered No. 19.

THE FRIEND OF INDIA,

IN WHICH THE INDIAN OBSERVER IS INCORPORATED.

No. 2128.] Calcutta: Saturday, December 25, 1875. [Vol. XLI.

NOTICE.

The FRIEND OF INDIA *continues to be supplied to all Missionaries and Schools in India, at half rates as heretofore: that is Rs.* 13-10 *as. per year, including postage, instead of the full rate of Rs.* 25.

W. H. TARGETT,
Manager, *Friend of India.*

Calcutta, 25th September 1875.

A HAPPY CHRISTMAS.

IT is our fortune to greet our readers on Christmas morn and to wish them all peace and joy and happiness and mirth. The Christmas tree has been brought to India from the far West, and we all feel that its fruits are not so rich and sweet as in the old home which must ever hold so much of our heart. But though an undertone of sadness, a sound of regret and longing for the past and the distant, may mingle with our mirth, yet nowhere more than in India should the grand old Christmas-song ring forth clear and full and beneficent—the song of

> "Peace and goodwill, goodwill and peace
> Peace and goodwill to all mankind;"

and perhaps never before did any Christmas come to India so suggestive as the present one, of peace and goodwill to all mankind. We have among us to-day the man destined, we hope, to be King of Great Britain and Emperor of India, and his coming among us, scattering kindly smiles and winning favour and friendliness from all, both from natives of India, and his own countrymen, is a token of the kindly feelings of brotherhood and goodwill that are, we trust, springing up and growing strong and mighty between the distant island of the West and the great Indian Empire. We hope it is no vain delusion if we cherish the belief, that the hearts of England and India are drawn closer together this day than ever before. If we have not yet learned to love each other as we ought, we are at least doing more than was ever done before with the view of learning to understand each other. The people of England are reading of India with greater eagerness to-day than they ever formerly combined with a spirit of kindliness. And Englishmen in India, and the children of the land, are joining together this Christmas-day in a harmonious tribute of loyalty to our common Prince and future King. And though we may not flatter ourselves that all the fair outward show bespeaks a deep reality, though much of the pageantry may be hollow and much of the enthusiasm transient, we cannot but hope that some true feeling of mutual kindness, some faint touch of brotherhood between the two peoples, may be evoked at this time which will last and grow greater. Natives of India will begin to believe that, with all our faults and in spite of much that is to be deplored in our past relations with them, we are honestly seeking to do them good. And while we tell them that we have many and great benefits to confer upon them, we frankly admit that we too draw immense advantages from our connection with India. To material advantages we need not now refer, but how great and valuable is the increase of wealth we are now drawing from India to our literature, our philosophic thought, and our knowledge of the human race. India and England are closely linked together and are helpful to each other in so many ways that it may be truly said that they are necessary to each other. We trust, therefore, that this Christmas season will be memorable not only for the outward expression of a loyalty common to the two races, but for having given a powerful impulse to those feelings of mutual dependence, brotherhood, and goodwill, which ought to exist between the strangers and the children of the land.

While wishing our readers a happy Christmas we cannot forget, even amid the excitement and pageantry of this day, that the happiness of a Christmas in India is seldom complete. The pains of family separation are seldom more keenly felt than when the day comes round that reminds us of old family gatherings at home. We need not dwell on this theme, which is too familiar to most of us, and we only mention it for a practical purpose. Since, in so few cases, it is possible to form a complete family circle, and to have around us the objects of our warmest affections, we ought, while cherishing the images of the distant and dear, to let the stream of our affections and kindly emotions flow forth the more widely among those who need our kindness and our help. On all sides of us are the needy, the sorrowing, and the suffering, of our countrymen, as well as of those born in the land. Instead of brooding over the absence of members of our little families, let us seek, on this Christmas-day to feel that we are members of a wider family; and when we remember that there are many of our own race around us who need to be clothed and fed, who are living in misery and destitution, let us perform some real acts of obedience to the precept—"Thou shalt love thy neighbour as thyself." Europeans in India are not to be reproached with lack of charity. Men are accustomed to open their hands liberally for benevolent objects, and we are constantly seeing and hearing of acts of beneficence and munificence in behalf of persons who have been overtaken by losses, bereavements, and other forms of human suffering. Yet there is much to be done, and there are many around us whose hearts might easily be gladdened by some kindly help at this Christmas time. And though we cannot all go out in search of objects on which to bestow our benevolence, we are all aware of the existence of various institutions and agencies, through which we can do something to relieve distress, and lend a helping hand to some brother or sister in one or other of the gloomy by-paths of life.

If, as we have said, it is desirable that feelings of brotherhood between the different races should be fostered at such a time as this, the duty to help those of our own nation and our own religion, is perhaps even still more urgent. To each of our readers, who is himself in circumstances of ease, we say: Do something this day to make Christmas happier to some needy or suffering one.

> "Then let men say whate'er they please;
> My faith, though very dim,
> Thinks He will say, who only sees,
> In doing it to one of these
> Thou didst it unto Him."

EDITORIAL NOTES.

IT would to idle to conceal the fact that the arrangements for the reception of the Prince have given dissatisfaction in various ways, and in some quarters where nothing like discontent or disloyalty can be imputed. The *Indian Mirror* writes strongly on the slight to the Native Princes conveyed in their omission from a place in the procession. "While two places have" says our "contemporary, "been officially assigned to Mr. Stuart Hogg in "recognition of his own singular merits, the Government could "find no elbow room for the Native Princes whom it invited to meet "their future Sovereign on his landing in the seat of his future "Empire. Has wisdom so utterly deserted the councils of our "Government that it could be capable of so gross a slight on the "invited guests? * * * * *

"It seems that that the Government in this country has been "blundering through the whole course of the ceremonies it has been

"preparing for the reception of the Prince of Wales. We thought "when we noticed it that Sir Philip Wodehouse's summary mode "of receiving the Native Princes, would have been the last, as it was "the first, mistake in the reception ceremonies. But we find we are "mistaken. After the pressure that was brought to bear on the "Court of Hyderabad to enforce the attendance of the Young "Nizam at Bombay, we confess that we are surprised at the poli- "tical insignificance attached to the presence of Native Princes "in the metropolitan city of India on an event so exceptionally "important."

The precedence difficulty was doubtless in the way. We wonder how the Princes liked the plan of introducing them to H. R. H., not in the order of precedence, but according as they were seated, or rather, as they stood.

***

THE resolutions of the public Meeting on Municipal affairs are now a fortnight old, and the protest of the independent justices has been for a still longer period in the hands of Sir Richard Temple. We are compelled, much against our inclination, to distrust the sincerity of his professed regard for the wishes and opinions of the public, for we cannot but think that simple sincerity would have taken the earliest opportunity of giving a straightforward reply to these addresses. There was nothing disloyal or disrespectful in either the one or the other, and it would have been good policy as well as honorable and manly, if the Lieutenant-Governor had given a ready and frank reply. But a pretext for delay was at hand in the Royal visit, and unfortunately for himself Sir Richard seized it. We forbear further remark on this policy for the present, and shall only say that it has disappointed us.

***

SOME may, perhaps, think that the *Indian Mirror* is "righteous overmuch" in entering so strong a protest against the exhibition of a native dance before the Prince of Wales at the entertainment at the Belgatchia villa. There is an opinion abroad that it is not necessary to consider the question of morality in this matter. The Prince has come to see the people of India, and to make acquaintance with them, their manners and customs, and his looking on at a performance of *nautch* girls is deemed of exactly the same significance as his inspection of a Hindoo temple. He must not be supposed to countenance or approve, but simply to look on, and form an opinion for or against, according to his taste. Now we have some sympathy with this way of putting the question, though we disapprove strongly of "the public exhibition and dancing of courtezans" before any audience Christian or Pagan We are willing to admit the desirability of seeing native institutions with a man's own eyes. We went ourselves on one occasion to see a native *nautch*, and are not prepared to say that is wrong in the Prince to see such a performance. But at the same time we believe it would be well that it should be clearly stated, that one such exhibition is enough, and that the Prince entirely disapproves of the institution. We read that being treated to a performance of this nature at Madras the Prince soon got wearied of it, and left abruptly before half the programme was exhausted. That, we think, should be a warning to our friends in Calcutta that another exhibition of the kind will be *de trop*. Let the managers of the Belgatchia fête drop the *nautch* out of their programme. It is not wanted, and the *Mirror* and other good authorities inform us, that it is quite immoral in its spirit and tendencies. We should not be surprised to hear that the Prince will decline to countenance by his presence another exhibition of *nautch* girls.

***

IT was quite unnecessary to invent failings to lay to the charge of our Commissioner of Police. We mention the following suggestion of a contemporary only to say that Mr. Hogg's activity and energy do not need any such explanation: "The recognition by the Prince of Wales of the services of Mr. Souter in Bombay, by the conferring of a knighthood, has had immediate effect upon Mr. Hogg in Calcutta it appears. He is stirring up indigent house-proprietors in odd localities within his jurisdiction to stir up their whitewash." But although Mr. Hogg's energy has not been so ignobly stimulated, it is said with some force that a good deal of it has been misdirected. How much of the whitewash, and other things that cheat the eye of visitors to Calcutta at the present time, has been put there by compulsion? And what is all the whitewash to order, worth? Simply nothing. If Mr. Hogg had taken a little more pains to gain the cordial co-operation of those of the community who would have been glad to volunteer their assistance, he could have done more to please the eye, and there would have been less unreality beneath the outward show. But the truth is that Mr, Hogg is at present the most unpopular man in Calcutta, and his actions are not always interpreted on principles of pure charity.

***

WE shall certainly be gratified if it can be shown that we have taken too severe a view of the policy of Sir W. Jervois in Perak, but while many of our Indian contemporaries have differed from us, we observe that some of the leading London journals are inclined to take the same view as we have done from the first We have formerly noticed the opinions expresed in the *Times*. The *Pall Mall* expresses itself cautiously as follows:—

The information just published from the Colonial Office with reference to the disturbances in the Malay Peninsula, is certainly most important and at first sight, it must be admitted, a little startling. From this it would appear that, previous to the outbreak which occurred on the murder of Mr. Birch, the relations of the British Government towards Perak had assumed an entirely new form, and that the policy of Sir Andrew Clarke had received an unexpected development in the hands of Sir W. Jervois. By a proclamation dated the 15th of October, and signed by the Governor of the Straits Settlements, it was announced that "Her Majesty's Government, in compliance with the request of the Sultan and chiefs of Perak, have determined to administer the Government of Perak in the name of the Sultan; and that to this end the governor is about to appoint officers who will be styled Commissioners and Assistant Commissioners of the Queen, to carry on the Government of the State, and that a Malay Council of Rajahs of Perak of the highest rank, will be appointed to aid the said Commissioners in matters touching the affairs of the government of Perak." It cannot be denied that this has very much the appearance of assuming "the responsibilities of annexation" in Perak; but it is not yet certain that this is the true state of the case, and until we get further particulars it is premature to discuss the question whether the annexation or quasi-annexation of territory is or is not a step too important to be settled by a colonial governor on his own responsibility.

***

ACCORDING to the telegram of 15th from Penang, matters are becoming serious in Perak and is to be hoped that the blaze will not overspread the Peninsula. Complications with the other States are mentioned as being probable. The capture of a stockade at Soonjie Ujong, which was defended by four hundred Malays, was effected after encountering a determined resistance, and with a loss of thirteen killed and ten wounded to twenty-one killed and an indefinite number wounded among the Malays. That looks as if the Malays are determined to fight, and, judging from the nature of the surface, covered with thick and trackless jungle, and the skill of the Malays in forming stockades, as well as the resolution with which they seem to defend them, it appears too probable that their subjugation will require a protracted and costly campaign. It had been expected that ex-Sultan Ismail was on the point of starvation and ready to surrender, but the telegram reports that he had gone to Wahong to obtain co-operation. It is probable that starvation will prove our strongest ally against the people of Perak, and however serious their resistance, it cannot last long, unless, as is feared, the war spread to other states. The forces under Generals Colborne and Ross were proceeding, respectively, up and down the Perak river, so as to take the enemy between two fires, and we sincerely hope we shall soon hear of their success.

***

IT is clearly recognised that England's interest in the Eastern Question is a single and definite one—to keep intact our means of communication and our highway to India, and in doing so we wish to abstain, if possible, from trespassing on the rights of any other nation. But it seems quite impossible for the Northern Powers to agree on any scheme of settling the affairs of Turkey which will not interfere with, or menace, our communications with India. And however unwilling to fight England confessedly is, it is clearly understood that on this point she must and will fight. Accordingly, all plans and propositions for the winding up of the affairs of Turkey have fallen to the ground. Meanwhile, we hear that the Sultan has come forward with proposals of radical reform Perfect legal equality is to be established between his Christian and Mussulman subjects. Non-Mussulmans are to be eligible as judges, provincial councillors, and tax-collectors. Taxation is to be equally distributed, oppressive taxes lightened, forced labour abolished; Christians may hold property, and their religion will receive ample toleration. All these things and more, are proffered in the firman recently published, and we are not surprised to see it stated, that the Northern Powers consider these promises too liberal to be sincere. They, too, have their scheme of reform, which, however, they are to submit to the signitaries of the Treaty of Paris before they present it to the Sultan. We fear all this doctoring, is more than the enfeebled constitution of the Sick Man will be able to stand.

***

WE quote elsewhere an article from the *Pall Mall Gazette* upon the power of the Turk, if he is compelled to engage in a desperate struggle for national existence, to plunge the nations into a

tremendous war, the end of which it is impossible to foresee, but which would be certain to assume the character of a great religious war. We commend the article to the attention of our readers. The *Gazette* believes that the Turk is perfectly conscious of his power to cause mischief, and would not be unwilling to exercise it, if any attempt were made to intefere with the integrity of his dominions. Consideration of this and of the resolute attitude of England, has determined the Northern Powers to abstain from aggressive interference. It is truly wonderful how the Eastern Question gets staved off from time to time. And yet no one doubts that the health of Europe demands the eviction of the Turk. But the time, it appears, is hardly yet come, though it may be nearer than most of us dream. The Bosnians, says the latest telegram, reject the Sultan's firman. It is too late to offer concessions, for the insurgents are strong enough to despise promises which they believe to be insincere. Had their affairs been in a failing condition, the firman would probably have overcome their better reason, and they would have come to terms. But they begin to know their power. The know, too, how great is the sympathy that is felt for their cause all over Europe, and their resolution seems taken to persevere in the struggle till their Moslem masters are driven from the country. How that result is to be brought about cannot be foreseen, but right will be might ere long, we cannot doubt.

***

A TELEGRAM from Cairo informed us on Monday last that the train of disasters that we have recently chronicled as having overtaken the Egyptian forces in Abyssinia, has been followed by a resolution on the part of the Khedive to abstain from further attempts at conquest. It is not impossible that some pressure from England has been brought to bear on the Khedive, for while one telegram informed us that he was preparing a large force to march to Abyssinia, the other stated that it would be employed only to exact satisfaction or merely to make a military demonstration. It is said that the inspiring genius of the late expeditions was the unfortunate Munzinger Pasha. His death and attendant losses, and, probably, the counsels and warning of Lord Derby, have apparently taken effect, and the Khedive will doubtless restrain himself from further schemes of conquest for the present.

***

THE Egyptian papers contain particulars of the annexation by the Egyptian troops of Harar, a territory lying south-east of Abyssinia. According to a circular issued by Nubar Pasha, Minister for Foreign Affairs, to the foreign diplomatic agents in Egypt, the Egyptian force of 1,200 men which started from Zeilah on the 19th of September, under the orders of Reouf Pasha, marched into the capital of Harar, on the 11th of the ensuing month, the Emir of that country having already tendered his submission through his son, who was sent to the frontier to meet the Egyptians. He repeated his offer of submission to the Pasha in person, and begged as a special favour to be allowed to serve the Khedive under the orders of the governor-general whom His Highness had sent to rule over the country in his name. On his way to Harar, the Egyptian general received the submission of all the tribes through whose territory he passed, with the exception of the Gallas, who offered some resistance, but were speedily routed, and thereupon sent their women to ask for mercy. This was readily granted, and, on learning from a proclamation issued by Reouf Pasha, that the cultivation of coffee, hitherto monopolised by their rulers, would in future be free to everybody, all the population joyfully welcomed the Pasha as a liberator. The town of Harar, the capital of the annexed territory, contains a population of over 30,000 souls. It is singular in one respect, being, unlike all other towns in Equatorial Africa, built entirely of stone. The population of the emirate is said to exceed a million and a half, and is composed chiefly of Somalis with an admixture of Arabs and Gallas. Its industry and its aptitude for traffic are noted in all surrounding parts, and a report forwarded by Reouf Pasha to Cairo, represents the country as remarkably fertile, its natural productions being, besides those indigenous in Egypt, myrh, frankincense, and a coffee equal if not superior to the celebrated quality produced in Yemen. By the annexation of this highly favored land, an immense new field has, with little trouble and hardly any bloodshed, been opened to commerce.

***

THE *Bombay Gazette* says:—

"Sir Salar Jung's enterprising Finance Minister does not, we find, intend to let the proceeds of the recent loan be wasted for want of employment. The whole amount of thirty-five lakhs, brought out to Bombay, has been gradually remitted to Hyderabad; and of this sum twenty-five lakhs will be invested in shares of a State Bank. It is a curious thing that at the very moment when the Government of India is severing its connexion with the Presidency Banks, on the ground of the difficulty the most careful of Governments must experience in maintaining an effectual control over the management of such institutions, the Hyderabad Government should be anxious to add to its responsibilities by undertaking an extensive banking business. We are assured, however, that it has been determined to give Hyderabad the benefit of possessing that latest luxury of mature civilization, a State Bank, along with the other privilege, lately accorded, of a State debt. The capital of the Bank is to consist of fifty lakhs of rupees; and the State will hold one-half of the whole, while of the remaining half ten lakhs will be reserved for the Hyderabad sowcars, and the balance of fifteen lakhs will be offered to the public of Bombay. We have not had the advantage of seeing the prospectus of the Bank, and cannot therefore say what reasons there may be for anticipating that it will be able to conduct a profitable business. But, as the banks of Bengal and Bombay have always laid great stress on the importance of the Hyderabad business, we may fairly assume that it is worth fighting for. It is probable, however, that the Bank will not restrict itself to mere operations in exchange. We look upon it as the nucleus of an extensive scheme for developing the mineral and other resources of the State of Hyderabad—a scheme which is legitimate and even laudable in its way, but which will drive the unhappy Government of India, mindful of past exploits of Hyderabad financiers, to its wits' end.

***

THE new harbour at Madras, of which the first stone was laid by the Prince of Wales ten days ago, will, it is to be hoped, render impossible the recurrence of such disasters as that of the 1st and 2nd May 1872, when nine English and nineteen native craft, measuring together 10,834 tons, were driven ashore to become total wrecks. The works are to consist of two rubble piers, on the tops of which concrete blocks will be laid so as to make a solid wall twenty-four feet thick, and five feet above sea level.

At the distance of 1,200 yards from the beach, the piers will turn towards each other at right angles, and form a safe shelter for shipping. The area enclosed between them will be about 210 acres of which 170 acres having a depth of from three to five fathoms at low water, will accommodate the largest European vessels. The remainder will be available for native craft, boats, and lighters. The estimated cost of the undertaking is £565,000 and its completion in from four to five years may, we believe, be looked for. There can be no doubt that it will confer immense benefits on the trade of the port. Ships will no longer have to put to sea on the first sign of approaching bad weather—the piers will form a breakwater behind which the frailest vessel may defy the fury of a cyclone. Nor will passengers and cargo have any barrier of boiling surf to cross. Quays will be constructed in still water, and Masoula boats and catamarans will find their occupation gone. These changes must give a great impetus to the commerce of Madras, and its inhabitants will doubtless long remember, the date of the Prince's visit as marking the commencement of their new era of prosperity.

***

A REPORT by Colonel Younghusband, the officiating Inspector-General of the Punjab Police, forcibly calls attention to the alarming frequency of murder cases in the districts beyond the Indus. The average for the whole Punjab, for the five years from 1870 to 1874 inclusive, was 320 cases annually. This rate can hardly be deemed remarkable, considering that the lawless traditions of the anarchical period immediately preceding our rule, have not yet had time wholly to die out. It gives one murder to every 66,433 inhabitants. In England the proportion is one to every 102,242 and in Sicily, an island which though geographically in Europe lies, morally, in much the same latitude as Dahomey or Ashantee, one to every 3,194: a comparison very favorable to the land of the five rivers. One half of all the murders that take place in the Punjab are, however, committed in the narrow strip of territory between the Indus and the hills, and *one-fourth* in the Peshawur Valley alone. During the past five years, 441 murders were committed in that district. In only one week of the present year, ten were reported. Successive governments have in vain endeavoured to put a stop to this continual bloodshed. Both the Judicial Bench and the Police have been strengthened, but without any apparent effect on the murder rate, and the crime, allowing for the increase of population, seems to be just as frequent now as twenty years ago. As a last resource, Colonel Younghusband proposes making the Arms' Act partially applicable to the Peshawur Valley. To carry it out thoroughly, he says, would be too strong a measure. The valley is surrounded by marauding tribes from whose attacks the inhabitants constantly have to defend themselves. It would therefore be unfair to deprive them wholly of the means of resistance. But he thinks it extremely desirable that their daggers and pistols, at least, should be taken from them. Out of the 441 murders, 217 were committed with these weapons, and the Colonel draws the conclusion that the crime would be less rife were their possession forbidden. The plan seems to be worth trying. A dagger or

pistol is undoubtedly a much apter instrument for the purposes of the private assassin than a weapon less easily secreted about the person. Many murders, again, are not premeditated, but are the result of sudden quarrels, brought about by an angry word or two and ending in arms being drawn. It is obvious that crimes of this class would tend to be less frequent if arms were not generally carried, and the prohibition of daggers and pistols would in a great measure put a stop to the practice. Colonel Younghusband's proposal, however, is open to the objection that, by depriving the population of any portion of their arms, their capacity for self-defence would be diminished in the same ratio, and that dacoities and border raids might be expected to become more frequent than ever. The application of the Arms' Act even to the extent suggested, would therefore seem to call for a simultaneous increase in the strength of the frontier garrisons. But this is a difficulty which the Government, if it decides on adopting Colonel Younghusband's plan will doubtless find means to overcome. One thing is clear—that the number of murder cases in our Trans-Indus territory is excessive and must shortly be reduced, either in Colonel Younghusband's way or some other, if the Punjab Administration wishes to maintain its character for energy.

***

THE *Pioneer* has the following on Baroda affairs:—

"Baroda, a correspondent tells us, seems beginning to feel the good effect of a settled Government. "Sir Madhava Rao has collected about him most of the well-known native officials of this part of the world." The reader will remember that Mr. P. S. Melvill is now the Agent, to the Governor-General. Mr. Elliott, who was formerly acting as Director of Public Instruction in Berar, has arrived as tutor to the young Gaekwar and is well spoken of. Mr. J. V. Pope from Bangalore, is Director of Public Instruction in the Baroda State. "It is probably for the best" writes the correspondent already quoted, "that natives, although most of them are not of Baroda, have been brought here to assist in the government in preference to Europeans, as thereby the spirit of the Viceroy's proclamation is acted up to. Had European officials been brought here in any great numbers, the untutored native mind would have looked upon this as a sign that we had no real intention of re-establishing a genuine native Government, as soon as possible, according to our promise. The military force in garrison here, is likely to remain at its present strength, for, at all events, another year, when it may be decreased, if all be well; but it is not probable that it will again be left as weak as before the troubles, without artillery or even cavalry. When troops were wanted from Baroda to relieve the 26th Native Infantry at Surat, to enable them all to go to Bombay to do honor to the Prince of Wales, Sir R. Meade, we hear, set his face absolutely against the withdrawal of a single soldier, and the 26th had to leave two companies behind them to look after Surat."

***

THE following telegram which appears in the English papers is dated, Tashkend 21st November:—

"After the departure of General Kauffman from Namanghan for Khojend on the 3rd instant, the excitement among the inhabitants of the former place and its vicinity increased. Major-General Scobeloff on the 4th instant quelled the Kiptschak rising, and armed the inhabitants of Turakurgan. During these operations the Kiptschaks surprised Namanghan, and on the 5th instant attacked the citadel and the Russian camp. The garrison bravely resisted for three days, when Major-General Scobeloff returned, and after shelling Namanghan from a battery of sixteen guns, successfully stormed the town. The Kiptschaks, who had intrenched themselves in the place, took to flight, leaving behind them 3,800 dead. The Russian losses were unimportant. Anarchy reigns throughout Khokand. The Governor of Machram has defeated 2,000 men in the neighbourhood of that fortress. In Namanghan and its vicinity everything is at present perfectly quiet."

***

THE Senate of the University of Bombay has, we observe, paid a well earned tribute to the memory of the "Rev. John Wilson, D. D., F. R. S., one of the Fellows mentioned in the Act of Incorporation, late Vice-Chancellor, and, for several years, and at his death, Dean and Syndic in Arts." Ample acknowledgement was made in the resolution of Dr. Wilson's invaluable services to the University and the cause of education. There is, already, a "Wilson Philological Lectureship," but as that was established by the doctor's friends and admirers outside of the University, the Senate thinks some other way must be found of commemorating his distinguished services.

***

THE number of unemployed Europeans and Eurasians in different parts of India, is so large as to make it imperative that something should be done, and done speedily, to help them, and to enable them to help themselves. At the same the number is not so large as to make the difficulty of providing means of employment very hard to be overcome. But the Europeans cannot, and the Eurasians will not, work in the plains; and it is well that the Government of Bengal is willing to give its countenance and support to any feasible scheme of hill-colonization. The Indian Government, too, will doubtless give earnest consideration to the memorial submitted to it by Mr. Atkins, the indefatigable Secretary of the Amalgamated Society of Railway servants in India. Mr. Atkins has furnished as full and accurate a statement of the amount of existing destitution among the two classes as can be obtained by private means, and the probability is that the real amount is greater than his statement shows. In Bengal, 432 persons have filled up the forms, and these have 758 depending on them, giving a total of 1,190 persons in destitution. In Madras the total is 1,289: in the North-West Provinces 372; in the Punjab 32, and in the Bombay Presidency 363. To provide for the total of 3,246 ought not to be difficult when the Government and the whole community are made fully alive to the necessity for finding employment for them. And if the first experimental hill-colony prove a success, we may presume that the difficulty will be overcome. But as far as unemployed Europeans are concerned, some strong and wise measures should be taken by Government to diminish the continued increase of their numbers. Employers must be compelled to dismiss their servants in the market where they engage them.

A CORRESPONDENT of the *Times of India* writing on tha Veddahs says:—

The notion that the Veddahs are such excellent marksmen with the bow and arrow has given rise to a great number of stories, mostly fabulous. It is said that wild beasts by a natural instinct keep a long distance from such excellent shots. Their aim was so certain, that it was long believed that they hunted the elephant by striking him always on the foot and the arrow breaking, leaving a long piece in the flesh, which so disabled the huge monster that he became an easy prey. This, however, is wrong. The Veddah is a stealthy being, and creeps close up to the monster before he shoots. He sends his arrow at the animal's heart, and if the wound is not mortal he goes on shooting arrow after arrow at the same spot until the elephant falls exhausted and is despatched; and the Veddah gets not only the ivory, but also recovers his arrows. Now, however, elephants are "preserved game," and the Veddahs are seldom poachers. A remarkable agility saves them from danger in getting so near the object of their chase, and so stealthy are they that they seldom startle the game it is their object to approach. I will just add, in regard to the Veddahs, that Mr. Simpson, of the *Illustrated London News*, sketched the best archer in the lot, but the poor fellow, never having seen a picture or reflection of his face, could make nothing of it, though it was recognised by his companions.

***

IT is surmised that the sinking cause of Don Carlos in Northern Spain has sustained a loss which will probably be its death-blow, in the demise of the late Duke of Modena. It has, from the first, been a puzzling question how Don Carlos has been supplied, from time to time, with the material support which has enabled him to persevere in the struggle so ruinous to his country, and if, as is shrewdly conjectured, the late Duke, who was the Pretender's maternal uncle and an enthusiast in the Legitimist cause, has hitherto provided him with valuable pecuniary supplies, his death will prove the removal of the great mainstay on which the continuance of the insurrection depended. It is to be fervently hoped that the extraordinary and disastrous obstinacy of the reckless Pretender will soon give way, from sheer inability to prolong the contest further.

***

THE *Pall Mall* is not very enthusiastic over Mr. Stanley's Great missionary scheme for the civilization of Central Africa. "King Mtesa" says our contemporary, "having been converted from El "Islam to Christianity by the sporting correspondent of the *Daily* "*Telegraph* and the *New York Herald*, wants further instruction; "and a gentleman, rich in gold and benevolence, has contributed "£5,000 by way of answer to the invitation. Missions are good "things; missionaries introduce merchants. But in this case there "is a slight complication, and the three or four pale faces are ex-"pected to do more than they perhaps anticipate. As the Khedive "is rapidly annexing the valley of the Upper Nile, the 'King of "Uganda, Unyoro, and Karaywah,' is evidently determined to "arrest his progress by a mission. The reverend gentlemen will "thus act as what are called, in popular English, 'buffers.' Some "fifteen years ago an eminent African traveller said of the "'Universities Mission,' that if the male members go alone it is "merely suicide—if they take their families *it is* murder. These "words will bear repeating now."

AT New York, a cable despatch from London lately announced that "a Manchester firm had begun to import calicoes from the United States," with the supplementary comment, that "the fact was significant," as showing that "Manchester had at last found a competitor." What this amounted to in the estimation of the trade in the United States was taken by the leading daily trade journal of New York to be no more than this:—Every effort to provide new openings for our manufactures abroad, however unpromising at first, deserves to be encouraged. In this case, however, it must be confessed, the prospect of satisfactory returns is more dubious than it would be if competition with Manchester was sought, not in the home-market, but in foreign countries where

Manchester is not wholly supreme, and where we should have, therefore, a freer field. There may be such a thing as carrying coals to Newcastle.

***

PUBLIC opinion in England is steadily advancing towards a belief in the soundness of the principle of compulsory education and Mr. Foster is losing no opportunity of expressing himself strongly in support of it. He never intended, he says, that his Education Bill should be a permissive Bill. But it was impossible at that time to make it compulsory, and he contends that on this subject he was then in advance of Parliament and the country. The time he thinks has now come. They have got the schools and must next fill them with scholars. Next Session, will, he trusts, supply a Bill to enforce compulsory education, and he hoped it would not give any increased State grant to voluntary or denominational schools, or encourage dogmatical or controversial teaching in board schools. Mr. Forster is quite indifferent to the charge of having changed his opinions, but he denies that he has changed them. The country was not ready for compulsory education when he framed his Bill, and it is ready now. Whatever may be said as to Mr. Forster's consistency, we have no doubt that he now carries the public along with him on this important question.

***

THERE is certain to be a keen contest on the Burials question in the next session of Parliament, and, as we have several times pointed out, there is now no probability of the matter in dispute being settled by compromise. Mr. Disraeli has received a petition signed by eight hundred clergymen of the Church of England, urging him to resist the encroachments of the Dissenters on this question. They will not hear of any decision that would permit a person not a member of the Church of England to read what he likes, or perform any kind of service, at an interment in the National Burial grounds. A great deal will depend on the action of the Government, but it is difficult to guess at the line which Mr. Disraeli may adopt. The *Spectator* conjectures that he is more likely to surrender the Establishment itself some day, than the right it has to keep the Dissenters dumb in its churchyards.

THE EDUCATION OF CIVILIANS.

THE work of a large majority of Indian civilians constantly requires them to draw conclusions and pass orders on the basis of facts, which are often disputed, frequently involved, and generally conveyed to them through the medium of a foreign language. The moral and intellectual qualities requisite for the efficient discharge of these functions, would seem mainly to be quick apprehension, logical power, patience, a habit of thoroughness, love of justice, readiness of resource, mental independence and disregard of personal consequences, and, lastly, mastery of the language through which alone the facts themselves can be ascertained. If this be, as appears to us, undeniable, the question arises: Are the methods at present adopted for selecting men to perform these duties, calculated to secure the possession by the chosen candidates of these qualities? The question is a sufficiently wide one, and probably does not admit of a categorical answer, but there is one side of it which seems to us to be somewhat unduly ignored, and which we now wish to consider exclusively. All knowledge is, probably, in itself desirable, but as omniscience is beyond our reach, we are practically compelled to discriminate between different kinds of knowledge, and make up our minds to acquire one kind and reject another. The subjects, for proficiency in which most civilians are selected, may be said, speaking quite generally, to be the history, language, and literature of England, Greece, and Rome; Mathematics, Logic, and Moral Philosophy; French, German, and Italian, and, to a less extent, natural sciences. Now, how far can acquaintance more or less intimate with these branches of knowledge, be regarded as a guarantee for the possession of the qualities above mentioned?

The study of Logic probably tends to discipline the reasoning faculty for our present purposes, at any rate it may be presumed to have that effect. Mathematics, too, will be said by some to act in the same direction as Logic, though for our own part we are inclined to doubt their efficacy in this respect, and lean to the opinion, that their principal use to a district officer is to enable him to calculate interest and costs, and to apportion shares of land or money. Moral Philosophy, and also certain portions of English, Greek, and Roman History, should encourage mental independence, the former by displaying to the mind, and making it conscious of, its own capacities, the latter by showing what other minds in other ages have dared and done. Natural Sciences, so far as they are studies, tend to promote habits of patient research and thoroughness, qualities of which hardly any career demands a larger measure than does the Indian Civil Service. So far so good. But what of the other subjects of examination? The selected candidate may be as well read in English literature as Macaulay, or Mathew Arnold; he may write the most faultless and lucid English prose, or even verse; he may have been an Ireland or a Hertford scholar; he may speak and read and write French, German, or Italian, or all three, with the fluency and precision of a native. But will these accomplishments enable him to arrive at a sound decision in a complicated civil suit or a criminal trial, to make a settlement that shall not collapse under the strain of a couple of bad seasons, to work sucessfully the machinery of an office or a district, or to withstand manfully the pressure of official superiors, and risk official favour for the sake of saving the dumb, toilworn masses from being crushed by the "cold spurt" of a legislative pen, directed by some semi-responsible writer in high places, who will never see or know the suffering he has wrought? In a word, can the test of purely literary education be trusted to secure those qualities, without the possession of which by the administrators of India, our rule must inevitably collapse under the daily increasing difficulties which beset it?

Purely literary education directly tends to make its possessor a pleasant companion, a brilliant talker, a polished writer, and what is called a man of refined mind. The judgments and reports of such an one will probably, even after his classics are forgotten and he has practically ceased to read anything but a newspaper, continue to betray a tincture of early culture, much in the same way as the Latin of Mr. Riley, in *The Mill on the Floss*, could only have been detected in the superior style and manner in which that worthy auctioneer conducted his sales. Whether his acquirements will be of any other use to him is not, perhaps, so obvious. One advantage, doubtless, literary culture does tend to bestow, the importance of which we should be the last to disparage—it tends to stimulate the imaginative faculty, so indispensable to any one who has to deal with circumstances of which he can often know but little directly, as enabling him to realise the probable effects of his conduct where he cannot actually see them. But the extent to which literary studies really promote this faculty seems doubtful enough, and whether it can only be acquired by means of them, still more so.

Of course there is much to be said on the other side of the question, and in favour of the subjects of examination as they stand. It is impossible, doubtless, wholly to dissociate the scheme of selection of civilians for India, from the general system of education in England. It may also be argued that the men who head the list at present, are generally those whose work is most satisfactory and who rise most rapidly. In regard to this latter point, however, we think it may fairly be replied, first, that rapid promotion is often as much due to the refined manner and pleasing address which so frequently accompany literary culture, as to satisfactory work, and secondly that though the men whose rise is most speedy, are generally those who have been high on the list, yet the converse proposition does not hold good, for there are many men high on the lists who do not rise rapidly.

We have no scheme for revolutionizing the system of re-examination, and indeed hardly even a practical suggestion to offer, except that more weight might advantageously be given to Logic and Moral Philosophy, and somewhat less to Literature in general; and that certain portions of English history *e.g.*, the reign of Charles I, the commonwealth, and the restoration, and certain portions of English literature, *e.g.*, the works of Milton and Burke, or selected passages from them, might be prescribed for especial study. Our object has been merely to bring into prominence some of the less obvious aspects

of the extent at present occupied by purely literary training in modern English education generally, and in the Indian Civil Service Examinations in particular, and to draw attention to the following passage from Herbert Spencer's treatise on education which indeed suggested the present article:—

"Accomplishments, the fine arts, *belles-lettres*, and all those things which, as we say, constitute the efflorescence of civilization, should be wholly subordinate to that instruction and discipline in which civilization rests. *As they occupy the leisure part of life, so should they occupy the leisure part of education.*"

SECONDING OFFICERS.

II.

THE seconding of brigade field officers of Royal Artillery, practically considered, more particularly in reference to brigades serving in India, is our present subject. It has been fairly, perhaps conclusively, shown, that the complement of colonels and lieutenant-colonels for the seven brigades serving in this Presidency, viz. fourteen colonels and twenty-six lieutenant-colonels, is more than sufficient for the commands which have to be filled, leaving one half the former and more than one half the latter grade, commandless. It has been a puzzle to many, why lieutenant-colonels of royal artillery, on attaining to that rank regimentally, are differently placed in regard to paid commands, from regimental lieutenant-colonels of British cavalry and infantry; and again, notwithstanding that a lieutenant-colonel of R. A. may not have exercised command for a single day for the first five years after his promotion to that rank, he qualifies for promotion to colonel. But artillery organization may be said to abound in anomalies which it is almost impossible to understand.

Now if we take the several lists, we shall find the seconded brigade field officers to be as follows.

Royal List	Colonels	6	Lt.-Colonels	20.
Bengal „	„	6	„	8.
Madras „	„	0	„	8.
Bombay„	„	3	„	5.

Taking the Indian lists only, there are nine colonels and twenty-one lieutenant-colonels seconded, and costing the Indian revenue the sum of Rs. 399,924 or, at 1-10*d.* per rupee, £36,659 per annum. This large sum is paid practically, if we look the matter fairly in the face, for maintaining an equal number of effective field officers promoted in the place of these seconded officers, now living in professional idleness. It may be, as is here shown, that systems or practices which obtain at home, are not necessarily applicable to India. The system of seconding brigade field officers of R. A. in India, is really of no advantage to the individual officer promoted, because he may have to wait for years for even an ordinary minor command. If in place of this he had remained as a major, in command of a component part of a brigade, and, if on promotion to lieutenant-colonel regimentally, he acquired the command of his brigade, as is invariably the case with majors of British line regiments on promotion to regimental lieutenant-colonel, he would be decidedly in a better position. Assuming, then, that it has been fairly established that the seconding of brigade field officers, practically considered, is in no way advantageous to the service, but is on the coutrary an exceedingly expensive system for the State, and that its abolition would not impair the efficiency either administratively or technically of brigades of R. A. serving in India, but rather on the contrary tend the other way, by decreasing the probability of their becoming rusty from want of active professional employment, we will proceed to consider a scheme for promptly disposing of all existing supernumerary brigade field officers.

Our auxiliary forces at home and in some of our colonies, offer the means for accomplishing our purpose more or less speedily. These forces are maintained essentially for home defence, to be fully organised in case of invasion, and to take the duties of our regular forces, which would thereby become available for active service abroad during a campaign. Appointment to our auxiliary forces, say as district inspectors, or commandants of militia artillery, should be exclusively reserved for officers of the regular service. These appointments to our auxiliary forces should be opened to officers on *all* the four existing lists of royal artillery, who may be entitled to "full pay retirements," as inducements to quit the active army and to serve for a period of five to nine years on the home reserve or auxiliary force. This is one of the great points in Prussia's military system, of which we are profound admirers and advocates for its adoption with us, where and when applicable, without prejudice to our national predilections, which just at present beset us terribly in our military reforms.

It is well known that there are many officers of thirty to thirty-five and even forty-six years' service, who are physically unfit to proceed on active field service, or to serve abroad in India or our colonies, and who, in a good climate such as that of the United Kingdom get perfectly fit to organise, train, and discipline our anxiliary forces. The pensions to which officers of thirty to forty years service are entitled by the regulations, are insufficient to enable them to retire and maintain themselves and families *suitably to their* rank and position. Consequently they prefer to continue in the service, and a considerate government is naturally indisposed to compel them to retire, and consign them and their families to penury and want. Promotion is thus necessarily choked, and senility more or less pervades all ranks. Let, then, the Imperial and Indian Governments put their heads together and come to some arrangement to get rid of this large number of supernumerary brigade field officers, by offering an officer, if reported by a medical board, as fit to serve with our auxiliary forces, an appointment therein for five years, and on expiry thereof, if still pronounced physically and mentally fit, and at the same time favorably reported on by the inspecting general of the district, a further extension of three years. And on expiration of the second period of service in our reserve forces, grant him a slightly enhanced pension over existing rates of pensions, commutable for a lump sum down. Were this done, we should find our supernumerary list absolutely abolished with great benefit to the State, and promotion accelerated and suitable professional employment available for the majority of our brigade field officers, who for want of such employment are growing more and more rusty year by year.

PORT CANNING.

THE mania that once raged in India for the establishment of Joint-Stock Companies, seems to be slowly and gradually passing away. No one can forget that great and gigantic scheme, the Port Canning Company, Limited. It came into life some twelve years ago and was to eclipse and cast into the shade every other speculation. What a sensation it created, not only in this city but throughout India! How vividly it was announced and proclaimed, that the channels and creeks of the river were silting up fast, and would in the course of a very short time cease to be either the outlet or inlet for the irrigation of the mighty Hooghly, which was doomed to destruction and must lose all her charms! What was to become of this great city? The only way of getting over the impending calamity was to make the Mutlah the future harbour of the City of Palaces, and Canning town was to be the future metropolis of all India. Ferdinand Schiller, the prince of merchants, was to be the happy saviour and deliverer. As the projector of the great scheme, his name will be as familiar in India as household words, and will go down to posterity. House proprietors in Calcutta trembled, and were so alarmed, that some disposed of their property and invested the money in Government Securities. The price of landed property fell rapidly. Turn where you would, go where you would, the subject uppermost in every man's mind was the city in embryo. Schiller was the man for Galway. He was the golden calf. The shares were taken up rapidly, in fact they were be-spoken. The names of several gentlemen, members of the press not excepted, were put down unsolicited. How very gratifying must have been the feelings of these gentlemen when they were acquainted with the fact of their being the fortunate holders of several shares, as at this time the premium had gone up to some thousands. We remember one of these gentlemen when the premium had gone up to eleven thousand, selling his shares and not knowing what to do with the money. He took a trip to the N.-W. Provinces and at Agra had the Taj illuminated for his especial amusement. The Calcutta correspondent of the *Times of India* puffed up the scheme in such glowing terms that the ducks took the bait at once, and the demand for the shares there was

much larger than in Calcutta. It was known that the shares went up in Bombay to 18,000, being 17,000 premium, while in Calcutta they stood at 13,000. Port Canning had cast into the shade the Back Bay which was, previous to that, the Eldorado. The excitement which this speculation caused in Bombay, was something terrific. The whole press of India with a few exceptions, had taken up the subject warmly and advocated the scheme so favorably, that people could not help as it were investing their money. The women in Bombay actually sold their jewels and purchased shares with the proceeds. For some time the daily papers published accounts of the great doings in Canning town. An eminent engineer with his staff had gone up and planned the sites for the various buildings, its high streets and broadways, sites for the Government House, the Cathedral, Court, &c. When the railway was completed, Canning town became a reality and a *fait accompli*. It was no longer to be a delusion and a snare. The erection of buildings commenced, and Calcutta was languishing. It was a golden harvest for many. For at least two years the price of building materials and labor was so high in Calcutta that no one could dream of building. Even if it had not been so, who would have ventured or had the temerity to become a landed proprietor in Calcutta, when the city was soon expected to become a deserted village The office of Messrs. Borradaile, Schiller & Co., who were the managers of the company, was daily besieged with applications for situations. A European constable and some natives had to be stationed at the gate to keep away the crowd and regulate the conveyances. Alas! how are the mighty fallen. It vanished like a dream. The disastrous foundering of a ship in the splendid new harbour caused the Government to think seriously over the scheme. The encouragement which it had given to the undertaking when it was started, gradually began to wane. The promoters lost heart, and the grand scheme which went up like a rocket came down like a stick. The whole thing collapsed leaving in the minds of those who had been ruined by it, the sad impressiou that it is folly to put their trust in a Government which would take the alarm at a single catastrophe. The despair, misery, and heart burnings, which the failure of this scheme brought about to the homes of thousands will scarcely be conceived, nor ever fully realized. In the would-be metropolis now stands a huge mill, the office of the company, and the hotel, as monuments of the defunct company.

TOLERATION.

THIS is a virtue which some people are apt to attribute either to amiability or benevolence of character, to the mental inability to be obstructive, or to a tendency to indifferentism. In its true sense it is due to none of these. It is in truth the offspring of a large and liberal mind, itself by no means indifferent, but rather of strong and powerful capacity for feeling, yet able to allow for equal strength of feeling in others, and able also to conceive of conviction on the same subject as possible from a wholly different aspect from that which it itself sees.

On no subject has it appeared so difficult to be exercised as on that of religion. It is so now, when light and knowledge are daily being diffused over fields of thought once obscure as twilight and untrodden as the eternal snows. It was still more *impossible* in those old times when to be tolerant was to be lax, heretical, if not infidel. Intolerance is the great key to historical puzzles of the past. Until we recognise it as the motive power, we are at a loss to understand even the best known and most familiar characters, and feel their actions to be incomprehensible, inconsequent, and without consistency.

In all history, there was no greater period for celebrated men, and women too, than that comprised in the reigns of Henry VIII, Mary, and Elizabeth. There was then a general out-break, as it were, of talent and genius throughout the world, yet never in all history were such deeds of intolerance perpetrated as then. Charles V., died, according to notions then prevalent upon sanctity, in the very odour of it. But one sin weighed, he said, on his conscience, embittered his dying moments and suggested the last request to his son. He had been too tender towards the heretics. (Torquemado might have reassured him on the subject!) Yet his successor supplies his lax energies two-fold, and so avoids the stings of a reproachful conscience when he should lay him down to die. None more ready and willing than Philip to undertake the charge. The fires of Smithfield, the torture chamber and the axe which Mary sanctioned and which Philip Gardiner and Regaud awarded, were the results of religious bitterness at least as much as of temperament and inclination. Could Mary, who wept and trembled as she signed the Lady Jane's death-warrant—could she, a woman, have rejoiced in wholesale slaughter for any other cause than that of religion? Could Gardiner, bland, suave, intellectual and mild-tempered, have incited her to cruelty for aught but this? Philip and Regaud were gloomy, pitiless men, but it was in the name of religion that they decimated the noble houses of England.

Then came Elizabeth. Bitter and prejudiced as those who went before her, cruel and relentless as the grave, she had the tact and knowledge to destroy, and yet escape the odium. As a late writer in *Fraser* has cleverly suggested, Elizabeth's cunning gave the name of treason to difference in religion. The Roman Catholics in her time were tortured and put to death as pitilessly as the Protestants in Mary's, but the popular voice condemned them. They were proclaimed traitors and the barbarous end of traitors was their righteous doom; and at this time befell the massacre of Saint Bartholomew. Protestants fell in the blood-stained streets of Paris, and Elizabeth's wrath was boundless; she and her ladies sat in State in dolorous weeds, and the Queen right royally expressed her just displeasure at the deed, she who in the name of religion sowed evil seeds of distrust and of rebellion in a neighbouring kingdom, and brought to captivity and finally doomed to death a sister-queen. Surely never in the world's long lifetime were such deeds of darkness done as in the compass of those three eventful reigns, when the greatest intellects, the most remarkable characters, and, in their way, the sagest and most enlightened of thinkers, ruled the destinies of kingdoms. There were two remarkable exceptions among the sovereigns of that extraordinary age, who, religious almost to bigotry, according to their several creeds, have left in the records of their reigns not one intolerant action perpetrated under the name of religious zeal. Mary Stuart, the theme of divided opinions to this day, admired, scorned, praised, and blamed with as much fervor now as when Murray took away her crown and Babington went to death for her sake—Mary was in her day, what in our's would be called a bigot for her faith's sake. Yet in all her reign not one life was sacrificed to religious intolerance, strong in Scotland then, as even in later days. Knox might brave and condemn her to her face, yet walk the land at large and propagate his faith and side with her enemies and fear no harm from the beautiful woman and crowned queen, in whose hand was the power of life and death.

The other sovereign, than whom among the mightest of the time there was no mightier, was Akbar. We cannot say he was a merciful man, sparing those who differed from him on religious grounds from impulses of mercy or tenderness, like Mary. What despot, and he a Mogul Emperor, ever knew the feelings? It was rather the effect of knowledge and thought; of the workings of a great and liberal mind and of exalted wisdom which in any age would have made him great. Computing the religions, of the world, he said to Jehanghir who wondered at his tolerance: "Are not five parts in six of mankind either Hindoos or aliens to the (Mahomedan) faith? . . . I have thought it my wisest plan to let them alone." And when the same son, heir to his power, though not to his *ability*, asked why the great Emperor had forbidden any interference with the rearing of other religious fanes, the idolatry of the Hindoos, the mystic worship of Boodhists and Brahmins, or the churches sacred to Christian worship, he replied—for Jehanghir has given us his words to admire and marvel at;—"My dear child, I find myself a puissant monarch, the shadow of God upon earth. I have seen that He bestows the blessings of a gracious providence upon *all* His creatures without distinction; Ill should I discharge the duties of my exalted station, were I to withhold my compassion and indulgence from any of those entrusted to my charge."

The Priory and Chapel of Bandel on the Hooghly, and Jesuit churches and buildings at Agra and at Lahore, were raised and established in that reign; and one of Akbar's noble sayings was that talent, knowledge, and the pursuit of science for the good of mankind, ought to be fostered by a great ruler irrespective of all difference of race or creed,—a splendid rebuke in theory and practice to the intolerance of the perverters of another creed who could immure Galileo, slaughter Jean Goujon working with the chisel in his hand, embitter by wrong and imprisonment Palissy that lover of nature, who could clothe the four bare walls of his dungeons with imaginary shadows of the fair flowers and greenery he loved and knew so well; who could dismiss from the world he so benefited, by a death of cruelest agony, a man like Cranmer. So then tolerance and intolerance belong of right neither to creeds nor parties; but tolerance to the wise, the true, the noble: not (of necessity) to keen intellects, or successful seekers in the gold fields of knowledge, any more than to facile natures, to minds tending towards a cold indifferentism—the

spurious imitation of a painstaking deliberation. Rather to the grandest and largest natures of all ages and all races; who ardent, strong and faithful in their own convictions, can allow an ample margin for those of others, realize the futility of compulsion, and condone every heresy for that grace of earnestness which we call enthusiasm the parent of all great achievements since the world began.

THE DISCIPLINE OF THE PATSHALAS.

THE Government policy of disallowing the infliction of all corporal chastisement in their schools and colleges, might perhaps lead unsophisticated minds to imagine, that such a policy springs from a wish not to interfere with native prejudices on the subject. Doubtless a wise and humane administration has found that painful discipline of this sort is quite foreign to the ideas of its Indian subjects, and has therefore banished it from its seminaries, and has preferred, where punishment was necessary, to appeal to the purse of the father, rather than to the person of the son. Fine the culprit if you please, but touch not his sacred little body. But is it so? Is this "hands off" system really practised by the indigenous schools of the country? All doubt on this question, if we had any, was cleared up, for ourselves, by the perusal of an old number of the *Calcutta Review*, that we happened to meet with the other day. From an article therein we found that, so far from corporal punishment being tabooed in the schools of the country, it was dealt out to youthful offenders with an almost Draconian severity. England may chastise her refractory urchins with canes and birches, but India chastises hers with nettles and tom-cats!

But perhaps a few extracts will best guide our readers to some idea of the discipline, that, if it does not still, at any rate, did some few years ago, form a part of the native *curriculum*; extracts which, we imagine, might lead "fustigated professors" of the present day to cry,

O mihi præteritos referat si Jupiter annos!

We remember that when we were at school in our youthful English days, juvenile ill-doers were sometimes punished by being made to hold heavy books up above their heads at the full length of their arms, the weight of the volumes being proportioned to the gravity of the offence. Our Aryan brethren have improved upon this; witness the following from among the punishments they are, or were, wont to inflict upon their erring youth:—"A boy is made to bend forward with his face towards the ground; a heavy brick is then placed on his back, and another on his neck; and should he let either of them fall, within the prescribed period of half an hour or so, he is punished with the cane." Horace tells us that some poets of his day were such clever fellows that they could write verses *stans pede in uno*. Probably, however, the position had its inconveniences, or we should hardly find this mode of punishment on our list:—"A boy is condemned to stand for half an hour or an hour on one foot; and, should he shake or quiver or let down the uplifted leg before the time, he is severely punished." But standing on one leg is a trifle to what follows:—"A boy is made to sit on the floor in an exceedingly constrained position, with one leg turned up behind his neck." "He is made to sit with his feet resting on two bricks, and his head bent down between both legs, with his hands twisted round each leg so as painfully to catch the ears." "A boy is made to hang for a few minutes, with his head downwards, from the branch of a neighbouring tree," this last method of correction having seemingly been derived from one mode of penance practised by Indian devotees. Another punishment carries us back to the old English children's game of "Honey-pots," a full description of which the curious reader may find in Messrs. Warne and Co.'s *Nursery Rhymes*:—"His (the boy's) hands and feet are *bound* with cords, to these members so bound, a rope is fastened, and the boy is then hoisted up by means of a pulley and attached to the beams or rafters of the school." The description of the next punishment is somewhat mysterious, and seems to require an *experimentum* on the *corpus vile* of a school-boy fully to elucidate it:—"The fingers of both hands are inserted across each other with a stick between and two sticks without, drawn close together, and tied." Here is another that is calculated to task the powers of endurance of the "prominent feature" of the unlucky urchin upon whom it is inflicted:—"A boy is made to measure so many cubits on the ground, by marking it along with the tip of his nose." There are other methods of correction, which we should imagine are not unlikely to cause heart-burnings and disputes in the play-ground after school is over. We might dub this class of punishments with the comprehensive title of "*Doing* and *Suffering*." "Four boys are made to seize another, two holding the arms and two the feet; they then alternately swing him and throw him violently to the ground." "Two boys, when both have given offence, are made to knock their heads several times against each other." Again, "Two boys are made to seize another by the ears, and with these organs well outstretched, he is made to run along for the amusement of the by-standers:"—which latter clause reminds us of the old Roman poet's line, *Omne tulit punctum qui miscuit utile dulci.* These last mentioned punishments seem to be based somewhat on the principle of "*setting* a thief to catch a thief," but who ever heard of setting a thief *to* catch himself? If the victims of the tortures just described might pray to be saved from their friends, the victims of the one that follows might with more justice petition to be saved from themselves:—"A boy is constrained to pull his own ears; and if he fail to extend them sufficiently, he is visited with a severer chastisement." Surely this is the climax of ingenuity in the way of punishment.

"Keen were his pangs, but keener far to feel,
He nursed the pinions that impelled the steel."

To insure punctual attendance at school a curious device is resorted to, delightfully simple, but at the same time, founded upon the strictest rules of justice:—"The boy who first comes to school in the morning receives one stroke of the cane on the palm of the hand, the next receives two strokes, and so each in succession, as he arrives, receives a number of strokes equal to the number of boys that preceded him, the first being the privileged administrator of them all." The above methods of chastisement may be thought to be fairly severe; but there is a "lower deep," yet; what do our readers think of the following.—"Nettles, dipped in water, are applied to the body, which becomes irritated and swollen; the pain is excruciating and often lasts a whole day; but however great the itching and the pain, the sufferer is not allowed to rub or touch the skin for relief, under the dread of a flagellation in addition." This seems bad enough; but here is something worse:—"The boy is tied up in a sack along with some nettles, or a cat or some other noisome creature, and then rolled along the ground." This last may, we think, not unaptly be designated as verging on the barbarous, and strikes us as one that savours of the Turkish imperial seraglio rather than of the *curriculum* of a school boy.

That we have sufficiently shown the existence of a pretty severe discipline, or at any rate of praiseworthy attempts to enforce it, in the *Patshala*, will now, we imagine, be clear to the tenderest and most compassionate administration. The Indian village school-boy is not spoilt, at any rate by the sparing of the rod, or nettle, as the case may be. But when the *Patshala* is exchanged for the Government School, when he finds that his exterior man, perhaps still tingling from the cane of his old *gooroo*, is sacred in the eyes of his new master, and when he sees perhaps that two or three schools are competing for the honor of instructing him, can it be wondered at that he should turn his new-found liberty into license, and do his part towards making his school that Babel which it is at present? And we may be quite sure that as the Government school-boy twig is bent, so will the college student tree be inclined.

But our space is exhausted. The vengeful tricks the village school-boy plays upon his *gooroo mohasoy*, and his dodges for escaping from school, may perhaps provide us with material for a future article.

THE SONG OF SONGS.*

THE present writer must confess to but a slender acquaintance with the ancient literature of India, and Mr. Arnold's beautiful rendering into English of the Indian Song of Songs, the *Gita Govinda* of Jayadeva, has come upon him, as it must come upon most English readers, as a splendid revelation of poetic wealth. What scholars may have to say of the work as a translation we know not—we must take Mr. Arnold's name as a guarantee for considerable excellence in that respect—but we have no hesitation in saying that the English reader and lover of pure poetry, will find in the volume before us a feast of delight and wine of the richest vintage. The poetry has all the warmth and gorgeousness that his imagination has been wont to associate with the products of the Oriental Muse; Mr. Arnold has re-arrayed it in chaste and harmonious English as none but a true poet and accomplished scholar could have done; and underneath the mystery and music, the strange and lovely imagery, and the luscious sensuousness of form and colouring, there lurks a deep, pure, spiritual meaning, a beauty of holiness, a divine soul of truth and wisdom, which the thoughtful reader with an eye trained to discern hidden loveliness

* *The Indian Song of Songs.* From the Sanskrit of the *Gita Govinda* of Jayadeva, with other Oriental Poems. By Edwin Arnold, M.A., F.R.G.S., &c. London; Trübner & Co., Ludgate Hill, 1875.

and spiritual significance under an earthly garb, will catch at with impulsive ecstasy. Here, once again, for the modern English reader, is a draught of poetry fresh and pure, which will make him feel as if the spring time of life, and his earliest poetic ardours, were renewed, and he will thank Mr. Arnold for rescuing this fair body of poetry from the tomb of antiquity and a language accessible only to natives of India, and a few Western scholars. Were the poem original it would at once lift Mr. Arnold into a very high place among men of genius; we must certainly class him far above the common herd of translators. But the extracts that we shall give below will render any laudatory observations of ours superfluous.

The *Gita Govinda* was, according to Lassen, composed about the year 1150 A. D. Its author, Jayadeva, was a native of Kinduvilva or Kendôli, in Burdwan or Tirhoot, the precise locality being doubtful. His theme is the well-known frolicsome amours of Krishna with the *gopees*—the milkmaids, or shepherdesses, but the poet, as a gifted seer and teacher of divine truth, has made the ancient fable of earthly love and dalliance the golden candlestick for a light of heavenly radiance. But Mr. Arnold will tell, in his own words, the argument and aim of the poem. "Under the form of Krishna, an incarnation of the god Vishnoo, the human soul is displayed in its relations alternately with earthly and celestial beauty. Krishna, at once human and divine, is first seen attracted by the pleasures of the senses (personified by the shepherdesses in the wood), and wasting his affections upon the delights of their illusory world. Radha, the spirit of intellectual and moral beauty, comes to free him from this error, by enkindling in his heart a desire for her own surpassing loveliness of form and character; and, under the parable of a human passion, too glowingly depicted by the Indian poet for exact transcription, the gradual emancipation of Krishna from sensuous distraction and his union with Radha in a high and spiritualised happiness, are portrayed."

For further comment on the spirit and object of the poem, and for a brief account of the peculiar character of Hindoo music, we refer the reader to Mr. Arnold's preface. We need only remark before proceeding to illustrate, by extracts, the meaning of the poem, that it is in form somewhat of the nature of an opera, and like all ancient poetry was composed to be sung, rather than to be read. Each song is accompanied with directions as to the music, but the original music is lost. There is a great variety of measure, and this is indicated by a corresponding variety in the translation, without a slavish attempt to reproduce "the many very fanciful alliterations, assonances, and recurring choruses." There is a slight setting of narrative verse, and the author has introduced at the close of most of the songs, a reminder of their spiritual significance—not perhaps unneeded, for as Lassen remarks: "The Indian poet seems, indeed, to have spent rather more labor in depicting the phases of earthly passion than of that intellectual yearning by which the mind is lifted to the contemplation of divine things."

The first Sarga represent the "beautiful Radha, jasmine-bosomed Radha" waiting in the wood for the too faithless Krishna,

"In the soft awakening spring-time, when 'tis hard to live alone."

One of her maidens sings an exquisite song about the absent Krishna, who is "dancing among the dancers,"

"Where Kroona-flowers, that open at the lover's lightest tread,
Break, and for shame at what they hear, from white blush modest red;
And all the spears on all the boughs of all the Ketuk-glades
Seem ready darts to pierce the hearts of wandering youths and maids:
'Tis there thy Krishna dances till the merry drum is done,
All in the sunny Spring-time, when who can live alone?

Thus Krishna, "letting pass life's greater chance," wastes his days and nights on false and fruitless pleasures. But the heaven-descended human soul cannot rest and be happy even among the fairest of earthly delights. However soft and fragrant may be its bed of rose leaves, however sweet the intoxication of the senses, there come movements of unrest, sharp thrills of heart anguish, yearnings that will not be stifled for the richer beauty, the nobler joy, the transcendent purity and excellence of that Divine Truth, the contemplation of which, is the source of eternal blessedness.

"And all as if—far wandered
The traveller should hear
The bird of home, the Koïl,
With nest notes rich and clear;
And there should come one moment
A blessed fleeting dream
Of the bees among the mangoes
Beside his native stream;
So flash those sudden yearnings,
That sense of a dearer thing,
The love and lack of Radha
Upon his soul in Spring."

The maid of Radha sings another beautiful song descriptive of the five shepherdesses, who are supposed to personify the five senses, and by whom Krishna is for a time enthralled. We should like to give the whole song but will confine ourselves to the two concluding stanzas, hoping that our readers will be incited to obtain the whole of it from the book itself.

"And one with arch smile beckons him away from Jumna's banks,
Where the tall bamboos bristle like spears in battle-ranks,
And plucks his cloth to make him come into the mango-shade,
Where the fruit is ripe and golden, and the milk and cakes are laid;
Oh! golden-red the mangoes, and glad the feasts of spring,
And fair the flowers to lie upon, and sweet the dancers sing.

Sweetest of all that Temptress who dances for him now
With subtle feet which part and meet in the Râs measure slow,
To the chime of silver bangles and the beat of rose-leaf hands,
And pipe and lute and cymbal played by the wood-land bands;
So that wholly passion-laden—eye, ear, sense, soul o'ercome—
Krishna is theirs in the forest; his heart forgets its home.

Radha,—the personified contemplation of divine beauty and goodness, sings wonderfully like a maiden of earthly mould. We give a few stanzas from her song of lament for the faithless Krishna.

My Prince! my Lotus-faced! my woe! my love!
Whose broad brow, with the tilka-mark above,
Shames the bright moon at full with fleck of cloud;
Thou to mistake so little for so much!
Thou, Krishna, to be palm to palm with such!
O soul made for my joys, pure, perfect, proud!

Ah, my Beloved! in thy darkness drear;
Ah Dancer! with the jewels in thine ear,
Swinging to music of a loveless love;
O my Beloved! in thy fall so high
That angels, sages, spirits of the sky
Linger about thee, watching in the grove.

I will be patient still, and draw thee ever,
My one Beloved, sitting by the river
Under the thick Kadambas with that throng:
Will there not come an end to earthly madness?
Shall I not, past the sorrow, have the gladness?
Must not the love-light shine for him erelong?

For (sang on that high Lady in the shade)
My soul for tenderness, not blame, was made;
Mine eyes look through his evil to his good;
My heart coins pleas for him; my fervent thought
Prevents what he will say when these are naught,
And that which I am shall be understood.

And again, addressing her maid, she sings;

Yes, go! say, if he will, that he may come—
May come, my love, my longing, my desire:
May come forgiven, shriven, to me his home,
And make his happy peace; nay, and aspire
To uplift Radha's veil, and learn at length
What love is in its strength.

Lead him; say softly I shall chide his blindness,
And vex him with my angers; yet add this,
He shall not vainly sue for loving-kindness,
Nor miss to see me close, nor lose the bliss
That lives upon my lip, nor be denied
The rose throne at my side.

Say that I—Radha—in my bower languish
All widowed, till he find the way to me;
Say that mine eyes are dim, my breast all anguish,
Until with gentle murmured shame I see
His steps come near, his anxious pleading face
Bend for my pardoning grace.

While I——what, did he deem light loves so tender,
To tarry for them when the vow was made
To yield him up my bosom's maiden splendour,
And fold him in my fragrance, and unbraid
My shining hair for him, and clasp him close
To the gold heart of his Rose,

And sing him strains which only spirits know,
And make him captive with the silk-soft chain
Of twinned wings brooding round him, and bestow
Kisses of Paradise, as pure as rain;
My gems, my moonlight pearls, my girdle gold,
Cymballing music bold?

While joined for ever I shall dare to grow
Life to life with him, in the realms divine;
And—Love's large cup at happy over-flow,
Yet ever to be filled—his eyes and mine
Shall meet in that glad look, when Time's great gate,
Closes and shuts out fate.

For even now (she sang) I see him pause,
Heart-stricken with the waste of heart he makes
Amid them;—all the bows of their bent brows,
Wound him no more: no more for all their sakes
Plays he one note upon his amorous lute,
But lets the strings lie mute.

It will be impossible to give all the passages we had marked for extract, and we do not wish to forestall the enjoyment to be derived from the volume which every lover of poetry will hasten to obtain. The extracts we have given are fair specimens of the quality of the poetry, but have lost much in being taken from their setting. And to seize the hidden meaning of the "Song of Songs," it will be necessary to read it as a whole. As a mere song of earthly love it has great beauty and completeness, and probably many will read it as such, heedless of the Poet's hint to

"Listen to the unsaid things
Of the song that Radha sings,
For the soul draws near to bliss
As it comprehendeth this."

But those who have been accustomed to see high spiritual meaning in the "Song of Songs which is Solomon's," will surely have no difficulty in catching the mystic strain of divine wisdom in the not less voluptuous, but more philosophic "Song of Songs" of the Indian bard.

The absorption of the human soul in sensuous and sensual pleasure is symbolized by what is something more than a mere symbol—the indulgence in illicit loves; the contemplation of divine beauty and goodness, the process by which the human soul becomes one with the divine, and so, for ever forsaking the transient and unsatisfying delights of the flesh, attains to untroubled and unending beatitude, is symbolised by Krishna's love for, and final union with, the jasmine-bosomed Radha. It has to be observed that while Krishna is indulging his befooled senses with the shepherdesses, he is never completely at ease, but his rescue from them and his penitent return to Radha are not due entirely to himself. Radha not only mourns for him in sad loneliness, but her maid is watching him all the while, and as soon as he begins to seek for her, she sends this maiden to win him and guide him back to her. Thus the poet seeks to show that while the foolish wayward mortal is wasting himself on earthly objects of passion, a great divine love is watching over him, and yearning to redeem him, and no sooner does a sense of guilt and sin and a gush of repentance fill his soul, than the spiritual messenger is sent to sing with whispered melody in his ear, of the forgiveness, the loving-kindness, the gracious welcome, and the holy joys that await him if he will only come to the divine fount of love. Divine goodness stoops to plead with the wayward, erring mortal. Radha lies faint with love, cannot uplift her eyelids "dark and tender" that

"Droop like lotus leaves in rain-storms, dashed and heavy in their splendour"

till her Krishna returns. Meanwhile she waited, and

"Wonderful her waiting was, her pity sweet, her patience great."

Yet she wills that Krishna shall come to her. She will not go to him, though his shame is so great as to make him reluctant to approach her. It may be freely confessed that it is not easy, as perhaps it is not necessary, to spiritualize the whole of the story and the songs. Let a few more extracts speak for us. Radha's maid entreats her mistress to go to Krishna :—

Loosen from thy foot the bangle,
Lest its golden bell,
With a tiny, tattling jangle,
Any false tale tell:
If thou fearest that the moonlight
Will thy glad face know,
Draw those dark braids lower, Lady!
But to Krishna go.

Swift and still as lightning's splendour
Let thy beauty come,
Sudden, gracious, dazzling, tender,
To his arms—its home:
Swift as Indra's yellow lightning,
Shining through the night,
Glide to Krishna's lovely bosom,
Take him love and light.

Grant at last love's utmost measure,
Giving, give the whole;
Keep back nothing of the treasure
Of thy priceless soul:
Hold with both hands out unto him
Thy chalice, let him drain
The nectar of its dearest draught,
Till not a wish remain.

Failing in her entreaties, however, she hastens again to Krishna.

Krishna! 'tis thou must come (she sang)
Ever she waits thee in heavenly bower;
The lotus seeks not the wandering bee,
The bee must seek the flower.

All the wood over, her deep eyes roam
Marvelling sore where tarries the bee,
Who leaves such lips of nectar unsought
As those that blossom for thee.

* * * *

Ten times lost in a languorous swoon,
"Now he cometh—he cometh," she cries,"
And a love-look lights her eyes in the gloom,
And the darkness is sweet with her sighs.

Till watching in vain, she sinks again
Under the shade of the whispering leaves,
With a heart too full of its love at last
To heed how her bosom heaves.

For all so strong in Heaven itself
Is love, that Radha sits drooping there,
Her beautiful bosom panting with thought,
And the braids drawn back from her ear.

When Krishna comes to her at last, her loving rebuke is exceedingly naive and beautiful. She professes to regard the marks of penitence on his face as the traces of the light love-conflicts in which he had lately been engaged, and bids him return to his former companions, lest she should be weak enough to believe, and forgive him. We give one stanza as a specimen:

Krishna! my Krishna with the woodland wreathe!
Return, or I shall soften as I blame;
The while thy very lips are dark to the teeth
With dye that from her lids and lashes came,
Left on the mouth I touched. Fair traitor! go!
Say not they darkened, lacking food and sleep
Long waiting for my face; I turn it——so——
Go! ere I half believe thee, pleading deep.

The reconciliation, however, is soon complete and the eternal union of Radha and Krishna follows. Here is the bridal song, sung at the bower's entrance, by those who tended Radha. With it, and the few fine descriptive lines that follow, we conclude our very imperfect notice of this charming translation of the glorious "Song of Songs."

Enter, thrice happy! enter, thrice desired!
And let the gates of Hari shut thee in
With the soul destined to thee from of old.

Tremble not! lay thy lovely shame aside;
Lay it aside with thine unfastened zone,
And love him with the love that knows not fear,

Because it fears not change; enter thou in,
Flower of all sweet and stainless womanhood!
For ever to grow bright, for ever new;

Enter beneath the flowers, Oh! flower fair!
Beneath these tendrils, Loveliest! that entwine
And clasp, and wreathe, and cling, with kissing stems;

Enter with tender-blowing airs of heaven
Soft as love's breath and gentle as the tones
Of lover's whispers, when the lips come close:

Enter the house of Love, O Loveliest!
Enter the marriage-bower, most beautiful!
And take and give the joy that Hari grants.

Thy heart has entered, let thy feet go too!
Lo, Krishna! lo, the one that thirsts for thee!
Give him the drink of amrit from thy lips.

Then she, no more delaying, entered straight;
Her step a little faltered, but her face
Shone with unutterable quick love; and—while
The music of her bangles passed the porch—
Shame, which had lingered in her downcast eyes,
Departed shamed . . . and like the mighty deep,
Which sees the moon and rises, all his life
Uprose to drink her beams.

IS CHRISTIANITY A LIFE OR A CREED?

WHEN we think of the alliance that God has formed between the head and the heart, and remember that "out of the heart are the issues of life," it is difficult to understand why the question we have just asked should have ever been raised. The soul and the body are wonderful products of Divine wisdom, and, as, in the latter, the various members are "tempered together," so that "the eye cannot say to the hand I have no need of thee, nor the head to the feet, I have no need of you," so, in the former, the various powers and faculties are all adjusted to one another, and work together in harmony. Such being the nature God has been pleased to give us, it seems only right and reasonable that in giving us a religion, he should adapt it, not to one part of our nature but the whole. We are thus led to expect that a religion claiming a Divine origin should contain truths to be believed as well as deeds to be done, and were such a religion to lack either the one or the other, that circumstance alone would raise a presumption against it. We find, accordingly, that all the religions that have ever appeared in the world claiming a supernatural origin, and demanding submission and obedience from men, have, with no exception that we know of, propounded doctrines to be received and rules to be followed, or, in other words, have had a dogmatic as well as a practical significance. And if Christianity is no exception to this rule, the inference to be drawn from the fact is simply this, that in giving us a true religion, God has shown no less wisdom in adapting it to our nature, than men have done who have given us false ones.

Passing from the question of antecedent probability, let us turn our attention to the question of fact. Does Christianity, that is the religion of the Bible, as a mere matter of fact, contain doctrines as well as precepts? It is only necessary to ask this question in order to answer it, as every reader of the Bible, even the most cursory, cannot fail to observe that doctrinal teachings and rules for the conduct of life, are every where blended together in the sacred record. But there is a circumstance in connection with this co-existence of doctrine and precept in the Bible, which, though plain enough when pointed out, does not perhaps attract the attention of every reader. It is this, that the two elements of religion—doctrine and precept, are not found in conjunction merely, but live together in the Bible. The union between them is vital. They are parts of an organic whole; and every attempt to cut

them asunder must end, not in mutilation, but death. The life which is inculcated in the Bible, and which occupies so conspicuous a place there, can be realised only when the truths from which it springs have found a lodgement in the human heart. The life of Paul, in all the varied and chequered scenes with which it abounds, is a noble example of what Christianity can do in raising, purifying and ennobling those who heartily embrace it, and in a well-known passage in one of his epistles, the apostle lets us into the secret of that beauty of holiness with which his life was adorned. "The life that I live in the flesh, I live by the faith of the Son of God who loved me, and gave himself for me." That is Paul's Confession of Faith—that is his Creed—expressed in few words, yet embracing at one sweep the doctrines of Christ's Divinity, His love to sinners and His atoning death. These great truths that make the person and work of Christ so precious, were the warp and woof of the apostle's life. They were wrought into the very texture of his soul. They were the spring of that perennial stream of buoyant emotion that gave his life its freshness and beauty, and they, and they alone, inspired him to those deeds of self-sacrifice and heroic devotion that have covered his name with imperishable renown.

It would be a very interesting and agreeable task to follow out the union of which we are speaking into all the details of Christian life, and show how every duty inculcated in the Bible, is enforced by some Christian doctrine; but this would occupy much space, and does not lie within the scope of our present purpose. To make our meaning clear, and indicate the line of investigation which our readers can follow out for themselves, if they are so disposed, we will quote only a passage or two. At the close of that admirable summary of Christian duties, the Sermon on the Mount, the Great Teacher exhorts us to seek a perfect life, and grounds his exhortation on the perfection of God "Be ye perfect even as your Father who is in heaven is perfect." And when Paul in the epistle to the Ephesians, seeks to impress on his readers the duty of exercising forgiveness, he does so by appealing to the fact that they themselves have been forgiven. "Be ye kind one to another, tender hearted, forgiving one another even as God, for Christ's sake hath forgiven you." We are commanded to be holy, because God is holy, to love one another, because God is love; not to be weary in well-doing because we shall reap in due season, to suffer patiently because Christ also hath suffered for us; in one word, to overcome the world, and "who is he that overcometh the world, but he that believeth, that Jesus is the Son of God"! The bearing of all this on the subject in hand is most obvious. Systems of morality may be constructed on another basis than that which the Bible supplies—though even these we should think, would find it hard to commend themselves to the acceptance of men, and harder still to exert any power over them, without priniciples of some sort as a basis—but the life to which the Bible calls us, the life that is distinctively Christian, must be reared on the basis of Christian doctrine.

But after all, it may be said, is not the life the main thing? Creed may be all very well in its proper place, but is not the rectitude of the life the grand concern? No one, we hope, will suppose that we under-estimate the importance of the life. It is just because we do believe it, in a most important sense, to be the main thing, that we have planted Christian doctrine in what we regard as its only proper place—at the foundation of Christian life. The great truths of Christianity have not been given to be the subject of perpetual wrangling, not to make Creeds and confessions of, or to furnish "the orthodox" with a strange excuse for neglecting to do their duty. They have been given to be believed and practised, and whenever churches or individuals make a parade of their orthodoxy, and set aside or overlook the demands of Christian duty, they become "as sounding brass, or a tinkling cymbal." Nor do we see how the varieties that have existed, and still exist in the creeds of Christendom, should be any argument against the importance of Christian doctrine. The lives of Christians have been as diverse as their creeds, and an argument against the one is equally valid against the other. "Let every man be fully persuaded in his own mind."

Attempts have often been made to show that all the evils, especially those of rationalism and infidelity, with which the Church in modern times has been afflicted, have arisen from the Reformation. The right of private judgment in matters of religion claimed by Protestants, is said to be inseparable from a spirit of free inquiry on all subjects; and when this spirit was once let loose, nothing but the most disastrous results could follow. Disastrous results have followed, but to what! Not to Christianity. Christianity has nothing to fear from free inquiry, but every thing to hope from it. Of all that perished at the Reformation, Christinity is as deadly a foe as free inquiry itself. Only let inquiry be *free*, and no man to whom Christianity is dear need fear the result. It is when religious life is on the wane that Christianity is in danger. A Church overgrown with formalism, from which the spirit of life has fled, is a more formidable antagonist to Christianity than all the sceptics in the world. Had the Church always kept in mind that her main business in this world is to conquer it for Christ, and to exhibit in her own life the fulness of grace and truth that dwells in Him, she might have been spared the misery of seeing so many of her sons houseless and homeless, with nothing to cover them but the rags and tatters of a former faith.

FUTURE PUNISHMENT.

(*Continued.*)

[By Rev. A. Constable.]

BEFORE we proceed to establish our view of future punishment by the testimony of Scripture, it will be necessary that we remove an objection very commonly made to it, and which has great force with very many minds. The objection is this, that what is no longer felt to be punishment by the party who is punished is no punishment at all; that it ceases to be a punishment the moment it ceases to be sensibly felt. We hold, on the contrary, that the loss of life after it has been taken, is just as much a punishment as its actual infliction, and that as the life lost by the sinner is an eternal life, its loss is to him an eternal punishment. And here the first death affords a perfect analogy to the second. From the earliest records of our race, capital punishment has been reckoned as not only the greatest but also the most lasting of all punishments, and it is reckoned the greatest *because* it is the most lasting. A flogging inflicted on a petty thief inflicts more actual pain than decapitation or hanging inflicts up on a murderer How, then, is the latter greater and more lasting? Because it deprives the sufferer of every hour of that life which but for it he would have had. Its duration is supposed co-existent with the period of his natural life. "The laws" says Augustine, "do not estimate the punishment of a criminal by the brief period during which he is being put to death, but by their removing him for ever from the company of living men."

The conclusion drawn from this, is sometimes sought to be got rid of by representing the real punishment of death to consist in its exposing the party put to death to those sufferings which are supposed to follow death in the world of spirits. Whatever may be believed of the reality of such sufferings in the intermediate state, it is, however, certain that human governments in their apportionment of punishments never took any consideration of this kind into their thoughts at all. Death, as a legal punishment, is reckoned the very same punishment whatever be the character of the person thus punished, or whatever his prospects in the world of spirits. The idea of death as the most lasting punishment has not been confined to Christian nations, or to believers in a future life of rewards and punishments, but was accepted before the time of the Gospel, and by men and nations who did not believe in the future life at all. The Sadducee, the Epicurean, and the Atheist, held it just as firmly as the Platonic philosopher, the Christian Father, or the Egyptian priest. Justin Martyr expresses the idea well when, speaking of heathen persecutors who, as he expressly states, "believed that there is nothing after death," he says, "they kill us with no intention of delivering us, but cut us off that we may be deprived of life and pleasure." Now all this is readily applied to the future life and to future punishment. The loss of every year of the life which the sinner might have had but for his sin, is a punishment, and because the life is eternal the punishment is eternal also. There is here no straining of an argument to make out a case. The argument is one which man's judgment has in every age approved as just. "May it not," says the great divine Witsius, who himself held the theory of eternal misery, "may it not, in its measure, be reckoned an infinite punishment, should God please to doom man, who was by nature a candidate for immortality, to total annihilation, from whence he should never be suffered to return to life?" (Covenants iv. 42).

And, in arguing thus, we have confined our attention to the parties actually punished, while we have left out of sight the grand object of all wise punishment—viz., the lesson taught by it to those who have not offended. Viewed in this light, eternal death inflicted on sinners is eternally felt, and has an eternal influence on the parties whom it was intended principally to affect. The actual sinner suffered as he deserved—if not less, certainly not more. His death then intervenes to afford its eternal lesson to all future

times. Those who rejoice in immortality are for ever warned by the aspects of its loss. Milton draws the fallen angels as shuddering at the thought of the loss even of their *life*—lowered, shattered, with no aim or object but evil :—

> " To be no more : sad cure ; for who would lose,
> Though full of pain, this intellectual being,
> These thoughts that wander through eternity ?"

How much more terrible must the thought be to those whose life, from all its associations, is synonymous with joy ! We will here merely add that the term " eternal death," used by us as properly descriptive of the theory of the future destruction and non-existence of the wicked, is the very term used by the best writers of the periods before and after the birth of Christ, when they would describe the eternal loss of life and existence to beings who had once possessed it. The Grecian writer calls it " deathless death ;" the Roman poet calls it " immortal death," " eternal death ;" Cicero, the great master of language, calls it " everlasting death :" even the Christian Father Tertullian, though his theory compelled him to confound life with death, when he would describe a state from which there was no resurrection to life, can find no stronger, truer description of it than " eternal death." Death was the penalty which God pronounced against human sin. All that God purposed to inflict upon Adam and his posterity in case of transgression is included in that word death : " in the day that thou eatest thou shalt die " (Gen. ii. 17). It is of the utmost consequence then that we should understand what God meant by death, nor is there the smallest difficulty in doing so, if we will only attend to what reason and justice require, and what Scripture expressly declares. Its meaning, then, we contend to be, when thus attached to sin as its penalty, the loss of life and existence.

One of the first principles of justice requires that parties threatened with a penalty for transgression, should have the full opportunity of knowing what the penalty was. God accordingly speaks to Adam of death as a thing whose nature Adam knew. Now Adam knew very well what death was in one sense, and one only. He knew it to be the law of the lower creatures, and to consist in the loss of their being and existence. He knew nothing of any secondary senses of death, such as death in sin, or death to sin, for in his innocence he did not know what sin was at all. Still less did he understand by death an eternal existence in agony. He had one clear, well-understood sense for death—the loss of life and being. When God, therefore, threatened death to Adam as the penalty of disobedience, Adam could only know that penalty to mean that he would become like the beasts that perish.

With this, and with this only, agrees everything that Scripture says of death as the penalty of sin. As soon as Adam transgressed, God came to him, and repeated in other words the penalty he had just incurred. It was " Dust thou art, and unto dust thou shalt return" (Gen. iii. 19). God's definition of the death inflicted for the first transgression, is frequently repeated in the latter Scriptures. Paul tells us that it is the death which all men actually undergo, whether they are among the saved or the lost, and therefore an eternal existence in pain can be no part of its meaning (Rom. v. 12, 14, 17, 1 Cor. xv. 22). Such, too, was the death which Christ endured for human sin, the very same penalty, to its full extent, to which man was exposed, and therefore spiritual death, or an eternal life in misery, can form no part of its meaning (Phill. ii. 8 ; Acts ii. 24 ; Rom v. 7, 8). We have thus, if we will accept God's teaching, the clearly expressed sense of death. It was not spiritual death ; that was the sinner's guilty act, not the penalty for his sin. It was not an eternal existence in pain. It was simply the withdrawal of a life whose true aim and object had been lost. God said nothing in the first instance as to whether this death would be temporal or eternal, but what the death was He fully explained. He gave life to the race of man, and would withdraw that life if man sinned. Such was the simple Scriptural meaning of that word Death about which Christian theologians have written whole libraries of confused jargon and hopeless nonsense, since the introduction of the Platonic dogma of the inalienable immortality of man, compelled them to hold that all men must live for ever.

This death, which was the penalty for original sin, is throughout the whole of the Old Testament declared to be the punishment which God will hereafter inflict on such as refuse His offers of mercy. For such God declares He has " provided the instruments of death." Of such as hate Divine wisdom that wisdom says, " They that hate Me love death ; " to the wicked God saith, " Thou shalt surely die," " The soul that sinneth it shall die " (Psa. vii. 13 ; Prov. viii. 36 ; Ezek. iii. 18 ; xviii. 4). But it is not merely by this phrase " death " that the Old Testament describes the punishment of the ungodly. By every expression in the Hebrew language significant of loss of life, loss of existence, the resolution of organised substance into its original parts, its reduction to that condition in which it is as though it had never been called into being,—by every such expression does the Old Testament describe the end of the ungodly. " The destruction of the transgressors and of the sinners shall be together ; " " Prepare them for the day of slaughter ; " " The slain of the Lord shall be many ;" " They shall go forth and look upon the carcasses of the men that have sinned ;" " God shall destroy them." " They shall be consumed ; " " They shall be cut off." They shall be rooted out of the land of the living ; " " Blotted out of the book of life ; " " They are not " (Isa. i. 28 ; lxvi. 16, 24 ; Jer. xii. 3 ; Psa. xxviii. 5 ; xxxvii. 20 ; lxxiii. 27 ; xxxvii. 38 ; lii, 5 ; lxix. 28 ; Job. xxvii. 19). The Hebrew scholar will see from the above passages that there is no phrase of the Hebrew language significant of all destruction, short of that philosophical annihilation of elements which we never teach, that is not used to denote the end of the ungodly. The English reader need only turn to his English dictionary to see that the primary sense of all the above terms is significant of the loss of existence. In a future article we shall show that the primary sense of words is the only sense that is allowable where a lawgiver is laying down for the guidance of men his penalty for transgression.

We now turn to the New Testament. We shall find it in perfect agreement with the Old. Before, however, bringing forward its statements, we will make a few observations on a new feature here introduced—*viz.*, the change of language adopted in the publication of the Gospel revelation.

We remark, then, that the writers of the New Testament must not only be supposed to follow the sense already fixed on the terms for future punishment in the Hebrew Scriptures, but that they also give us another guarantee as to their meaning by their usage of the Greek tongue. The Gospel, revealed to, and recorded chiefly by, Jews, is recorded, not in a provincial dialect, but in the language of the Roman world. We have here a guarantee as to their meaning whose overpowering force upon the present question we will show a little farther on. Paul, and Luke, and John, and Peter, use as the vehicle of their thoughts a language which they had no hand in forming or moulding, but which was already provided for them. They made no claim to alter the world's tongue, but to alter the faith of the world through the medium of that tongue which the world used and understood when they were children learning the meaning of its words from their elders. The ordinary Greek Lexicon, not lexicons of the New Testament coloured and tainted by theological opinion, is the true guide to the Greek of the New Testament. It is only where an idea new to the human mind is brought before it that we have a right to look for a new or modified phrase, whose sense is to be stamped upon it by the teachers of the novel truth. Neither a future life, however, nor judgment and punishment to come, were ideas new to man. Heathen poetry and prose perpetually discussed them before the preaching of the Gospel.

We shall first draw attention to the fact that the punishment of the wicked is just as frequently described as their death, in the New Testament as in the Old, without the smallest effort to show that its terms " death," or " to die," have any new sense placed upon them. These words, like all other words on this question, are used without any explanation; as words whose sense was long established. Thus our Lord, speaking of Himself, says, " This is the bread which came down from heaven, that a man may eat thereof, and not die." And again He says, " Whosoever liveth and believeth in Me shall never die " (John vi. 50, xi. 26). In these passages He implies that they who do not believe in Him shall die. What our Lord implies of the ungodly, Paul affirms of them, " If ye live after the flesh ye shall die " (Rom. viii. 13) Very frequent are the passages in which the expression " death " is used for future punishment. Thus our Lord says, " If a man keep My sayings he shall never see death." Paul affirms of wicked works that their " end is death ; " that " the wages of sin is death ; " of those who perish he says that to such " we are the savour of death unto death." James declares that " Sin when finished bringeth forth death ; " and that " He which converteth a sinner shall save a soul from death." John declares that the ungodly shall suffer " the second death." We have thus, in repeated places, death described as the lot of the wicked in the world to come.

WHAT THE TURK CAN DO.

(From the Pall Mall Gazette.)

NOTWITHSTANDING the denials which have been circulated in the newspapers, we believe it to be true that Turkey has been threatened with a Russo-Austrian Note, setting forth the necessity of conceding certain reforms or privileges to her revolted provinces. And not only so, but we also believe that either at Vienna or at Constantinople, or in both capitals, the Ministers of the Porte have been brought to face the likelihood of a demand that Bosnia should be temporarily occupied by Austrian troops, as a security for the fulfilment of reforms and for the establishment of peace. The presentation of such a Note was all but resolved upon a week ago at least. But we do not yet hear of its presentation; on the contrary, what we do hear are denials, with a clear tone of haste and anxiety in them, that such a step was ever contemplated. The explanation of *all this is*, perhaps, that the two Powers have been confronted with grave reasons for hesitation—reasons apart even from all such considerations as their representatives at Berlin may have to ponder.

The English public has been led to think of the occupation of Bosnia as a light matter, and that view of it seems to prevail universally. It has been talked of as if it were something like the march of a British police constable to the scene of a street fight—as if at once, in the twinkling of an eye, the same pacific consequences would follow in the one case as in the other. But, in act, there is no certainty that pacific consequences would ensue. There is, indeed, a considerable likelihood that opposite consequences would ensue; and it is to be suspected that a somewhat tardy sense of that circumstance has brought all diplomatic conversations about a Note and a necessary occupation of Bosnia to a stand.

"Nothing but a foreign army occupation can save Herzegovina from the risk of a catastrophe," said the *Times* the other day in one of those articles which do such extraordinary mischief abroad and at home. But suppose the Turk's answer is—"Nothing on earth shall hinder a foreign occupation of Herzegovina from being a catastrophe to Europe." If he does say so, he can keep his word: which does not seem to be suspected. "The Sultan" (also said our British mentor) "cannot save Herzegovina; it is as fairly out of his grasp as if its future destiny had been already settled by a Confederation of the Great Powers. But there is still time to save an army which is worthy of a better fate than to perish by cold and hunger." But there is a possibility that the Sultan *might* reply, "If the Herzegovina is to be taken from my grasp, that army shall perish, if it must perish, by a better fate." "Austria could not do a better service" (so the Anglo-Austrian article goes on) "than by repeating in Bosnia and Herzegovina the act of police which she performed in 1854. The Porte would of course protest, and at first, perhaps, refuse to withdraw its own troops; but a State which exists on sufferance must be peremptorily informed that it wastes time by putting on airs of independence." No doubt the Porte would protest. But would it do nothing more?—*can* it do nothing more? That is an important part of the question which seems so far to have been overlooked. The truth is that it is in the Sultan's power to do much more. We fancy there are signs that he has threatened to do it. And, strangely as it may sound, the Sick Man can threaten with such effect as may "bring up" intervention with "a round turn." The explanation of his power is this: the Sultan himself can at any moment precipitate the Eastern Question. It is as easy for him as for any Power to fling the whole of Europe into turmoil. He can do this before the week is out, if Austrian troops enter his territory. For aught we know he has already threatened to do so. And if it be true that the Powers are not yet prepared for that event, either individually or collectively, the threat may have its effect; after which we shall no longer omit from our calculations the circumstance that the Porte can do something more than protest.

A year ago, when the present crisis had not set in, though it had long been foreseen to almost every particular, one of the least intolerant and most honest of the recent Grand Viziers, whilst discussing the position of the Ottoman Empire, declared that every Turk, from the Sultan down to the poorest hamal in Stamboul, was aware that on the day when the Christian Powers demanded concessions on behalf of Bosnia, notice of the ejection of the Turk from Europe would be given. He added, in a tone and with a manner which attested the sincerity of his own belief, "Every drop of Turkish blood will be shed to resist that eviction." It is not enough known how commonly and thoroughly Ottoman statesmen believe that a serious mistake was committed when the fort at Belgrade was surrendered to the Servians, and we have yet to learn, perhaps, how far they have since determined that no pressure shall induce them to suffer territorial encroachment. It may be that the Grand Vizier whom we have quoted did not know his own people; it may be, of course, that such an event as the march of a foreign army into Bosnia would sink the Turks into an abject instead of rousing them into a ferocious despair. But we have no sufficient warranty in their character, their creed, or their position in the world, to rely on any such assumptions. What if they, too, have been preparing for the hour, when, deserted by their friends in Europe, they are confronted by their foes? It is a fact much better understood by those who live among the followers of the Prophet than by our own public men that if Turkish officials have set themselves up as leaders of the religious revival lately kindled among Mahommedans, it is because they know or believe that the impending struggle with Christendom cannot be much longer delayed. Wherever Islamism exists there is religious agitation; and there the influence of the Sultan is never small, while sometimes it is paramount. Unfortunately, far less heed is paid to these facts, and all they signify, than to a declaration of insolvency from Constantinople. Their importance will be seen, however, if Austria, with any of the other European Powers, o march Christian soldiers into Bosnia, and if at the same time (as it well may be) that step is regarded by the Porte as "the beginning of the end." In that case, the Ottoman Government will at once oppose to the resolve this formidable threat—and there's no gainsaying it, or creeping round it: "We resist; we plunge you, prepared or unprepared, agreed or disagreed as to your own policies and prospects in the matter, into the thick of your Eastern Question instantly. And if it is to be war it will be a religious war; and you know what a flame we can kindle here and there in the world, if we choose to give the word that the time has come to fight for the faith and die for it if fate so wills." Not that it would be necessary to utter the whole of the threat. Neither Austria nor Russia—the moving Powers herein—is prepared to be pitched at once headlong into the Eastern Question; and what is to prevent Turkey doing that if they carry out the interference they at one time contemplated? Obviously nothing, if she makes up her mind that the threat must be made and the risk incurred. Therefore it is, probably, that the denials are published.

If the situation is what we suppose it to be—(and nobody can doubt that it is well within the range of possibility)—it follows that we in England cannot afford to think lightly of any resolution to march foreign troops into Bosnia. It is not such an off-hand matter as some of our leading journalists make of it. Mr. Disraeli said a very weighty thing when he said, "England is a great Mahommedan Power." There is nothing more necessary to the right guidance of our exterior policy at this moment, and for a long future, than a full and anxious recognition of that fact. England is a great Mahommedan Power; and unless we are all wrong together events are fast approaching which may bring that fact home to us with poignant force. Of course it will be said that here again we are "alarmists." That cry will not disturb us much if mean time the Government and public opinion in England are awakened to the tremendous possibilities involved in the reflection that an invasion of Turkish territory may not be taken with despairing acquiescence but in another spirit of despair. The result of such an outbreak of resistance—even though England would not be an aggressor by any means might be far more disastrous to her than to any of the real aggressors; because England is a great Mahommedan Power. We have only to glance round the world at our dependencies, and then to think of the Sultan, who is also a Pope, driven to bay by European and Christain aggression, to understand what that means. The possibilities may be distant—they may be the merest possibilities; that we allow. All we say is, they are far too serious to be cast out of account.

THE BISHOP OF MANCHESTER AND HIS PUBLIC TALKS.

(From the Spectator.)

THE Bishop of Manchester will, we suspect, within a very little while, have, to decide a question of some importance to himself and his friends. Will he endure a certain amount of depreciation of a very painful and irritating kind, or will he, to avoid it, consent to limit what he deems a considerable means of usefulness? Unpopularity of a sort is, we can see, coming on him in a curious way. Ever since his acceptance of the Bishopric of Manchester, Dr. Fraser has been trying, and trying most successfully, to show that a brand-new Bishop may be most useful in a brand-new see; that there is nothing in the Episcopal character

which unfits its possessor for modern life under its most modern forms; that a Bishop, if only he is the right man, can extort a recognition of his usefulness even in the Metropolis of Utilitarianism. Besides the ordinary duties of his post, about which no one hears a complaint, Dr. Fraser has endeavoured, throughout all that wide region in which spiritual and material interests are interlaced, to be the first teacher and counsellor and guide of the multitude of half-ignorant folk committed to his supervision. He has "presided" like a philanthropic Peer; preached like a popular preacher; and lectured to ordinary audiences as if he were paid for it,—and he has done all these things well. No novel undertaking of which he approved has lacked the Bishop's support, no kind of audience has daunted nor disgusted him, and he has lectured upon a range of subjects so wide, that it takes a moment to remember that they are all within a Bishop's rightful purview. He has delivered himself not only about doctrine, which it is of course his duty to expound, and ecclesiastical ritual, which in England he is expected to denounce or defend, but about scores of other subjects, ranging from the necessity of purity of life and the advantages of temperance, to the moral duty of not spending too much on furniture and of retaining simplicity in maidens' dresses. He has lectured on the wrath of God and on savings-banks, on righteousness and on chignons, on the conflict between the Bible and science, and on the Christain value of decent manners. In all these utterances he has found a certain degree of acceptance, and has apparently done much good, nor do we see any evidence that among the classes he addresses either his popularity or his usefulness are in any degree diminished. But we do see signs that the more cultivated among his flock and his friends think that the talking is a little overdone, that the Bishops is deceived by the ready welcome he everywhere receives, and that it would be well for him to try the experiment of a little reticence. Flashes of silence, as Sydney Smith said of Macaulay, would, it is thought, become him. He is getting fussy, it is said, and believes in his own power of persuasion on a range of topics too wide for any man to embrace who has a care for his own dignity, and especially for a Bishop, who without dignity would, outside his strictly official duties, have no particular function in this world. We have little doubt that the cavillers are on one point in the right and that many whose opinion the Bishop esteems, will think it probable that he personally will suffer in reputation from talking to large audiences so much and on such a variety of topics, some of them, moreover, topics on which it is nex to impossible even for Dr. Fraser to avoid falling into a strain of platitude. After all, it is very difficult to censure a mania for dress among factory girls without saying things that have been said a thousand times, sometimes in much stronger language; or to inculcate thrift without using phrases which seem, when analysed, to be much more in accordance with the genius of Solomon, who on one side of his head was an early Franklin, than with the genius of Christianity. But though Dr. Fraser will suffer, want of reticence being in the opinion of most Englishmen equivalent to want of judgment, for adhering to the course he has obviously marked out for himself, we are by no means equally certain that his work will, or that he would be right in imposing any check upon his copiousness of public speaking. Without being exactly certain, we suspect strongly that this is just one of those cases where the cultivated and the majority instinctively differ, and where the opinion of the former ought to be resolutely disregarded. It is of a piece with the "snare" so constantly set for good preachers, in churches where two rows among the audience are wearied and worried with teaching which sends the remaining fifty rows home better people than they came. If the preacher is thinking of himself, his own prospects, his own tastes, or even his own improvement, he will preach to the two rows, leaving the fifty to be benefited as much as they can by an ignorant admiration for what may be really fine teaching; but if he is thinking of his work only, he will preach to the fifty, and let the two endure their weariness as they best may. If he can reach the few Normans and the many English both, as some few can, so much the better; but if he cannot, he must even talk English, and submit to be misreported and misunderstood. The real question as regards the Bishop of Manchester and his incessant utterances is not what is dignified for him, of course within well-understood limits, but what is beneficial for his people; and on this point it is quite possible that all the cultivated, and more especially all journalists, are a good deal in the wrong. They do not underrate the value of teaching, for they are always trying to teach, and if there is any honesty in their loud praise of the press and literature generally, they think they succeed; and they do not underrate the importance of reiteration, however wearisome—at least, if they do, practice and theory with them lie very far apart; but they do underrate unconsciously the utility of oral instruction of an acceptable kind. The impatience of lecturing springs a good deal from those who want to lecture.

That conversational lecturing, especially from eminent men, is very pleasant to the majority of Englishmen, needs very little proof. It is quite certain that crowds will anywhere go to hear it. Be the topic what it may, politics, or society, or science, or even that dreariest of important subjects,—education, any man of any eminence or repute for speaking fairly well can always cram a hall. The exhibition, to look at it only in that light, certainly "draws" and draws after very many repetitions. It is hard on the theatre in a country town if the Member is going to speak that night; and a Bishop lecturing anywhere is pretty sure to empty a concert-room, even though it is to be filled with "stars." The people really like to gain information through their ears, to a degree which men with a habit of reading can scarcely comprehend, and if we cannot sympathise with this taste, it is foolish not to utilise it. For it can be made very useful indeed. It seems almost silly to any men that a crowd, say of small shop-keepers, should be so influenced by hearing from persons of authority statements which, perhaps, they all already know and all assent to; but they are so influenced, are all much more certain of truisms when repeated to them from a mind they believe to be strong. We all see this every day in politics. The moment the people are at all excited they crowd to hear the politicians, and though they may hear nothing of which they were not previously assured, they go away twice as energetically convinced. The constituencies did not want their leaders to tell them that the Slave Circular was somehow all wrong. Scarcely one of those leaders, except Sir Henry James, took the trouble to tell them exactly why it was all wrong, but still they went away, after listening to assertions quite as tiresome as the Bishop's worst platitudes about extravagance, much more hostile to the circular than they were before. They have, in fact, to use theological language, the support of authority as well as of reason, and authority, whether a reasonable force or not, is an effective one. It is just the same with the Bishops's talking. If he talked twice as often as he does always provided audiences went to hear him, just twice as many audiences would go away a little more fixed than they were before in convictions it is very good for them, or for any body, to entertain. Some newspaper readers may be a little irritated next day to find "the Bishop again," but a much more numerous class has received a benefit which, were the Bishop silent with dignity, would have been withheld. It is all very well to say they are not influenced, but they are influenced, as is shown by the Associations rising on every side, and by the wholly new position which a Bishop has assumed in Lancashire minds. As it happens, their exists just one extreme illustration of what we say which is visible to everybody. Nobody of authority ever talked so much, as Mr. Gladstone has observed, as the present Pope. He talks on every conceivable subject, to almost every conceivable kind of audience. There never was so much talk from a Pope, and to Protestants a good deal of it seems very weak, or even wishy-washy platitude, but of its influence on the Catholic world there can be no doubt whatever. There are plenty of critics of this Pope, even among high Catholic prelates, but none of them deny that he has had more influence on the Church—good influence or bad influence is not the question—than any Pope since Hildebrand. Whether the Bishop of Manchester always chooses the subject of his public talks wisely is another matter, one to be decided on evidence which is not before us. For ourselves, judging from his reported speeches, we should say that, allowing for a certain conventionality of thought, very apparent in his last lecture on extravagance, he usually chooses for his subjects just those habits, and ways, and peculiarities of his people which might, if unreasonably indulged, be exaggerated into sins or serious social errors,—surely as useful a field for discourse as a Bishop able to see the world as well as the Churches could easily select. That he begins to weary us with his constant speaking, we may confess, and yet feel that in the Bishop's place it might be a duty to go on speaking, and let those weary who would. St. Paul, in that little house without the walls of Rome, must have said things over and over again in a manner which, if he had had reporters, might have wearied Christians, but the effect of that iteration has not wholly died away yet.

LETTER TO THE EDITOR.

MISSIONARIES CARICATURED.

To the Editor of the Friend of India.

SIR,—Amidst the more than usually good fare provided in the last issue of the *Indian Evangelical Review* there is a paper by Dr. Thoburn. The mention of this name is a sufficient guarantee of the excellence of the production. Of this, therefore, I need say

no more. But one was not quite prepared to find a man of Dr. Thoburn's experience and thoughtfulness, falling into an error in regard to missionary work which is just wo rthy of some commonplace member of one of our Missionary *Boards* at home. The sentiment to which I allude is embodied in the following quotation : Speaking of the contrast between your modern evangelist among the natives of India and the apostle Philip, he writes,—'The picture of the good missionary sitting at his tent door with his family around him, his horses under the mango-trees, his savoury dinner in the kitchen-tent, and his plan of future journeyings in his note-book, reminds us so very little of Philip running down the Gaza road to overtake the stranger in the chariot, that one cannot but wonder that any identity should ever have been suspected between the two.' Now, to say nothing of the fact that some of the best European evangelists in India in our time, take neither family, horses, nor kitchen-tent with them, does our friend mean to say that Philip never had anything to eat?—and that he did nothing but run down the Gaza road?—or, that the evangelist he has in his mind's eye was never otherwise occupied than in sitting at his tent-door, waiting for his dinner? And is the modern evangelist to be a man who waits continually on the look-out for some one riding in a chariot reading 'Isaiah'? What would our Brahmin friends say to inviting a dusty unattended, unostentatious beef-eater picked up by the road-side to come and sit by them in their conveyances in order to *explain* matters to them!

Dr. Thoburn should have reflected a little before sending off that utterance to the printer; for a moment's thought would have convinced him that both in India and in his own country there are plenty of persons ill-informed enough to catch up the caricature, who will wholly miss the really good points of his paper; and considering the authorship of the caricature they will pass it around among their friends as so much gospel. How thankful should I be if Dr. Thoburn would only see this, and write a brief note on the subject to the *Review* modifying, in some way, the statement; for it is a statement that will wound many a heart which seeks and obtains its inspiration at the same throne where Dr. Thoburn kneels.

It is almost time that the world should know that the best evangelists in India are men who are all but unknown—men who have seen the end of all perfection, including the puffings and trumpeting of newspapers and reports; and who feel it their truest honor and most blessed privilege to labour for their Heavenly Friend with a studied avoidance of worldly ostentation, content to await recognition at the resurrection of the just. True, they need their dinners, like the man in Dr. Thoburn's graphic picture; but if Dr. Thoburn were to find them not at their well-earned rest, but *at their work*, he would find them sitting on wells, thirsty and weary, discoursing of that water of which if a man drink he shall thirst no more; he would find them on roads, in fields, at villages, in market-places, at festivals, telling everywhere the old, old story, and seeking to save the perishing—unattended by a show of native preachers or missionary brethren but attended by their Master and sustained by him in a work which many have given up in despair.

And as to the 'note-book' in the caricature, does our friend mean to advise that the missionary should deliberately set his face against a 'plan'? He need only think of that body of believers of which he is himself so bright an ornament. Let him, again, think of an example with which he is thoroughly familiar. Were not the mission tours of Paul 'planned?' Was he not able to send messengers on before him to the places he had planned to visit, and to tell before hand where he had planned to 'winter'? The fact is, in the present state of affairs in India, one is almost tempted to say that it does not matter what plan we follow, or whether we reject plans altogether, as long as we *do* the work.

Now, Dr. Thoburn is a public man: it may be presumed, therefore, that he would not adjudge it a rudeness if he were asked why he discontinued the work of an evangelist among the poor Christless miserable heathen, and devoted himself to the work of an evangelist among the English-speaking part of the population; and whether he was ever wholly engaged in the kind of evangelistic work which he so comically brings his brethren to task for not accomplishing? Did he go on his long and weary journeys without family, without horses, without cooking arrangements? If not, he will at once perceive the injustice and unkindliness (wholly unintended, I am sure) of his description of men of God who are still toiling on at work which he has abandoned. What with the misconceptions of the secular press, the ignorance and perverseness of Boards of Directors, and the appalling superstitions by which he is confronted, the true missionary has, God knows! enough to put up with without being taunted and caricatured by men who ought to be in sympathy with him. I am quite sure that in abandoning his former work and devoting himself to his present mode of life, Dr. Thoburn is convinced that he is following his Master's leadings; but there are other ministers of the Gospel who are as deeply convinced that, though the work they are engaged in brings them less prominently before the public, and savours too much of the unseen to be advertised in the newspapers, their quiet, unostentatious labour among the despised natives is not beneath the notice of the Master. Some of us would think more highly of Dr. Thoburn if, instead of lecturing and caricturing those who are devoted heart and hand to the most trying work ever attempted by man, he would *shew* us how it ought to be done.

A PILGRIM.

THE WEEK.

As public attention is so entirely engrossed by the one all-absorbing event of the week, the long-looked-for arrival in Calcutta of the Prince of Wales, we feel sure our readers will agree with us that comments upon other local topics had better be reserved for a future issue.

The following is an account of His Royal Highness's arrival and landing:—

On the morning of the 22nd instant, the arrival of H. R. H. the Prince of Wales being imminent, the Lieutenant-Governor's Yacht *Rhotas*, in tow of the *Sir William Peel*, left Prinsep's Ghaut shortly after eight o'clock to meet the *Serapis*, which was expected to arrive at Diamond Harbour that afternoon. The party on board the *Rhotas* consisted of His Honor the Lieutenant-Governor, C. E. Buckland, Esq., Private Secretary, Captain H. M. Temple, Ex. A.D.C., R. L., Mangles, Esq., V. C., Secretary to the Bengal Government, H. J. S. Cotton Esq., C. S., officiating junior Secretary, H. Hankey Esq., C.S., Inspector General of polics, F. C. Daukes, Esq., C.S., attaché Foreign Office, General Sam Browne, V. C., C.B., the special artist of the *Graphic*, and the special reporter for this paper. The intention was at first to have remained at Diamond Harbour, but at about 10 o'clock the news came that the *Serapis* would anchor for the night off Mud Point, to which place the destination of the *Rhotas* was changed. On either side of the river for some miles below Calcutta, preparations were observable for welcoming the illustrious visitor, and it was only when all signs of habitation ceased and merely the low fringe of jungle skirted the waters of the Hooghly, that these signs of welcome disappeared. At about half past two the *Serapis* was sighted with the Royal Standard floating from the main truck, and the *Rhotas* and *Sir William Peel*, both of which were literally covered with their holiday attire of many colored bunting, rapidly approached the Prince's ship. The *Serapis*, which is, as our readers are probably aware, a sister vessel to the *Jumna*, and in build and appearance similar to the troopships of that class, is painted white, and profusely gilded at the stem and stern. The *Osborne*, a two-funnelled paddle steamer, was in close attendance, and also the *Celerity* pilot vessel, with the Master Attendant on board. The General Steam Navigation Company's flat *Jaboona* was observed apparently performing a circuit round the *Serapis*, now at anchor. By this time the Lieutenant-Governor and staff, having donned their official uniform, were preparing to leave for the *Serapis*, when a boat was observed rapidly approaching the *Rhotas*. This turned out to be one of the *Jaboona's* boats, and brought a message to the effect that the Prince could not receive the deputation just then, as the Pilot had determined, there being very little water under the *Serapis*, to proceed as far as Culpee before anchoring. The *Serapis* now steamed slowly ahead with the *Osborne* abreast on her port side, the *Celerity* and *Rhotas* following in her wake, which order was maintained until the vessels anchored at Culpee at about half past five. Presently a boat was lowered from her after starboard davits, and in a few minutes was alongside the *Rhotas* with General Probyn, the Prince's Equerry, and Major Bradford, on board. These gentlemen, after a short conversation with the Lieutenant-Governor, left again for the *Serapis*, accompanied by General Sam Browne. A few minutes later the Lieutenant-Governor, accompanied only by his Private Secretary and Mr. Daukes, followed.

On board the *Serapis* the Lieutenant-Governor and party were received by Captain Glyn, and introduced by that officer to His Royal Highness, by whom they were cordially welcomed. Sir Bartle Frere, Lord Suffield, Dr. Russell, Captain FitzGeorge, and the Officers of the Prince's Staff were also introduced to the Lieutenant-Governor. No official business was transacted at this reception, at the conclusion of which the Lieutenant-Governor and party withdrew and returned to the *Rhotas*.

The shades of evening were now rapidly deepening, and the many lights shining through the port holes of the *Serapis* had a picturesque effect, seen across the intervening waters. The *Rhotas* was illuminated along the whole of her length, as also the *Sir William Peel*. The illumination on the *Rhotas* consisted of a row of white lights on the upper deck, prettily contrasted by the green and ruby lamps which ran along the lower deck near the water's edge, while the *Sir William Peel* was hung from deck to mast heads with white lanterns. The effect from the water as seen by a party on board one of the *Rhotas's* boats was most charming. The great length of the two vessels gaily illuminated with lamps that burnt with steady lustre in the still and almost breezeless night presented a view well worth looking at, and contrasted

brilliantly with the starlit sky which, serene and unclouded, looked down upon the scene.

At daybreak the ships started for Calcutta, the *Rhotas* leading the way. The *Serapis* and *Osborne* were to follow as soon as the tide would give sufficient water to take them over the James and Mary's. Along the banks of the river already might be noticed at intervals congregations of the dark sons of the soil waiting to see the vessel pass which was bearing their future Emperor. At the confluence with the Roopnarain just opposite the James and Mary's, this was especially noticeable, some hundreds being collected, while at Ooloobarriah the inhabitants, who had hoisted a few scarlet flags on bamboos, greeted the appearance of the vessels with shouts and a vigorous beating of tom toms. The Fort Gloster Mill was distinguished by its mottoes of welcome and the crowds of its employés thronging roof and window. Just before reaching the King of Oude's palace, a large concourse of people were seen drawn up in front of the river. They evidently mistook the *Rhotas*, from the amount of gay colored flags flying, for the Prince's ship, and cheered lustily. Progress was now slow, as the vessels were waiting for the tide to turn before going up to moorings. Passing the dethroned King's palace, which was sullenly undemonstrative and bare of people, and turning the point immediately beyond, the whole panorama burst upon the view of the wide river with its countless ships dressed in their holiday suit of flags, and many of the nearest, swinging to the tide, gave the open path between them the air and appearance of a grand marine avenue, down which the great white ship steamed slowly and majestically. The men of war now fired their salutes. Some very tasteful arrangements had been made at the P. and O. moorings—the yards of the steamers were manned—and in front of the Master Attendant's house a perfect forest of flags was observable. The *Serapis* now steered past the *Immortalité* and *Topaz*, which lay in the order named, and anchored between the latter and the *Doris*. The yards of all these were manned by their jolly tars, and it was an amusing thing to watch the celerity of their descent, when hands were piped down. The *Rhotas* herself now anchored opposite Prinsep's Ghaut. The Ghaut was hardly recognisable, so glorified was it with scarlet awnings and crimson foot-cloths stretching from its front along a boarded way that led down to a boat moored as a landing place. The grey pillars were wreathed with green garlands, and the grey facade covered with mottoes of "Welcome to Calcutta" and "God bless our Prince," while over all and interspersed so thickly as almost to hide much of the elaborate decoration details, waved a multitude of banners, conspicuous amongst which, spanning the entrance from the river, were the Union Jack and the Royal Standard. The *tout ensemble* was really most tasteful. At 3 o'clock the Lieutenant-Governor and Staff proceeded on board the *Serapis*.

From an early hour in the day the banks of the river had been alive with thronging groups of people which, as time wore on swelled into crowds. Long before the hour announced for the Prince's landing the seats at the ghaut began to fill, and the long line of streets through which His Royal Highness was to pass to be lined with thousands of people. A countless crowd of carriages, *gharries*, and vehicles of every description rolled towards Prinsep's Ghaut. To describe the scene would be almost impossible. Time was now wearing on, and a brilliant assemblage might be seen within the railed enclosure. Here were gathered the European officials, the Native Princes and feudatories, and all those entitled to an introduction to the Prince. Amongst those present we noticed—

The Maharajah Holkar; The Maharajah of Travancore; The Maharajah of Jodhpore; The Maharajah of Puttialla; The Burmese Ambassadors; The Maharajah of Benares; The Maharajah of Pubna; The Maharajah of Cashmere; The Maharajah of Jeypore; Sir Salar Jung; The Nepal Ambassador (General Runnodeep Sing); The Rajah of Jheend; The Begum of Bhopal; The Maharajah of Rewah; The Maharajah Scindia; The Rajah of Naheen (Sirmoor,) and Nawab Abdool Gunny Miah, C. S. I.; Khajah Asunoollah, Khan Bahadoor; His Highness the Maharajah of Burdwan; and His Highness the Maharajah of Johore; The Maharajah of Benares, The Maharajah of Punnah, The Maharajah of Vizianagram, The Mysore Princes. His Honor the Lieutenant-Governor, the Commander-in-Chief, Major General the Hon'ble Sir Henry Norman, K. C. B., the Hon'ble A. Hobhouse, Q. C., Hon'ble E. C. Bayley, C. S. I., the Hon'ble Sir W. Muir, K. C. S. I., the Hon'ble Sir A. J. Arbuthnot, K. C. S. I., Colonel the Hon'ble Sir Andrew Clarke, R. E. K. C. M. G., C. B., the Hon'ble John Inglis, C. S. I., the Hon'ble Sir Douglas Forsyth, K. C. S. I., the Hon'ble Ashley Eden, C. S. I., the Hon'ble C. S. Hope, His Highness Maharajah Iswariparshad, Maryan Singh Bahadoor, of Benares, the Hon'ble Maharajah Sir Drig Bijoy Singh, Bahadur, of Balrampur, K. C. S. I., the Hon'ble D. Cowie, the Hon'ble Raja Narendra Krishna Bahadoor, General Litchfield, American Consul, the French, German, and Austrian Consuls. Mr. Justice Louis Jackson, Mr. Justice Macpherson, Mr. Justice Phear, Mr. Justice Pontifex, Mr. Justice Romesh Chunder Mitter, and Mr. Justice Morris, &c., &c., &c.

Punctually at half-past four the Prince left the *Serapis* amidst thundering salvoes of artillery and landed accompanied by his personal staff consisting of—

1. His Grace the Duke of Sutherland, K.G.
2. The Right Hon'ble Sir Bartle Frere, G.C.S.I., K.C.B.
3. The Lord Suffield, (Lord in waiting and Head of the Household of H. R. H. the Prince of Wales,
4. Major-General Lord Alfred Paget, (Clerk Marshal to H. M. the Queen).
5. The Earl of Aylesford.
6. Major-General Probyn, C.B., V.C., (Equerry in waiting to H. R. H. the Prince of Wales.)
7. Lieutenant-Colonel Arthur Ellis, (Grenadier Guard, Equerry in waiting to H. R. H. the Prince of Wales.)
8. Mr. Francis Knollys, Private Secretary to His Royal Highness the Prince of Wales.
9. Surgeon-General Fayrer, C. S. I., (Physician to His Royal Highness the Prince of Wales.)
10. Captain the Hon'ble H. Carr Glyn, C.B., Royal Navy, Aide-de-Camp to Her Majesty the Queen, (Commanding H. M. Ship *Serapis*,
11. Colonel Owen Williams, (Commanding Royal Regiment of Horse Guards.)
12. Lieutenant Lord Charles Beresford. M. P., Royal Navy (Aide-de-Camp to H. R. H. the Prince of Wales.)
13. Captain Lord Carrington, Royal Horse Guards, Aide-de-Camp to His Royal Highness the Prince of Wales.
14. The Reverend Canon Duckworth, (Chaplain to H. M. the Queen and to H. R. H. the Prince of Wales.
15. Lieutenant Augustus FitzGeorge, Rifle Brigade (Extra Aide-de-Camp to H. R. H. the Prince of Wales).
16. Commander Durrant, Royal Navy, (Commanding Royal Yacht *Osborne*).
17. Mr. W. H. Russell (Honorary Secretary to H. R. H. the Prince of Wales).
18. Mr. Albert Grey (Private Secretary to the Right Hon'ble Sir Bartle Frere).
19. Mr. Sydney Hall, (Artist in the Suite of H. R. H. the Prince of Wales.)

Here the Prince was met by the Viceroy and the following Justices who formed the deputation for the purpose of presenting the address to H.R.H. :—

Hon'ble S. S. Hogg,—*Chairman of the Justices.*
Baboo Sree Nauth Ghose,—*Vice-Chairman.*
Hon'ble Sir Richard Garth, Kt.,—*Chief Justice.*
The Right Revd. the Lord Bishop.
His Grace the Most Revd. Archbishop Steins.
E. C. Morgan, Esq.,—*President, Chamber of Commerce.*
Rajah Romanath Tagore, Bahadoor, C. S. I.,—*President, B. I. A.*
R. Allardice, Esq.,—*Master, Trades Association.*
Hon'ble J. R. Bullen Smith,—*Sheriff of Calcutta.*
Hon'ble V. H. Schalch, C. S. I.
Hon'ble H. H. Sutherland.
F. J. Fergusson, Esq.
J. B. Roberts, Fsq.
E. S. Gubboy, Esq.
Manackjee Rustomjee, Esq.
J. Ewart, Esq., M. D.
Hon'ble Kristodas Pal.
Rajah Jotendro Mohun Tagore, Bahadoor.
Baboo Rajendralala Mitra.
Hon'ble Rajah Norendra Krishna, Bahadoor.
Baboo Degumber Mitter.
Nawab Ameer Ali Khan Bahadoor.
Prince Mahomed Furruck Shah.
Moulvee Abdool Luteef, Khan Bahadoor.
Rajah Harendra Krishna, Bahadoor.
Rajah Komul Krishna, Bahadoor.
R. Turnbull. Esq.,—*Secretary to the Corporation of Justices.*

The following Address by the Municipality was read.

"May it please Your Royal Highness,—We, the Corporation of Justices of the Peace, and the undersigned Citizens of Calcutta, approach Your Royal Highness with a most respectful and heartfelt welcome on this joyous occasion of the visit of Your Royal Highness to this great Dependency of the British Crown, to express to Your Royal Highness, and through Your Royal Highness to our beloved Queen, the earnest assurance of our allegiance, loyalty, and devotion to Her Most Gracious Majesty's person and Throne.

The advent of the Heir of our Gracious Sovereign to this country is a source of universal rejoicing and gratification to the people. The occasion awakens associations connected with the many mighty and ancient dynasties of this vast Empire, now so happily centred in the Royal Throne of England, and we hail with no ordinary enthusiasm the presence of the heir to that throne in the Capital City of Her Majesty's Indian Empire.

We doubt not that this visit of Your Royal Highness will be for ever remembered as a great and prominent event in Indian history,—an event which, while strengthening and cementing with fresh bonds the loyalty and attachment of the people to their Sovereign, affords them an additional pledge of Her Majesty's unceasing interest in their welfare and advancement.

In this City Your Royal Highness will meet with abundant indications of the moral and material progress, and of the prosperity, which everywhere follow on British rule, in its numerous structures and works of public utility. In its extensive trade, and in the spread of education and intelligence amongst its citizens, will be found all the signs of a prosperous and contented people.

The only regret, mingling with the universal enthusiasm evoked by the intelligence of the projected visit of Your Royal Highness, was caused by the intimation that the Princess of Wales would not accompany the Royal Progress through India. We respectfully beg Your Royal Highness to convey to Your Royal Consort the sincere expression of our regret that we have thus been unable to prove to Her Royal Highness our loyal devotion and attachment by welcoming with acclamation Her bright and gracious presence among us.

Respectfully wishing Your Royal Highness the fullest enjoyment in your interesting Tour, and earnestly hoping that Your Royal Highness will bear away pleasing impressions of the country and its people, &c.

His Royal Highness made the following reply :—

GENTLEMEN.—I thank you for your welcome to the Capital of British India.

It is a great personal pleasure to me to find myself in a city so full of historical associations connected with our Empire in the East.

It is a still greater gratification to be received with such demonstrations of loyalty to the British Crown, and to see on every side the marks of prosperity and contentment, intelligence and progress.

I will convey to the Queen your expressions of loyalty and gratitude to Her Majesty, and to the Princess of Wales what you so kindly say of your regret that she was unable to visit India.

The Princess, I can assure you, very sincerely shares the feeling. She would most gladly have accompanied me, had not the fatigues of such a long journey, and the necessity for watching over our children at home, proved insuperable obstacles.

I feel certain that every day I remain in India will deepen and strengthen the impression of interest in the country and its people, which I have always felt, and will thus realise your anticipations of increased pleasure from my longer stay among you.

His Royal Highness, accompanied by the Viceroy, the Lieutenant-Governor, the Members of his personal staff, and a crowd of lesser notabilities, now entered the enclosure in front of the ghaut, being all the while loudly cheered, and the introduction of the Native Prince's and others was performed by the Viceroy. The Prince's manner was most gracious and affable, and he appeared genuinely pleased to meet the loyal subjects who crowded to do him homage. On leaving the enclosure and proceeding through the ghaut to the carriage in waiting, His Royal Highness was again loudly cheered, and these demonstrations of welcome continued throughout the entire route of the procession. When the Prince entered the gates of Government House a salute fired from the guns of Fort William brought the public festivities of the day to a close. His Royal Highness dined with the Viceroy.

MONEY MARKET.

FRIDAY, 24TH DECEMBER.

THE enlarged demand for money, which was noticed last week, has now made no further progress, and the anticipations then expressed that a dearer market would likely set in with the new year, seem now still more likely to be confirmed. The most marked change in affairs this week has been in the course of Sterling Exchange, which has not only advanced from a half to three quarters per cent, but has shaken off a great deal of the depression that has characterized it for months ; there are signs that funds laid in for the busy season, the rapid investment of which was evidently the tangible cause of recent depression, are now becoming exhausted, and although the private deposits in the Bank are still large, they do not seem to be held so greatly on behalf of operators in exchange. The advance in rates this week is only just what has been looked for, but it has come about more quickly than was recently expected ; it is likely to do good to business generally, for an unnaturally low exchange suits few if any ; even exporters of produce do not usually find their operations more succesful with a very low exchange than with one at a fair level, and even now rates are only approximating towards their natural basis, silver. Bank Bills, at six months' sight, which closed for last mail at 1-9 13/16, opened for this opportunity at 1-9⅞, at which a moderate amount was taken by remitters ; 1-9 15/16 was subsequently conceded, and finally 1-10, something like an equal amount being sold at each rate. Telegraphic has been done at 1-9⅞ and 1-9 9/16, and possibly a fraction higher could now be obtained by large buyers. Mercantile paper is coming to market more freely, another sign that the forward contracts are becoming exhausted, for there has been plenty of export business doing, for many weeks past, to make far more bills than have been offering for sale. Credits have ranged from 1-10 to 1-10 3/16, the last rate being given to Banks when private buyers were filled up, and Documents have been sold at rates advancing from 1-10⅛ up to 1-10¼.

The closing rates for to-days mail were :—

Bank Bills	1-9 15/16 to 1-10	Six months' sight.
Credit Bills	1-10⅛	
Document Bills	1-10⅛	

The changes this week in the position of the Bank of Bengal are calculated to give strength to rates, the deposits having decreased 23½ lakhs, the Bills Discounted having increased 8 lakhs, and the Credits &c. 2 lakhs. The Cash Balances have increased 29 lakhs, and it is understood that Government will presently be sending a considerable sum of specie to Bombay.

The market for Government Paper has been very flat, and all descriptions are slow of sale. The four per cents have remained tolerably steady in price, there being always buyers to a certain extent for that standard stock, but if any large amount were offered, it is very unlikely present quotations would stand. The week's business, a very small one, went as under :—

4 per cents, all at 102.
4½ do. 102-14, 2-12, 2-14, 102-12.
5½ do. nothing.

and quotations now are,

4 per cents. 102.
4½ do. 102-12.
5½ do. 107-8. nominal.

Business in the Share Market is evidently suspended until quiet is again restored after the loyal demonstrations now going on : very little business has been done during the week, and only in small amounts. There is a feeling, however, that more lively times are not far off, and that next year may recoup some of the losses of the present. The over investment that has spoiled the market must by this time be getting absorbed, but until the Joint Stock concerns on this market are more largely held on capital instead of on borrowed money, there will be times of depression in the most sound stocks. The business of the week includes the following :—

Bank of Bengal 1,485, several tranactions.
National Bank 109, 8½, 109.
India General Steam 410.
Bengal Coal 1,400, ex-dividend.
Barnagore Jute 89, 9, 88¾.
Howrah Jute 75, 6, 5, 76.
Calcutta Jute 98.
Budge Budge Jute 8 discount, ex-dividend.
Burkola Tea 99, 99, ex-dividend.
Central Cachar 137, 137.
Singell 103, 3, 104.
Chota Nagpore 106, 106.
Dehing 60.
Gowhatty 87,

The Mails of 3rd December will be here to-morrow (Saturday) morning.

INDIAN INTELLIGENCE.

BENGAL.

WE learn that the Revd. Dr. Thoburn has arranged to hold services at the Corinthian Theatre similar to those he held last year.

THE half-yearly meeting of the Bengal Chamber of Commerce was held pursuant to notice on Monday in the hall of the Chamber. The proceedings were of more than usual interest, as the subject of the new Tariff Bill was discussed at some length.

COLONEL HYDE, the Master of the Calcutta Mint. who goes home in February on two years' furlough, will, the *Pioneer* says, hold during his furlough the appointment just vacated by General Strachey, probably retiring at the end of his two years.

A WIDOW marriage, according to Brahmo rites, was celebrated on Saturday at the house of Baboo Doorga Mohun Dass, South Circular Road, the bridegroom being Baboo Ram Duhlabh Mozumdar, head-master of a provincial school, and the bride Srimati Susila, a widow of about twenty-two years of age, who has been for some time a pupil in Miss Akroyd's School.

THE *Bombay Gazette* now asserts that Colonel Ballard has declined the appointment of Mint Master of Calcutta, and that the appointment will probably be given to Colonel Tennant, R.E., who was designated the other day for the suggested new post of Indian Astronomer Royal. Lord Northbrook is said to be of opinion that India can do without an Astronomer Royal at present.

THE Government of India is stated by a contemporary to have ruled that no Government servant is entitled to a month's notice previous to his discharge from the service, unless he is under special covenant. Any one ordered by Government or by any district authority to be discharged, should be so discharged from the date of the receipt of the order at the station where he may be serving.

THE Mitter Brothers of Chorebagan have celebrated the *shrad* of their mother with great *eclat*, 800 Brahmins, 1,000 Kayasts, and 1,000 Nabasaks being feasted. Gifts were made to all the Brahmins, and charitable doles given to 12,000 poor people. The most novel feature of the *shrad* was that the Hindoo visitors to Europe, who since their return have lived as if they were outcasted, were invited to the dinners given on the occasion.

THE *Mirror* points out that next to Government the Roman Catholics own the largest number of educational institutions in the city. The following is the list of our Catholic Schools according to the *Indo-European Correspondence* :—St. Xavier's College, 500 pupils ; Bengal Academy, 120 ; St. Joseph's Day and Boarding School, 200 ; Cathedral Orphanage, Moorghyhatta, 220 ; St. Joseph's Free School, 180 ; Mr. Vallis's private School, 75 ; St. Chrysostom's School, 60, Loretto Convent, Chowringhee, 200 ; Entally Orphanage and Boarding School, 250 ; Bow Bazar Pay and Free Girls' School, 320; Cathedral Pay and Free Girls' School, 60 ; St. John's School for Girls, 50 ; Dhurrumtollah Sunday School (average attendance) 150; Cathedral Parish Sunday School, 120. These figures show that over 2,500 children are receiving education in the different Catholic Schools of Calcutta.

A RETURN to the House of Commons, moved for by Mr. Fortescue Harrison, has just been printed, giving information connected with the Bengal famine. The total approximate cost of relief works to Government is estimated at £1,662,612. Mr. Harrison, the Controller-General of India, in a communication to the Government of India dated Calcutta, May 21st last, shows that the excess of famine expenditure over loans to July 31st, 1874, was £1,667,731. After setting forth the various loans in India and England, he adds, "It will be observed that the net expenditure at the close of July was greater than at the completion of the year in consequence of the recoveries during the later months being in excess of the charges. On the other hand, only a small portion of the two and half millions loan raised in India had been recovered before July 31st, so that no unexpended balance was on hand on that date. From these causes little comparison is possible in the accounts or estimates already furnished with the financial statement, but there seems no reason to question their correctness. The recoveries at the close of February last were already sufficient to reduce the net expenditure to within forty lacs of the estimated amount.

ON the evening of Friday week a large number of ladies and gentlemen, comprising chiefly those interested in the Institution ; assembled at the Calcutta *Martiniere* to witness the distribution of prizes to the young pupils who merited the distinction. The Hon'ble Sir William Muir presided on the occasion. As a prelude a pianoforte duet was played by two girls, followed by a glee which was very well rendered. The prizes were then distributed ; Miss Alice Baker carrying off the medal on the girls' side, and, H. Cashman on that of the boys. The classical scholarship was allotted. to a boy named Alders, and the mathematical to one named Johannes The ceremony of distribution being over, Sir William Muir rose and expressed his pleasure at being asked to preside on so interesting an occasion; and after dwelling at some length on the satisfactory report of the progress of the institution, proceeded to address the girls and boys in a very earnest manner, exhorting them to prosecute their studies assiduously, requesting them to remember with gratitude what they owed the institution for the liberal education they received through the bounty of the late General Martine, and further impressing upon them the necessity of taking full advantage of their education in all its branches. The National Anthem terminated the proceedings. The school-room was elegantly decorated with banners and a profusion of foliage.

NORTHERN INDIA.

THE Talookdars of Lucknow are determined not to be excelled by their neighbours in giving a welcome to the Prince of Wales. At their last meeting a vote of Rs. 45,000 was sanctioned to be expended in fireworks, illumination, and a banquet.

THERE has been a severe earthquake at Peshawur. The Military, Civil, and Police buildings have, we regret to hear, suffered most severely. Nowshera Cantonment has suffered much. Many lives have been lost in the district, but happily none in cantonments or the city. The same shock was felt at Lahore, and over a great part of the Punjab.

A CORRESPONDENT at Akola, writing to the *Bombay Gazette* on the 5th instant, says :—"The swindler Mr. Kavananagh, *alias* Captain Molyneaux, Government Auditor of Railway Accounts, *alias* Mayo Bourke, a relative of the late Governor-General, as he gave himself out when caught, was arrested by Mr. Lima, Inspector of Police of the Cantonment of Kamptee, near Gwalior, and was taken into Nagpore on the 3rd instant, through this station. This sharp individual, it appears, had plied his game in Nagpore and Kamptee to the tune of Rs. 1,000 and odd, and succeeded moreover in duping several shop-keepers, including Bunsee Lal Aberchund, the great Kamptee and Nagpore Banker. The Cantonment Magistrate at Kamptee. Major Playfair, has the trial of the case. Mr. Elliot left for Baroda on the 1st instant. The next to leave the station, I learn, is our popular Civil Surgeon, Dr. J. A Laing."

A KHOJA tradesman, named Alloobhoy, or Allovanee, a British subject, appears to have been subjected to some very cruel treatment at the hands of the Jam of Lus Beyla's myrmidons. It is said that a charge was preferred against him of having conspired to defraud certain underwriters in Kurrachee by getting goods, shipped by him for Malabar, thrown overboard, on the pretence of stress of weather, and claiming some thousands of rupees on them when their actual value was not above a couple of hundred rupees. The crew of the boat were, of course, in collusion with him. Whatever grounds there may have been for the accusation, the Naib of Ormara certainly went about dealing with the matter in a very off-handed manner ; he had Alloo put into the stocks, where he was kept for days. The price of his release was a handsome sum which Alloo was either not in a position, or disinclined, to pay. At date of latest advices it would appear he had been released on a friend furnishing security for the amount.

THE irrigation operations in the Punjab during the autumn of 1874-75 show a falling off of about 52,000 acres, as *compared with* the corresponding period of the previous year. The decrease appears to have occurred chiefly in the districts watered by the Eastern Jumna and Bari Doab Canals That the diminution is due to other causes than the variation in the rainfall is clear from the fact that in Rohtuk and Delhi, where the rainfall was less than in the previous year by 4 and 12 inches respectively, the decrease in the irrigated area was nevertheless 10,000 acres. In the districts of Umritsur and Lahore again, where over 80 per cent. of the irrigation comes from the Bari Doab Canal, there was a decrease of 9,000 acres, although the rainfall in each was considerably below that of the previous year. There was an increase of 70,000 acres on the Inundation Canals, which is doubtless due to the timely and abundant rainfall indispensably necessary to the successful operation of such works. Nothing is said of the operation of the Delhi and Goorgaon works.

THE sickness created in the Bulundshuhr district by defective canal drainage has been frequently called attention to through our columns, but nothing we (*Delhi Gazette*) have said on the subject is half so graphic as the official report of the District Superintendent of Police on the health of his force in the year 1874. He says that so severely was that force visited by fever, that for many months it was positively crippled. One Sub-Inspector died, another had to be sent away twice for a month each time, a third was reduced from a powerful active man to a walking skeleton, while a fourth was for months quite unfit to leave his station. At Narora the head officer or clerk had to be changed four times in three months, and at almost all the smaller stations the story was the same. The constables fell sick in numbers, and leave to go home had to be given to almost every one who asked for it. Inspector Emile had to be sent to the hills delirious, and Inspector Martin Blake, after having been unavailable for duty a long time, obtained three months' leave. In this state, crippled for want of superior officers, and with the men disheartened and feeble from sickness, much was left undone with the Police Force that in a more favorable year would have been pushed on, as pressure could not be brought to bear upon men whose minds were chiefly occupied with the thought how they might escape sickness.

BOMBAY.

IT has at last been settled that the payment of the Government Police grant of about a lakh a year to the Municipality of Bombay shall be continued regularly from year to year.

DR. ANNA MORESWAR KUNTE, who has lately passed the M. D. Examination of the Bombay University with success, is the first B. A., L. M., and the only Native Doctor of Medicine ever passed on that side of India.

THE MAHARANEE JUMNABHAEE lately made very handsome donations to the Camp at Baroda : Rs. 2,000 for prizes at soldiers' sports, European and native ; Rs. 1,000 to the Racket Court ; and Rs. 1,000 to the station swimming baths.

AS one result of his recent journey to Bombay, to wait on H. R. H the Prince of Wales, the Nawab of Joonaghur rejoices in the increase of two bangs to the artillery salute accorded him, and in having been promised a Political Agent exclusively his own. All the Kattiwar chiefs who visited Bombay have returned to their respective capitals.

THE second annual general meeting of the shareholders of the Indian Cloth-selling Company Limited, was held at Bombay last week. The directors' report and the balance sheet for the year ending the 30th September last were adopted. The sales of cloth during the year under report amounted to Rs. 18,000, and the profits to Rs. 1,278, Of this latter sum the establishment and contingent expenses amounted to Rs. 1,234. The net profit of Rs. 44, which remained available for dividend amongst the shareholders of the Company, was, instead of being distributed, decided to be added to the reserve fund.

THE Bombay *Statesman* says :—After a long service, extending over thirty-five years, Mr. A. R. Gordon retires from the charge of the Currency Office of Bombay. Mr. Gordon has, we believe, done good service as a Treasury Officer, and has well earned his pension and retirement. Dr. G. W. Cline, Barrister-at-Law and of the Financial Department, has been appointed by the Government to the charge of the Currency Office in his place. Before leaving Calcutta it was intimated to him that he should live on the Currency premises ; this has been made a necessary clause in the appointments of the Currency Officers, both of Calcutta and

Bombay, and we think rightly, as the vast business now transacted in the Currency Offices of the two Presidencies equals that of any of our largest banks in India. Dr. Cline was in Bombay three years ago, when he made himself popular with all sections of the community, and was appointed on the Municipal and other Committees by Sir Seymour Fitzgerald.

MADRAS.

AT a general meeting of the proprietors of the Bank of Madras held on Monday last for the purpose of electing two Directors in the room of Mr. G. E. Branson and Mr. W. W. Munsie, to go out by rotation, those gentlemen were re-elected.

THE MASONS of Madras presented the Grand-Master H. R. H. the Prince of Wales with an address, on parchment, containing representations of the various signs and lodges in the Madras Presidency, beautifully decorated with their respective banners and mottoes. The following is a list of the various lodges represented therein :—Universal Charity, Pitt MacDonald, Perfect Unanimity, Deccan (Chunderghat), Grand District, Bangalore, St. John, St. Andrew, Good Will with Good Deeds, Western Star, Mayo, Hope, Faith, Hope, and Charity, Rock and Mount.

A SUIT has been filed in the Madras High Court by Mr. Champion in behalf of one Somasoondrum Moodelly against the Municipal Commissioners for the Town of Madras, and Mr. S. Jasudasen, Municipal Collector, for the recovery of the sum of Rs. 10,000, being the amount of damages sustained by him by reason of the defendants having maliciously and illegally obtained a warrant for his arrest, and wrongfully confining him. The plaintiff alleges that his brother had to pay a certain tax to the Municipality, and that after he had done this the defendants took out a warrant for the apprehension of the plaintiff, who was wrongfully arrested. The suit will come on for settlement of issues on the 5th proximo.

FROM the figures compiled by Mr. Atkins, it seems that in the Bombay Presidency there are 1,144 Europeans and Eurasians unemployed, and without the means of subsistence, having 219 persons dependent on them, or in all 363 destitute people. The figures for the Punjab show a total of only 32. In the North-West Provinces, the number is 372, or 124 heads of families in destitution, with 248 souls dependent on them. In Bengal, the unemployed Europeans and Eurasians number 432, with a dependence of 758, giving a total of 1,190 in destitution. In the Madras Presidency the figures are respectively 414 and 875, yielding in all 1,289. The class comprises eighty trades or professions, from a doctor down to a coachman.

A CROMLECH has been discovered by Mr. Theobald, the Head Forester of the Annamalay Range, in one of the sholays on the hills. It was constructed of slabs of granite stone, and buried in the ground, the cover, or lid, alone being on a level with the ground. It took twenty men to move it. The inner dimensions of the cromlech were about five feet in length, three in breadth, and four in depth ; it was filled with earth, and on digging into it, a few bones, several potsherds, an axe head, and a spear head were found. The potsherds were very thin, and quite different to those now manufactured. The bottom of the cromlech was also lined with a granite slab. The contents Mr. Theobald has carefully removed and kept. This is the first one found on those Hills, and although the Karders (Hill tribes) lived near to the spot, and often slept on the slab covering it, they never suspected that it covered a grave. At one end of the grave there were the stump and roots of a *very old* teak tree, which must have grown years after the man was buried. The bones are quite decayed, and could be crushed between the fingers, and the axe and spear-head, are quite rust-eaten, so that the grave must be some hundreds of years' old, and perhaps contained the remains of some old warrior who fled to those jungles during some of the wars.

THE set of Scriptures presented to the Prince by the Committee on behalf of the Madras Auxiliary Bible Society are five in number, and comprise a Canarese Bible, a Tamil Bible, a Hindoostanee Testament, a Teloogoo and a Melayalum Bible. The books are full bound in green, purple, maroon, crimson, and blue-black Russia leather, and are ornamented with gilt lettering and plates on both sides. The front of each volume bears in gold letters the inscription, "Presented to H. R. H. the Prince of Wales by the Madras Auxiliary Bible Society, December 1875." The Society have enclosed with the books a copy of their last report for 1874, being the fifty-fith year of their existence ; from which the Prince may learn that from the year 1820 to the year 1874 inclusive, 147,358 Scriptures were issued and sold in the English and other European languages, and 2,338,946 in the native languages, or a total of 2,486,304 issues ; that the circulation of entire Bibles and Testaments rose from 967 and 1,512 in 1873 to 1,108 and 2,113 respectively in 1874 ; and that during the latter year the Society's agents visited villages and "village towns" on 11,157 occasions, travelled 65,157 miles, and made 223,398 house-to-house visitations. The presentation volumes are enclosed in a rose-wood case, blue velvet lined, supplied with a Chubb's silver lock and key, silver handles and hinges, and a diamond shaped plate of silver on the lid, having a representation in relief of the Prince's Crown, Plumes, Motto, and Garter with a suitable inscription engraved beneath.

ASIA.

THE following news from Acheen is published in the *Penang Gazette* of Dec. 1st :—"Although there has been hardly any fighting during the several months, and no territory lost or gained, still matters are beginning to look brighter for the Dutch. Owing, no doubt, to various hygienic measures the state of health in the Dutch camp is decidedly favourable, and in the month of October ten days passed without a single death among the European troops. The Artesian well supplies sufficient water of good quality, the ice machine is in good working order, the railway from Oelehleh, the village where the landing-place is situated, to Kotta Rajah (a distance of about three miles) is fast approaching its completion, the iron pier is already constructed, numerous substantial buildings are in course of erection, and road-making is vigorously carried on. Judging from the numerous retail traders of all nationalities, who leave Penang for the Dutch settlements at Acheen one would think the place must soon become a populous, thriving town, more especially since the disapperance of epidemic diseases. General Pel having now returned, and the battalions having been brought up to their full strength, we may soon expect to hear that the Dutch have made further advances into their enemy's territory. We are informed that Regas on the West Coast, and Langsa on the East Coast, both hitherto hostile States, have expressed their desire to submit to the Netherlands.

THE *Times*, remarking upon the difficulties which Sir Thomas Wade has had to overcome in his negotiations with the Chinese Government, says that the way of peace is not yet absolutely smooth. The most important concession of the Chinese is, of course, the authority given to Mr. Grosvenor and Mr. Baber to go to Yunnan and be present at the inquiry into the murder of Mr. Margary. But the task, as shown in a very startling way by the investigation which followed the atrocious massacre of French subjects at Tien-tsin, is beset by difficulties which scarcely enter into the calculations of Western jurisprudence. As at last, however, an attempt will really be made to bring the murderers to justice, we may trust that Mr. Grosvenor will tolerate no obvious attempt to make the inquiry a mere form. But, bearing in mind the easy way in which the Chinese Government can sacrifice lives which are of no value, we shall do well to moderate our expectations. Mr. Grosvenor's report will be awaited with much curiosity. In the meantime, the publication of something like truth in the *Pekin Gazette* respecting foreign countries has been peculiarly difficult to obtain. No doubt the alternative between humiliation and war with England is hard. Systematic mendacity always leaves inconvenient consequences. So far as we safely can, we ought to respect even the childish gasconading of the Chinese officials. But, unfortunately, it has a highly practical value, and the only way to let the people know that the lives of our countrymen must be respected is to expose the falsehood that we are an insignificant power. Such an announcement has not yet been made with sufficient frankness, for the memorials in the *Pekin Gazette* have been models of ambiguity. We shall have much to do before we can so beat down Chinese vanity as to obtain a truthful declaration of our power.

MILITARY.

THE reason assigned for Sir Frederick Haines' visit to England, is that he may consult the Secretary of State for India on the re-organization of the native Indian army, before succeeding Lord Napier in the chief command.

EUROPEAN Military Pensioners who reside in cantonments, and require medical attendance for themselves and families, are in future privileged to receive such attendance from the medical officer in charge of the staff. In any serious illness the pensioner may be sent into a military hospital, and his family into the sudder dispensary, where there may be suitable accommodation.

WITH the special sanction of His Excellency the Commander-in-Chief, and under the supervision of Captain Davidson, of the 18th Bengal Cavalry, Ressaldar Murtza Khan, of that regiment, has published a translation of Parts 2 and 3 of the *Movements of Cavalry*,—a work that promises to be of great utility to the service, as it includes the regulation and tactics of the new non-pivot system of drill now being introduced, and is written in simple but excellently idiomatic Urdoo. The translation is printed at the Government Press, Allahabad.

AT a sham fight held lately in the presence of His Royal Highness the Field Marshal Commanding-in-Chief, between the Shorncliffe and Dover Forces, Colonel the Hon'ble F. A. Thesiger commanding the former, and Colonel Mackenzie, 78th Highlanders, the latter, the Shorncliffe army was out-manœuvred, but His Royal Highness pitched into the conquerors, especially the 78th Highlanders, who it seems objected to kneel or sit down on stubble in their kilts. The Duke told them that if they wished to keep their pretty dress they must learn to do this. He allowed, however, that it might not be comfortable.

THE *Pioneer* says that "one of the most interesting operations to be carried out at the present Camp of Exercise at Delhi is designed to test the efficiency of artillery and infantry fire at a skeleton enemy posted in a defensive position. The Commander-in-Chief will probably allow a General of division to arrange the combined force under his command—artillery, cavalry, and infantry—in any way he likes for receiving an attack. The men, guns, and horses will be represented by dummies ; and their position having been pointed out to the General entrusted with the attack, this officer will take up such a position as he would choose on active service. The artillery of the attack will then open fire, and of course, if the Okehampton results are to be believed, there will be little left for the infantry to do. The infantry are, however, to be engaged ; and if the formation, as laid down in orders, is followed, we may expect to see proof of the danger of sending forward alternate rushes of men covered by the fire of those behind. It is more than probable that the first direct fire of the artillery will be supplemented by a nearer flank attack of rifled guns ; but as the defenders will have no line of fire to mark their strongest posts, where their men would naturally be in greatest numbers ; and as the guns of the defence will not have their position marked

by dashes and smoke, the realities of war will not be very accurately represented. The experiments, however, will be of an interesting character; and we hope to record their results at considerable length. The ordnance at Delhi seems to be in great variety, including 40-pounder Armstrong's, mountain guns, and even mortars, so between one weapon and another the defenders of the position during the forthcoming experiments should have a very warm time."

THE *Pioneer* says:—"We hear from a correspondent that the force which left Calcutta for Perak on the 20th November reached Penang all well on the 27th. This was the head-quarters and two companies of the Buffs, under Lieutenant-Colonel Cox. The rest of the Buffs, the 1st Goorkhas, and the 3rd Battery 5th Brigade R. A. left on the 22nd, and were at Penang, according to Reuter, by the 3rd December. Major-General Colborne, who left Hong-Kong with eleven officers and three hundred men of the 80th Regiment, and reached Singapore on the 18th November, was at Penang shortly after the first detachment of the Bengal force came there. His troops, it seems, were left at the mouth of the Perak river, and he himself went on to consult the Governor at Penang. A plan of the campaign was arranged, and General Colborne left for Perak in the *Modeste* on the 28th November, with discretionary power to push up the Perak river, if he thought such a move could be made with safety. At first it was intended that the whole Bengal force should move down the river from Qualla Kangsa, and that the China force should make a simultaneous move upwards. The insurgents were building stockades somewhere between, and would thus be caught both ways. Our correspondent, writing from Penang on the 29th November, says that 'the China force pushing on ahead upsets this plan.' He must mean that General Colborne was likely to move up the river at once, without waiting for the Bengal force to get into position. However that may be, the head-quarters and the two companies of the Buffs, together with one hundred and thirty-seven Madras sappers (who started from Rangoon on the 21st November) left Perak on the afternoon of the 29th. Our surmise was correct that they would march *viâ* Laroot from the landing place on the Laroot river at Ujong Tembo, it is eight miles and a half to Bukit Gantang, where the Mantri lives, and then twenty-seven miles eastward, through the Brapit pass, to Qualla Kangsa. At the last place a depôt was to be made, and, if needful, the troops would go down the Perak river in rafts. All the carriage had been provided by the Control Department. Reuter's telegram, published on the 17th instant, announced that the first detachment of troops was expected to reach Qualla Kangsa on the 4th December; and the rest should have been there by about the 10th. Our correspondent says that the following officers were with the first one:—Lieutenant-Colonel Cox, Commanding; Major Hawkins, Brigade Major; Captain Graham; Lieutenant Martin; Lieutenant Ommanney; Lieutenant Colvill (Adjutant); Sub-Lieutenant Holme; Surgeon-Major Davie, A.M.D., in medical charge; and Lieutenant Howlett, in command of the Madras Sappers and Miners."

GENERAL.

MR. WILSON, the Vice-President of the United States, died on Nov. 22. He is succeeded by the President of the Senate, Mr. Thomas W. Ferry, of Michigan. A *post-mortem* examination shows that the cause of Mr. Wilson's death was apoplexy,

THE Berlin correspondent of the *Times* states that while the Powers are not yet agreed as to the guarantees to be exacted from Turkey, the Ottoman Government is preparing a note upon the subject of the contemplated reforms. The tithes are to be replaced by a money-tax, the ground-rent is to be equitably regulated, and the arbitrary power of the Turkish landlords over the Christian peasants is to be restricted. Austria thinking this insufficient, her inspired writers constantly revert to the idea of armed intervention.

MR. GEORGE SMITH, of the British Museum, who left London on the 4th inst., on his third expedition to Asia Minor, writes to a friend from Constantinople on the 16th of November, that fresh difficulties have arisen in consequence of the disturbed condition in which that country is at present, and that his application for a firman or permit from the Turkish Government has been unsuccessful. Mr. Smith says that he will therefore be unable, for the present at least, to prosecute his Assyrian explorations, and will return to England about the commencement of the new year.

"THE Marquis of Bute," says a London correspondent "is trying hard to obtain cannonization for his wife's mother, the first Lady Howard of Glossop and the heroine of the Talbot case, and if money can buy a place among the saints you may be sure he will succeed. It is said that the version (I leave you to prefix *per* or *con* as you please) of Lady Flora Hastings, which has been a great affliction to her father, took place under the roof of the Marquis of Bute during her ladyship's illness, and that her mind was worked up when she was in a state of extreme prostration. There is great indignation on the subject in Anglican circles."

PARIS was horrified on Nov. 22 by the report of an accident at the Winter Circus on the previous night. A gymnast, named Mayol, had inaugurated an innovation in the trapeze exercise—instead of merely swinging himself from one trapeze to another, he had himself shot out of a mortar by a small charge of powder on to the trapeze bar. On the 22nd he had performed the feat successfully, but last night he did not manage to clutch the bar properly, or the charge of powder was too strong, and he was projected head foremost on to the balustrade in front of the boxes, and was picked up senseless. He recovered in about twenty minutes, and is said to be none the worse.

ACCORDING to the *Live Stock Journal*, the thorough-bred racing studs of England appear to be affected by a strange but fatal disorder something like blood poisoning. The studs of Newmarket are said to have suffered greatly from this cause, and at Doncaster several deaths are reported. One nobleman has lost several youngsters, and the Cobham Stud Company have had half a score of valuable foals attacked, and several of the cases have proved fatal. Neither at "head quarters," nor elsewhere, does the exact nature of the disease appear to be thoroughly understood. No description of it is to be found even in modern text-books; stud grooms, trainers, and even veterinarians generally regard it as a new "visitation."

THE most extraordinary law suit on the subject of a will probably ever known has just terminated in England. The late Lord St. Leonards only turned his attention to the duties of a testamentary disposition of his property on the death of his son in 1867, when his title devolved upon his grandson. To the will which was the result of these considerations, eight codicils were appended. When Lord St. Leonards died the codicils were discovered, but the will was not. Of course, Miss Charlotte Sugden's—the daughter whom his late lordship made his secretary and his confidante—version of the missing will was disputed, and a long Probate suit was the consequence. Sir James Hannen decided that Miss Charlotte Sugden's narrative, supported as it was by the codicils, was unquestionably correct. Thus the promoters of *the suit, Lord St.* Leonards and his friends, have failed, and the greater proportion of the late Lord St. Leonards' property goes to his nephew and his daughter.

IN Vienna the opinion is said to be general that the "Eastern Question" is at last on the point of being settled. As regards the vitality of Turkey under the present reign the most unfavourable views are held. In military circles no secret is made of the settled conviction that intervention can only be a question of a few months at the utmost, the interval being filled up with diplomatic fencing. In the probablity of actual warfare nobody believes, unless Hussein Avni Pasha, the former Grand Vizier, should be again called to the same post. He is now hard at work endeavouring to bring powerful influences into play at the Sultan's palace. He is described as a fanatical Moslem, hard and unrelenting; a statesman, moreover, of reckless courage, who would not hesitate a moment, if the occasion arose, to unfurl the standard of the prophet, raise the war-cry, "*Allah Kuvenèt* (*God is great*), and so give the signal for a fierce onslaught on all unbelievers, whatever their creed and nationality. It was he who, when recently in power, made it his special study, by masterly inactivity, to lure Servia and Montenegro into open alliance with the insurgent forces; thereby obtaining a suitable pretext for making an end of their semi-independence at any risk. There is still a possibility that Hussein Avni Pasha may gain the ear of the Sultan, although the latter for the time being is yielding everything to his soft-spoken mentor of the hour, General Ignatieff.

BY last mail we have particulars of the accident to the *Iron Duke*, which appears to have been within an ace of following her sister ship, the *Vanguard*, to the bottom. The *Home News* says:—

Mr. Disraeli's customary good fortune has not waited on his administration of the Admiralty. The *Iron Duke* having most effectually rammed the *Vanguard*, was within an ace on Saturday last of committing suicide and of sinking itself. For some unexplained reason, the main sluice valve was left open when the *Iron Duke* steamed out of Plymouth Harbour, and after she had gone three miles the water rushed in, the ship began to fill, and it was signalled that she was sinking. Fortunately, it was found possible to close the valve, the signal was recalled, and the *Iron Duke* is not yet relegated to a place in our "submarine navy." On Wednesday night the Admiralty issued a communication intended to reassure the public mind, and to convince us all that the accident had been grievously exaggerated. The *Iron Duke*, it is stated, merely went on a trial trip of a week or two "to test the working of her machinery after a refit before proceeding on service," the repairs had been imperfectly executed—at least "the action of the valves was not satisfactory"—the spring proved too weak, and the water passed into the bilge, But the discovery of the danger threatened was made in good time, and therefore "the ship was never in any danger," and the signal of sinking ought not to have been made. No doubt the original oversight was trivial, but the mere fact that it was possible will not increase the national confidence in our naval architecture and the economy of our war-ships.

THE following copy of a despatch to the secretary of the Admiralty, concerning the Arctic Expedition, has been published:—

"H.M.S. *Alert*, Upernivik, July 22, 1875.

Sir,—I have the honour to inform you that Her Majesty's ships *Alert* and *Discovery* arrived here this morning. Leaving Rittenbank at 6 A.M. on the 17th instant we experienced light southerly winds and calms in the Waigat Strait. The *Valorous* was seen at anchor off Rittenbank coal mine, but a thick fog prevented my communicating with her, I arrived at Proven on the eve of the 19th, and having entered hands an Esquimaux dog driver and interpreter for the *Discovery*. I left for this port yesterday evening. I have still sufficient coal on the upper deck of the *Alert* to enable the two ships to reach the edge of the ice in Melville Bay without having touched their regular supply. The winter here has been a very mild one, but the spring is backward; by all accounts the season is, on the whole, very favorable for us. The whaling ships passed this port early in June, and, not having since been seen, must have made a successful passage through Melville Bay. In consequence of the energetic help of Mr. Smith, Inspector of N. Greenland, I have been successful in obtaining sixty dogs, two-thirds of which are full-grown powerful animals. All on board are in good health and spirits, and we look forward to a quick passage to Cape York, the barometer having risen during the last three days with a south-west wind to an unusual height,

and now going down slowly with a northerly one. I shall leave this evening at six o'clock.

(SIGNED) G. S. NARES, CAPTAIN.

A CONVERT from Islamism to Christianity appears to have had a hard time of it lately in Cyprus. A correspondent of the Armenian paper *Manzoumei Efkiar* writing from Nicosia in that island, states that a young Mussulman named Derwish-Oglou Mahmoud, a native of Marash, having embraced Christianity at Smyrna, where he was baptized in an Armenian church under the name of Hatchadour, was soon afterwards arrested by the authorities and taken to Constantinople, whence he was recently sent to Cyprus to be imprisoned in one of the fortresses. On his arrival Hatchadour was accordingly confined at Nicosia. While a prisoner there Shukri Effendi, a naib (or judge in the religious tribunal) at Touzla, who at the time was temporarily filling the same office at Nicosia, endeavoured to persuade Hatchadour to recant, and, on the attempt proving fruitless, ordered that he should be incarcerated at Famagousta. The Christians were indignant at this order, and an Armenian notable, Melikian Effendi, applied to the Governor Asiz Pasha, begging him not to sanction the naib's sentence. The Pasha, on Melikian Effendi's representations, annulled the decree; but Shukri Effendi, with the co-operation of several other Mussalmans, interfered again, and succeeded in obtaining from headquarters a ratification of the sentence. Hatchadour has accordingly been despatched to Famagousta, where, unless a change takes place in his religious convictions, he is likely to remain shut up in company with the worst stamp of malefactors. The indignation of the Christians of Nacosia at this treatment of Hatchadour is increased by the fact that three convicts in the bagnio at that place—an Armenian and two Greeks—lately became Mussulmans, without thereby incurring the displeasure of the authorities, or bringing any evil consequences on their own heads.

PRINCE Bismarck has returned to Berlin, but his health is said to be far from satisfactory, and there are renewed reports as to his resignation. General Manteuffel is now spoken of as his successor. Nevertheless, the prince attended, on November 22, the sitting of the Imperial Parliament, and made one of his sudden, out-spoken speeches. He was respectfully saluted upon his entrance into the House, and it was generally remarked that he looked in better health than could have been expected after the late unfavourable bulletins. A summary of his speech says that:—"Referring to the subject of the proposed new taxes on beer and bourse transactions, he met some objections raised on the Liberal side of the House by admitting frankly and freely the right of the Assembly to vote or to refuse taxes. The Government, he assured the House, had no intention of disputing that constitutional right. He, however, contended that a general reform of Imperial taxation was called for, and maintained that the abolition of matriculatory contributions voted by each State, and making up collectively about the sixth part of the Imperial revenue, was above all things desirable. The financial system of the Empire ought to be based, not upon direct, but upon indirect taxation. Adverting incidentally to the external commercial relations of the Empire and the administration of customs, Prince Bismarck expressed himself favourable to free trade and adverse to protection. The present aim of the Government must be, he said, to simplify the tariff. Addressing himself to the Liberal demand for the creation of a responsible Ministry at the head of the Empire, every member of which should be responsible for his own department, the Chancellor affirmed such a reform to be at present impracticable. He must retain the direct government of the several departments in his own hands. On the other hand, Prince Bismarck signified his willingness to concede the appointment of a responsible Minister for Alsace-Lorraine in the place of the present Governor, whose powers are to be accordingly enlarged. Another account reports the Chancellor as saying, in reference to the question of an Imperial Ministry, that the Empire would lose considerably in capacity for action if the present arrangement had to give way to a "collegiate" system.

IN alluding to the settlement of the Eastern Question, the *World* says:—"We have trustworthy information that, with a view to the solution of the Eastern Question, the three Northern Powers are separately courting the alliance of England; and that the following distinct proposals have been made to our Foreign Office:

"BY GERMANY.

"1. That Wallachia and Moldavia (now constituting the Roumanian Principalities) and all territory north of the Danube should federate to the German Empire.

"2. That Bosnia, Herzegovina, Bulgaria, and all the territory along the south bank of the Danube (except, we presume, Servia) should be annexed to Austria.

"3. That Constantinople and the Roumelian Provinces should be incorporated with Montenegro into one State."

"BY RUSSIA.

"That England should obtain Egypt on condition that Russia should take Constantinople.'

"It is known that Russia would go to war against the carrying out of the German scheme, and it is not probable that Germany would acquiesce in the Russian proposals without obtaining some at least of the advantages it seeks by the partition of Turkey. The frequency of recent Cabinet Councils is now explained. None, however, of these proposals will be accepted by Her Majesty's present Government. Should either of the Northern Empires attempt to carry their plans into execution England would not defend Constantinople but would probably take an island in the Levant—Cyprus or Mytilene—and occupy the Euphrates Valley, commanding at once Syria, Asia Minor, Egypt, and Persia, and thus securing the route to India.

ADVERTING to the rumours which have been current relative to plans and measures contemplated by the Northern Powers in regard to the disturbances in the Balkan Peninsula, and in which the Austrian Cabinet is assigned a special part, the *Politische Correspondent of Vienna*, making special reference to the alleged introduction of peace committees and the occupation of Turkish territory by Austrian troops, declares that all such visionary prognostications must be treated as mere fables.

MR. MACLEAY, leader of the expedition that started in the *Chevetrt*, intending to explore New Guinea, but which was broken up in consequence of internal disagreements, has given a lengthy account of the voyage to the *Sydney Morning Herald*. He states that after five days' unremitting work in sounding and buoying the way through a mass of reef nearly twelve miles in extent, they dropped anchor about a mile and a half from the mouth of Kalow River and the village of Mohatta. Next morning they were visited by two canoes, with about twelve men in each. They came on board with the utmost confidence, and though they could only previously have seen vessels of small size, they did not testify much surprise. Shortly afterwards the vessel's company landed, to the number of 22, and were received at the village by the elder members of the tribes, seated in a circle upon a large piece of new matting. The village consisted of seven houses, exactly of the kind described by Jukes in the voyage of the *Fly*. Each house was ninety or a hundred feet long, elevated about six feet from the ground, and covered with a thick thatch. The ends were open, and on each side were the sleeping places of the inmates. Each house would easily contain 50 people, which would make the population of Maino village 350. The houses are built close to the sea, and are everywhere surrounded by mud, filth, and stench. The people are powerful and well-made, jet black, with straight foreheads and Jewish noses, and without the projecting jaws of the Australian. The hair is woolly, but grows in small tufts, which, when long, form close compact ringlets, and it is not an uncommon thing for the people, not only here but at Warrior and Darnley islands, to cut off their hair when thus grown into ringlets and convert it into a wig for their own use. The men have no clothing or covering of any kind. Some of them are marked, like the Australians, with seams on the shoulders, and they all cut the lobes of their ears into fanciful shapes, and pierce the rim all round and ornament it with coloured wool or fibre. The women were seen little of, but enough to satisfy the visitors that they were no beauties. They are hewers of wood and drawers of water, the duties of the men being confined to fishing, hunting, and fighting. A very scanty covering round the loins is their only clothing, but they seem fond of ornaments of cassowary feathers round the knees and ankles. The chief weapons of these poople are bows and arrows of a very formidable description. The bows are of bamboo, very like those used by English archers, and strung in the same way, and the arrows are over 4 feet long, and can be used effectively at a distance of 120 yards. Like the woolly-haired races of Fiji and the New Hebrides, of which they are probably a variety, these people use kava. They are great navigators, and go long distances in their canoes, which are of great size, and are made from the excavated trunks of large coral trees (*trythrina.*) Their supply of animal food is chiefly from the pigs, which are very numerous both in a wild and tame state. Mr. Macleay saw no indication among them of cannibalism, though human skulls were not an uncommon ornament in their houses.

LITERARY.

LIEUT. COL. ARTHUR CORY, Bengal Staff Corps, has a work in the press entitled "The Shadows of Coming Events," which will shortly be published. The book treats of the position of our Indian Empire, as now affected by the progress of Russia in the East, and of its defences in respect of the present condition of our armies, European and native, for war.

THE *Social Essays*, &c. of Mr. Matthew James Higgins are to be published. That does not, perhaps, appear a familiar name. The writer was better known as "Jacob Omnium," or "J. O.," or "Habitans in Sicco," under which signatures he wrote, years ago, some very slashing sketches and letters in the *Times* and the *Cornhill Magazine*.

BABOO ROMANATH DOSS, Principal of the Educational Institution, is about to publish a book under the name of "The Comprehensive and Elaborate Dictionary of the English Language," in which, he says, "I.—Pronunciation, accentuation, syllabification, etymology, definition, and synonym of each word are given in English;" II.—The definitions are given in (*a*) Bengalee, (*b*) Sanskrit, and (*c*) Latin throughout the body of the work."

ECCLESIASTICAL.

A MEETING, attended by nearly 5,000 persons, has been held in St. George's Hall, Bradford, for the purpose of defending the Church of England against the attacks at present being made upon it by Liberationists. Lord Wamcliffe presided, and was supported on the platform by Mr. H. W. Ripley, M.P., Mr. H. Cecil Raikes, M. P., Bishop Ryan, Mr. F. S. Powell, Mr. G. E. Lyon, barrister, London, Mr. William Fison, and Mr, Thomas Collins. Lord Wharncliffe said it was not the habit of this country to destroy an institution because it had a few slight faults any more than it was the habit of a doctor to cut off a leg beeause a toe was injured. The few faults which could be found with the Church could easily be rectified, and then it would take hold more deeply than ever of the loving sympathies of the English people. His lordship also commented upon the deplorable results which would follow the disestablishment of the Church. Mr. Ripley M.P., said he did not lay as much blame on the body of Nonconformists as was generally attributed to them, for he could say from his own experience that a great part of them had no sympathy with Liberationist tactics, and would deplore their being carried into effect. Mr. Raikes, M.P., regarded the disestablishment question from the utility point of

view, and showed that on this point alone it would be disastrous to the best interests of the Gospel and the public well-being. Resolutions deprecating the disestablishmeat movement were unanimously passed.

ON Sunday, November 21, Cardinal Manning "officiated Pontifically" and preached at the high mass at the opening of the new Roman Catholic Church of St. Aloysius, at Oxford. The new Church, which stands at the top of St. Giles's, a few yards to the south of Oxford Infirmary, is built from the designs of Mr. Charles Hansom on a site purchased for that purpose a few years ago. It is a lofty and imposing building, plain and simple in its plan and main outline, and of the early English or first pointed style of Gothic architecture, with a few semi-Norman details. It is stated that the altar is the gift of the Marquis of Bute. The two sides are dedicated to Our Lady and the Sacred Heart respectively. A very large number of the Catholic laity and clergy from all parts of England were present, and there could not have been far short of one hundred ecclesiastics, mostly in surplices, though some, and especially the Dominicans, wore their monastic garb. The Dowager Lady Lothian, Lord Gainsborough, and Sir George Bowyer were among the laity. High Mass commenced at half-past eleven, the "celebrant" being the Right Rev. Dr. Ullathorne, Bishop of Birmingham, within whose "diocese" Oxford is geographically situated. The sermon was delivered by Cardinal Manning, who took for his text the well-known passage from the Book of Psalms which stands now, as of old, as the motto of the University of Oxford, "*Dominus, Illuminatio Mea.*" He drew out and illustrated in eloquent language the position that, as all knowledge comes from God, the knowledge of God in His own nature, and as revealed to us in Christ, is the true foundation of all science and philosophy, and that apart from such knowledge, mere human sciences, even though true as far as they go, are weak and powerless. This was confessed and admitted throughout all Christendom in the Middle Ages—the "ages of faith"—and nowhere more firmly and truly than at Oxford, which in consequence became the nurse of great saints, as well as of great Churchmen and great Statesmen; but for the last three hundred years—in fact ever since the Reformation—this truth had been lost sight of, and consequently Oxford had sunk from being an authoritative teacher of God's truth to a collection of human schools wrangling over doubtful philosophy, while the open pages of Holy Scripture, which Oxford still used as her armorial bearings along with her sacred motto, floated like a derelict in the waves of the ocean of strife. No doubt, in spite of having thus degenerated from her high and holy calling, Oxford still heard around her the echoes of her former greatness, and memories of the ancient faith which once she taught her children. But that greatness had passed away, and it remained to be seen whether the same greatness would not await the efforts now being made under the sanction of the Holy See to refound a University in France which should rival Oxford in her best and purest days, and become a source of Divine light in future generations.

LATEST TELEGRAPHIC NEWS.

London, 6th December.

THE African Expedition under Lieutenant Cameron reached Paul de Loanda successfully on the 19th ultimo, having travelled the whole distance from Ujiji.

It is stated that, at the request of the British Government, 62 (query 6) Egyptian ships have been re-called from Zanzibar.

The troopship *Euphrates* arrived at Portsmouth to-day.

London, 15th December.

THE Northern Powers will submit the schemes of reform to be exacted from Turkey to the signitaries to the treaty of Paris, before presenting them to the Porte. Meanwhile, however, the Sultan has taken the initiative and promulgated a firman yesterday, which establishes perfect legal equality between its Mussulman and non-Mussulman population. Non-Mussulmans are to be eligible as judges, provincial councillors, and tax collectors. Taxation is to be fairly distributed; oppressive taxes lightened; forced labour abolished. The powers of the local governors are to be more clearly defined. Non-Mussulmans may acquire landed property, and are to have a guarantee for religious toleration. The Northern Powers distrust the sincerity of the reforms thus contemplated on account of their radical character. The Egyptian defeat published on the 27th ultimo turns out to have been most disastrous; nearly 2,000 were killed. The Khedive is collecting a large force for fresh operations.

London, 17th December.

THE Queen has left Windsor Castle for Osborne.

The Princess of Wales, accompained by her children, left England on the 15th for Copenhagen.

A terrible explosion of dynamite has happened at Bremen Haven. Sixty-eight persons killed, and upwards of one hundred injured The explosion originated in a plot for the destruction of the American steamer *Moselle*, in order to recover heavy insurances which had been effected on that vessel. Its author confessed the plot, and died from the wounds received by him in an attempt to commit suicide.

A colliery explosion has occurred in Belgium, in which one hundred and ten persons have been killed.

London, 18th December.

LORD DERBY, in replying to an address at Edinburgh from the Conservative Working Men's Association, disclaimed all idea of establishing a Protectorate for Egypt; or of any intention, from interested motives, of reversing English policy with regard to the Eastern Question. He said the Government solely required additional security for free and uninterrupted passage to India. The Bosnian insurgents reject the Sultan's firman; and have decided to continue the conflict until the expulsion of the Turks is complete. No important fighting generally either in Bosnia or Herzegovina.

Paris, 16th December.

THE Legitimists and Republicans have by a close coalition, secured the election of the majority of the seventy-five senatorial candidates, proposed by the Left.

Washington, 16th December.

CONGRESS has adopted by 232 against 18 votes the resolution discountenancing a third Presidential term.

Cairo, 16th December.

THE Egyptian Expedition to Abyssinia will either be confined to exacting satisfaction or to mere military demonstration.

Penang, 10th December.

COLONEN ANSON has gone to Soongy Ugong, near Malacca, with a portion of the Goorkhas. Matters there are reported to be serious. The troops *viâ* Laroot have reachod within nine miles of Quallah Kangsa.

Penang 15th December.

THE Perak and Laroot forces under Generals Colborne and Ross are progressing respectively north and south of the Perak river.

The ex-Sultan Ismail has gone to Wahong to obtain co-operation Complications in further Malay States are probable. A detachment of the 10th Regiment under Lieutenants Hinxman and *Peyton attacked a* stockade of four hundred Malays of Soonjie Ujong, and met with a determined resistance. Capture was only effected at the point of the bayonet British loss thirteen killed and ten wounded; Malays lost twenty-one killed and a considerable number wounded. A detachment of the Buffs is returning, having been recalled from Ujong. Matters are serious. Colonel Anson remains at Malacca.

Penang, 23rd December.

According to latest advices, the Chinese authorities show some inclination to prevent foreigners from proceeding on shooting excursions.

Consul Medhurst was interfered with whilst proceeding on an up-country trip. His passport alone prevented any serious difficulty.

The newspapers publish a report from Pekin of the retirement of Mr. Hart, Inspector-General of Customs, China, to be replaced by Shunghow.

The Perak forces, under General Colborne commenced active operations. The troops are approaching Kinta-Blanja, which is deserted, the ex-Sultan Ismail having left the place. A body of Malays, whilst retreating, fired on the British advance guard, severely wounding Doctor Randell, Senior Civil Surgeon of the Straits. When the news left the British troops were replying with artillery rockets.

Rangoon, 20th December.

THERE will be a further investigation before the Magistrates respecting the recent plot, previous to finally ommitting all the prisoners or trial.

Rangoon 22nd December.

ALL the prisioners concerned in the recent plot have been committed for trial, with the exception of four, who are to be dischaaged upon producing substantial securities.

Rangoon, 29th December.

THE examination of the prisoners concerned in the recent plot has been concluded before the Magistrate, and thiry-one have been committed to take their trial at the Sessions.

LIST OF PASSENGERS.

ARRIVAL.

THE P. & O. Co's S. S. *Gwalior*, Commander J. C. Babot, arrived at Bombay, on Satuaday last, with the following passenger:—

FROM SOUTHAMPTON.—Mr. and Mrs. Ogilvey, Mr. and Mrs. Turnbull, Mr. H. Ball, Mr. J. Thompson, Mr. W. Evans, Mr. G. Lasher, Mr. G. Clark, and Mr. C. J. Douglas.

FORM VENICE.—Mr. W. H. Hunter, Mrs. R. S. Froude, infant and European female servant, Mr. J. Duff, Mr. W. Nicholls, Mr. C. D. Letzen, Mr. D. W. Barbour, Mr. J. C. Whitney, and Major & Mrs. Robertson.

FORM BRINDISI.—Mr. H. Earnshaw, Capt. Western, Mr. & Mrs. Fisher, Mr. & Mrs. Warden, Mr. G. Gonne, Mrs. Western, Mr. and Mrs. Acton, Mr. F. A. Shillingford, Mr. C. F. Shillingford, Mr. D. Crawford, Rev. L. Wheeler, Rev. J. Blackstone, Rev. W. Nichols, Mrs. Benshroff, Mrs. Goodwin, Rev. F. Newton, Rev. J. H. Lee, Mr. W. Gill, and Mr. Kittridge.

FROM MALTA.—Colonel Hughes, Major Little.

FROM PORT SAID.—Mr. W. H. Cowley.

FORM SUEZ.—Mr. E. Baker, Mr. Finlay.

FROM ADEN.—four Natives.

DEPARTURES.

THE following is a list of passengers per S. S. *Penang*, which left Calcutta on the 21st instant, for Rangoon and Moulmein: Mr. and Mrs. H. Krauss, Miss Bedford, three Misses Millard, Mr. M. S. Chaplin, Mr. C. J. Wortley, Masters T. and W. Gregory, G. Bleake, C. Bleake, and Mr. Cowell, 2nd Class.—Mr. E. T. Dover.

VIA THE SUEZ CANAL.

The following passengers left Bombay, on Monday, last, by the P. and O. Company's S. S. *Cathay*:—

FOR SOUTHAMPTON.—Mr. Vailling, Mrs. Milne, child and three infants, Mrs. Salkeld and infant; Mrs. M. C. Mackinson, three children and two infants, Mr. Charles Young, and Mrs. Harrass.

For Brindisi.—Major W. Chrystie, R. E. and Lieut, Howard.

For Venince.—Captain Conolly.

For Aden.—Surgeon-Major Skipton.

LIST of passengers per "Anchor Line," steamship *India*, Captain Harris sailed for Liverpool *via* Suez Canal, Port Said and Gibraltar on the 15th instant:—

Col. and Mrs. Loving, two Misses Needham, two Misses Marshall, Rev. B. Morrell Mrs. Morrell, Miss Morrell, Mrs. Crawford & ayah, Miss Hennecke, Mr. Hunter, Rev. Mermills, Mrs. Stoke, Mr. Nundy, Mr. Hardie, Mr. Sellers, Mr. Monaham, Col. Bird Mrs. and Miss Bird, and Mr. J. Mackenzie.

Will be published on the 1st January.

POSTPONED FROM 1ST DECEMBER.

A NEW MONTHLY JOURNAL

OF

INDIAN AGRICULTURE, MINERALOGY,

AND

STATISTICS.

BY

R. KNIGHT, F.S.S.

CONSIDERABLE regret having been expressed at the discontinuance of the *Indian Economist* and its Supplements, and there being now no Agricultural newspaper in the country, Mr. Knight proposes to publish, on the 1st of December next, the first number of a new Monthly Journal of Indian Agriculture, Mineralogy, and Statistics.

The new paper will be a little larger than the old *Agricultural Gazette of India*, and will be a complete record of what is being attempted for the improvement of the Agriculture of the country; of its planting enterprise; and the development of its mineral resources.

The subscription will be Rs. 12 *per year only, payable in advance.*

Intending subscribers will be good enough to send their names to Mr. Knight, or to the MANAGER,

"FRIEND OF INDIA,"

Calcutta.

ST. PAUL'S COLLEGE,—Stony Stratford.

(BUCKS).

PRESIDENT:

VICE-PRESIDENTS:

The Right Rev. the LORD BISHOP OF OXFORD.

The Ven. EDWARD BICKERSTETH, D. D.	THE REV. CANON LIDDON, D. D.
C. G. DUPRE, ESQ., M. P.	J. LEWIS FITYCHE, ESQ., M.A., F.S.A.
The Hon. CHARLES LINDLEY WOOD.	THE REV. R. N. RUSSELL.

COUNCIL.

Chairman:—SIR CHARLES L. YOUNG, BART.

Vice-Chairman:—ALEXANDER K. MACKINNON, ESQ.

W. REINFRED A. H. ARUNDELL, ESQ.	SAMUEL J. HARRISON, ESQ.
THE REV. PREBENDARY BARRETT.	THE REV. W. M. HATCH.
THE REV. PREBENDARY BENNETT.	WILLIAM A. LANGDALE, ESQ.
THE REV. R. BULLOCK.	THE REV. JOHN LIGHT.
THE REV. E. R. F. EVEZED.	THE REV. T. MILLER.
	FREDERICK M. SMITH, ESQ.

ST. PAUL'S COLLEGE provides a Public School Education on the principles of the Church of England.

The *inclusive* charge for Board and Instruction is Sixty Guineas a year. Washing, Medical Attendance, Stationary, and all necessary expenses are included in this sum.

The College is divided into Three Departments—

1. In the Junior Department little boys from 8 to 12 are grounded in the essentials of general knowledge.
2. In the Modern Department, boys are prepared for the Civil Service and other competitive examinations.
3. In the Classical Department boys are prepared for the Universities and learned professions.

Arrangements are being made for the accommodation of one hundred additional students.

SINDIA STATE RAILWAY.

TENDERS for the construction of the works on the proposed line of Railway between Agra and Gwalior, including the bridge over the River Chumbul, a distance of 75 miles, or thereabouts, are hereby invited.

The Government of India do not bind themselves to accept the lowest or any tender. English materials, for the most part, and sleepers will be supplied by Government to the contractor. The work will be paid for on a schedule of rates. Copies of the specification of works, general terms of contract, bill of approximate quantities, together with plans and sections of the line, and drawings shewing the general character of the masonry structures, also details as far as they are known, of the floods in the Chumbul and the nature of the foundations there, will be on view, on week days, at the Engineer-in-Chief's office at Agra, from Monday the 27th of December 1875, till Saturday the 22nd of January 1876, both days inclusive, between the hours of 11 A. M. and 4 P. M.

Copies of the specification of works, general terms of contract, bill of approximate quantities, also forms of tender to be filled in and signed by intending contractors, may be obtained during the term above-mentioned from the Engineer-in-Chief, Agra, on payment a fee of (Rs. 50) fifty rupees as earnest money, which will not be returned.

Sealed tenders, marked outside "Tender for the Sindia State Railway," must be forwarded (registered) to the Director of State Railways, Agra, so as to reach him not later than Sunday the 29th January 1876.

E. C. S. WILLIAMS, *Lieut.-Col.*, R. E.,

Director of State Railways.

Dated Simla, the 17th Dec. 1875.

Will be ready on 1st January 1876.

A COURSE OF ENGLISH READING,

CONSISTING OF

SELECTIONS FROM MODERN ENGLISH AUTHORS

FOR THE USE OF

CANDIDATES FOR THE ENTRANCE EXAMINATIONS

OF THE

INDIAN UNIVERSITIES,

ILLUSTRATED AND ANNOTATED BY THE REV. K. S. MACDONALD, M. A. FREE CHURCH COLLEGE.

To be had at the Bible and Tract Societies' House, 23, Chowringhee Road, Calcutta.

ADMINISTRATOR-GENERAL'S OFFICE.

THE undermentioned Estates having come under charge of this office all persons having claims upon, being indebted to, or holding property belonging to the said Estates, are requested to place themselves in immediate communication with the undersigned :—

Robert STRUTHERS, of Greenhead, Glasgow in Scotland, a Brewer, died in Scotland on the 3rd April 1849.

Thomas William, MOORE, an Extra Assistant Commissioner of Dehrah Ismail Khan, died at Shekh Budin in Punjab on the 5th August 1875.

mas COLLINS a Plate-layer in the service of the E. I. Railway Company, died at Kutnee in the District of Jubbulpore on the 15th August 1875.

Richard Peter BLAKE a Captain in the General List, Madras Infantry died at Simla on the 7th July 1875.

Charles Arthur CROMPTON a Lieutenant in the Bengal Engineers, died at Cherat in the District of Peshawur on the 6th July 1875.

Simon John Ross FRASER, Manager of the Roopacherra Tea Garden in Cachar, died on the 16th September 1875.

John MAHER, a Pensioned Apothecary residing at Moradabad, died at Moradabad on the 20th April 1875.

William PITT, of Ingrave in the county of Essex in England, gentleman, died, in England in the year 1867.

Lewis William DELABAR, a carriage examiner in the service of the E. I. Railway Company, died at Howrah on the 22nd August 1875. Certificate granted under section 36, Act II of 1874, to Mrs. Mary DeLaBar, widow of the deceased.

Adam Henry SHEA, Station Master at Nursingpore, G. I. P. Railway, died at Nursingpore on the 4th April 1875. A like certificate granted to Mrs Catherine Shea, widow of the deceased.

Alfred MCHATTON, formerly a Deputy Inspector in the Oudh Police, at Roy Bareilly, but lately out of employment, died close to the Alinugur Police station on the 9th September 1875. A like certificate granted to Honorary Captain Michael McHatton, Father of the deceased.

Francis Austin MONTRIOU, a Captain in the Bombay Staff Corps, died at Calcutta on the 19th November 1875. A like certificate granted to Mrs. Alice Emma Montriou, widow and executrix of the deceased's will.

Nancy WILLIAMS, of the Town of Calcutta a widow, died at Calcutta on the 7th November 1875. A like certificate granted to James Derrick, executor of the deceased's will.

Ralph Alfred LOVEGROVE, a Guard in the Great Indian Peninsular Railway, died at Hurda on the 4th May 1875. Certificate granted under Section 37. Act II. of 1874 to Joseph H. Imrie as a creditor of the deceased.

NOTICE.

ADMITTED Claims against the undermentioned Estates are payable on Tuesday and Friday as usual.

ESTATES.	Claim or Dividend.	Rate of Dividend per rupee.	Remarks.

N. B.—The Surplus of the Estates marked * is carried over to the Account for the persons interested and no other claims against the Estates can be admitted.

Persons presenting receipts for payment are requested at the same time to produce the registry certificates which have been granted to them from this Office.

HIGH COURT,
Calcutta, 18th December 1875.

F. S. COLLIS,
Offg. Administrator-General.

DR. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS.—If you wish to obtain quiet, refreshing sleep, free from headache, relief from pain and anguish, to calm and assuage the weary aching of protracted disease, invigorate the nervous media, and regulate the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. COLLIS BROWNE (late Army Medical Staff, Member of the College of Physicians, London), to which he gave the name of

CHLORODYNE,

And which is admitted by the Profession to be the Most Wonderful and Valuable Remedy ever discovered

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis, Asthma.
CHLORODYNE effectually checks and arrests those too often fatal diseases—Diptheria, Fever, Croup, Ague.
CHLORODYNE acts like a charm in Diarrhœa, and is the only specific in Cholera and Dysentery.
CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, and Spasms.
CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

CAUTION.—BEWARE OF PIRACY AND IMITATIONS.

From LORD FRANCIS CONYNGHAM, Mount Charles, Donegal, Dec. 11th, 1868:—"Lord Francis Conyngham, who this time last year bought some of Dr. J. Collis Browne's CHLORODYNE from Mr. Davenport, and has found it a most wonderful medicine, will be glad to have half-a-dozen bottles sent at once to the above address."

*** EARL RUSSELL *communicated to the College of Physicians that he had received a despatch from Her Majesty's Consul at Manilla, to the effect that Cholera has been raging fearfully, and that the* ONLY REMEDY *of any service was* CHLORODYNE. *See Lancet, Dec.* 31, 1864.

J. LOWE, M. R. C. S. E., Missionary in India, states—"In nearly every case of Cholera in which Dr. J. Collis Browne's CHLORODYNE has been administered in the earlier stages of the attack the patient has recovered. Every traveller in India should carry a supply."

Extracts from the GENERAL BOARD OF HEALTH, LONDON, as to its efficacy in Cholera:—"First Stage or Premonitory. In this stage the remedy acts as a *charm*. One dose is generally sufficient."

From DR. THOMAS SANDIFORD, Passage West Cork:—"I will thank you to send me a further supply of CHLORODYNE. It was the most efficacious remedy I ever used, affording relief in violent attacks of Spasms within a minute after being taken. One patient in particular, who has suffered for years with periodical attacks of Spasms of a most painful nature, and unable to obtain relief from other remedies, such as opium, &c., finds nothing so pro mpt and efficacious as CHLORODYNE."

DR. M. MILLMAN, of New Galloway, Scotland:—"I consider it the most valuable medicine known."

DR. GIBBON, Army Medical Staff, Calcutta:—"Two doses completely cured me of Diarrhœa."

From DR. B. J. BOULTON & CO., Horncastle:—"We have made pretty extensive use of CHLORODYNE in our practice lately, and look upon it as an excellent Sedative and Anti-spasmodic. It seems to allay pain and irritation in whatever organ, and from whatever cause. It induces a feeling of comfort and quietude not obtainable by any other remedy, and it seems to possess this great advantage over all other Sedatives that it leaves no unpleasant after-effects.

CAUTION.—VICE-CHANCELLOR SIR W. PAGE WOOD stated that Dr. J. COLLIS BROWNE was, undoubtedly, the Inventor of CHLORODYNE; that the story of the defendant, FREEMAN, was deliberately untrue, which, he regretted to say, had been sworn to.—See *Times*, July 13, 1864.

Sold in bottles, at 1*s.* 1½*d.*, 2*s.* 9*d.*, 4*s.* 6*d.*, and 11*s.* each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming Medical Testimony accompanies each bottle.

Sole Manufacturer—J. T. DAVENPORT, 33, Great Russell Street Bloomsbury, London.

THACKER, SPINK & CO., CALCUTTA.

ASSURANCE COMPANIES.

THE STANDARD LIFE ASSURANCE COMPANY

has placed on its books New Assurances to the amount of £1,000,000 every year since 1865—a result maintained by no other office in the United Kingdom for so many successive years—some of them years of doubt and anxiety in the Assurance World.

THE INVESTED FUNDS of the Company have increased from £2,696,052, in 1865, to £4,821,005, in 1874, and now amount to nearly,

FIVE CRORES OF RUPEES,

notwithstanding that DEATH CLAIMS have been paid during the period, to the amount of THREE MILLION POUNDS STERLING (£3,399,486), being at the rate of upwards of **£1,200 per Business day.**

ANNUAL REPORT, 1875.

Copies of the Annual Report containing Schedule of Investments, &c.; and all further information may be obtained on application.

GEORGE LUCAS KEMP,
Secretary, Calcutta Branch.

Standard Life Office, Calcutta, 9th December 1875.

TESTS FOR SELECTION OF A LIFE OFFICE.

The Tests recommended by the Board of Trade.

"Taking insurance business as it exists in this country, the public cannot be misled if when seeking an office in which to effect an insurance, they select one which transacts its business at a small percentage of working cost, and does not anticipate its profits."—*Extract from Report by the Assistant Secretaries to the Board of Trade, ordered to be printed by the House of Commons.*

How these Tests are fulfilled by the "Royal."

It is exceedingly satisfactory to see that, *of all the English provincial offices, and all the Scotch offices, the* Royal *ratio of expenses to its income is the lowest,* and to complete the requirements of the official standard, it may be added that the company has *never anticipated a single shilling of profit."—Extract from the Speech of the Chairman Annual Meeting, 7th August,* 1874.

Terms of Proposal, Table of Rates, &c., forwarded on application to

PEEL, JACOB & CO., Agents,
ROYAL INSURANCE COMPANY, CALCUTTA.

THE POSITIVE GOVERNMENT
SECURITY LIFE ASSURANCE COMPANY LIMITED.

Capital £500,000, with power to increase.

A UNIFORM RATE OF PREMIUM FOR THE WHOLE WORLD
And for all Professions or Employments.
NO ENTIRE FORFEITURE OF POLICIES.
And Lapsed Policies revived without Fine.
Surrender Value of Policies (being 40 per cent of premiums paid) fixed at time of effecting the Assurance.
POSITIVE NOTES, OR PAID-UP POLICIES, ISSUED
On each Payment of Premium being made.
ALL NET PREMIUMS INVESTED IN GOVERNMENT PAPER AT COMPOUND INTEREST.
And lodged with Official Trustee to meet claims.
AS AN OUTER FORTIFICATION TO THE SYSTEM, £20 OUT OF EVERY £100 PAID AS CAPITAL IS INVESTED IN CONSOLS, IN TRUST, AND FORMS A GUARANTEE FUND, WHICH CAN ONLY BE MADE AVAILABLE ON THE IMPROBABLE CONSEQUENCE OF A SUDDEN MORTALITY AFFECTING THE ORDINARY LIFE FUNDS OF THE COMPANY.

Assurances affected in five different Forms.

WHOLE LIFE POLICIES, with payment of Premiums ceasing, at the option of the Assured, after 5, 10 15, 20, 25, or 30 years.
WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
POLICIES FOR JOINT LIVES,
payable at decease of the First which shall fail of Two Lives.
POLICIES FOR SHORT TERMS of from 1 to 10 years.
ENDOWMENT POLICIES
payable at 50, 55, 60 or 65 years of age, or earlier in the event of death.

Annual Premium Income, £50,000.

A. B. ANTRAM, Manager,
6, *Old Court House Street, Calcutta.*

UNIVERSAL LIFE ASSURANCE SOCIETY.
ESTABLISHED IN THE YEAR 1834.
Head Office, 1, *King William Street, London.*

Insurances effected with or without participation in Profits.

Committee of Management, Indian Branch, Calcutta.

CECIL STEPHENSON, ESQ., East Indian Railway Co.
WILLIAM THOMAS BERNERS, ESQ., of Messrs. Ashburner & Co.
GEORGE MILLER, ESQ., of Messrs. Hoare, Miller & Co.
JAMES WALTER LOWE, ESQ., Barrister-at-Law.
JOHN MATHESON LYALL, ESQ., of Messrs. Lyall, Rennie & Co.

Assurers under the participating scale share in the Society's profits after six years' premia have been paid, and thus receive back each and every year thereafter, either in the form of an addition to the original sum assured, or of a reduction of the next year's premium, at their option, a Bonus, the amount of which is governed by the annual valuation of the Society's Assets and Liabilities.

This principle was adopted on the establishment of the Society in 1834, and it is manifest, that on a business where *stability* is the first necessity, an undeviating rule which limits the distribution of all profits to the existing condition of the Society's affairs in each year, is the true and *only principle on which stability can be guaranteed,* whilst the Assured are relieved from the payment of any higher premium than is absolutely necessary from year to year to maintain that stability.

During the past twelve years, Policy-holders so assured in the Universal Life Assurance Society have been thus relieved to the extent of 50 *per cent. of their yearly Premium,* the sum allotted for Bonuses this year being £37,030.

THE

GENERAL TRADING ASSOCIATION,

TAJ ROAD, AGRA,

BEG to announce that they have taken those fine premises situated opposite the premises lately occupied by Messrs. D'Visien & Co., at the corner of Taj Road and Gwalior Road. In the course of a few days they will open business as Merchants, General Dealers, Wholesale and Retail Wine and Spirit Merchants, Purveyors, Auctioneers, Commission Agents, &c. with a well selected stock of perfectly new goods imported from some of the leading European houses. It will be the first object to supply the public with fresh and first class goods at the lowest possible prices.

All goods will be marked in plain figures and only one price charged to every Customer alike.

In order to ensure to customers perfectly fresh stock periodically clearance sales by auction will be held, at which all soiled and damaged goods will be sold off to the highest bidders. Prices will be as nearly as possible assimilated to those of the best Bombay and Calcutta houses, with the sufficient margin to cover cost of carriage and charges to Agra.

Goods will be received on commission sale and for sale by Auction. All accounts will be rendered in detail within three days from date of sale, and will be payable one week after date.

The undersigned solicits the support of the public in the endeavour to establish a first class Wholesale and Retail European business in Agra. It is intended hereafter to open branches at other important stations in the North-West Provinces, which will offer great facilities and conveniences to customers in the transfer of their accounts &c.

T. H. HENTY,

Manager.

Agra, 13th December 1875.

"ROYAL TOURIST."

PUBLISHED FOR SIX MONTHS ONLY,

FROM 1ST NOVEMBER,

At 3, Chowringhee Road, Calcutta.

An issue of 500 *Copies already guaranteed. Subscription, Rs.* 25 *only, in advance.*

SINCE the ensuing season will inevitably be a most brilliant one, and as the appliances for producing magnificent Illustrations and splendid Letter-press in the Office of the ROYAL TOURIST will be unequalled in Asia, the Proprietors of that Journal will also publish every evening a paper entitled the

"ENTRE-ACTE."

This expensive and novel production will be devoted to illustrated descriptions of, and *critiques* upon, the Theatrical and Operatic World in the Metropolis of India during the season 1875-76. An issue of

2,000 *Copies is Guaranteed.*

The Subscription to the *Entre-Acte* will be only Rs. 10 for six months. Twice a week Portraits will be given in CHROMO, while the daily illustrations will be produced by means of Wood-engraving and Lithography.

All Cheques, Money-orders, and Cash remittances of every kind to be sent to MESSRS. NICHOLLS & CO., Financial Agents, 8, Old Court House Street, Calcutta.

SPECIAL NOTICE.

Important Reduction of the Rates for Life Assurance in India, China, Ceylon, &c.

THE Directors of the North British and Mercantile Insurance Company have, in consequence of the improved rate of Mortality in India, as shown by the statistics of recent years, revised the Special Tables of Premiums introduced by them twelve years ago. The result of this revision has satisfied the Directors that they are warranted in making a reduction in their existing Rates for the Assurance of the lives of residents in India, &c., both Civil and Military.

EXAMPLE.

NEW TABLE of RATES for CIVILIANS payable during the whole term of Life, for an Assurance of Rs. 1,000 *payable at Death.*

WITHOUT PROFITS.

MANUFACTURERS OF
Crystal Chandeliers, Candelabra Fountains, Wall Brackets, Table Lamps, Porcelain, and Earthenware,
&c., &c., &c.

C. LAZARUS & Co. have the pleasure to announce that in extension of their established business, they have opened those splendid show-rooms (adjoining the Currency Office,) No. 2, Dalhousie Square, East.

The special feature of this branch of their business will be the productions of Messrs. J. Defries & Sons, whose reputation in their respective manufacture is universal. From such a source of supply, the long Indian experience of C. L. & Co. will enable them to meet the taste and demands of their already large constituency.

The reputation of Messrs. Defries and Sons precludes the necessity of any detailed description of their manufactures, and C. L. & Co. simply invite inspection of the large Stock of Glass-ware and other goods, which, for purity of material, elegance, and variety in design and for skill and finish in workmanship, has never been surpassed.

The Stock Comprises

Chandeliers.

From the simplest Hall Lamp to the magnificent 150-lights, of the purest Crystal, Ruby, Emerald, &c.

CONSULTING ACTUARY J. HILL WILLIAMS, ESQ. *President Institute of Actuaries, London,*
Extract from the Actuary's Report, dated 10th September 1875.

"It will be a matter of congratulation to the Directors, the Assured and the Proprietors, that the close of the first five years of the business of the Company a valuation made on the strict principles have adopted should exhibit such satisfactory results."

Participating Policy-holders who have paid five complete premiums to end of *1874*, are entitled to have their premium reduced 40 per cent. during the years ending 1879. Policies of more recent date share in proportion,

INDIAN RATES of Premium charged while in India, English Rates on leaving for Europe. Assurers who do not contemplate spending a *life-time* in India or other tropical climates will find that the rates of this Company compare *favorably* with *enhanced English Rates.* They have the advantage of *consistency* as it is proved *beyond doubt* (by the various Civil and Military Funds &c.) that English life is of *less value* in India than in Europe.

ASSURANCES EFFECTED IN THE FOLLOWING FORMS:—

(1.) WHOLE LIFE POLICIES, with Premiums payable during continuance of Life.
(2.) POLICIES, FOR SHORT TERMS, for 1,3,5,7, and 10 years at low rates.
(3.) PENSIONS granted. The Rates are more *favourable* than those of any similar Fund in India.
(4.) EXCHANGE OF POLICIES by substitution of Lives.
(5.) WHOLE LIFE POLICIES with payment of premiums *ceasing at the option of the Assurred* after 5, 10, 15, or 20 years.
(6.) ENDOWMENT POLICIES payable at 50, 55, or 60 years of age, *or earlier in the event of death.*

PROMISSARY NOTES OR PAID-UP POLICIES issued under Forms 5 and 6 *for each Premium paid* if assured on the With-Profit scale, 40 per cent. or if on the Non-Profit scale, 30 per cent. of the Premium is withdrawable at three days' sight. As each Premium effects a *Complete paid-up* Assurance independent of any further payment, *the Forfeiture of a Policy is obviated,* and it also ensures a *Fixed Surrender value payable in cash at the will of holder.*

LAPSED POLICIES REVIVED WITHOUT FINE.

REDUCTION OF PREMIUM to English Rates from date of *leaving* any Port in India, Ceylon or China.

In Assurance transactions what *ought* to be sought *beyond everything else* by the Assurer is *absolute Security,* which can only be obtained by *sound* and *consistent* rates, combined with investment of Funds in securities of an *unimpeachable nature.*

The two Grand Inducements to Policy-Holders.

MUST ALWAYS BE

UNQUESTIONABLE SECURITY, AND AS LARGE PROFITS AS THE SYSTEM OF LIFE ASSURANCE ADMITS.

Assurances effected on lives of EUROPEANS, EURASIANS, HINDOOS and PARSEES.

LIVES BELOW the average Standard of Health may be assured at increased Rates in proportion to the extra risk.

For Forms of proposal, Tables of Rates, and information, apply to the Company's Agents, or to

D. LANCASTER, *Secretary*
Meerut. *Fellow, Institute of Actuaries.*

AGENTS.—The following Banks are Agents for the "INDIAN LIFE":—Agra, Agra Saving. Allahabad, Alliance. Bank of Upper India. Delhi and London Himalaya, Mussoorie, Punjab, Simla, Uncovenanted Service.

ALL BILIOUS COMPLAINTS and every disorder depending on either functional derangement of the Liver or obstruction of the hepatic or biliary Ducts, such as Indigestion, Jaundice, Heartburn, Dyspepsia, Pain in the Right Side and Shoulder, Blotches, Habitual Costiveness, Offensive Breath, Depression of Spirits, Oppression after Meals, Nervous and General Debility, Restlessness, Wasting, &c. &c., have their appropriate remedy in

Dr. E. J. LAZARUS'S

ESSENCE OF CHIRETTA.

That it is the only preparation that has a really *beneficial* influence on the Liver has already been proved, *beyond all doubt,* by the 97,500 cases in which it has been tried. It has already saved *thousands* of valuable lives (*see the numberless Testimonials in the Pamphlet of Directions that is wrapped round each bottle*), and has enabled very many thousands more to continue their residence in India in the enjoyment of perfect health and comfort; hence it has with all truth, been generally styled

THE GREAT INDIAN REMEDY.

Prepared only by Messrs. E. J. LAZARUS & Co., at the Medical Hall, Benares from the original receipt of E. J. LAZARUS, M.D., and sold by all Medicine Vendors at Rs. 4 each bottle.

CAUTION.—We have a host of unscrupulous imitators—*an indubitable proof of its value*—against whom the Public are warned. Please observe that every bottle is capsuled, and bears on its labels the fac-simile of our signature.

THE GRAND INDIAN ALTERATIVE TONIC.

DR. E. J. LAZARUS'S

ESSENCE OF HEMIDESMUS.

THIS preparation of the INDIAN SARSAPARILLA UNUNTAMUL is equal, if not superior, to the more costly Jamaica or Hondurus Sarsaparilla. INDIAN MEDICAL AUTHORITIES, both European and Native, with one accord bear testimony to its valuable alterative tonic, diuretic and diaphoretic properties, pronouncing it a most efficacious remedy in all those diseases arising from an *impure state of the blood,* and most strongly recommend it in SCROFULOUS COMPLAINTS, BOILS, PIMPLES and BLOTCHES of the SKIN, CONSTITUTIONAL DEBILITY, CACHEXIA, especially of children, CONSTITUTIONAL SYPHILIS, CHRONIC RHEUMATISM, certain diseases of the Skin, &c., &c.

Prepared only by Messrs. E. J. Lazarus and Co., Medical Hall, Benares, from the original receipt of E. J. LAZARUS, M.D., and sold by Medicine Vendors at Rs. 2-8 per bottle.

THE LIVERPOOL, LONDON, AND GLOBE INSURANCE COMPANY,

FIRE AND LIFE.

ESTABLISHED IN 1836.

And specially empowered by Parliament.

OFFICES: DALE STREET, LIVERPOOL,

Cornhill, and Charing-Cross, London.

PRINCE OF WALES'S ROYAL VISIT TO INDIA.

P. W. FLEURY & Co.,

BUILDERS, ENGINEERS, MANUFACTURERS, AND EXHIBITORS OF

ELECTRIC LIGHTS,

PATENTEES FOR AN IMPROVED METHOD OF EXHIBITING

TRANSPARENCIES,

REPRESENTING

PRINCE OF WALES'S PLUME.

PRINCE OF WALES'S

COAT OF ARMS,

PRINCE OF WALES'S

CHROMATROPE REVOLVING CROWNS,

AND

OTHER COATS OF ARMS.

P. W. FLEURY & Co.

BEG respectfully to offer their service to the Maharajahs and Princes of India, and Chairman of Municipalities, for brilliantly illuminating, by the agency of Electricity,

10,000 running feet

of roadway, and for decorating Buildings within that space with appropriate Devices and Designs.

Our charges for exhibiting our Revolving Chromatrope Stars, Lights, Ornamental Welcomes, Prince of Wales's Plumes, Crests, Coats of Arms, and other Transparencies will range from

RS. 50 to RS. 400 EACH.

With reference to our Patent, which was filed by the Secretary to the Government of India, on 7th August 1875, for an improved method of exhibiting for exterior Illuminations, Transparencies, &c., we beg respectfully to invite the Chairman or Agents of Municipalities and other Committees, the Merchants, the Editors of Journals, Executive Engineers, and Agents of the Maharajahs of India, to witness the effects of our Transparencies, which we are prepared to exhibit at No. 62, Wellesley Street, Calcutta, for the inspection of our constituents and parties who are desirous of engaging our services.

Our Mr. Fleury and his staff of experienced Assistants will superintend and carefully carry out all arrangements entrusted to them in any part of India.

ST. XAVIER'S COLLEGE,
No, 10 *and* 11 *Park Street.*

MY DEAR MR. FLEURY,—I very willingly give you the certificate you ask from me regarding your Electric Light and your Transparencies. I think that your appliances are very good, and I may add, I know by experience, that your Electric Batteries never fail to give a strong and steady light.

Yours sincerely,

Calcutta, 13*th May* 1875. E. LAFONT, *Rector.*

OPINION OF BRADFORD LESLIE, ESQ., C. E., *Chief Engineer, Calcutta Municipality.*

I have been much pleased with the Transparencies exhibited by Messrs. P. W. FLEURY & Co. The designs are tasteful and carefully drawn, and the chromatic effects both varied and beautiful.

BRADFORD LESLIE, C.E.
Calcutta, 9th August 1875.

Letter from Chevalier Blondin's Secretary

P. W. FLEURY, ESQ.

DEAR SIR,—Mr. Blondin wishes me to inform you that the Electric Light with which you lighted his Tight Rope Performance on the Maidan from the Ochterlony Monument last Tuesday, 13th, was all that could be desired, and a perfect success—a proof of your perfect mastery in the management of such a difficult task, and with Mr. Blondin's thanks for your kindness to him.

I remain, &c.,

GREAT EASTERN HOTEL, NIAUDE,
Calcutta, 17*th January* 1874. *Secretary.*

Calcutta, 28*th December,* 1869.

MESSRS. P. W. FLEURY & CO.

DEAR SIRS,—On the night of the general illumination of this City in honor of the arrival of His Royal Highness the Duke of Edinburgh, you supplied us with four Transparencies, showing a Crown, Stars, &c., and the word "Welcome." The effect of these was decidedly rich and satisfactory. The machinery by which changes of light and design were thrown into each device worked as truly as anything possibly could, so that there was no interruption of any kind in a trial of five hours.

We express our complete satisfaction with them.

Yours, &c.,
F. & C. OSLER.
